

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. COMMITTEE ON MILITARY AFFAIRS.

S. HUBERT DENT, Jr., Alabama, *Chairman*.

WILLIAM J. FIELDS, Kentucky.

PERCY E. QUIN, Mississippi.

WILLIAM GORDON, Ohio.

A. C. SHALLENBERGER, Nebraska.

CHARLES POPE CALDWELL, New York.

JAMES W. WISE, Georgia.

RICHARD OLNEY, Massachusetts.

SAMUEL J. NICHOLLS, South Carolina.

T. W. HARRISON, Virginia.

DANIEL E. GARRETT, Texas.

GEORGE R. LUNN, New York.

JULIUS KAHN, California.

DANIEL R. ANTHONY, Kansas.

JOHN C. MCKENZIE, Illinois.

FRANK L. GREENE, Vermont.

JOHN M. MORIN, Pennsylvania.

JOHN Q. TILSON, Connecticut.

THOMAS S. CRAGO, Pennsylvania.

HARRY E. HULL, Iowa.

JAMES H. DAVIDSON, Wisconsin.

J. KUHIO KALANIANAOLE, Hawaii.

MARK L. BLACK, *Clerk*.

J. GLENN STANLEY, *Assistant Clerk*.

SUBCOMMITTEES ON ARMY APPROPRIATION BILL, 1919.

On pay.—Mr. Fields, Mr. Dent, Mr. Kahn.

On subsistence.—Mr. Quin, Mr. Dent, Mr. Anthony.

On Signal Corps.—Mr. Gordon, Mr. Dent, Mr. McKenzie.

On ordnance.—Mr. Shallenberger, Mr. Dent, Mr. Tilson.

On transportation.—Mr. Caldwell, Mr. Dent, Mr. Morin.

On clothing.—Mr. Wise, Mr. Dent, Mr. Greene.

On Engineer Corps.—Mr. Olney, Mr. Dent, Mr. Crago.

On regular supplies, incidentals.—Mr. Nicholls, Mr. Dent, Mr. Hull.

On Medical Department.—Mr. Harrison, Mr. Dent, Mr. Davidson.

On camp and garrison equipage, horses for Cavalry, Field Artillery, and Engineers.—Mr. Garrett, Mr. Dent, Mr. Anthony.

On barracks and quarters.—Mr. Lunn, Mr. Dent, Mr. Greene.

ARMY APPROPRIATION BILL, 1919.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Friday, December 7, 1917.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENT OF MAJ. GEN. WILLIAM CROZIER, CHIEF OF ORDNANCE.

The CHAIRMAN. General, we understand, of course, that you were not given very much notice to prepare for these hearings, and we will just start to-day and go through the different items in the committee print of the bill under your department, and then you can suggest to us whether you are the proper party to explain those items or who ought to explain them.

The first item is on page 14, for pay of 20,000 enlisted men, Ordnance Department, \$7,873,800.

Gen. CROZIER. Mr. Chairman, I suppose the appropriate thing for me to say about that would be to inform the committee why we need 20,000 men and what we are going to use them for. The number of enlisted men in the Ordnance Department has not in normal times reached one-tenth of this aggregate, and while, of course, an expansion of tenfold is moderate in comparison with the rate of expansion of the Army at large, at the same time the particular reason for it deserves some explanation. We use enlisted men of the Ordnance Department for guarding and policing the arsenals and for taking charge of and handling, as clerks and foremen and laborers, the stores which are kept at the depots which are established at each one of the cantonments where divisions are now training. You understand, the things that the Ordnance Department supplies have to be kept in depots at each place where there is a considerable aggregation of troops, and they need some people to look after them, to arrange them on shelves, load and unload them, and issue them to the troops. So there are required about 150 men for each one of these divisions where they have some 30,000 or 40,000 troops in a camp. In addition to that, we need men for the same purpose in France with the troops over there, and we need also to establish in France depots of supply and repair, which constitute in reality large arsenals of issue and repair, like Rock Island Arsenal in this country, or Watervliet Arsenal, or Springfield Armory, or any one of the large arsenals, except that the ones we will establish in France will not be manufacturing arsenals. They will be arsenals of storage, issue, and repair.

Mr. TILSON. You have there assembly depots also, where you load artillery ammunition, and so on?

Gen. CROZIER. Yes; part of the artillery ammunition is sent over not completely assembled for certain reasons, depending on the character of it, and it is put together there. Another part of the ammunition that we use has a certain salvage. The brass cartridge cases are expensive and they are saved and reloaded, and that means there must be a place over there to do this reloading; that is, the brass cartridge cases of artillery ammunition. The gun carriages have to be repaired, rifles have to be repaired, cartridge belts have to be repaired, pack carriers have to be repaired, and there is an enormous amount of salvage, and the repair process also includes the cannon themselves, which have to be relined and the breech mechanism repaired, and so on. The arsenal over there will probably require for the operation of it, taking wide limits, from 7,000 to 15,000 men. We hope to have all of the personnel that does this work in the theater of war, either commissioned or enlisted and not to use civilian employees.

In the United States, of course, the great bulk of our operatives at the arsenals are civilians, employed under the civil-service rules, but in the theater of war that is not a good status for them to have, and we propose to have all that class of people either enlisted or commissioned, unless it may be possible on the spot to hire some labor of the lowest class. That may be possible or it may not. France is pretty well drained of labor, and unless people can be brought there from the less advanced countries there will be very little to be had I am afraid. The British, I believe, have imported Chinese with some success and are using them. It may be necessary to import negroes or some people of that sort, but that is the only prospect of employing any labor except that which we think ought to be either commissioned or enlisted.

The CHAIRMAN. Have you 20,000 men now?

Gen. CROZIER. No, sir.

The CHAIRMAN. How many enlisted men have you in your department?

Gen. CROZIER. We may have 5,000, possibly, at the present time. We are doing our best to recruit them. We are running against a good many difficulties. A large number of our men ought to be mechanics. They should be machinists or carpenters or men of allied trades, and of such men many have families, and they would have to make very considerable sacrifice to come to us at the pay which we can give them as enlisted men. That is one trouble. Another trouble is that a good many of these men are already drafted, and when we want to get them transferred, men who would be the best ones for us—that is, men who would be of the foreman and superintendent class—usually have such qualities that they have already been made sergeants or first sergeants in their organizations, and their regimental and company commanders naturally do not want to let them go.

Mr. OLNEY. You can take men of the draft age, can you?

Gen. CROZIER. Yes; we can take men of the draft age if they will enlist.

Mr. CALDWELL. General, did not the old Army acts which we passed specify how many men should be in the Ordnance Department?

Gen. CROZIER. No; they authorized the President to form organizations of special and technical troops, and under that authority the President can fix the number, and he has thus far fixed 20,000.

Mr. KAHN. The law itself authorized the President to fix the number.

Mr. CALDWELL. And he has actually issued an order fixing 20,000 as the maximum for the Ordnance Department?

Gen. CROZIER. Yes, sir.

Mr. CALDWELL. Have you opened any recruiting stations especially for the Ordnance Department or are you taking voluntary enlistments through the regular enlisting officers?

Gen. CROZIER. We are doing both. We have opened some special recruiting stations and we have asked for the assistance of engineering societies and organizations in various cities to help recruit men for this special work, and they have in some instances given very helpful assistance. We have undertaken a campaign of the usual kind which sets forth in manner which we hope will appeal to men what the need is and how certain classes of men can render the best kind of service. We try in this not to give anybody any gold bricks and yet tell a story which will be a true story and at the same time have the inspiration in it which the subject really has or really ought to have.

Mr. KAHN. General, these 20,000 men are predicated upon an Army of what size?

Gen. CROZIER. About one million and a half.

Mr. KAHN. Do you not think we will have to have 3,000,000 men before another year is over?

Gen. CROZIER. I think so; yes, sir.

Mr. KAHN. Therefore, do you not think there will be a deficiency in this item?

Gen. CROZIER. I think so; yes, sir.

Mr. KAHN. Do you think we probably would be justified in providing for 40,000 enlisted men in your service?

Mr. QUIN. The ratio would not increase with the increase in the number of men.

Gen. CROZIER. It does not increase as fast as the troops they have to provide for increases, Mr. Kahn.

Mr. KAHN. What would be your estimate of the actual number of men you would require in your service before the end of the fiscal year 1919?

Gen. CROZIER. If we could get as many troops in France as we would like to get there, I should say it would certainly not be less than 30,000 men; but in view of the limitations, which you all know about, we can not at the present time say whether it will be possible to get any such number of men there, and that is why I am not asking for any more than I now can see we really need, and I am relying upon the fact that if the situation in that respect improves you will be in session here for some time and I can come to you again.

Mr. KAHN. But I have in mind, too, that it would then come as a deficiency and would go to another committee, and I prefer to have this committee handle it if I can.

Gen. CROZIER. I think it altogether possible I will have to ask for a 50 per cent increase in this number of men.

Mr. TILSON. You have there assembly depots also, where you load artillery ammunition, and so on?

Gen. CROZIER. Yes; part of the artillery ammunition is sent over not completely assembled for certain reasons, depending on the character of it, and it is put together there. Another part of the ammunition that we use has a certain salvage. The brass cartridge cases are expensive and they are saved and reloaded, and that means there must be a place over there to do this reloading; that is, the brass cartridge cases of artillery ammunition. The gun carriages have to be repaired, rifles have to be repaired, cartridge belts have to be repaired, pack carriers have to be repaired, and there is an enormous amount of salvage, and the repair process also includes the cannon themselves, which have to be relined and the breech mechanism repaired, and so on. The arsenal over there will probably require for the operation of it, taking wide limits, from 7,000 to 15,000 men. We hope to have all of the personnel that does this work in the theater of war, either commissioned or enlisted and not to use civilian employees.

In the United States, of course, the great bulk of our operatives at the arsenals are civilians, employed under the civil-service rules, but in the theater of war that is not a good status for them to have, and we propose to have all that class of people either enlisted or commissioned, unless it may be possible on the spot to hire some labor of the lowest class. That may be possible or it may not. France is pretty well drained of labor, and unless people can be brought there from the less advanced countries there will be very little to be had I am afraid. The British, I believe, have imported Chinese with some success and are using them. It may be necessary to import negroes or some people of that sort, but that is the only prospect of employing any labor except that which we think ought to be either commissioned or enlisted.

The CHAIRMAN. Have you 20,000 men now?

Gen. CROZIER. No, sir.

The CHAIRMAN. How many enlisted men have you in your department?

Gen. CROZIER. We may have 5,000, possibly, at the present time. We are doing our best to recruit them. We are running against a good many difficulties. A large number of our men ought to be mechanics. They should be machinists or carpenters or men of allied trades, and of such men many have families, and they would have to make very considerable sacrifice to come to us at the pay which we can give them as enlisted men. That is one trouble. Another trouble is that a good many of these men are already drafted, and when we want to get them transferred, men who would be the best ones for us—that is, men who would be of the foreman and superintendent class—usually have such qualities that they have already been made sergeants or first sergeants in their organizations, and their regimental and company commanders naturally do not want to let them go.

Mr. OLNEY. You can take men of the draft age, can you?

Gen. CROZIER. Yes; we can take men of the draft age if they will enlist.

Mr. CALDWELL. General, did not the old Army acts which we passed specify how many men should be in the Ordnance Department?

Gen. CROZIER. No; they authorized the President to form organizations of special and technical troops, and under that authority the President can fix the number, and he has thus far fixed 20,000.

Mr. KAHN. The law itself authorized the President to fix the number.

Mr. CALDWELL. And he has actually issued an order fixing 20,000 as the maximum for the Ordnance Department?

Gen. CROZIER. Yes, sir.

Mr. CALDWELL. Have you opened any recruiting stations especially for the Ordnance Department or are you taking voluntary enlistments through the regular enlisting officers?

Gen. CROZIER. We are doing both. We have opened some special recruiting stations and we have asked for the assistance of engineering societies and organizations in various cities to help recruit men for this special work, and they have in some instances given very helpful assistance. We have undertaken a campaign of the usual kind which sets forth in manner which we hope will appeal to men what the need is and how certain classes of men can render the best kind of service. We try in this not to give anybody any gold bricks and yet tell a story which will be a true story and at the same time have the inspiration in it which the subject really has or really ought to have.

Mr. KAHN. General, these 20,000 men are predicated upon an Army of what size?

Gen. CROZIER. About one million and a half.

Mr. KAHN. Do you not think we will have to have 3,000,000 men before another year is over?

Gen. CROZIER. I think so; yes, sir.

Mr. KAHN. Therefore, do you not think there will be a deficiency in this item?

Gen. CROZIER. I think so; yes, sir.

Mr. KAHN. Do you think we probably would be justified in providing for 40,000 enlisted men in your service?

Mr. QUIN. The ratio would not increase with the increase in the number of men.

Gen. CROZIER. It does not increase as fast as the troops they have to provide for increases, Mr. Kahn.

Mr. KAHN. What would be your estimate of the actual number of men you would require in your service before the end of the fiscal year 1919?

Gen. CROZIER. If we could get as many troops in France as we would like to get there, I should say it would certainly not be less than 30,000 men; but in view of the limitations, which you all know about, we can not at the present time say whether it will be possible to get any such number of men there, and that is why I am not asking for any more than I now can see we really need, and I am relying upon the fact that if the situation in that respect improves you will be in session here for some time and I can come to you again.

Mr. KAHN. But I have in mind, too, that it would then come as a deficiency and would go to another committee, and I prefer to have this committee handle it if I can.

Gen. CROZIER. I think it altogether possible I will have to ask for a 50 per cent increase in this number of men.

Mr. GORDON. That would depend upon an improvement of transportation service in a marked degree, if I understand?

Gen. CROZIER. Yes, Mr. Gordon.

Mr. KAHN. But do you not think that even if we did not get the number of men to France that you would like to see go over there, yet we will have a material increase in the number of men who will be training in this country and they will require ordnance supplies of some kind or other which you will have to prepare for, and do you not think you will require a considerable increase of men for that additional increment of the Army?

Gen. CROZIER. Of course, I can only surmise as to that, Mr. Kahn. I do not speak with authority, but I should say that if we did not have a prospect of getting our men over there we would not call them into the service unnecessarily, on account of the expense. Now, another thing is that the big requirement for this class of men is for manning these salvage establishments—that is a good name for them—and storage depots in France. Here the number required even for a considerable increase of the troops is not so great. It is not numbered in thousands. As I say, for instance, about 150 to a division are nearly all we need.

Mr. KAHN. Does this number of men take into consideration the second increment of the National Army of 500,000 men?

Gen. CROZIER. No, sir; it does not.

Mr. KAHN. We see in the papers that they will be called for probably in the early part of next year, which would be even before the beginning of the fiscal year 1919.

Gen. CROZIER. Yes, sir.

Mr. KAHN. If the War Department carries out its program of calling those men and putting them into the camps in this country to be trained, do you think that these 20,000 men will be enough to serve that additional increment?

Gen. CROZIER. If we are able to send over to the other side as many as we would like to, or as many as we think now we may, it will not be enough, Mr. Kahn, and for that purpose I should say it should be increased about 5,000.

Mr. GORDON. Gen. Crozier, may I ask you a question at this point? You stated a moment ago the total number of men in the Army you had in mind in estimating for your department?

Gen. CROZIER. Yes; one million and a half, Mr. Gordon. That is a little more than we have now.

Mr. GORDON. How many have we now?

Gen. CROZIER. About 1,300,000.

Mr. GORDON. Does that include the drafted men in the camps?

Gen. CROZIER. Yes.

Mr. TILSON. General, I would like to ask if you have considered the matter of sending back to our manufacturing plants men who are already enlisted in the Army, under some sort of arrangement with the manufacturer, and letting them work there as enlisted men?

Gen. CROZIER. Yes, Mr. Tilson. That question has been up in several forms. It is a very important question.

Mr. TILSON. You know it to be a fact that there are hundreds and thousands of men who ought to have remained in the manufacturing plants who, as a matter of patriotism or because they thought they

would be called slackers or something of that kind, have already left more important work or have refused to claim exemption in the draft, and have gone into the service and are now serving as infantrymen or something else, when they could be rendering infinitely better service to the country if they were back in those manufacturing plants, and they would be glad to go back there and work if they could at the same time be soldiers; if they could wear their uniform and be soldiers, they would be perfectly willing to work anywhere. Have you considered that question at all?

Gen. CROZIER. Yes, sir. We are confronted now with an accentuated reminder of it. Regulations which are about to issue restrict the voluntary enlistments to those which can be made before the 15th of this month, and the consequence is that a large number of just the class of men you mention are declaring now that if they can not be in some way or other enlisted for the service they are in, they will leave that service and go and enlist at the recruiting depots for any service for which they can make any kind of choice. I have that in my own office. I have dozens of clerks here in Washington in my office who are saying that if they can not be enlisted now and used where they are, they will go and enlist for some other kind of service. The question resolves itself into something like this: You have passed a law removing the restrictions on the detachment or detail of enlisted men during the war, and that would seem to give authority to detach an enlisted man for service in a munitions factory or for work in the arsenals. As far as work in the arsenals is concerned. I do not think there is any doubt about the authority under that special law, because that is the way most of our workmen used to be gotten and it has been only by custom that we have passed into the other method of employing them in a civil capacity.

Taking the other point, however—that is to say, the employment of enlisted men in private munitions plants doing work for the Government—the proposition becomes more important, because they are doing more work than is being done in the arsenals. If we do this, if we detach enlisted men for work in these plants and enlist more men to take their places, as we could under the law, you have a situation in which there are men working for soldiers' pay alongside of other men who are working for the wages of the vicinity, and they are very different. You also have the situation in which you have a large number of working people—because it would not amount to anything unless you do something on a large scale—who are not free men, and therefore not in a position to take part in the deliberations of labor unions or in the matters connected with labor unions, and you raise a question right off with the labor unions. Now, you might, perhaps, try to meet that by saying, "Very well; we will enlist these men and we will detach them for service in the munitions factories, but we will suspend their pay as members of the military service during that time and allow them to receive their pay from the manufacturers on the same terms as everybody else." Now, there is no authority of law for doing that, because we can not furlough a man without pay.

Mr. TILSON. You think that would be the better way to come at it; that is, the practical way to get at it?

Gen. CROZIER. I think that if this war goes on, as it seems likely to, that something of that kind has got to be done; we have got to

authorize something like this: That men shall be in such a status that they may work in munitions factories as civilians work there, but subject to the power, if they do not continue to work there, to take them back into the military service.

Mr. ANTHONY. After December 15 all voluntary enlistments will be closed in the Army, will they not?

Gen. CROZIER. Yes, sir.

Mr. ANTHONY. Under the selective draft law you have the power to say which men you will accept and which you will exempt; therefore why not, under the draft law, simply exempt those men as long as they work in your munitions plants?

Gen. CROZIER. That can be done.

Mr. ANTHONY. And why the necessity for new legislation?

Gen. CROZIER. They do not want to be exempted, and they will not accept it.

Mr. ANTHONY. You say you want them to stay in the factories, so why not exempt them and let them stay there?

Gen. CROZIER. Oftentimes they will refuse to accept that exemption, and they go and enlist voluntarily.

Mr. ANTHONY. It is up to the Government to exercise that discretion.

Mr. FIELDS. Suppose a man who is a carpenter or a draftsman is taken in the draft; on his own request would he be transferred for duty in the Ordnance Department? Would he have any choice or would you have any choice as to where he would be placed?

Gen. CROZIER. That would be a proper procedure under the law, and there is plenty of law to do it. I can now call upon The Adjutant General for a certain number of carpenters or a certain number of machinists, but, in accordance with the ruling that the War Department has made—of course, all of these rulings are new and have to be tried out—I can not ask for the detachment of men to the Ordnance Department by name. As an illustration, for the purpose of manning this arsenal of storage issue and repair which we must construct in France, I have secured from a number of manufacturing establishments the names of individuals, probably running up to 1,200 or 1,400, who would be very suitable men for that kind of a service, but I am not authorized to ask for them by name.

The reason for that is this, as I said a moment ago, that these men are leading men, men of such a character that they would be good foremen or good leaders of any kind, and that kind of a man, when he gets into the military service is immediately spotted and made a noncommissioned officer, and if I ask for such a man by name I run against this, that the military commander will say, "That man is my first sergeant," or "That man is an important noncommissioned officer in my company," and they naturally do not like it. So that there will have to be a certain weighing of the insistence of a demand. Here is a man who is of a character that will make him a leader or a good noncommissioned officer; in addition to that, he is a trained machinist, we will say. Now, where should he go? The military service will say, "We have got to have men of that character, otherwise our Army will be a mob." The technical service says, "We have got to have men of that character to follow their trades in France or else the work can not be done."

Mr. FIELDS. Would the request of a man be given any consideration as to where he shall be placed?

Gen. CROZIER. Well, theoretically, every such man should go where the best judgment you can bring to bear on his case says he ought to go, but, as a matter of fact, I never knew of an instance where a man's personal wishes or statement as to what he thought he could best do were not taken into consideration by the people who are nearest to him.

Mr. KAHN. Now, right along that line. Have not England and the other countries met these same difficulties?

Gen. CROZIER. Yes, sir.

Mr. KAHN. Do we know how they have met them?

Gen. CROZIER. We know to a certain extent.

Mr. KAHN. Can we not follow their plan in this country?

Gen. CROZIER. In general we can, Mr. Kahn, but there is some difficulty in doing it, because there is a little conflict of evidence. Illustrating by continuing my answer to Mr. Tilson's question as well as trying to answer your own, they met this difficulty in the beginning—of having workmen actually work in the munitions plants—by enacting that no such workman should be engaged in a strike, in the first place, and also that no such workman should leave such a plant as that and take employment in another plant without a leaving certificate—that is to say, the management of the plant he was leaving must grant him permission. And it was made an offense for the management of any other plant to employ a man coming to them without a leaving certificate.

Mr. KAHN. That seems to be good legislation.

Gen. CROZIER. That, in the earlier days of the war, had nothing but good words said about it, but recently they have made some modifications, because they have said they have some trouble with that leaving certificate; but the latest and best information I get from people who are closest to it is that it is not necessary now, that they can meet the matter in other ways. They think, however, that it served its purpose, and served a practical industrial service in the early months of the war. Now, here is something they do: They have in the principal munitions plants, private and public, a representative of the ministry of munitions, who looks out for the industrial side of the work. Their interest is to have every good man in the munitions plants; and they have a representative in the war office who wants every good man they can get in the ranks at the front. Each man's case in the munitions plants is considered by those two men, and they make up their minds as to whether a man had better remain in a munitions plant or whether he had better go into the ranks. Now, if a man is employed in what they call a nonessential industry, there is not any such board that sits on it; and if he comes within the terms of the draft he goes, and there is no question about it. Men knowing that drift into these munitions plants—it produces a natural current and drift into the munitions plants—and that has had the effect of keeping the munitions plants supplied very well.

Mr. KAHN. Will you let me ask a question in connection with that right now? I have seen statements in the papers and magazines to the effect that in many cases women have taken the places of men in the munitions plants and that women are now doing the work that

was formerly done by men, so as to enable the men to go to the front. Do you know to what extent that is being done in the foreign munitions plants?

Gen. CROZIER. To a very large extent, Mr. Kahn, and to an extent that would have been considered nothing less than remarkable before the war.

Mr. GORDON. That is in foreign countries but not in this country?

Gen. CROZIER. No; not in this country.

Mr. TILSON. But it is being done in this country?

Gen. CROZIER. Yes; to some extent.

Mr. KAHN. I was going to follow my former question with this question: If this war is a protracted war—and I agree with you fully in believing that it is not going to finish next year, in fact, I will go further and say I do not think it is going to be finished before two or three years—will we not have to come to that in this country?

Gen. CROZIER. We undoubtedly will if we can get our troops over to the other side as we intend to get them over there.

Mr. KAHN. Then women will be doing the work that these men you speak of now are doing in many instances?

Gen. CROZIER. I think it is not far from the mark to say that in England they have taken into the military service 40 per cent of the men. Now, I do not mean 40 per cent of the men of military age but 40 per cent of their men have been taken into the military service. Now, you can see at once what a tremendous vacancy that will leave to be supplied with some other kind of labor.

Mr. TILSON. Could you not at the present time utilize men a little older than the military age, men thoroughly qualified for the work, either of an officer or of an enlisted man—utilize men of older age than strictly military age, and as soon as you get them be able to send a lot of these husky officers of military age abroad—that is, all except certain specialists, whose places could not be taken in this country?

Gen. CROZIER. That is undoubtedly what we will come to and what we will work toward; but in the beginning it is not a good reliance, because, in the first place, it is not necessary. We have not taken more than 5 per cent of our men so far; and, in the next place, it requires an alteration of method and an alteration of the point of view of the people as to what work is suitable for certain persons, which can not be brought about quickly, and if we are going to have this absolutely necessary industrial work of preparation go on at all we must do it with a class of people whom we will recognize as such and as people who can more appropriately be employed in this most necessary work.

Mr. TILSON. At the present time those men who might be called on to go abroad would probably receive better training right here than at any other place, and right in our munitions plants in connection with the manufacture of ordnance?

Gen. CROZIER. Yes; that is true.

Mr. GREENE. May I suggest this, General? Inasmuch as it appears to be the reasonable expectancy that all men who are within military age and are competent in these trades will eventually be called, would it not be better to overprepare than to make a second preparation from the start? Would it not be a good thing—through legislation,

if necessary—to be able to put your hands on the men of military age in these ordnance factories, munitions works, and all that sort of thing, and have them, even if they still remain at their machines, under military organization and discipline, and then as fast as individuals or groups of individuals were found to be necessary for the Government service to withdraw that number of individuals or groups of individuals and have this second class of labor fed in at the other end in order that it might immediately take the places of those withdrawn?

Gen. CROZIER. Yes, sir. I think you can say that if we require men to go out and endure the hardships of the extreme front, risk their lives and lose them, that it is not too much to in some way or other require that men shall work at home in factories where their services are indispensable. That is one point. Now, another point is this: I am told by officers, and others, who have been close to this subject of labor supply for munitions work in England, that, as a matter of fact, with the kind of material that war is waged with nowadays there is not in any country enough skilled men, and that if any man of trained skill in any of these industries which contribute toward the armament of the forces is employed in any way in which his trained skill is not utilized that trained skill is wasted in a way that we can not afford to waste it. Here is a husky young fellow who is just the kind of a man who would make a splendid soldier, but he is a skilled machinist. The experience of other countries, as it has been detailed to me, is to the effect that if you do not somewhere in connection with your military work, either at home making munitions or in your repair plant over on the other side behind the troops, use that man as a machinist you have wasted an amount of machinist skill which you can not afford to waste.

Mr. GREENE. That is right in line with my suggestion. Why is it not the wise, prudent, and foresighted policy to be able to put your hand on the bulk at the start, from the military point of view, and then sift them into specialized services, the making of munitions, and so on, as necessity demands, and not wait until an emergency presents itself, bringing them right now under military organization and control?

Gen. CROZIER. I think that something of the kind—if you could throw out acceptable legislation—would be one of the most desirable things that could be done.

Mr. KAHN. Do you think it would require additional legislation or are there any laws now in force which, by making regulations, would enable the department to get control of these men?

Gen. CROZIER. If we were to do something of that sort we have had legal opinion to the effect that it would amount to the conscription of labor. Now, there is no doubt about the authority of Congress to conscript labor but it has not consciously, thus far, exercised that authority.

Mr. SHALLENBERGER. Is there not a distinction in conscripting labor for private profit or for Government work? You could not conscript them to work in private munitions plants and yet that is where we are making our ordnance principally.

Gen. CROZIER. I think Congress has power to conscript labor for work in private munitions factories where they are doing work for the Government.

Mr. SHALLENBERGER. Where a profit is being put into the pockets of the owners of the works?

Gen. CROZIER. The subject of the profit that will go to increase the fortunes of private workers would have to receive very careful consideration in connection with that subject.

Mr. SHALLENBERGER. Of course, you could commandeer those plants.

Mr. TILSON. Could it not be worked out in this way: That you could send a man to a munitions plant, give him his pay and his commutation of rations, and so on, and at the same time have the private munitions plants pay the Government the same amount that that man, if he were not a soldier, would receive?

Mr. MCKENZIE. What would the other munitions manufacturers say to whom you were not furnishing these experts?

Mr. KAHN. That is a detail, anyhow.

Mr. QUIN. Could you conscript anarchists and the persons out on the farms so that they could be compelled to make products for the soldiers to eat?

Gen. CROZIER. You see, the thing is very far-reaching. There is another question that comes in there. If you could conscript labor you could conscript the management also.

Mr. KAHN. Under the national defense act can we not do that?

Mr. TILSON. We can do that already without any question.

Gen. CROZIER. I do not think you can do it; you can do something that is allied to it; you can conscript a plant if the management of that plant declines to take an order for something which that plant ordinarily makes and can make; you can not only take possession of the plant and operate it, but you can punish the recalcitrant management by fine and imprisonment; but I do not think you could conscript a manufacturing organization and require them to erect another plant in which to work. Now, then, if you pass an act which would in effect be something like the conscription of labor, I should say that it would very likely cover this last point. If you could conscript a man to work a lathe, I do not see why you could not conscript a man to design a great factory.

Mr. GARRETT. I want to ask you this question: Under our selective-draft system I understand the underlying principle to be that men shall be called according to their liability for service. Now, if a man, because of the fact that he knows how to make a gun, should be exempted and goes on and earns the same wages that he did before, what sacrifice is that soldier making in the war?

Gen. CROZIER. Under those circumstances I should say that he is making no sacrifice.

Mr. GREENE. Right in line with this suggestion of the employment of United States soldiers in private shops making supplies for the Government at a profit, I do not understand that the Government is interested in any subsidiary or incidental return from the operation, but that what it is looking for are the munitions. We know that the Government may on occasions employ soldiers not at all associated with the munitions work to go there and stand guard over them and protect the manufacturer in his work and permit him to make profits by preventing assaults on his buildings or preventing the burning of them. Soldiers would be employed in that respect to help these munitions manufacturers in making their profit, but

it would be regarded as the right thing to do because of the greater benefit to the country.

Gen. CROZIER. I think you all understand as well as I do, and better, probably, a great many of you, that in England the question of profit to the private manufacturers has been met by placing a limit on the profit they can make, not a proportionate taxation of it back, but the fixing of a point which they can not pass; that is to say, they are allowed to make 20 per cent more than in normal peace times and no more; everything in excess of that goes back to the State, and the standard as to the normal peace-time profit has been the average of the two years preceding the war.

Mr. MCKENZIE. Let me just ask one question right here: Is it not a fact that the correct theory of the selective-draft law is that exemption under that law is not a personal right that belongs to the citizen but that it is a means whereby the Government may say to a man, "You will serve in the Army or you will not serve." If a man is working in a munitions plant, is of military age, is conscripted, and he does not claim exemption, it is not for him to say whether he will claim exemption or will not claim exemption; it is the duty of the Government to say to him, "We will not exempt you or we will exempt you," under a statement of facts as to what he is doing and what he can do.

Now, would it not be infinitely better to follow out that line rather than to enlist a man, put a uniform on him and detail him in a private munitions plant for the manufacture of munitions, even though the munitions might be for the Government? If that were done it would at once involve us in a controversy with the labor unions, disturb the whole industrial life of the country, and bring criticism upon us that it would be very difficult to explain. Is it not your judgment that the better way is for the Government to arbitrarily exercise the power which we have given the Government under the selective-draft law?

Gen. CROZIER. I think that if it should be exercised in that way and could be exercised in such a way that would insure that the man thus exempted would continue at the work which he is exempted for it would go far to solve the problem.

Mr. MCKENZIE. His exemption is always conditional and his exemption would only continue during the period of time that he continued in that line of business, and the moment he ceased to do that he could be certified for service.

Mr. TILSON. There is one further difficulty there. Suppose that procedure were followed in localities where the people were largely munitions workers and you voluntarily or involuntarily exempted everybody doing munitions work; then the quota must be made up of somebody else, and there would not be enough other people to make up the quota. In other words, you have practically forced all men who are making munitions to continue making munitions and have not left enough to make up the quota of soldiers.

Mr. MCKENZIE. But that is problematical.

Mr. TILSON. No; that is an actual fact; it is an actual condition in some places.

The CHAIRMAN. You have been enlisting men in your department between the ages of 30 and 40 up to date, have you not?

Gen. CROZIER. Yes.

The CHAIRMAN. There is no reason why you should not enlist men up to 40 under the voluntary enlistment law?

Gen. CROZIER. No; if we can get them.

The CHAIRMAN. Then, under this regulation, which goes into effect on the 15th of December, you will be deprived of all voluntary enlistments—I mean between the ages of 30 and 40?

Gen. CROZIER. Yes—no; between 21 and 31.

The CHAIRMAN. No; I think you misunderstood my question, General. You are now entitled to have men voluntarily enlist in your department between the ages of 31 and 40, because that is the age limit of voluntary enlistment. I mean that 40 years is the maximum limit.

Mr. TILSON. It is from 18 to 40.

The CHAIRMAN. The point I am making is this, that under this regulation, which prevents voluntary enlistments after the 15th of December, you will be deprived of all voluntary enlistments in your department of men between the ages of 31 and 40.

Mr. TILSON. No.

The CHAIRMAN. That is what I am trying to find out. Is that what the regulations that go into effect after December 15 mean?

Gen. CROZIER. That regulation has not yet officially come to me, and I do not know what the exact language is.

Mr. MORIN. It only prevents those coming under the classification of 21 to 31.

Gen. CROZIER. That is the way I understand it.

The CHAIRMAN. I want to find out what the facts are.

Gen. CROZIER. What I understand is, although I have not had the regulations sent to me to read, that the prohibition of voluntary enlistment applies only to men who are subject to the draft.

The CHAIRMAN. If that is so, you will not be deprived of the voluntary enlistment in your department of men between the ages of 31 and 40.

Mr. GORDON. Have you a copy of that regulation?

Gen. CROZIER. No, sir.

Mr. CALDWELL. You stated in reply to a question by Mr. Kahn, in reference to the number of men that we could use, that if you could get the men over there, or as many as you thought you might need, you would need more men.

Gen. CROZIER. Yes, sir. I was not speaking of getting my men over there, but getting the troops over there that my men would take care of.

Mr. CALDWELL. What I have in mind is this: This bill will take care of a condition that will extend over a period of about 18 months from to-day. Now, we have a certain number of men over there now, and I think it is reasonable to suppose that we can carry at least 75,000 men over per month, or may be more, from now until the 18 months' period is up. Eighteen times 75,000 will be 1,350,000, that representing the number of men over on the other side. Now, if we have 1,350,000 men on the other side, we would have to have about 1,350,000 men on this side as well, would we not? Would not that be a good military situation?

Gen. CROZIER. I do not think that we contemplate permanently having on this side fully as many men as we have on the other side.

I think the more probable proportion would be 2 on the other side to 1 here.

Mr. CALDWELL. That would be after we reached from three to five million men on the other side?

Gen. CROZIER. It would be reached after we got up to a considerable number.

Mr. CALDWELL. It would not be an unfair proportion to have as many here as there——

Gen. CROZIER (interposing). It would not be far wrong now.

Mr. CALDWELL. Then, would it not be better forethought in this situation for us to provide for an Army of 3,000,000 men at this time rather than for an Army of 1,500,000 men?

Gen. CROZIER. I think that some way of providing for an Army of 3,000,000 men ought to be contemplated, and if it must be done now, rather than run the risk of its not being done at all——

The CHAIRMAN (interposing). As you know, the proposition is to provide an Army of 1,600,000 and then to provide equipment, clothing, etc., for an Army of 3,000,000. That is what the estimates call for.

Are there any other questions on this item?

Mr. GREENE. I would like to ask one question, because it is embraced in all of this discussion: So far as it is consistent with the policy of the department, General, can you state in general terms whether the always and ever-present labor-union difficulties present any serious obstacle to the practical administration of your department to-day?

Gen. CROZIER. There has been a question of wages, which have been mounting and mounting. They have mounted out of proportion to the cost of living, but thus far they have not presented any practical difficulty. So far we have been able to meet them. We had the funds and were able to meet them. That has caused us to look ahead to see what we are coming to along that line, and it calls for some thought to meet the demands and to keep down the cost of living, also. Now, there is one other line along which there has been thus far not any trouble because we have not taken radical action, but here is a possible source of trouble and necessity for trying to reach an agreement with organized labor. As I said a few minutes ago, the experience of every other country in this war has been that there are not enough skilled men, and, particularly, there are not enough machinists. Now, if there are not enough, ordinary forethought would require that we should start in as soon as we can and train some more, not only by taking men in and letting them learn their trade by being employed at it but we should try the systematic method of having machinists' schools, if it can be done, for the training of men against our future needs.

The machinists' union is very strong, and they look with a great deal of suspicion upon anything which they think will have a tendency to overstock the labor market in the matter of machinists, and they are very likely to say that, while they admit the necessity must be met in that way if the necessity arises, there is not evidence of that necessity as yet, and they also claim that they can supply all the demands for machinists in the essential industries by taking them from the nonessential industries. The only way in which that can

be intelligently discussed is by making an estimate of the need for machinists in all the essential industries, as they will be, say, six months from now, and an estimate of the supply of labor in the nonessential industries, which would be something like taking a census of the United States.

Mr. GREENE. Does that involve any conflict with the policy of this organization with regard to what is described as the conscription of labor—that is to say, the arbitrary placing of men who ordinarily in normal times would follow their own inclinations as to their places of work and putting them where military service would be required of them, although they would not necessarily be involved in any military organization?

Gen. CROZIER. The question does not touch the matter of the conscription of labor. That is to say, they raise objection to your taking the man in with his full consent—a man who wants to do it—and training him to be a machinist.

Mr. GREENE. That, of course, involves the old apprentice regulation.

Gen. CROZIER. Yes; and the placing of some limit on the number of machinists.

Mr. GREENE. Has there been the question of the substitution of the character of labor and the places of labor, the bringing of outside labor into certain localities, and that sort of thing?

Gen. CROZIER. That has not been discussed very much on this side, but I am told by those close to the subject in England that the placing of what you might call a military tag on a man and giving him a military status and then allowing him to work in munitions factories for the wages of the vicinity has not produced any labor difficulties.

Mr. CALDWELL. How many enlisted men have you in the Ordnance Department now?

Gen. CROZIER. The number is increasing every day, but I should say somewhere in the vicinity of 5,000.

Mr. CALDWELL. How soon do you think you will get up to the maximum of 20,000 authorized by the President's proclamation? It would be a guess, of course.

Gen. CROZIER. If I do not get them faster than I am getting them now, it will be a good while. I think we will get them in the course of two months or six weeks.

Mr. CALDWELL. Before the end of six months you will have the 20,000 men?

Gen. CROZIER. Yes, sir.

Mr. CALDWELL. Do you expect to get any of them by draft or all of them by voluntary enlistment?

Gen. CROZIER. I think we will probably have to get some of them by draft.

(Thereupon, at 12 o'clock noon, the committee adjourned until Monday, December 10, 1917, at 10 o'clock a. m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,

Monday, December 10, 1917.

The committee met at 10 o'clock a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENTS OF BRIG. GEN. E. B. BABBITT AND COL. JAY E. HOFFER, OF THE ORDNANCE DEPARTMENT.

The CHAIRMAN. We left off last Friday on page 14, pay of enlisted men. There are one or two questions I wanted to ask before we pass that item. In handling this appropriation this year, of course, there are three bills that we have got to look to for last year's appropriation, the act of May 12, which was handled by this committee, and the acts of June 15 and of October 6, which were handled by the Committee on Appropriations. You are asking for pay of 20,000 enlisted men, \$7,873,800. The three appropriations last year gave you a total of \$7,080,000. I understood Gen. Crozier to say the other day that you had about 5,000 men. Can you tell the committee what is the average pay of the enlisted men, or how you arrive at those figures?

Gen. BABBITT. These figures, Mr. Chairman, are prepared by the Quartermaster General, and I have had, of course, nothing to do with them.

The CHAIRMAN. That explanation would have to be made by the Quartermaster General?

Gen. BABBITT. Yes.

Mr. KAHN. But he would get his estimate of the number required from you?

Gen. BABBITT. The number of men required is gotten from us, but not the pay. He has the pay as fixed by law.

Mr. CALDWELL. Have you any of that money left over?

Gen. BABBITT. Undoubtedly the Quartermaster General has. It was a question of how rapidly we could recruit this ordnance personnel. We hope to have this number of 20,000 sometime in January or February.

Mr. GREENE. General, does not the law make it possible to keep this pay item as one fund so that if there should not be personnel sufficient to take up the amount appropriated the remaining part of the appropriation may be disbursed to other arms of the service?

Gen. BABBITT. Yes, sir; it is all under pay of the Army.

Mr. GREENE. So that it would not necessarily to-day be still pertaining to this particular item?

Mr. CALDWELL. Gen. Crozier said when he was here that the Ordnance Department had been increased under proclamation of the President to 20,000 men, and that those were called under the section of the law which allowed the President to call for additional special and technical troops.

Gen. BABBITT. Yes, sir.

Mr. CALDWELL. Before that time was the personnel of the Ordnance Department considered technical troops and not carried in the general number of the line of the Army?

Gen. BABBITT. Yes, sir; and their number was never fixed by law. The number was fixed from time to time by the Secretary of War. Three years ago, for example, we had about 700 men. Between that time and last spring, when war was declared, it was increased to about 1,300 men to meet increased requirements, because we were getting larger appropriations and handling a larger quantity of supplies.

Mr. CALDWELL. The proclamation of the President increasing the Ordnance Department to 20,000 was in writing, was it not?

Gen. BABBITT. Yes; it was upon a recommendation from this office which was approved.

Mr. CALDWELL. Have you a copy of that proclamation?

Gen. BABBITT. I have not with me.

Mr. CALDWELL. Will you put it in the record?

Gen. BABBITT. Yes, sir. Mr. Chairman, I have a detailed statement of just what these men are doing, under five different headings, and that will show just where they are:

The authority for increasing the enlisted personnel of the Ordnance Department to 20,000 men is contained in section 3, paragraph I of General Orders. No. 103, War Department, August 6, 1917, which states as follows:

"Under authority conferred by section 2 of the act of Congress 'Authorizing the President to increase temporarily the Military Establishment of the United States,' approved May 18, 1917, the President directs that there be organized for the period of the existing emergency, the enlisted strength being raised and maintained by voluntary enlistment or draft, an enlisted Ordnance Corps, National Army, of the following personnel: Ordnance sergeants, 2,800; sergeants, first class, 400; sergeants, 2,000; corporals, 3,600; cooks, 400; privates, first class, 3,600; and privates, 7,200; total, 20,000."

The duties of these men can be stated under general headings, as follows:

Attached to line organizations of 16 divisions of the National Army---	2,500
Attached to line organizations of 16 divisions of the National Guard--	2,500
Ordnance depot companies assigned to 16 divisions of the National Army--	2,500
Ordnance depot companies assigned to 16 divisions of the National Guard	2,500
Detachments with Army corps troops, with Army troops, at main bases, at ports of embarkation, at ports of debarkation, at artillery parks, at repair stations, etc-----	10,000
Total -----	10,000

The CHAIRMAN. I will ask you to put that in the hearings, and also a statement showing just where you expect to use these 20,000 men.

Gen. BABBITT. Yes, sir. I would like to say, however, Mr. Chairman, that that number will undoubtedly be exceeded in the near future, and we will have to request authority for a larger number than that.

Mr. KAHN. How many men do you think you will require in the next fiscal year?

Gen. BABBITT. My notes indicate a total requirement of 68,811.

Mr. KAHN. When was this estimate submitted to the department—in September?

Gen. BABBITT. In September; yes, sir.

Mr. KAHN. Did you know at that time that 20,000 men would be entirely inadequate for the needs of the Ordnance Department?

Gen. BABBITT. We did not. The requests are coming in constantly indicating the need for more men for handling ammunition and other ordnance supplies and for performing other ordnance duties in France. We need, for example, 10,000 right at the port of debarkation for handling the ammunition which is to be passed on to the dumps.

Mr. KAHN. Do you think that 68,000 will absolutely meet your needs for the next fiscal year, or will you require even more than that?

Gen. BABBITT. The number of men we will need, of course, will be dependent upon the number of men sent abroad. A large portion of these men go with the line units. Every regiment is provided with a certain number of ordnance men to make the immediate repairs, to assist in salvaging the ordnance material, and to get it back where we can recover it and repair it. Each Infantry regiment, for example, has two sergeants, three corporals, and five privates. The Cavalry regiments have more and the Artillery regiments still more. Then we have with each division mobile repair units. These have not been tried out yet, but we are going to need more men in every way. There are 12 trucks to go, three of which carry machinery for repairing small arms and other equipment. We may need a larger number of men than this.

The CHAIRMAN. As I understand you, then, the number of men in your department will depend upon the size of the total Army to a large extent?

Gen. BABBITT. Yes, sir.

The CHAIRMAN. What size army are you estimating for when you ask for 20,000 men?

Gen. BABBITT. 1,600,000.

The CHAIRMAN. What size army are you estimating for when you ask for 68,000?

Gen. BABBITT. I am wrong about that. Our original idea was that 20,000 men would meet our requirements for a force of 1,600,000, but the demands for men on the lines of communication, for the dumps, and for other service abroad indicate we will need 68,000 instead of 20,000 for that number.

Mr. KAHN. I understand in the various training camps and in the various posts and fortifications we now have 1,600,000 men, and I understand the War Department officials are going to call for another 500,000 under the draft law some time in the spring. Will your 68,000 men be sufficient to take care of that additional 500,000?

Gen. BABBITT. Not quite, but the number will not go up proportionately. We will probably want about 10,000 additional.

Mr. KAHN. That would make 78,000.

Gen. BABBITT. Yes.

Mr. McKENZIE. General, in estimating this number of men, do you know how many men are required at the different camps and cantonments at the present time?

Gen. BABBITT. Yes, sir.

Mr. McKENZIE. You have taken that into consideration?

Gen. BABBITT. Yes, sir.

Mr. McKENZIE. Then you have also estimated for an army of 1,600,000 men in France?

Gen. BARRITT. Yes, sir.

Mr. McKENZIE. And the 68,000 is to take care of an army of 1,600,000 men in France and still continue the efficiency of the force now at the various camps in this country?

Gen. BABBITT. Yes, sir.

Mr. McKENZIE. Therefore the whole ground would be covered because you do not anticipate you will have an army to exceed 1,600,000 men in France during the fiscal year 1919?

Mr. KAHN. Oh, yes.

Gen. BABBITT. I hope so. Independent of any movement to France, if we call to the colors and organize additional units, we will have to put with all these regiments additional men, and those are the only ones I refer to. Our arrangements under the 68,000 will naturally take care of the biggest part of the expansion, in that it takes care of the very large enlisted force we will require along the lines of communication and at our base depot or depots in France where we do all the repair work. The units in this country at the cantonments also will have to be provided for, but there will be no great enlargement there. It is solely then the question of taking care of the troops which are organized as a part of the units here, and that is all we would have to take care of except some slight additions, due perhaps to the increased volume of work at the established plants, but that would not be anything like the same ratio.

Mr. CALDWELL. Will these men carry arms themselves, or will they be more like working troops?

Gen. BARRITT. Very few will carry arms, although they will have to do a certain amount of guard work, of course.

Mr. SHAULENBERGER. General, you are estimating here the number of ordnance troops you will need for the fiscal year beginning the 1st of next July?

Gen. BABBITT. Yes, sir.

Mr. SHAULENBERGER. Is it humanly possible for you or for anyone else to estimate within 25,000 or 50,000 of what we are going to need a year and a half from now in France? Is it not a very indefinite thing at best, and can we expect to get down to a close estimate of the number of troops we will need?

Gen. BABBITT. I think it unlikely, sir; but I think it would be a matter of discretion on our part to estimate the higher unit.

Mr. SHAULENBERGER. I think so myself, and there is no necessity for disputing here about a few thousand.

Gen. BABBITT. If we do not need them we can save that money, because of course we do not have to spend it.

The CHAIRMAN. Following the suggestion which has already been made, I wish you would put in the record a statement giving an estimate of the total number you will need under any circumstances.

NOTE.—It is estimated that for an army of 1,600,000 men, the Ordnance Department will require an enlisted force of 68,000 men; and for each increase of 500,000 men in the line of the Army, the enlisted force of the Ordnance Department should be increased by 12,000 men.

There is one other question I want to ask you General, on this line: Gen. Crozier stated that one purpose for which he used enlisted men in his department was for guard duty at camps and cantonments, which required about 150 men in his department. Now, we will have

to explain that on the floor. Why can not that guard duty be done by the troops?

Gen. BABBITT. I think that is an error. I have not had time to read Gen. Crozier's testimony, but the guard duty is done at our arsenals in places where there are no line troops. At the cantonments there are men of whom we have 150 now, 100 for our supply work there in the handling of the supplies at the workhouses, etc., and 50 men with our mobile repair depot. The 100 men stay at these cantonments and the 50 men go with the division with the motor repair trucks.

The CHAIRMAN. What duty do they perform at the cantonments? I understood that they were used as guards.

Gen. BABBITT. No, sir; they are in our warehouses for the issue of supplies. Naturally we must have men who are technically trained in that work—in the handling of small parts for repairs, etc.

Mr. TILSON. Do you use some of these men as guards?

Gen. BABBITT. At the arsenals.

Mr. TILSON. I saw some at the Frankford Arsenal the other day.

Gen. BABBITT. Yes, sir. We use a good many of them as guards at the arsenals.

The CHAIRMAN. Unless there are some other questions, we will pass to the next item. The next item provides for additional pay for length of service. That is based upon the law as to the actual facts, and I do not suppose there will be much of that, as these men will not have the length of service.

Gen. BABBITT. No, sir.

The CHAIRMAN. The next item is on page 19, for the pay of 2,000 officers. Are you familiar with that item, General?

Gen. BABBITT. My attention was not called to that particular item. I might say, however, that that item will have to be largely increased. The Ordnance Office submitted an estimate to the Chief of Staff for its personnel in May or June, amounting to approximately that number. In September that number was revised, and the number that now stands is approximately 5,375. I will have to correct that number, because I am only giving it from memory.

The CHAIRMAN. You can put the actual figures in the record.

Gen. BABBITT. That number, I understand, has been approved by the committee of the War College handling this subject and is before the Secretary for final approval as to numbers, but not as to the grades.

The CHAIRMAN. How many officers have you there now?

Gen. BABBITT. We estimated for about 5,375. We have, I think, 1,500; but on that question I will have to correct the figures. I brought my notes solely on the enlisted personnel.

The CHAIRMAN. Put in the record exactly what the figures are.

NOTE.—The number of officers called to active duty up to December 12, 1917, is 2,619.

Mr. SHALLENBERGER. I understood you to say that this amount would have to be greatly increased?

Gen. BABBITT. Yes, sir.

Mr. SHALLENBERGER. Will you put in the record your estimate of what you think it ought to be now, based upon the information you now have as to how much it ought to be?

Gen. BABBITT. Yes, sir.

Mr. GORDON. How can you estimate for the officers if you do not know their rank or grade?

Gen. BABBITT. We will have to get the grades finally approved by the Chief of Staff and get instructions as to what grades we will commission these men in. Then the Quartermaster General will be able to make up a statement for the record from the grades as finally approved by the Chief of Staff.

Mr. SHALLENBERGER. These ordnance officers will have to be taken largely from civil life?

Gen. BABBITT. Almost entirely.

Mr. GORDON. You have transfers from the Cavalry into the Ordnance Department, do you not?

Gen. BABBITT. From the Cavalry, Infantry, and Artillery. All of them have furnished their quota.

The CHAIRMAN. The next item is on page 61. For the current expenses of the Ordnance Department in connection with purchasing, receiving, storing, and issuing ordnance and ordnance, stores, etc., you ask \$25,500,000. Do you remember what the total appropriation was under the three bills last session?

Gen. BABBITT. The total appropriation amounted to about \$16,000,000. In the May act there was carried \$350,000, in the June act \$2,650,000, and in the October act \$11,825,000, making a total of \$14,825,000.

The CHAIRMAN. Will you explain to us why that increase is estimated?

Gen. BABBITT. This item covers three important operations; one, although under this it is a relatively small amount, is the current expenses of our arsenals, including the handling of stores at those points, which amounts to about \$2,500,000 under war conditions. The second item is a pure estimate of approximately \$9,500,000 for the pay of laborers that we must hire in France other than our enlisted personnel. Gen. Pershing reported to us that in his project for our lines of communication for our base depots and for our repair units we would require, in addition to our enlisted personnel, 11,000 laborers, which he hoped we might be able to employ there. It is for those 11,000 laborers that this item to the extent of about \$9,500,000 refers. In addition to that, \$13,500,000 relates to our operations at our ports of embarkation and debarkation. Gen. Wheeler has the details, as that subject falls under his particular administration. I can probably give it to you myself very roughly, unless you wish to ask some special questions about it.

The CHAIRMAN. You might state it in general terms.

Gen. BABBITT. It relates to the handling of stores at the various terminals. This is for the employees there. For labor charges in the loading and unloading of cars, both in and out of terminal depots, it is estimated that there will be 154,000 cars handled at a total cost of \$4,235,000. At interior depots for similar operation the amount estimated is \$4,345,000. At component depots, which are depots where component parts of material are stored before they can be brought together and assembled, the amount estimated is \$1,485,000. For heat, light, power, and water and operating supplies at those points, the estimate is \$1,710,000. For the maintenance of depots,

repairs and renewals of buildings, railroad equipment, mechanical equipment, etc., the amount estimated is \$4,000,000. For the rental of warehouses—we estimate on renting 1,000,000 square feet of space—the estimate is \$400,000. For contingent expenses, including the erection of temporary buildings, which we have to do from time to time for our supplies, the estimate is \$1,825,000, making a total of \$18,000,000, instead of the \$13,000,000 to which I referred, and which is included in the bill as presented to you. In other words, it is desired to increase this estimate by \$5,000,000.

Mr. KAHN. You increase this \$5,000,000?

Gen. BABBITT. From \$13,500,000 to \$18,000,000.

The CHAIRMAN. You want a total increase of—

Gen. BABBITT (interposing). \$4,500,000; that increase being the result of additional information that has reached us from abroad.

Mr. KAHN. You are asking for \$25,500,000?

The CHAIRMAN. You are asking now for \$30,000,000?

Gen. BABBITT. Yes, sir.

Mr. CALDWELL. Do you think that this will carry you through until July 1, 1919?

Gen. BABBITT. It is impossible to predict with any accuracy so far ahead with this tremendous movement going on. We are basing our estimates on our probable ability for transporting supplies.

Mr. KAHN. General, I heard the statement made by Gen. Joffre, when he was over here, that we would have to furnish everything for our own troops—that we could depend on nothing from France or from England. Have you taken that into consideration in these estimates, and do you propose to ship every pound of munitions that will be required by our forces?

Gen. BABBITT. Ultimately; yes, sir. In the initial stages we expect some assistance from them for which we will make replacement of material when we get it.

Mr. KAHN. In this war, ordnance is the most important thing, almost.

Gen. BABBITT. Yes, sir.

Mr. KAHN. Is your department expending in such a way that you can furnish everything that will be required for our troops over there and in sufficient quantities?

Gen. BABBITT. We are expending as fast as the manufacturing facilities of the country will permit us.

Mr. KAHN. Could we, if we wanted to, get any assistance for our troops in any of the foreign countries that are cooperating with us?

Gen. BABBITT. We are getting temporary assistance in the way of supplies.

Mr. KAHN. Could that temporary assistance be made permanent if the situation required it?

Gen. BABBITT. I think not.

Mr. KAHN. Then we will have to depend altogether, in the final analysis, on what we ourselves can do in this matter?

Gen. BABBITT. I think so; yes, sir.

Gen. Wheeler would like to make a statement in reference to this matter.

Gen. WHEELER. In answer to a question asked of Gen. Babbitt in regard to the amount asked for under the item for the ordnance service, I would like to say that the \$18,000,000 that we are estimating for under this item for the maintenance of storehouses is based upon the assumption that we are maintaining an army of 1,500,000 men in France, that the army in France is being recruited at the rate of 100,000 men per month, and that we are maintaining in this country an army of 500,000 men. That will involve the shipment of 56,000 cars per month. If the plans change between now and the time this bill goes into effect, so as to increase the army materially, the \$18,000,000 we are asking for will not be sufficient.

Mr. McKENZIE. Did I understand you to say that this involves the shipment of 56,000 cars per month?

Gen. WHEELER. Yes, sir.

Mr. KAHN. Gen. Babbitt, I believe, stated that he would require 11,000 Frenchmen and Frenchwomen to help them at the points of debarkation in France in the handling of these ordnance stores, and that he would require about \$1,000,000 for their pay?

Gen. BABBITT. About \$9,500,000.

Mr. KAHN. Is the pay for these people in France anywhere near what the pay would be over here, or are you asking that much?

Gen. BABBITT. We are really estimating that on the possibility that we might have to send the laborers over there to do the work.

Mr. KAHN. Of course we know that the pay there is much less than the pay of Americans, and I could hardly see why you would want such a large amount for the employment of 11,000 French laborers; but, of course, taking into consideration the fact you may have to get Americans to do the work, I can readily see the need of it.

Mr. CALDWELL. You say that you base your estimate on an army of 1,500,000 in France; does that estimate contemplate an army of 1,500,000 men in France now, or are your estimates based on the assumption that you will have 1,500,000 men there in June, or that that number will go over in the fiscal year 1919? In other words, are you taking the maximum for the whole year?

Gen. WHEELER. We are considering that we shall have in about a year after the war started that many men in France, and that we will be maintaining that many.

Mr. CALDWELL. That will be in April.

Gen. WHEELER. Beginning in September, we are estimating on an average of about 100,000 troops per month, and as soon as we accumulate 1,500,000 troops over there we will be maintaining that 1,500,000 troops; and for replacement purposes there will be constantly in training in this country troops to the extent of 500,000 men. It is further estimated that we are going to send with our

troops a four months' supply—a one month's supply for expenditure during the month when the man receives his supplies and a constantly maintained supply for three months. Then, there will be a month's supply on the road or on the water, and we will maintain the reserve in France by a three months' supply in this country.

Mr. CALDWELL. So it is based broadly on the number of troops you will have in training and in France?

Gen. WHEELER. Our estimate is also partially based upon the record that our allies have made up to the present time in the shipment of supplies. I am informed that the trip for months has averaged eight weeks.

Mr. KAHN. The round trip takes eight weeks?

Gen. WHEELER. Yes, sir; but we are hoping to do better than that.

Mr. CALDWELL. The transports are moving faster than that?

Gen. WHEELER. Yes, sir.

The CHAIRMAN. Is there any other statement you wish to make on this item?

Gen. WHEELER. I think there is nothing further I wish to say on the subject, unless the committee desires more information or details.

Mr. GORDON. I understood you to say that your plans under the appropriation asked for contemplated the shipment of 56,000 cars per month?

Gen. WHEELER. Not their shipment abroad. Fifty-six thousand per month is the movement; some of them will be in interior movements.

Mr. GORDON. What proportion of these 56,000 cars will be sent abroad for maintenance purposes?

Gen. WHEELER. We would have 21,000 cars for shipment abroad. I might say that that is really double the actual number of cars leaving our Atlantic ports. That number would be about 10,000 cars, but we have doubled this year so as to take into account the loading of those cars on ships. We have to take that into our calculations, because we are taking it in carload lots, but the actual number of cars leaving the Atlantic ports for shipment abroad per month will be 10,000.

Mr. GORDON. That would be about 420,000 tons per month?

Gen. WHEELER. Yes, sir; something like that.

Mr. GORDON. When do you figure on commencing these shipments?

Gen. WHEELER. We have already commenced the shipments. The total volume, of course, depends on the number of troops abroad.

Mr. GORDON. And it also depends on shipping facilities?

Gen. WHEELER. Yes, sir.

Mr. SHALLENBERGER. Have you been able to carry over supplies in sufficient volume for all the troops you have there at present, or have you been delayed by the scarcity of shipping?

Gen. WHEELER. No, sir; we have not been delayed up to the present time.

Mr. SHALLENBERGER. You think that a sufficient volume can be carried over for the troops you have there?

Gen. WHEELER. Yes, sir.

Mr. CALDWELL. As a matter of fact, you are accumulating a surplus over there now, are you not?

Gen. WHEELER. Yes, sir; we send a reserve over there with all the troops that go over.

The CHAIRMAN. The next item, Gen. Babbitt, that you are interested in, according to this note, is on page 63, for national trophy and medals for rifle contests.

Gen. BABBITT. That is an annual appropriation that is made year after year for that purpose. It is handled entirely by the office of the Assistant Secretary of War, the Ordnance Department simply acting as a disbursing agent for that purpose.

Mr. TILSON. Is the carrying on of these contests in any way interfered with by the progress of the war? Has that made any difference with the national trophy contests?

Gen. BABBITT. They had contests this last year, but what will be the result I do not know.

Mr. TILSON. It says, "Said contests to be open to the Army, Navy, Marine Corps, and the National Guard or Organized Militia of the several States," etc. There is no National Guard or Organized Militia, and it seems to me that this is practically eliminated. I do not mean to say that I wish to have it eliminated or interfered with, but it seems to me that it has been eliminated by the force of events.

Gen. BABBITT. The War Department might decide at any time that they might spend that.

Mr. HULL. The States may still organize militia troops if they want to.

Mr. GREENE. As a matter of fact, the Army is filled practically to the extent of one-third by our National Guard troops, and they are so designated as National Guard troops. The Army consists of the Regular Army, the National Guard, and the National Army. There are three distinct wings.

Mr. TILSON. Could these contests be carried on by the National Guard or by anybody else now in the service at the present time?

Gen. BABBITT. I doubt very much whether it could be done.

Mr. HULL. If you have National Guard organizations in the States, you could use it.

Mr. TILSON. They may have some plan to spend it.

Gen. BABBITT. I have no means of knowing. The subject pertains to the Secretary's office.

Mr. GREENE. I think it would be a good thing for morale purposes to have rifle matches in the Army.

Mr. GORDON. They have rifle practice as a part of their regular training.

Mr. GREENE. But when you add a little competition to it, you keep their spirits up.

Mr. KAHN. It would altogether depend on the attitude of the War Department as to whether they held these contests?

Gen. BABBITT. Yes, sir.

The CHAIRMAN. Under ordnance stores and supplies, you are asking for \$93,400,000 and last year you had \$230,070,000.

Gen. BABBITT. Yes, sir.

Mr. TILSON. General, I understand you are doing a great deal and preparing to do a great deal more in the way of salvaging ordnance material?

Gen. BABBITT. Yes, sir.

Mr. TILSON. And that is a part of this expense?

Gen. BABBITT. Yes, sir. We are endeavoring now to have with each division of the Army motor-repair units that carry small repair outfits and go right with each regiment, and the companies send them their supplies and they are taken care of right there, so that minor repairs can be made at once. In addition, we will have larger salvage units where material is taken to be repaired.

Mr. TILSON. The British have established large salvaging depots, as it were, for instance, at Calais, where all sorts of things are brought in large quantities and salvaged. For instance, old shoes are washed up, resoled, and repaired and sent back again to be worn, and all sorts of things are fixed up. We are preparing to do the same thing in regard to ordnance, I presume.

Gen. BABBITT. Yes, sir. The Quartermaster General also is doing that.

Mr. CALDWELL. Why do you reduce this appropriation from \$230,000,000 to \$94,000,000 for 1919?

Gen. BABBITT. The estimate as it appears here was relatively small, because we were figuring on the last year's appropriation in equipping and maintaining 2,600,000 men. After we had prepared our original notes on the basis of maintaining 3,600,000 men and equipping additional units, it was decided that the number to be considered was to be reduced to 1,600,000. Therefore we have very little to do but to maintain the 1,600,000 men, and that is a very small amount as compared with equipping a large unit of over 1,000,000 men. Ultimately, the maintenance, of course, will be a large item.

Mr. SHALLENBERGER. Then the explanation is that because we appropriated so generously a year ago you were able to equip from that sum the number of men you have now?

Gen. BABBITT. Yes, sir; when the number which we were working on was reduced, it left us approximately \$60,000,000 that we might apply toward maintenance for the next year; that is, buying supplies for 1918 for maintenance—so that we would need but \$30,000,000 more under the head of equipment.

Mr. GORDON. Can you tell me upon what theory the department estimates for 2,600,000 men when Congress has only authorized 1,000,000 less than that?

Gen. BABBITT. I can not; no, sir.

Mr. GORDON. Is it usual and customary in making appropriations for the Army for the War Department to undertake to make estimates for more men than Congress has authorized to be brought into the service?

Gen. BABBITT. It was presented to the Appropriations Committee that it was expected to call an additional 500,000 men at a certain time and then a second 500,000 men at a later period.

Mr. GORDON. That would only make 2,000,000, including the National Guard and Regular Army.

Gen. BABBITT. We have now, sir, 1,600,000 men.

Mr. GORDON. Including the National Guard and Regular Army?

Gen. BABBITT. Yes, sir; and we expected to call another million.

Mr. GORDON. You do not expect to call them until Congress authorizes them?

Mr. GREENE. It has already authorized them.

Mr. GORDON. When?

Mr. GREENE. In the original act.

Mr. GORDON. How many men do you claim Congress has authorized to be called into the service, including the National Guard and Regular Army? If this committee does not know, we ought to find out. I was under the impression that Congress had simply authorized the President to draft into the military service 500,000 men and, then, at his discretion an additional 500,000, in addition to the regular organization of the National Guard and Regular Army; is that correct?

Gen. BABBITT. That is my understanding of it.

Mr. GREENE. With such additional special and technical troops and other accessories as the President in his discretion might provide.

Gen. BABBITT. The numbers are given us, of course, by the War College. We get data from them as to what they are planning.

Mr. KAHN. General, this estimate of \$93,400,000 which you are asking for is based on an Army of how many men?

Gen. BABBITT. 1,600,000.

Mr. KAHN. If 500,000 are added in the spring, will this amount be adequate?

Gen. BABBITT. No, sir.

Mr. KAHN. How much more will you require? Can you put that in the hearing?

Gen. BABBITT. I can put that in the hearing. I can only state now that I have the data here with reference to the figures we were working on and which contemplated, instead of 1,600,000, 3,600,000; and we would need for that purpose \$232,700,000 under this item.

Mr. KAHN. If they add 500,000 in the spring, and this Congress should authorize for the year 1919 1,000,000 more, and this appropriation runs until the end of the fiscal year 1919, can you also put into the hearing how much more you would require?

Gen. BABBITT. That is a total of 1,000,000.

Mr. TILSON. One million more than at present authorized.

Mr. KAHN. Exactly; put into the hearings how much more you will require for the next increment of the National Army which has already been authorized, which would be 500,000 men. In addition to that, will you kindly put into the hearing how much you will require if the draft law is amended so that before the end of the fiscal year 1919 we should get one and a half million more men into the field? You can take it by increments of 500,000.

Gen. BABBITT. If the men have to be brought in all at the same time and maintained from that time, then it is a constant unit; but if you are bringing them in at intervals along during the year, of course we do not provide for maintenance for the same length of time.

Mr. CALDWELL. In other words, if we draft them every three or four months, you would have three or four months when you would not have to provide for maintenance.

NOTE.—The amount required for equipping and maintaining a force of 100,000 men is estimated at \$127,900,000, and for every additional 500,000 men is sum should be increased by \$90,300,000.

Gen. BABBITT. Yes. Col. Hoffer has a memorandum with reference to the necessity for increasing this appropriation.

Mr. KAHN. Col. Hoffer, you want an increase for the 1,600,000 men anyhow?

Col. HOFFER. Yes, sir. Mr. Chairman, the estimate under ordnance stores and supplies of \$93,400,000 includes an item of \$28,300,000 for various miscellaneous material pertaining to trench warfare matériel, and particularly, to bomb-dropping aeroplanes; items which can not properly be placed under other appropriations, such as reflex lights, illuminating rockets, signal rockets, position lights, smoke torches, aeroplane flares, bomb sights, releasing mechanism, etc. Based upon an army of the same size, and in accordance with which all the other estimates were made, the sum required for this purpose is estimated at \$28,300,000; but it has been found necessary to revise our estimates for three reasons: In the light of later information an increase in the estimated expenditure per month in hostilities, the requirement for more substantial reserves than previously contemplated, based upon recommendations from Gen. Pershing, and a material increase in the number of bomb-dropping aeroplanes, data in regard to which was very indefinite at the time the original estimates were submitted. In the light of this new information it is found necessary to ask for an increase of \$34,500,000.

Mr. KAHN. That would make \$62,800,000 for this class of material?

Col. HOFFER. Yes, sir. The additional sum of \$34,500,000 asked for may be divided into two parts: That required to meet the deficiency in our estimates up to September 1, 1918, of \$18,200,000, which was supposed to have been covered in the urgent deficiency bill approved October 6, and the remaining sum is to cover the deficiency in our estimates submitted under this bill of \$16,300,000, approximately, making the total additional sum required \$34,500,000, of which \$18,200,000 should be available as promptly as possible.

Mr. SHALLENBERGER. Do I understand that this increases this item of \$93,400,000 by \$34,500,000?

Col. HOFFER. Yes, sir.

Mr. CALDWELL. And you say you want \$18,200,000 to be available at once?

Col. HOFFER. Yes, sir.

Gen. BABBITT. I think it would not be necessary to provide that that sum should be immediately available if this clause of special legislation is accepted by the committee, which reads:

The appropriations made in this act shall be available for the payment of obligations on account of the existing emergency incurred prior to the passage of this act and which are properly chargeable to such appropriations.

Mr. KAHN. But the colonel said that in September, 1918, this deficiency of \$18,200,000 would arise.

Mr. HOFFER. I did not mean to convey that impression. I meant to say that the \$18,200,000 should be available, so that we can now procure the material which should be on hand by September 1, 1918.

Mr. CALDWELL. Then you would have to have a special clause making that \$18,200,000 immediately available?

Gen. BABBITT. Not under this clause of special legislation.

Mr. CALDWELL. That covers only past obligations. You want to obligate this amount between now and the 1st day of July.

Gen. BABBITT. If he is authorized by the Secretary of War to spend \$18,000,000 for a purpose for which this appropriation is applicable and this clause is adopted—

Mr. CALDWELL (interposing). But that clause says, "Any obligations incurred prior to the passage of this act."

Gen. BABBITT. Yes, sir.

Mr. CALDWELL. The colonel wants to make the obligations after the passage of this act, but pay for them before the 1st of July. We are appropriating here for the fiscal year beginning July 1, 1918, and running to June 30, 1919, and in the meantime, in September or in June, he expects to incur some of this liability, and there ought to be a provision in here making that amount immediately available. Am I not right, Col. Hoffer?

Col. HOFFER. Yes; under existing legislation we can not contract for any material without either having the actual funds or contract authorization, so that without some legislation it would be impossible to enter into any contract to cover any portion of this sum, and the point I wish to make is the necessity for having at least this amount available at the earliest possible date. I think the entire sum should be available before June 30, 1918, in order that contracts may be entered into.

Mr. KAHN. I think it has been the custom of the bureau to enter into agreements for the expenditure of the money even before the beginning of the fiscal year, but the payments are not made until the money is available.

Mr. GARRETT. Can you not put a saving clause in here providing that the money shall become available when contracts for supplies have been made and approved by the War Department and in such amount as such contracts are made?

Gen. BABBITT. He could do that now, sir, if this material is delivered after June 30. We have always done that. In ordinary peace times, for instance, if this act passed in April, we would make all our contracts and arrangements and begin deliveries July 1 and make payments at that time.

The CHAIRMAN. I was called from the room to answer the telephone, and I have not heard your statement. You want to make this available before the 1st of July?

Col. HOFFER. Mr. Chairman, I requested that \$18,200,000 be made available at the earliest possible date to cover the deficiency in the estimate on the funds for materials which should be available by September 1, 1918.

Mr. TILSON. Of course, it would be impossible to separate what would be payable before July 1, 1918, and what afterwards.

Col. HOFFER. We need it all in order to enter into the contract.

Mr. CALDWELL. Col. Hoffer wants to make the contract and provide that part of it shall be deliverable before the 1st of July, 1918.

Mr. MCKENZIE. From what I have been reading, it seems to have been the policy, announced through the newspapers, that in certain branches of the War Department they have adopted a policy of making contracts, for instance, with a concern and advancing them

money, not only to buy material but in some instances to build buildings and buy machinery. That has not been the policy of your department in any instance, and that is not involved in this appropriation, is it?

Col. HOFFER. It may become involved, and for that reason, in my opinion, the funds covered by this bill should be made available upon the passage of the bill. Under authorization confirmed by Congress, advanced payments not to exceed 30 per cent can be made under such regulations as the Secretary of War and the Secretary of the Navy may promulgate, and there has been established by the Secretary of War a War Credits Board, which passes upon such cases. Furthermore, the contracts are of such magnitude in individual cases, and the financial condition of the country is such, that it has been found necessary to award our contracts in such a way as to assist in every possible way the contractor in preventing him from having tied up in this particular order any more capital than is necessary. For that reason, if we provide additional facilities we arrange to pay for them promptly. As the material is put in, we pay for it upon receipt of the proper vouchers, O. K'd by our inspector, and, furthermore, we make arrangements whereby we furnish in many cases the raw material, which must be paid for as soon as delivered. Therefore we have many financial obligations to meet in the payment of actual money before the delivery of the finished article begins, and that is the general practice at the present time with reference to the classes of artillery coming under artillery-ammunition and trench-warfare matériel.

Mr. QUIN. Have you exhausted the last appropriation of \$230,000,000?

The CHAIRMAN. Mr. Quin means the appropriations made at the last session of Congress in the three different bills.

Col. HOFFER. The bills for last year only carried for this particular class of material \$4,520,000, which is a very small sum, and that entire amount has been obligated.

Mr. GORDON. How about the entire \$230,000,000? Has that been used?

Col. HOFFER. I can only speak for the particular classes of material that I am attempting to cover.

Mr. McKENZIE. I understood Gen. Babbitt to say there was about \$60,000,000 of that still available.

Gen. BABBITT. This is under just one item. I will give you just what remains.

The CHAIRMAN. You can put a statement of that under each item in the record, General.

Gen. BABBITT. All right, sir. We have about \$97,000,000, roughly.

Col. HOFFER. Mr. Chairman, I may state in this connection that while the appropriation is available for these different classes of material, it is all in accordance with certain carefully prepared estimates, and in the practical application of these funds it is almost equivalent to having these appropriations contain subheads appropriating a certain amount for each class of materials.

Mr. GREENE. In other words, you endeavor to estimate and account to yourselves through different classifications whether the law requires it shall be done or not?

Col. HOFFER. Yes, sir.

Gen. BABBITT. In this particular case, for example, there is one division of the office known as the equipment division, which handles a certain portion of this fund and which is credited with \$30,000,000, and another division known as the gun division, which is credited with \$28,000,000, which they desire a further increase in of \$34,000,000 for the special items referred to, and the carriage division, which is credited with \$35,000,000, nearly all of which will go for artillery harness. Each one of those divisions is responsible for spending that money for the items which they handle, and the Chief of Ordnance holds each division very closely responsible for carrying out the projects.

Mr. CALDWELL. But the Chief of Ordnance has authority, and frequently does, does he not, exercise the authority, and where they find they have overestimated one branch, as in a case like this, and underestimated another, order a transfer of a certain portion of the fund from one branch to the other?

Gen. BABBITT. Very seldom.

Mr. CALDWELL. But he has done it?

Gen. BABBITT. It is possible for him to do so, but the division has to make an exceedingly good case for him to make any departure from the project as presented to you, and it would have to be such a one as he would be willing to defend fully and say to you, "We have done this for the following reasons." I do not recall more than one or two cases in my three years here in which we have made any departure.

Mr. CALDWELL. But in 1916 he transferred the money that was appropriated for building rifles and had pistols made out of it, and instead of making the rifles in the arsenals he had pistols made in private establishments. Am I not right about that?

Gen. BABBITT. I could not say offhand about that.

Col. HOFFER. That would come under the same division of the office.

Gen. BABBITT. But, even then, the division would be held as close as possible to the figures given here.

Mr. WISE. General, is there any way by which we can take the appropriation made last year, of over \$200,000,000, and know what we have got for that money; just what ordnance has been manufactured?

Gen. BABBITT. We can give you that in the form of orders placed.

Mr. WISE. I understand about the orders placed, but what I want to know is how much actual material we have got for it and where it is.

Gen. BABBITT. We can give you exactly how much has been delivered of those orders.

Mr. WISE. I would like to have some information along that line; not what we have got contracts for, but what we have got now.

Gen. BABBITT. If it is a matter of personal information, perhaps the quickest way to arrive at it would be to look at our production charts, where there is plotted, for every item we make, the total amount that has been ordered and the amount that has been delivered. These are kept up to date. I have, for example, in my own office in a case which is kept locked, so it is not subject to inspection

by unauthorized persons, charts on which are given all that information, and the other divisions have similar charts.

NOTE.—See testimony of December 12, 1917.

Mr. WISE. Do you know where all of that material is located?

Gen. BABBITT. Yes, sir. It is turned over to the supply division, and they can tell you where it is located, even if it is in transit.

Mr. SHALLENBERGER. You were to prepare some figures showing the surplus fund you still have in reserve under this item.

Gen. BABBITT. Yes, sir; I will put them in the record. There are about \$97,000,000 of that total sum not expended.

Mr. TILSON. Does that mean that no contracts have been made?

Gen. BABBITT. The contracts have been made, but that amount simply stands on our books.

Mr. TILSON. And you have more than six months to run before the end of the fiscal year?

Gen. BABBITT. Yes, sir. Of course, these moneys were not given to us until October.

The CHAIRMAN. Have you anything further to say on that item, General?

Gen. BABBITT. I have nothing further to say; no, sir. As I said, it is entirely a question of the number of troops that are to be supplied.

The CHAIRMAN. Mr. McKenzie asked you a question a moment ago that he said he wanted to pursue further. Perhaps you can explain it now: Did not the Appropriations Committee in one of its bills, either in that of June 15 or the bill of October 6, authorize the War Department generally to advance money to private manufacturers?

Gen. BABBITT. I do not recall which bill it was. It happened to be one in which I was not interested.

The CHAIRMAN. That law only applied during this fiscal year, as I understand it?

Gen. BABBITT. I think it applied solely to that bill.

Mr. OLNEY. I would like to ask the general a question as to the kinds of rifles that are used. Are they using Springfields, Enfields, and Kraggs? Are the Kraggs serviceable to the men for training purposes?

Gen. BABBITT. That is all they are intended for, and they are being replaced.

Mr. OLNEY. Do they furnish the Springfield rifles now?

Gen. BABBITT. Both the Springfield and Enfield rifles.

Mr. OLNEY. Are you supplying enough rifles to meet the demand?

Gen. BABBITT. Col. Thompson can tell you more about that.

Mr. GORDON. As I understand you, on the question of additional appropriations, there are \$34,500,000 in addition to the estimate of \$93,400,000?

Gen. BABBITT. Yes, sir; an increase of \$34,500,000 beyond \$93,000,000.

Mr. GORDON. What are the reasons for that?

Mr. KAHN. He gave that, Mr. Gordon. He spoke of the aeroplanes and the necessity of giving them additional bombs and things of that sort in connection with the flying squadron. He went into that.

Mr. GORDON. It did not seem clear to me.

Col. HOFFER. Three considerations resulted in this increase in the estimates. An increase in the estimated expenditure per month during hostilities was made. In other words, the amount to be expended be a given force was underestimated, and the revised estimate, based on late information, indicates that we must provide a greater number for expenditure in hostilities.

Mr. GORDON. Is that because of the increased force?

Col. HOFFER. No, sir.

Mr. GORDON. That is, taking the same number of men and machines?

Col. HOFFER. There has been a slight increase in the force, too, because the estimates which were submitted for this class of material last year were based upon a million men, so that a part of this increase is due solely to the larger force now being considered. The second consideration was the requirement for a more substantial reserve than was previously contemplated. That is based upon the recommendation of Gen. Pershing that we must have a larger reserve.

Mr. GORDON. How much of it is reserve and how much of it is intended for the fiscal year ending June 30, 1919?

Col. HOFFER. Of this amount, \$4,200,000 is for reserve and the remainder is for expenditure.

Mr. GORDON. I would be glad if you would do that. I think the committee ought to be in a position to state on the floor of the House just how much they are appropriating for reserve and how much for the fiscal year for which they are appropriating. As you know, there is a constitutional provision which we are frequently reminded of on the floor of the House which prohibits Congress making appropriations for the Army for a longer period than two years, and I, myself, have been charged, or this committee has been charged, already with attempting to anticipate a possibly hostile Congress and to appropriate in advance money that the next Congress might be reluctant to appropriate. That is a pretty serious charge to make, and, as far as I am concerned, I would be glad to be able to refute it successfully if anyone makes it. We want to be in a position to state on the floor of the House, if we can, just what we are appropriating for. If we are appropriating for a reserve of material that is not to be used for the fiscal year ending June 30, 1919, we ought to be able to state specifically how much that appropriation is.

Col. HOFFER. It is necessary in arriving at a reserve to consider all the elements that might affect production, delivery, shipment, and all other considerations. There must always be some reserve, and all of our estimates have been based upon having a reserve. For example, when a battery goes into action, or a man goes into action, there should be a certain amount or supply of ammunition in reserve.

Mr. GORDON. Your appropriations always contemplate that?

Col. HOFFER. When I speak about a reserve I simply mean that in accordance with the information received from abroad and in accordance with Gen. Pershing's recommendations, in order that there may be on hand on September 1, 1918, in France, or here for shipment to France, because shipments for expenditure on September 1 must start long before that time, we must have, in order to provide for expenditures for and keeping our troops supplied, this quantity of ammunition and supplies, the total estimated cost of which is represented by the sums I have given to you.

Mr. KAHN. In other words, you had better provide for any possible contingency that may arise over which you would have no control?

Col. HOFFER. Yes, sir.

Mr. KAHN. For instance, if two or three nitrate ships, bringing nitrates to this country were blown up, you would have to have a sufficient supply of powder on hand to take care of that contingency?

Col. HOFFER. Yes, sir.

Mr. TILSON. By providing a war reserve, that does not necessarily mean that it will not be used before June 30, 1919?

Col. HOFFER. No, sir; not by any means.

The CHAIRMAN. Is not a reserve to be stored away for use in some future years?

Mr. TILSON. I do not understand it to be that kind of reserve at all.

Col. HOFFER. It is not. It covers supplies which are necessary to insure the Army being operated as it is expected to operate during the year 1919.

Mr. GORDON. Of course, if you take into consideration such contingencies as Mr. Kahn speaks about, there would be no reason for asking the judgment of this committee on the amount to be appropriated. Of course, I do not quite agree with that contention.

Gen. BABBITT. You see, in getting our supplies over there and looking after troops some provision must be made for a lot of delay in shipments, and Gen. Pershing has laid down the rule that we must have on hand over there three months' maintenance supply. We estimate that they will use so much every day. One day they may not use it at all, but the next day they may use twice as much. This covers the average consumption. In other words, we must be prepared to ship over there enough to take care of them for three months in case something happens. Then we must have a month's supply in transit, and, finally, these figures contemplate about two months' supply in this country.

Mr. GORDON. Are you able to say how much of this reserve is provided for in this estimate of \$93,400,000?

Gen. BABBITT. We included a certain amount for it.

Col. HOFFER. We included some reserve in it, but now we have been obliged to revise the estimates in accordance with Gen. Pershing's recommendations, and we are giving them more.

Mr. GORDON. So, as a matter of fact, this additional \$34,500,000 is all intended to provide supplies for a reserve in addition to what was provided by the other estimates?

Gen. BABBITT. I do not term it a "reserve." That would be a misnomer. It is not a reserve in the sense that that term has been heretofore employed.

The CHAIRMAN. The next items are on pages 64 and 65.

Gen. BABBITT. Beginning on page 64, that item pertains to the loss of a small number of arms and some ammunition that was taken from striking miners in Colorado so as to prevent trouble there. They were taken both from miners and from the operators. The Federal Government took possession of them for the time. The authorities endeavored to ship all of this material to Fort Logan, and eventually it was to be redistributed to the owners. These claims, which amount to about \$7,800, have been looked into and the Ord-

nance Department thinks these claims are just. Their final adjudication, you will notice, is left to the Auditor of the War Department.

Mr. CALDWELL. Were these men rioting when they had their arms taken away from them, or did the Federal authorities go into private houses and take the arms?

Gen. BABBITT. They took arms away from everybody there, as I recall it.

Mr. CALDWELL. From people on the streets and from their homes?

Gen. BABBITT. From the homes and everywhere else. They went into the various mining towns. As you know, there was threatened a serious uprising, and not only the miners had arms in their possession which were taken, but arms were taken from the management of the companies who had accumulated them with a view to defending their plants.

Mr. CALDWELL. If a man is out on the street rioting with a firearm in his possession and unlawfully using it and it is taken away from him, that is nothing that he ought to be paid for, but if they went into the private houses of these people in the fear that some of them might take the law in their own hands, that is a different proposition.

Gen. BABBITT. These claims are of the latter class.

Mr. CALDWELL. This is where the firearms were taken from the houses of peaceable people?

Gen. BABBITT. Yes, sir. They took the names and gave them receipts, but the difficulty of the thing was that it had to be done so hurriedly and the Federal agents were so few in number and so unaccustomed to that class of work that they were unable to distribute back to the original owners all that they had taken, and on investigation it is found that they have claims which seem to be just in these instances.

Mr. FIELDS. Who has the final adjudication of these claims?

Gen. BABBITT. The Auditor for the War Department, and they also require the approval of the Secretary of War.

The CHAIRMAN. The next item provides:

That all material purchased under the appropriations for the Ordnance Department in this act shall be of American manufacture, except in cases when, in the judgment of the Secretary of War, it is to the manifest interest of the United States to make purchases abroad—

And so forth. You have stricken out the words "in limited quantities."

Gen. BABBITT. The words "in limited quantities" are taken out for the reason that we are purchasing and must purchase in much larger quantities from this time on from France and England for our immediate needs. We are purchasing a great many guns and much ammunition from them.

Mr. KAHN. Are you getting any very large guns from the French or English?

Gen. BABBITT. We are getting some few 6-inch guns of the howitzer type.

Mr. KAHN. Are you getting anything larger than that?

Gen. BABBITT. We may get some 8-inch, some 9.2-inch, and maybe some 9.5-inch howitzers.

Mr. CALDWELL. Do they shoot our form of ammunition?

Gen. BABBITT. We have to buy their ammunition, and we will have to make some of their ammunition in this country.

Mr. CALDWELL. Have we any factories already making any ammunition for these guns?

Gen. BABBITT. There were some manufacturers in this country making that ammunition before we went into the war.

Mr. MCKENZIE. This is not a question of buying guns in France, is it?

Gen. BABBITT. Yes, sir; and any other material. For instance, we have bought helmets.

Mr. MCKENZIE. On the question of the guns, are you being handicapped in the Army by the fact that a number of our gun-manufacturing establishments are being employed in the manufacture of guns for the Navy? In other words, do they have priority of contract over the Army?

Gen. BABBITT. I would like to have Col. Hoffer answer that question.

Mr. MCKENZIE. I wish to state that I read an article a few days ago discussing that very point of the necessity of having some authority in Washington with power to say to which branch of the service deliveries should be made first, and the article went on further to say that some 600 contracts had been entered into for the manufacture of guns for the Navy. Coupled with that I had the statement of Representative McCormick, of our State, who has been on the western front. He says that the only thing necessary to win this war, or, at least one of the great essentials, is artillery. Now, the point I want to have made clear and to find out about is whether or not the manufacturers in this country are manufacturing guns for our Navy when the need is greater in the Army. Do you know anything about that part of it?

Col. HOFFER. When war was declared, in accordance with the policy of the administration, as defined in the President's message to Congress, the procurement of war munitions in this country by our allies was not interfered with, and we found what we had known before, that to a great extent the gun-forging and the gun-machining capacity of this country was taken up with orders from our allies. It was necessary, therefore, to consider what further capacity existed, to what extent existing plants could be expanded, and then to consider new organizations that could be developed to take care of the immense quantity of gun forgings to be made and the immense work of machining those gun forgings into finished guns. The question of priority was settled by the Priority Committee of the National Defense, in conference with representatives of the Navy Bureau of Ordnance and the Army Bureau of Ordnance, and where the Navy Bureau of Ordnance and the Army Bureau of Ordnance could not agree then the Priority Committee settled in favor of one or the other. The result of that has been that each department now is working independently with such firms and are either utilizing their entire capacity, or in the case of firms which are manufacturing material for the Navy as well as for the Army confining ourselves to the exact part of their capacity that has been allotted to the Army. So there is not now and has not been for months any question of interference. For example, certain firms or organizations which were considered to be organizations for handling this work were allotted to the Army and certain of them were allotted to the Navy, and each department has developed the particular plant in which it is interested. You

see, a plant could not be operated for the manufacture of guns for the Army and also for the manufacture of guns for the Navy, because the guns are so dissimilar that it would require a complete change of equipment, such as tools, gauges, etc., and so much of this equipment would have to be changed that it would take months to accomplish it. Therefore the separation must come at the beginning.

Mr. McKENZIE. Right on that point, they could utilize men in your department who are now manufacturing guns for the Army. That is, men who are now being used in those factories for the manufacture of guns for the Navy could be used for the manufacture of guns for the Army, and, as I understand it, you are short of men of that character. While I do not want you to understand that I am prejudiced against the Navy—because I fully appreciate the importance of the Navy—yet I do feel, and I can not help but feel that this is a war that must be won, if won at all, by the Army; and it seems to me that every ounce of power and force than can be thrown behind the Army ought to be thrown there, and that some of these other things could wait. What I would like to know is, whether or not we are expending some of our force in the manufacture of guns for fortifications or for the Navy that could be used at this time for the manufacture of guns to be used by the mobile army in France?

Col. HOFFER. The Navy has had priority with reference to such guns—for example, the guns required to arm merchantmen and also with regard to certain guns for destroyers and certain machinery connected with destroyers.

Mr. GREENE. The idea being that until the Navy could make the seas safe there would be no army sent there at all.

Mr. McKENZIE. But why should they make 14 and 16 inch guns for battleships that they may not have use for in two or three years?

Col. HOFFER. The question of priority has been very definitely settled, and I think every point has been covered except just one point of labor.

Mr. DAVIDSON. Is there any competition between the Army and the Navy in the employment of labor, so as to make laborers more inclined to go to one line of production than to the other?

Col. HOFFER. I do not think that competition is at all serious. In starting an organization along this line of work, you consider, among other things, the labor. You consider the labor as well as other conditions at those plants.

It is not likely that there will be any serious interference on that account. The only interference that has come to my attention has been in cases where plants in undertaking this work wanted to get from some of the older plants some of their best men, and we thought that was not a bad idea, because the organization that could be diluted is the old organization and the organization that needs trained men is the new organization. While that is checked, it can not be said to be absolutely under control, and I do not know of any control over the labor situation with regard to any class of material.

Mr. McKENZIE. It would seem to me that this is no time for rivalry as between the two branches of the national defense, and it seems to me the organization ought to be so perfected as to drive at the point that is, perhaps, the weakest, or the point that needs the greatest assistance, and it seems to me that at this time that is the Army.

Mr. KAHN. As I understand it, this proportion was arrived at by a board which was duly organized to consider the matter, and after having considered it they decided that so much should be done for the Navy and so much for the Army, and that you are acting in accord with that.

Col. HOFFER. Yes, sir; both with regard to the older plants and with regard to the new plants that are turned over in their entirety to either the Army or the Navy. All questions with regard to war material must pass through and be cleared by the Priority Committee of the Council of National Defense, which consists of officers of the Army and Navy, as well as of civilians.

Mr. KAHN. Of course, there is such a contingency possible as the German fleet coming out of the Kiel Canal and getting beyond the British fleet and coming over to this side of the Atlantic. Such a contingency might happen.

Mr. CALDWELL. In the beginning of the development of our air forces there was a great deal of trouble experienced in finding firms capable of making the necessary equipment. Have you had the same kind of trouble in finding firms capable of making ordnance?

Col. HOFFER. Yes, sir; particularly with reference to gun forgings and gun machining. It was an art known to very few manufacturers.

Mr. CALDWELL. Has that been eliminated now, and have you gotten to the stage where you are making what your plans require?

Col. HOFFER. Our plans are progressing satisfactorily, and we have no reason for anticipating any unusual difficulties. Of course, difficulties are going to arise because there are complications about coal, there are complications about labor, and there are complications about raw materials with regard to every industry in the country, and they must be met.

Mr. CALDWELL. What I had in mind was this: When we first began thinking about the air service we were met with the proposition that the country could not make it; that the art was not developed in this country so we could make it. Have you got that condition in the Ordnance Department?

Col. HOFFER. Yes; we are struggling with it every day with regard to every class of material.

Mr. CALDWELL. What is the particular big thing in front of you which you are struggling with which the art of America has not developed to take care of?

Col. HOFFER. We think we have practically overcome the difficulty with regard to gun forging and gun machining. We are having difficulty now with reference to smokeless powder and explosives. The capacity of the country is not equal to the task which is being laid upon it, and one of the greatest sources of trouble is the scarcity of raw material.

Mr. CALDWELL. What particular raw materials?

Col. HOFFER. There is the question of toluol for trinitrotoluol. Then there is the question of ammonia for ammonia nitrate, and then there is the question of sufficient nitric and sulphuric acids. The latter of the acids is very serious. There is not plant equipment in this country able to take care of half of our needs, but we are developing as rapidly as we can, and just as in the case of gun forging and

gun machining we had to take 12 or 15 entirely new organizations, some of which had never seen a gun forging and never known anything about the building of a gun, and provide them with the plant equipment and undertake the task of instructing them.

Mr. CALDWELL. Are you doing that with reference to the other things you are short on?

Col. HOFFER. We are endeavoring to do so; yes.

Mr. OLNEY. Colonel, does not the United States even now depend upon the French manufacturers almost entirely for their heavy guns, and to what extent is this country going into the manufacture of guns, and of what caliber?

Col. HOFFER. We are looking to this country to eventually furnish our entire supply, but until this country is able to provide the troops abroad with the guns and the ammunition that they require we are relying upon our allies to furnish that which is required, and we are replacing it in the form of the raw material or the components.

Mr. GREENE. The 75's are largely built by the French and turned over to us now.

Col. HOFFER. They are furnishing us the 75's necessary for the troops that are over there until we can get the manufacturers in this country started.

Mr. TILSON. We are manufacturing or preparing to manufacture the ammunition for the 75's right in this country?

Col. HOFFER. Oh, yes. We have 75 ammunition under manufacture, and we also have 75-millimeter guns and carriages under manufacture.

Mr. OLNEY. You are manufacturing heavy guns here?

Col. HOFFER. We are manufacturing all mobile artillery from 75-millimeter up to 9½-inch.

Mr. TILSON. But are we manufacturing the 75-millimeter gun in this country? The French have been very particular about their gun.

Col. HOFFER. I am hesitating about the use of the word "manufacture." We started months ago to provide plans.

Mr. TILSON. To manufacture the 75-millimeter gun?

Col. HOFFER. To manufacture forgings and to manufacture all mobile artillery cannon from the 75-millimeter up to and including the 9½-inch.

Mr. TILSON. But the 75-millimeter gun is not our 3-inch gun. It is a slightly different gun, of course.

Col. HOFFER. Yes.

Mr. TILSON. My idea was not whether we are manufacturing guns of that general type, but whether we are manufacturing the actual 75-millimeter French gun in this country.

Col. HOFFER. No; we are not. I misunderstood your question, Mr. Tilson. We are manufacturing our own gun and carriage, but bored and chambered for the 75-millimeter ammunition.

Mr. GREENE. That is a temporary makeshift, because we have not abandoned the 3-inch gun, have we?

Col. HOFFER. It will be permanent, because there is no reason why we should ever go back to it.

Mr. CALDWELL. When you do that you are going to have one kind of ammunition for the Army and another kind of ammunition for the Navy.

Col. HOFFER. The ammunition of the Army and the Navy has never been interchangeable.

Mr. KAHN. From your former statement about the scarcity of these things which you now need, you are just beginning to realize how utterly unprepared for war this country is!

Col. HOFFER. We have realized it for some time, sir.

Mr. KAHN. The Army has, but some of the committee have not.

Col. HOFFER. But I may say in regard to some of these things that it was not anticipated—and we had very good reason for so thinking—that the allies would make the demands upon this country that they are now making. We had every reason for believing that capacity along these very critical points would be free to us about this time, and now there is no prospect of its ever being free.

Mr. SHALLENBERGER. Do I understand you to say that our artillery troops in France are using the French gun and not our 3-inch gun?

Col. HOFFER. They are being armed with the French gun.

Mr. SHALLENBERGER. Why have you abandoned our gun? Have you decided that the French gun is a better gun than our own gun?

Col. HOFFER. We think our 3-inch gun and carriage is as good as there is in the world.

Mr. SHALLENBERGER. Why do you not use it?

Col. HOFFER. We could not provide it in time.

Mr. SHALLENBERGER. You could provide it as fast as you could provide the French. You have a great many of them here. Have you not taken any of our guns over there?

Col. HOFFER. No, sir.

Mr. SHALLENBERGER. Why not?

Col. HOFFER. Simply because there was not a sufficient number to take care of the troops.

Mr. SHALLENBERGER. Have you bought more French guns than we have got guns manufactured now of the 3-inch size.

Col. HOFFER. Yes, sir; practically.

Mr. KAHN. Colonel, how long does it take to make a 3-inch gun?

Col. HOFFER. It takes, from the time you start the forgings, about five or six months.

Mr. KAHN. And when you were asking for a large appropriation to make guns in time of peace some of us had that in mind.

Mr. SHALLENBERGER. Can you make the French gun faster than you can make our gun?

Col. HOFFER. As I explained to Mr. Tilson, we are not making the French gun.

Mr. SHALLENBERGER. But you are going to make one like it?

Col. HOFFER. We are taking our gun and chambering and boring it so it will fire the French ammunition, and also making some change in the breech mechanism.

Mr. TILSON. Do I understand you anticipate that that is going to permanent and that hereafter our 3-inch guns will be chambered for the 75-millimeter ammunition?

Col. HOFFER. Yes, sir.

Mr. TILSON. So that it will be interchangeable with the ammunition which the French use in their seventy-fives?

Col. HOFFER. Yes, sir.

Mr. TILSON. And then it will be our permanent policy in regard to our 3-inch guns? We are going on making our 3-inch guns, but

we are going to use in them hereafter slightly different calibered ammunition which is used by the 75-millimeter guns?

Col. HOFFER. Yes, sir.

Mr. GREENE. Is it not true, Colonel, that even to-day in our 3-inch guns we have not enough to supply the troops now in training in this country?

Col. HOFFER. Yes, sir.

Mr. SHALLENBERGER. What is the use of simply changing the character of your ammunition? Is it not a fact that you expect to make a gun which is in every detail the French gun, because you found the French gun is a better gun than our gun?

Col. HOFFER. No, sir; we do not think the French gun is better.

Mr. SHALLENBERGER. You only found the French ammunition better than our ammunition?

Col. HOFFER. The French ammunition has some points of superiority over our own ammunition. We could have applied the French ammunition to our 3-inch guns just as well, because there is just a slight change, and the only change is in the projectile, a slight increase in diameter, and a slight adjustment of the weight. The question arose as to how our troops could be best taken care of; first, whether they should fight with the English or fight with the French, and it was finally decided they would fight with the French. In order to have artillery and artillery ammunition for the troops that first went over there, it was necessary to rely upon our allies to supply those troops and keep them going until we could catch up with our manufacture here. That was the determining factor in changing.

Mr. TILSON. That is just what I was going to ask you. It saves us another transition from one ammunition to another. Now, we must make 75 millimeter ammunition in order to supply the guns that we must now use, and therefore it will prevent us from making another change if you go on making 75-millimeter ammunition and use it in our own guns. That will save us from changing once more.

Col. HOFFER. Yes, sir.

Mr. MCKENZIE. I would like to ask the Colonel a question in the interest, I might say, of fairness, in reference to the question asked by Mr. Kahn about the length of time it takes to manufacture a 3-inch gun. You replied from five to six months. Now, what are we to understand from that; that it takes from five to six months to get the first gun manufactured, or to manufacture each gun? In other words, if you started manufacturing 3-inch guns six months ago, how many could you turn out a day now, at the end of six months, with the facilities you have?

Col. HOFFER. A plant starting now, for example, ought to be turning out 75-millimeter guns, or 3-inch guns, up to about its capacity within six months. They could rush out one gun in less time than that. For example, one of these plants we have created for the manufacture of 155-millimeter guns has already completed a gun. They have gone through the operations, completed the gun, and completed the breech mechanism simply as a try-out of their general shop production.

Mr. CALDWELL. How many do you expect to produce a day when that plant gets to operating?

Col. HOFFER. I do not remember that.

Mr. CALDWELL. Have you any figures available or in your head as to about how many of these ordnance guns you are going to make in all the plants available now per day?

Col. HOFFER. We expect to complete by the summer of 1919, 16,000 guns of these various calibers.

Mr. KAHN. All told?

Col. HOFFER. Yes, sir.

Mr. KAHN. Could you tell us how many a day would be turned out by all the plants subsequent to that time? You say 16,000 in six months from now?

Mr. CALDWELL. No; in 18 months from now. Let me ask you just one more question. While we are making in these plants for ourselves 16,000 guns between now and the time you spoke of, our allies are having a great many guns made here too, are they not?

Col. HOFFER. Comparatively a small number.

Mr. CALDWELL. They are making a great deal of ammunition here, are they not?

Col. HOFFER. Not any great quantity; no.

Mr. CALDWELL. You said a few moments ago you had expected all these plants would be available for our service and that you have now discovered that they are not. Those two statements do not seem to agree.

Col. HOFFER. I made the mistake of applying your term "ammunition" to the metallic parts, such as the shell, and not to the explosives. The serious thing is the explosives, and to some extent the shell, but only with regard to certain calibers.

Mr. CALDWELL. The allies are buying enormous quantities of explosives here; is that the idea?

Col. HOFFER. Yes.

Mr. CALDWELL. So that as the war goes on, and the allies get out and we go in, we are going to have as much in the future as we have now?

Col. HOFFER. The trouble is they are not getting out as we expected. That is the primary cause of our trouble.

Mr. CALDWELL. You did not understand my suggestion of "getting out."

Mr. SHALLENBERGER. I would like to ask one more question about this artillery. Do I understand you to say that we have not sent any of our 3-inch guns to Europe; that our troops over there are all equipped with the French guns?

Col. HOFFER. Yes, sir.

Mr. SHALLENBERGER. That means we are being furnished a great many guns. How does that compare with Mr. Kahn's statement that we were informed by the office of the general staff of the French Army that we must not expect to be supplied with any essential of war, when artillery is the most essential part of modern warfare, and we are able to secure all these cannon from the French people when we were told that we must not expect anything from them? If our cannon are as good as the French cannon, and they are so short of everything, how is it we are still buying cannon of them?

Col. HOFFER. We are only buying up to the point where we can supply our troops with guns from here.

Mr. SHALLENBERGER. Where are all the 3-inch cannon we have made and paid for if they are just as good as the French cannon?

Col. HOFFER. They are all in the training camps, where they are imperatively needed, and where there is a shortage now for training.

Mr. TILSON. Are there not some training camps in this country now that are training men with pine logs?

Col. HOFFER. Yes.

Mr. TILSON. I have some photographs which show where they are actually training men with pine logs because they can not get the guns to train them with.

Mr. SHALLENBERGER. Has it been discovered by any other nation fighting over there that they have had to abandon their own ammunition and their own cannon as we have had to do? Did the English have to abandon their artillery supplies, or the French or the Belgians or the Italians? Have they not all adhered to their type or ordnance?

Col. HOFFER. Yes, sir; but they are working under the difficulty of each one of them being absolutely forced to maintain its own base. Their lines are just as separated as anything could be.

Mr. KAHN. Was not that the great trouble at the beginning of this war? Did not all the allied nations find themselves absolutely short of the quantity of ammunition that they required to serve their various field pieces?

Col. HOFFER. Yes; even Germany was short at the beginning.

Mr. GREENE. But Germany had the advantage of drawing from one standardized supply all the time for herself, whereas her allies were split up into as many different sources of supply.

Mr. SHALLENBERGER. Then the reason we had to change was not because you discovered our ordnance was inferior to that of our allies?

Col. HOFFER. No; not by any means, but as a matter of military expediency.

Mr. HARRISON. Colonel, how do you expect to arm this army of a million and a half with these big guns? Where do you expect to get the big guns? You have not got them here and you say the French can not supply them. Where are you going to get the big guns for this army?

Col. HOFFER. We had under manufacture in this country some large guns of the English type; and, again, for some of those larger calibers we are relying upon our allies to supply the guns until we can make them.

Mr. HARRISON. You are going to have an army, as I understand it, of 1,500,000 or 2,000,000 men in France. Have you got a plan made out by which you are going to supply them with these big guns necessary for their use, and where are you going to get them, and have we got the plants in this country to manufacture them?

Col. HOFFER. Yes, sir; the plants are being created and all our plans made to furnish all the cannon we need for the Army.

Mr. HARRISON. I understand that is contemplated for 18 months from now.

Col. HOFFER. That would be the artillery for 2,000,000 men with all their reserves.

Mr. HARRISON. What are you going to do for the next summer?

Col. HOFFER. Our guns and carriages and equipment will be coming in in the spring. Some of our 75-millimeter guns are slated for delivery commencing in January.

Mr. GREENE. That is right in line with the question asked a while ago. After you have once laid down the plan at the plant for the making of any type of ordnance, you figure a certain base period in which one gun is being completed, machinery, system, and everything else desired, and then you get in gear for it, and from that time there are successive periods of maturity for the various pieces of ordnance. Is not that right?

Col. HOFFER. Yes.

Mr. GREENE. So that from that time, after that base period has been determined, you begin to get an average of daily output?

Col. HOFFER. Yes; just like any other manufacturing industry. You gradually build up to your capacity, and then when you build up your capacity it will come along at that regular per day without any interruption.

Mr. GREENE. Then, on that basis you probably have approximated a base period of preparation for the first gun of the different types of ordnance?

Col. HOFFER. Yes.

Mr. GREENE. Do those figures and your experience justify you in the conclusion that there will be a considerable product of different types before the expiration of these 18 months?

Col. HOFFER. Oh, yes; our plan contemplates the completion of the project in that time.

Mr. GREENE. In the meantime there will have been delivered a great many pieces of ordnance of the various types, but you probably will not have arrived at full-production capacity until that time?

Col. HOFFER. Oh, we will arrive at full-capacity production before that time.

The CHAIRMAN. The next item is, "The Chief of Ordnance of the United States Army is authorized to employ in the District of Columbia, out of the appropriations made in this act for designing, procuring, caring for, and supplying ordnance and ordnance stores to the Army, such services, other than clerical, as are necessary for carrying out these purposes."

Gen. BABBITT. We wish to carry that on during the coming year. As it appeared in previous legislation it affected only the appropriation bill of which it was a part, and it is therefore necessary to repeat it. It is not general legislation. It applies to special cases when we want expert service. I can illustrate it by citing one case: We wanted to secure the assistance of a chemist from one of the colleges who was an expert on the chemistry of explosives, but we had no means prior to the passage of this act for utilizing his services, unless we could get him in as a commissioned officer, and we could not do that. We want, in addition to that, to get men in an advisory capacity in certain other lines. We have, for example, a man who is an expert in procuring machinery who is employed here only three days in the week. We have another man who is employed as an expert on keeping records, graphic charts, etc. He also is employed only for a few days per month. Some of these assistants have been put on the temporary roll as regular employees, but the expensive men are taken in as experts. These men are occupying positions other than clerical, and during the period of the war they are very necessary to our records in order that we may follow our production and keep track of it. As you can see,

we need to draw into our force men who are experts already, because we can not take the time to train anyone at this time.

Mr. TILSON. Have you stated about the amount that you would wish us to appropriate for this purpose, or which would be used out of this appropriation for this particular purpose?

Gen. BABBITT. I have not, but I can put that in the record.

The CHAIRMAN. Will you put in the record a statement showing about what amount you expect to expend for this purpose?

Gen. BABBITT. The accumulation of a force of employees of the class contemplated under this authorization is necessarily a slow process. It is estimated that for the current fiscal year the expenditures under this authorization will amount to approximately \$400,000; for the coming fiscal year this expenditure will be considerably larger—probably \$650,000, or more.

The CHAIRMAN. The next item is—

The appropriations made in this act shall be available for the payment of obligations on account of the existing emergency incurred prior to the passage of this act and which are properly chargeable to such appropriation.

Gen. BABBITT. You will remember that at the beginning of the war the Secretary of War authorized the Ordnance Department to incur deficits in some of our appropriations. I think the amount authorized was \$43,000,000. This legislation permitted us to charge this deficiency to the appropriations then being made. It might occur, for example, that in our 1918 appropriations we might not have funds enough, and would want the Secretary of War to authorize us to incur deficits to be paid for out of this fund.

Mr. TILSON. Should not that language be changed from "incurred prior to the passage of this act" to this language: "Incurred prior to July 1, 1918"? Would not that cover it? This act may pass in April; and, if so, what about contracts that might be made between April and the 30th of June?

Mr. CALDWELL. That would not make any difference.

Gen. BABBITT. We are not troubled very much with that, because when an act is passed the contracts that are made in the last days of the fiscal year hardly mature until the 1st of July.

The CHAIRMAN. The deliveries are made after?

Gen. BABBITT. Yes, sir.

Mr. TILSON. Do you think this will take care of it if it is left this way, "incurred prior to the passage of this act"?

Gen. BABBITT. Yes, sir.

The CHAIRMAN. The next proviso has been carried since the appropriation act of August 29, 1916.

Gen. BABBITT. There is nothing special about that. It occurs every year.

The CHAIRMAN. It has been carried since the act of August 29, 1916.

Gen. BABBITT. We are required to put that in the estimates. The prior act requires that that shall appear in the estimates.

(At 1 o'clock the committee adjourned until Wednesday, December 12, 1917, at 10 o'clock a. m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Wednesday, December 12, 1917.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENT OF BRIG. GEN. E. B. BABBITT, OF THE ORDNANCE DEPARTMENT—Resumed.

Gen. BABBITT. Mr. Chairman, there is one matter to which I might refer, which was brought out in a question asked by Judge Wise on Monday regarding the amount of material that had actually been procured under the appropriation "Ordnance stores and supplies." I answered in a general way that we keep a running chart showing how that was done, and that I thought I might bring one or more of those charts to the committee if it met with the committee's approval. There are so many, however—some 7,000 completed articles and some 25,000 altogether, counting the components—which we have to list that a statement in tabular form would be a very difficult and a very laborious one to prepare, and I think would hardly be one that the committee would have time to look over. It also should be considered confidential, in that the progress we are making would necessarily be a direct index of how nearly prepared we are. I would suggest, therefore, if it meets the committee's approval, that I make the general statement that the project, so far as the personal equipment of the soldier is concerned, will be completed in April for a force of 2,300,000 men, with the exception of a small amount of leather equipment, for which the manufacturing facilities of the country are at present insufficient to produce at the rate we desire.

The CHAIRMAN. I think that is a sufficient answer.

The next item is, on page 71, "Rifle ranges for civilian instruction."

Gen. BABBITT. For the current fiscal year the department submitted an estimate for this purpose in the sum of \$500,000, and in the act of May 12 \$300,000 was appropriated, so far, at least, as this appropriation affects the Ordnance Department. The item affecting the Ordnance Department appears on page 72, as you will note, and the remainder of that appropriation relates to the Quartermaster Department, for labor to the extent of \$20,000. This estimate is based on a statement furnished us by Maj. Bookmiller, a retired major of infantry, who has been detailed to take charge of the civilian rifle practice in this country. It covers the procurement of material for target practice, such as target carriers, disks, flags, targets of various kinds, gallery practice targets, etc., amounting to \$3,085 for one club, exclusive of the ammunition. Maj. Bookmiller estimated there would be 1,000 clubs, a number larger than the department considered would be practicable at this time under war conditions. We therefore took half that number upon which to base

our estimate, namely 500 clubs, which gave us a total for equipment of \$1,542,500 and for ammunition \$157,500, making the total which appears in the estimate for the Ordnance Department of \$1,700,000.

The CHAIRMAN. Is this practice really being carried on now?

Gen. BABBITT. I should say it was to the extent that we have been thus far able to furnish the supplies and more particularly the ammunition. Due to the general shortage of ammunition, I believe we have confined our issue largely to the National Guard and to the National Army. Col. Thompson verifies that. He has charge of the small-arms ammunition question. For the time being, the rifle clubs will probably have to mark time until we catch up with the supply.

Mr. TILSON. Who in general are being trained in these rifle clubs; I mean what class of men, as to age, and so on?

Gen. BABBITT. In my limited experience of this subject I should say that relatively few of these men are within the draft age or men who would be called to the colors.

Mr. TILSON. Does it seem to you that at this time, when we are bending every effort toward securing supplies for strictly military uses, we should continue the use of ammunition and money for these things which, while good in themselves in ordinary times, yet are not absolutely essential at this time?

Gen. BABBITT. Personally, I would consider it unnecessary.

Mr. TILSON. I am very much in favor of it in ordinary times.

Gen. BABBITT. Yes.

Mr. TILSON. Because I think that sort of thing ought to be encouraged among our citizens, but the question is whether it is now a matter of pressing necessity.

Gen. BABBITT. I do not consider it a matter of present necessity, Col. Tilson. I think I might add that it will solve itself in that the department will not supply the material until the situation is such that it can be supplied without detriment to the military service.

Mr. DAVIDSON. I suppose to the extent that the supply would permit, there might be old arms which could be supplied for such rifle practice?

Gen. BABBITT. Yes; that has been our practice. We have issued Krag rifles to these clubs, with the exception of one modern rifle, I think, to every 10 men in a club. They have used the Krag rifle and the Krag ammunition. Both the arms and the ammunition of the Krag type have been issued now to the National Army for drill purposes, although they are rapidly being withdrawn, and, as I recall, the chart of production indicates that we will have modern rifles by the end of this month for all our men.

Mr. TILSON. Do you not think it might perhaps be more useful and more nearly essential to put these Krag rifles in the hands of the home guard which may at any time be called upon to do actual service in case of need at home after the troops have been sent away?

Gen. BABBITT. I think that is very desirable, Col. Tilson, and that is contemplated.

The CHAIRMAN. The next item is on page 73, for arms and ordnance equipment in connection with training camps for civilians. This comes under your department, does it not?

Gen. BABBITT. Yes, sir; civilian training camps. That portion which pertains to the Ordnance Department is found on page 73, at the bottom of the item, \$2,640,000.

Mr. TILSON. To what class of camps does that apply?

Gen. BABBITT. That is an item of questionable need. It refers to the civilian camps which have been going on during the summer, like the Plattsburg camp, for example, and the others. With the cessation of that form of training, the appropriation would be unnecessary.

Mr. TILSON. It seemed to me it was rather a stretch of the term to call those civilian training camps—the ones that went on this summer—where they were actually prepared for service as officers. Heretofore the camp at Plattsburg has been purely a civilian camp, but it seems to me the training camps this year were of quite a different character.

Mr. MCKENZIE. They were officers' training camps.

Mr. TILSON. They were officers' training camps; and it seems to me the expenditure there was absolutely justified by the war.

Gen. BABBITT. Yes.

Mr. MCKENZIE. That is a different proposition from this.

Gen. BABBITT. This is intended to continue the Plattsburg project. Whether it will be continued now, in view of the war, is something I do not know. That would be a question of policy in the War Department of which I have no knowledge.

Mr. TILSON. There will undoubtedly be training camps of some kind or other, whether at Plattsburg or at the various cantonments or somewhere else, but there will undoubtedly be training schools of some sort for officers.

The CHAIRMAN. But not what are known as civilian training camps.

Mr. TILSON. It does not seem to me the camp at Plattsburg last year could be called a civilian training camp, in any sense of the word.

Gen. BABBITT. They were civilians, of course. They were trained and then selected and commissioned, in contradistinction to what you will find at all our cantonments when the men called under the draft are inducted into the service and then sent there for training. They are properly paid out of the Army appropriation.

Mr. TILSON. It seems to me all that would be necessary would be to drop out the word "civilian."

The CHAIRMAN. What is the use of the appropriation at all?

Mr. TILSON. If they need a special fund for carrying on these camps, all right. If it can come out of some other funds, then all right.

The CHAIRMAN. You do not understand, General, do you, that the officers' training camps which were held throughout the country were paid for out of this appropriation?

Gen. BABBITT. I should say they would be paid for out of this appropriation, Mr. Chairman. I would have to look into that more carefully, because that particular feature has not been brought to my attention. It is a question of furnishing the supplies so far as the Ordnance Department is concerned. The other appropriations we have had have been applicable solely to men within the military service.

Mr. TILSON. Let me ask you this question, General: Suppose you take to-day 1,000 men out of a cantonment and take them out some-

where on the side and put them into a camp and train them, as you probably will have to do in order to get officers, what appropriation in the bill would you pay it out of if it was done in that way?

Gen. BABBITT. It would be paid from the regular Army appropriation as a part of the Army.

Mr. HARRISON. Some of those men are from colleges and they are really civilians.

Mr. TILSON. That has been so in the past.

Mr. HARRISON. I mean, as to the January camps. There will be many of them from the colleges.

Mr. TILSON. Yes; that is correct.

Gen. BABBITT. Those are civilians.

Mr. TILSON. And they will be mixed in with the other men from the ranks.

Gen. BABBITT. Yes, sir; some of the expenditures under that heading will therefore be paid from this appropriation, as I understand it.

Mr. McKENZIE. I do not know what the policy of the department is going to be hereafter, but it seems to me it would be the part of wisdom to confine the training of men from the service hereafter; and if a man wants to get training let him enlist or get into the Army.

Gen. BABBITT. We expect to do that almost exclusively, Mr. McKenzie, as far as the Ordnance Department is concerned. We are declining, except in the case of special technically trained men, to take men into the Officers' Reserve directly from civil life. We are telling them the gate is open through enlistment, and we are now preparing to promote some of the best enlisted men.

Mr. McKENZIE. Noncommissioned officers?

Gen. BABBITT. Yes, sir; that is the proper gateway for them to take to enter the service with a commission.

Mr. McKENZIE. To my mind it seems a little unfair, although there are some good men getting into the service in that way and heretofore we have had to take them from civil life because I know I have been importuned a great deal to help get young men into the training camps, and I presume every other Member of Congress has been importuned, but I should think it would save confusion at least to simply have it the policy of the War Department hereafter to make the selections from the body of one or two million men who are wearing the uniform of the United States Army.

Mr. TILSON. Have they not done that already, Mr. McKenzie, except from certain schools which have military instruction, and in those cases the man must come recommended by the Army officer who gives the instruction at that school, as I understand it.

Mr. McKENZIE. I understand that.

Mr. TILSON. So it is limited to men already in the service.

The CHAIRMAN. You mean the next camp is limited in that way?

Mr. TILSON. Yes.

The CHAIRMAN. Heretofore the camps have not been limited in that way.

Mr. HULL. Is not the whole conflict here over the use of the word "civilian"? After we have entered the war we are simply using the same word we used in the last year's appropriation bill.

Gen. BABBITT. It would, however, apply to the civilian still to the extent that he has not been inducted into the service in some cases. These men who are graduates of military institutions, who have not been commissioned, and who go to these training camps, must be provided with equipment and taken care of while there.

Mr. HULL. They are a very small proportion of the training camps now.

Gen. BABBITT. I should think so.

Mr. HARRISON. There are 2,400 of them.

Mr. SHALLENBERGER. General, is it not a fact that among the thousands of officers whom you are going to have in your department as it expands and as the war goes on, and also in the Signal Corps and the other technical departments of the Army you are going to have to take thousands of men because of their technical knowledge, without any reference to their military training?

Gen. BABBITT. Yes, sir.

Mr. SHALLENBERGER. So that this idea that they must all come from the ranks is not practical because you will have to take in thousands who will not come from the ranks.

Gen. BABBITT. I modified my answer to that extent.

Mr. SHALLENBERGER. Yes; and in a general way it is true; but, on the other hand, we have got to realize that there are thousands of men who will have to be taken into these special and technical corps from civil life.

Gen. BABBITT. We will probably take more than any other corps because of the training which must be technical and which we can not get from the training camps.

Mr. SHALLENBERGER. Every place I turn I run onto majors, colonels, and captains who are men of years, and I am told upon inquiry that they were civilians when the war started. They must have been taken in because of their highly technical training and not because of any particular military training, and you can not get along without those men?

Gen. BABBITT. No; we can not.

Mr. SHALLENBERGER. And such men will have to be still taken in?

Gen. BABBITT. Yes, sir; that is quite right.

The CHAIRMAN. Gen. Babbitt, the next item is "Ordnance equipment for home-guard organizations, \$4,500,000," a new item.

Gen. BABBITT. This is a new item, Mr. Chairman. The department was prompted in making this estimate due to the demands which were pouring in upon it from the States after they had been denuded of their National Guard. This was especially true of manufacturing communities, where they appreciated the necessity for the protection of their great industries. We had nothing at that time with which to supply these Home Guard organizations. This estimate is rather small in amount; it contemplates procuring about 75,000 rifles and about 9,000,000 rounds of ammunition; canteens, haversacks, and cartridge belts to go with the rifles. This is not the complete equipment of a soldier but is simply enough to enable a Home Guards man to look after himself. He would need his canteen, and of course he would need his haversack and a cartridge belt and ammunition.

Mr. ANTHONY. General, how many Home Guard organizations have been organized over the country?

Gen. BABBITT. I do not know, but I will have that inserted in the record.

NOTE.—From reports thus far received it appears that there are at this time authorized home organizations totaling approximately 93,000 men; also unauthorized organizations totaling approximately 28,000 men.

Mr. ANTHONY. Are there any Home Guard companies in existence in any of the States?

Gen. BABBITT. Quite a large number. Massachusetts made a request, as I recall it, for 17,000 guns. This may have been increased since then.

Mr. ANTHONY. How would you arm and equip these men—the same as the Regular soldiers of the service?

Gen. BABBITT. No; we would give them only enough equipment to get them under way; for example, canteens, haversacks, and belts. We would not give them the packs, pack carriers, intrenching tools, etc.

Mr. ANTHONY. But you would give them the regular service rifle?

Gen. BABBITT. We would give them the service rifle and service ammunition; also a small allowance of ammunition for target practice.

Mr. ANTHONY. What have you done with the Krag rifles which you had in storage?

Gen. BABBITT. They were all issued to the National Army for training purposes. They are just as good for training a recruit; and indeed in some respects this is the better plan, in that we then give them, after they have been trained and the rifles pretty well knocked to pieces by awkwardness and abuse, a new rifle, following in that respect the German practice.

Mr. ANTHONY. Then they are now in use?

Gen. BABBITT. They are now in use, but will soon be withdrawn. By the end of this month they will probably all be back in storage.

Mr. TILSON. You have spoken of German service. Have they training rifles?

Gen. BABBITT. They have established the precedent of using an old rifle for training purposes, one that is obsolete.

Mr. ANTHONY. Can those rifles be supplied to the Home Guard organizations?

Gen. BABBITT. They will undoubtedly first have to be overhauled.

Mr. ANTHONY. They can be utilized for that purpose?

Gen. BABBITT. Yes; they will be.

Mr. MCKENZIE. Take, for instance, our State of Illinois, where our legislature passed some legislation last winter providing for the organization of a number of regiments as provisional National Guard or State troops. I do not know under what appropriation they would be taken care of.

Gen. BABBITT. This would be for that purpose. You have important industries, and if there should be a riot there, the only way it could be stopped would be by the use of some such organization, or else by Federal troops.

Mr. MCKENZIE. We have three full regiments and a number of other provisional regiments.

Mr. TILSON. We have in the State of Connecticut more home guards than we had National Guard when this war began, and we realize the necessity of having them there.

Mr. DAVIDSON. In my State they are organizing right around all the cities where they had National Guard companies home-guard organizations.

Mr. HULL. There are several such organizations in my State.

Gen. BABBITT. I think this is a very moderate amount, and it will provide a class of material which, if it is not called for by the home-guard organizations can be utilized in the Regular service. It is all modern material.

The CHAIRMAN. I was just wondering how you arrived at the amount of 75,000 rifles.

Gen. BABBITT. That was simply based upon the data we had in September, and I think if I were to look it up now it would probably be more than that.

The CHAIRMAN. They were the requests you had had up to that time?

Gen. BABBITT. Yes, sir.

The CHAIRMAN. The next item is "Ordnance stores, equipment, etc., Reserve Officers' Training Corps."

Gen. BABBITT. Under the act of May 12, \$1,000,000 were appropriated for that purpose, and under the urgent deficiency act of June 15, \$524,000. The estimate is based upon equipping educational institutions that desired to qualify under the act of June 3, 1916, to maintain Reserve Officers' Training Corps. Training will go on in those institutions now, as well as in peace times. The institutions qualifying at present have about 27,677 students; the institutions which have made application, but have not quite qualified, but are entirely capable of doing so, have students amounting to something over 17,000 more; the institutions which are in a condition to qualify—at least have the qualifications if they care to apply—have students amounting to 15,000; a total of about 60,000 for which provision should be made, and this estimate, coupled with the appropriation for the present fiscal year, will provide for those 60,000 students.

Mr. DAVIDSON. Which item is that?

Gen. BABBITT. The item at the bottom of page 74.

Mr. MCKENZIE. The item for which \$1,000,000 was appropriated?

Gen. BABBITT. Yes, sir; and for which we are asking \$2,921,000.

Mr. HARRISON. Have you officers to put into those institutions for training purposes?

Gen. BABBITT. Officers are assigned by The Adjutant General for this work. The Ordnance Department does not do that. Many are retired officers who are able to handle that class of work, but who are not in sufficiently good physical condition to be brought to active service and sent out with troops. That class of officer, who has some physical disability, can be used for recruiting purposes and for training purposes.

Mr. HARRISON. The reason I asked the question, there are one or two institutions in my district which have never been able to get officers.

The CHAIRMAN. The department supplies some of the institutions with noncommissioned officers?

Gen. BABBITT. Yes, sir.

The CHAIRMAN. Why can not the department have the colleges qualify now who have made application?

Gen. BABBITT. The department is unable to equip them. If we did not have stores on hand and the colleges applied—they are entitled to them under the law—we would be unable to equip them and they would run through the year without the equipment. One of the difficulties that the educational institutions labor under is a falling off in enthusiasm. Everybody gets ready; we have had every year a number of such cases; at first there is tremendous enthusiasm and they must have the guns and ammunition almost immediately, and if we can not comply at once, within six months all enthusiasm is gone. I think it is a form of enthusiasm that is well worth cultivating.

Mr. TILSON. All of the equipment which you furnish in this way is standard and necessary equipment for use in the field so that it will not be lost?

Gen. BABBITT. No; not a bit will be lost. If we have it on hand and it is not called for, our subsequent estimate would be reduced by that amount, because every year we take into account what supplies we have on hand.

The CHAIRMAN. How many colleges have these 27,000 students?

Gen. BABBITT. I have not that information. I will be glad to get it and put it in the hearing, if you will permit me.

The CHAIRMAN. I would be glad if you would show the number of institutions, practically in the service, the number which have applied, and the number which have qualified and have not applied.

Gen. BABBITT. The number of institutions having enrolled qualifying reserve officers' training corps is 92, with a total of 27,677 students; the number of institutions having military training that made application but had not qualified June 1, 1917, is 35, with approximately 17,000 students; the number of institutions not having military training who have applied but had not qualified on June 1, is 63, with approximately 16,000 students. The number of enrolled students has undoubtedly largely increased since June 1, and the estimate of probable needs under this appropriation is a very conservative one.

The CHAIRMAN. The next item is on the same line, on page 75, "Ordnance supplies for military equipment of schools and colleges."

Mr. DAVIDSON. I have not yet been able to distinguish the difference between the former item which we were discussing and this one.

Mr. SHALLENBERGER. I think the reason for the large amount there is that it includes the transportation of horses and forage which we found was very expensive.

Gen. BABBITT. The Quartermaster General gets a part of that.

Mr. SHALLENBERGER. And the other part is for arms and equipment?

Gen. BABBITT. Yes, sir. In the act of June 3 provision was made for furnishing military equipment for instruction at schools and colleges. We provide equipment at schools and colleges that do not maintain organizations designated in the act as reserve officers' train-

ing corps. The act of June 3 provides "such arms, tentage, and equipment as the Secretary of War shall deem necessary for proper military training shall be supplied by the Government to schools and colleges, other than those provided for in section 47 of this act, having a course of military training," etc.

Mr. TILSON. Does that refer to the State agricultural colleges who are receiving appropriations from the Government and are required to have military training of some sort?

Gen. BABBITT. They are provided under an old act and we still provide them under that act.

Mr. QUINN. Under that act have you any record of how many schools took advantage of this military training?

Gen. BABBITT. I have not it with me, but we have a record of every school that we have supplied. Normally, I bring that record with me, but this year in making up my notes with the assistance of the clerks—I had none of the old clerks and my notes are not as good as they should be. Last year I had the number of colleges and schools all amongst my notes. My time has been so limited that I have not been able to give the close attention I should like to some of those details.

With reference to the item on page 75, "Ordnance Supplies for Military Equipment of Schools and Colleges," the estimate of the department for the present fiscal year, covered equipment for 50,000 boys and amounted to \$718,000. Under the act of May 12, \$500,000 were appropriated. Between the date of that estimate and the time when we could make any application of those funds, the price of everything had advanced so that we now find we can provide with the money appropriated about 30,000 students, that is with the \$500,000 which have already been appropriated and are being expended this year. The total number of students in the State universities and colleges in the United States amounts to something over 90,000, other colleges to about 69,000, public high schools to 660,000, and private high schools to about 12,000, giving us 832,000 students who might be beneficiaries of this act.

Mr. SHALLENBERGER. They are male students?

Gen. BABBITT. Yes, sir. Of course, a number, about 70,000 are already engaged in military work, leaving approximately 775,000 students to be provided. Instead of taking the full number given there, we estimate that about 50,000 will apply, and therefore the amount asked for here is to cover that number of students.

The CHAIRMAN. Fifty thousand students?

Gen. BABBITT. Yes, sir; 50,000 students to be provided with personal and horse equipment, in addition to overhauling that which has already been provided.

Mr. CALDWELL. The 50,000 is more or less an arbitrary guess?

Gen. BABBITT. Yes, sir. At one time the conditions promised to flood us in the line of furnishing equipment and it may come to us again. In the State of Illinois they organized some sort of a high school military unit—I have forgotten what it was called—and I think in the schools in and around Chicago and northern Illinois they succeeded in forming an organization containing 50,000 students, and

called upon the Federal Government to furnish some form of instruction.

Mr. McKENZIE. That was under the national defense act which makes provisions for schools having 100 students or more.

Gen. BABBITT. They formed this organization even before that. I think the war has broken that up temporarily.

The CHAIRMAN. General, I think that closes all the items that I have a memorandum of.

Gen. BABBITT. Yes, sir.

The CHAIRMAN. We are much obliged to you, General.

**STATEMENT OF COL. JOHN T. THOMPSON, UNITED STATES ARMY,
RETIRED, IN CHARGE OF THE SMALL-ARMS DIVISION, ORD-
NANCE OFFICE, WAR DEPARTMENT.**

Col. THOMPSON. May I say, Mr. Chairman, that the Small Arms Division has to do with the design, manufacture, and repair of small arms, including rifles and pistols of small-arms ammunition, caliber .30 and .45, and of small-arms target supplies. The division has about 12 large plants in operation, about 70,000 employees, and over \$350,000,000 to spend before next June, if possible.

Mr. TILSON. Do you mean that is the amount to be spent in the Government plants or does that include the private plants from which you are purchasing?

Col. THOMPSON. That amount includes all plants devoted to these purposes.

Mr. TILSON. Whether Government or private?

Col. THOMPSON. Whether Government or private; yes.

The CHAIRMAN. The first item is "Ordnance stores, ammunition," for which you are asking \$390,000,000. Will you explain that item?

Col. THOMPSON. I would say, in general, Mr. Chairman, that the three appropriations with which this division is concerned are ordnance stores ammunition, small arms target practice, and the manufacture of arms. The ordnance stores ammunition and small-arms target practice appropriations are based upon an army of about 1,500,000 men. The manufacture of arms, as will be explained, is based upon a larger number, for reasons which will be given. The Small Arms Division is, however, not charged with the supply, as it is called, of these ordnance articles to troops. The determination of the requirements of troops, based on the amount of supplies of this character on hand and required, is made in the Supply Division of the Ordnance Department for all the other divisions, and we are given a table in the Small Arms Division stating those requirements.

This particular appropriation, ordnance stores ammunition, becomes in time of war, perhaps, a misnomer. It uses the words "reserve supply." It is not only for a reserve supply but it is for the battle supply. That is about the only difference as to the amount of ammunition of various kinds for small arms, as called for, or that will exist between the appropriations as called for in time of peace and in time of war.

Mr. TILSON. Do you not think the form of that item ought to be angled? If you look at it hastily you would think you are using 90,000,000 to get ammunition to fire the morning and evening gun military posts and soldiers' homes.

Col. THOMPSON. Yes, sir. I think those precise definitions of appropriations come in sometimes from the fact that the department has had to do certain things and has been doing them for years, and has to get special authority for continuing to do them.

The CHAIRMAN. It has been carried that way for a long time?

Col. THOMPSON. Yes.

Mr. TILSON. But it looks ridiculous, if you do not look at it very closely.

The CHAIRMAN. It is deceiving.

Col. THOMPSON. May I state, in regard to all of these appropriations under the control of the Small Arms Division, that they are appropriations which can easily be multiplied for any other number of men, because they are based on so many rifles per man and so many cartridges of each kind per man.

Mr. ANTHONY. Will you state just what weapons would be embraced for small arms and hand use?

Col. THOMPSON. The service rifle, model of 1903, as made at the Springfield Armory and at the Rock Island Arsenal; the service rifle, model of 1917, as made at three outside manufacturing plants, both of which rifles are caliber .30 and fire the same cartridge; the automatic pistol, model of 1911, caliber .45; and the Colt and the Smith & Wesson revolvers, caliber .45, which now fire the same cartridge, caliber .45.

Mr. ANTHONY. Does that also cover ammunition for machine guns?

Col. THOMPSON. Yes; the appropriation, in addition to the ammunition for small arms, also covers the ammunition for machine guns, which are of caliber .30.

Mr. ANTHONY. And also hand grenades?

Col. THOMPSON. This appropriation also carries the reserve and battle supply for hand grenades, which subject is under Col. Hoffer.

Col. HOFFER. If I may, I would like to enumerate the items that will be included: Hand grenades; rifle grenades and drop bombs, the drop bombs covering the class of projectiles that are dropped from aeroplanes. Our estimates for the class of materials called for are submitted as a part of the Ordnance stores ammunition item which is now under consideration.

Mr. CALDWELL. You stated that you made this estimate on the basis of an army of approximately 1,500,000 men, and a part of it on an increased number of men. I understand from that that you have figures on an army of a million and a half men, that a certain portion of them would be Artillery, a certain portion of them Engineers, etc., not using small arms, and that you are only figuring for the number of men who would actually use the small arms in an army of a million and a half men?

Col. THOMPSON. Exactly so, sir; for the ammunition for the number of men carrying rifles and pistols; but for small arms, this estimate is based upon a larger number of men and for other requirements, such as those of the Navy, etc., as will be explained later.

Mr. CALDWELL. And machine guns?

Col. THOMPSON. Yes; for the number of machine-gun men as laid down in the organization tables, which are approved. Of course, these tables are subject to change from time to time, as is deemed best, according to the exigencies of the case.

Mr. ANTHONY. Is this for 1,500,000 men in the field and for field use?

Col. THOMPSON. For field use, yes, sir.

Mr. CALDWELL. What allowance do you make in your estimates for rifles, for pistols, and machine guns of the various types?

Col. THOMPSON. That exact subject is not under my present jurisdiction, and it is changing very rapidly. It is a matter with the supply division, which, as I said before, makes out the requirements and then sends to the Small Arms Division the total amount required. I might say, however, that that has been the subject of a great deal of consideration, and the experience has been different in the French Army and in the British Army; one army will base the number of cartridges per man per day on the total number of men in the entire theater of war, and with a certain amount of reserve for so many days, based upon experience; another army will base that estimate to the number of men to be maintained on the firing line. That information is now in the hands of the experts who make these calculations, and upon that information these tables have been made. That information can be gotten from the Supply Division.

Mr. CALDWELL. You have not that before you at all?

Col. THOMPSON. No, sir; I have it for small-arms target practice, because that is gotten at in another way.

Mr. CALDWELL. Do you know how much of this small arms will be treated as field reserve and how much will be treated as reserve in transportation and how much in reserve in the warehouses?

Col. THOMPSON. No, sir; that subject is not under my jurisdiction; it is under the jurisdiction of the Supply Division.

Mr. CALDWELL. Who is at the head of that division?

Col. THOMPSON. Col. Horney, who was here the other day. I believe that matter is a matter of such importance that it was deemed best to take it out of the hands of all the manufacturing divisions and put it into a special division that would have special charge of that work.

Mr. CALDWELL. The other day, when we first started our hearings, there were a number of questions asked of the officers who appeared before us along the line of how much would be required in the event that we had an Army of 3,000,000 men. I have wondered whether there has been any conference, of which you know, among the heads of the bureaus in the War Department, as to whether or not the appropriations of Congress should be continued on the basis of 1,500,000 men, or whether they should increase them?

Col. THOMPSON. That is a matter of which I would have no official knowledge; it would concern the policy of the department. When anything of that kind occurs we are simply told what to do.

The CHAIRMAN. That information would come from the Secretary or the Chief of Staff?

Col. THOMPSON. Yes, sir.

Mr. KAHN. Are you making the ammunition for the so-called Chauchat rifle?

Col. THOMPSON. Yes, sir. We are getting—confidentially, of course—the initial supply of French 8-millimeter cartridges in France for this purpose; we are getting a supply from the cartridge works at Swanton, Vt., and we are providing for an additional supply to be made at Upper Alton, Ill., and Kansas City.

Mr. KAHN. Those supplies would be in addition to those you indicated a little while ago as coming out of this appropriation?

Col. THOMPSON. No, sir; they would replace a part of this; and, in addition to the French cartridge, I might particularize by saying

that there have grown up quite a number of types of cartridges of which we have not much knowledge nor experience in this country.

Mr. ANTHONY. What is the 8-millimeter cartridge used for?

Col. THOMPSON. For the French rifle, the Chauchat gun, and French machine gun, which is known as the Hotchkiss.

Mr. CALDWELL. We are not using those in our Army, are we?

Col. THOMPSON. We are going to use, for the present, some of the French machine guns and also some of the French light machine guns, called the Chauchat.

Mr. ANTHONY. Do you consider them an improvement on the type of machine gun in this country or guns that you can easily get over there?

Col. THOMPSON. I understand it is simply a question of immediate procurement.

Mr. CALDWELL. Would you not have that unfortunate thing of two kinds of cartridges in the same division?

Col. THOMPSON. Temporarily; yes, sir.

Mr. KAHN. As I understand it, Colonel, the Chauchat French gun which you purpose using is practically a hand machine gun handled by one man?

Col. THOMPSON. Yes, sir.

Mr. KAHN. Instead of two or three soldiers working a machine gun, this is worked by one man, who holds it by his side?

Col. THOMPSON. Yes.

Mr. KAHN. He has a metal socket that he puts it into, and he just swings it around as he fires?

The CHAIRMAN. As he would a hose?

Col. THOMPSON. Yes.

Mr. CALDWELL. You can use the Lewis gun in the same way?

Mr. KAHN. No.

Col. THOMPSON. It is a somewhat lighter gun than the Lewis gun.

Mr. ANTHONY. It is a further development along the same line.

Col. THOMPSON. Yes, sir.

Mr. SHALLENBERGER. It is not fired from the shoulder?

Col. THOMPSON. It is too heavy to be habitually fired from the shoulder by the average soldier.

Mr. SHALLENBERGER. The French have a gun—the Chauchat gun—that is fired from the shoulder.

Col. THOMPSON. Those rifles of the automatic type that are intended to be fired from the shoulder and to be carried by a single man should not weigh over 10½ or 11 pounds.

Mr. SHALLENBERGER. Are you using any of them?

Col. THOMPSON. No, sir. No country has ever successfully gotten that type, because when you get such light weights the parts begin to break.

Mr. SHALLENBERGER. The lightest gun that you have in contemplation is the French gun?

Col. THOMPSON. Yes, sir; that is the lightest.

NOTE.—I have since learned that the light Browning weighs less.

Mr. ANTHONY. Are all the men in the training camps now supplied with the service rifle?

Col. THOMPSON. I do not see any reason why they should not soon be; but, as I said before, I am not in charge of the Supply Division.

Mr. ANTHONY. As you know, there has been a good deal of newspaper talk about the men being compelled to drill with wooden guns.

Col. THOMPSON. Are you speaking of officers' training camps?

Mr. ANTHONY. No; I am speaking of cantonments.

Mr. KAHN. National Army camps?

Col. THOMPSON. No, sir; the situation there was that none of those rifles of the 1917 model, when we started out, would interchange, even in the same plants. They were all touched up or hand finished, and the consequence was that we had to standardize them. "Interchangeable" in that connection is a bad word. We had to standardize them. When we come to talk about standardizing liberty motors or standardizing ships, everybody understands it, but when we in discussing small arms talked about making them interchangeable, few knew exactly what was meant. We standardized those rifles so they would interchange to a certain degree in the different plants, so that if they ran short in one plant we could send to another plant.

Mr. GARRETT. I visited the camps in Texas during the vacation, and I found at nearly all of them that they had one gun to about four men. Now, as I understand you, that is due to this process of standardizing?

Col. THOMPSON. Yes, sir; but we got out 40,000 last week.

Mr. GARRETT. And that trouble has now passed away?

Col. THOMPSON. It has passed away to a great extent unless we have trouble in the matter of labor or material.

Mr. SHALLENBERGER. The troops are not yet supplied with the service rifle——

Col. THOMPSON (interposing). It takes some time to get them, and we are just getting the steam on. We have 160,000 Krag's in the camps, I understand, and 220,421 of the 1917 model have been manufactured to date, which makes a total of 380,421 rifles. Now, if we take the 600,000 men of the National Army and multiply that number by 66 $\frac{2}{3}$ per cent, which is the percentage of men armed with the rifle, we get 400,000 men that ought to have rifles. Deducting 380,421 Krag's and 1917 rifles from that number, we have a shortage of 19,579. In one week we ought to fix that up.

Mr. KAHN. After you get them, or after they are turned over to you, how long will it be before they are delivered to the men in the camps?

Col. THOMPSON. It may be a long time, unless you get some man to sit right there on top of the car and follow it right through.

(Thereupon the committee adjourned until to-morrow, Thursday, December 13, 1917, at 10.30 o'clock a. m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Thursday, December 13, 1917.

The committee met at 10.30 o'clock, a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENT OF COL. JOHN T. THOMPSON AND COL. JAY E. HOFFER, OF THE ORDNANCE DEPARTMENT—Resumed.

The CHAIRMAN. Colonel, the first item in which you are interested is on page 62, ordnance stores, ammunition. Have you a detailed statement of that item?

Col. THOMPSON. Yes, sir.

The CHAIRMAN. Will you please give it to the committee?

Col. THOMPSON. The purpose of the appropriation is to manufacture at Frankford Arsenal, 175,000,000 cartridges, caliber .30, model of 1906, \$7,875,000; 15,000,000 pistol cartridges, caliber .45, \$345,000; then to purchase from private plants 1,950,000,000 ball cartridges, caliber .30, model of 1906, \$97,500,000; and 168,491,000 pistol-ball cartridges, caliber .45, \$4,886,250. There are also provided a number of bullets, or cartridges with bullets called tracer bullets, incendiary bullets, armor-piercing bullets and some high-pressure cartridges that are used in the test of rifles to see that they are strong enough, and seventeen and a half million rounds of ball cartridges, caliber .30, model of 1898, for use in the Krag rifles which will be used for guard purposes in the home guard. The total amount of this appropriation pertaining to the small-arms division is \$135,585,000, and the remainder of the appropriation pertains to what is termed the gun division, which handles the hand grenades, rifle grenades, drop bombs, and articles of that kind. Col. Hoffer can explain in detail that part of the appropriation.

Mr. KAHN. Col. Thompson, of course, you saw the article in this morning's paper complaining that Congress has not helped the Ordnance Bureau in the matter of voting funds, and so on. You saw that in the paper?

Col. THOMPSON. Yes.

Mr. KAHN. Now, I want to ask you whether this amount that you have named to us is all that you want for the specific purposes that you have named. Is it all that you can use for that purpose?

Col. THOMPSON. Mr. Kahn, I think I stated at the beginning of this hearing that this was for 1,500,000 men, and of course the determination of the number of men to be estimated for is not a matter under my control.

Mr. KAHN. Then let me ask you this question: Assuming we have 1,600,000 men under arms at present, and I believe the War Department so states, and that a new or second increment of the drafted men will be called in March and that they will be put into the cantonments for drill and preparation to go to the front, will the amounts that you have stated be enough for that purpose?

Col. THOMPSON. May I ask for information? I understand the number of men now provided for is 1,300,000.

The CHAIRMAN. It has been stated in so many different ways that I do not know what it is. Some claim it is 1,300,000 and some 1,600,000.

Col. THOMPSON. If it is 1,300,000 men and 500,000 men are called, that will make a total of 1,800,000 men; and this estimate is for 1,500,000 men. Therefore the estimate would be short ammunition for 300,000 men—the difference between 1,800,000 and 1,500,000.

The CHAIRMAN. What would be that difference in dollars?

Mr. KAHN. Can you put that in the hearings?

Col. THOMPSON. Yes, sir. I would state, Mr. Chairman, that this is a very simple matter of figuring. Roughly speaking, there are required about 1,400 cartridges, caliber .30, per man, and that would be 300,000 times 1,400 multiplied by the price of cartridges, which would be about \$50 per 1,000, and likewise for the pistol cartridge.

Mr. KAHN. Col. Thompson, will you kindly put into the hearing figures showing what additional sums will be needed if the Army is increased during the next fiscal year up to 1,800,000?

Col. THOMPSON. Yes, sir.

Mr. KAHN. And if it is increased to 2,500,000 men and to 3,000,000?

Col. THOMPSON. Yes, sir.

The CHAIRMAN. Right in that connection, Col. Thompson, is it not a fact that the total appropriations that were given last year by this committee and by the Appropriations Committee were finally based on an Army of 2,300,000 men?

Col. THOMPSON. Mr. Chairman, I can not say that of my own knowledge.

The CHAIRMAN. You do not know?

Col. THOMPSON. No, sir.

The CHAIRMAN. The amount of small arms that you are asking for here, you say, is for an Army of 1,500,000 men; that means 1,500,000 men who will actually use the small arms, does it not, and it does not necessarily mean a total Army of 1,500,000 men?

Col. THOMPSON. It means a total Army of over 1,500,000 men. [See also answer, page 2, hearings of Dec. 12.]

The CHAIRMAN. You stated that Col. Hoffer could explain some items of the bill also.

Col. HOFFER. Mr. Chairman, included in the estimates submitted under the heading "Ordnance stores, ammunition," was the sum of \$254,415,000 to cover the following general classes of material: Hand grenades, rifle grenades and their accessory, and drop bombs. Included in the term "drop bombs" are all the classes of offensive articles that are dropped from aeroplanes. The estimates upon which the appropriations were made were based in this case upon a force only slightly greater than 1,000,000 men, because it was expected that we would be able to get other appropriations from Congress early enough so that this class of material could be procured for the additional men by the time the men were ready to handle it. It has been found necessary to materially revise that estimate, primarily on account of the drop-bomb portion of it, and also on account of the fact that it is considered unwise to run too close to your supplies; and upon Gen. Pershing's recommendation it has been decided that

it is necessary to provide what I called the other day a reserve, but which is really an allowance sufficient to keep a one month's supply with the troops, a three months' supply in the base depots in France, a one month's supply in transit, and a two months' supply in reserve in the United States. You can readily see that providing that far ahead means a considerable increase in the amount of material of this class that must be procured before any given date. Furthermore, we have obtained further information with regard to the aeroplane program. That program is based upon a certain number of squadrons, and, as far as we have been able to understand, that portion of the program, which is very extensive, will be carried out, irrespective of the size of the Army. For these reasons, to provide the material that will be required in this class by September 1, 1918, will require the additional sum of \$277,800,000, and it is necessary to increase our estimates for the calendar year from September 1, 1918, to September 1, 1919, by \$41,000,000.

The CHAIRMAN. In addition to—

Col. HOFFER (interposing). In addition to the \$277,800,000 which should be made available at the earliest possible date. The \$41,000,000, if made available within the next three or four months, will be available in sufficient time to enable us to make our preparations and to place the orders.

The CHAIRMAN. Do you mean to say that you are already short in the appropriation of \$212,798,000 given you last year, as late as October? That is what you got last year in all, and the last appropriation was made on October 6.

Col. HOFFER. For this particular purpose the department received in the appropriation acts of 1917 approximately \$41,000,000, the exact amount being \$40,981,540, and that is all the money carried in the three appropriation acts of the calendar year 1917 available for this particular class of material.

The CHAIRMAN. And that has been exhausted?

Col. HOFFER. Yes, sir; it has all been practically obligated, or it will be within the next 10 days or 2 weeks. I would like to correct that statement, Mr. Chairman, because I am advised by my assistant that the entire amount is obligated. The size of the force to be provided for has very little effect upon the total amount required. It would have no effect, of course, upon the deficiency of \$277,800,000 which I have referred to, and an increase in the size of the force to 3,000,000 men would only increase the additional sum required for 1918-19 from \$41,000,000 to \$76,000,000. To summarize, there should be made available at the earliest practicable date for this class of material \$277,800,000 to cover deficiencies in our estimates up to September 1, 1918, and there should be added to the amount carried in the estimates for 1918-19 for ordnance stores, ammunition, \$41,000,000, to make up for the deficiency for the period from September 1, 1918, to September 1, 1919.

Mr. GREENE. That latter is not a real deficiency, but it is an anticipated one?

Col. HOFFER. I had better say "revision of our estimates" from September 1, 1918, to September 1, 1919.

Mr. FIELDS. What amount do you need, Colonel, to be made immediate available?

Col. HOFFER. \$277,800,000.

Mr. SHALLENBERGER. Do you mean to say that that is a part of the \$290,000,000? You do not want \$277,800,000 in addition to the \$290,000,000? You said you wanted \$277,800,000 made immediately available.

Col. HOFFER. Yes, sir; \$277,800,000 should be made immediately available. Then, I would like to increase the estimates in this bill by \$41,000,000—

Mr. SHALLENBERGER (interposing). What is the total amount?

Col. HOFFER (continuing). Which would make available under this appropriation for this class of material \$254,415,000 plus \$41,000,000, or \$295,415,000. So, the total amount which will be required for this purpose will be \$277,800,000 plus \$295,415,000.

Mr. SHALLENBERGER. When you say "for this purpose," did you mean for these bombs?

Col. HOFFER. For the classes of material I enumerated—hand grenades—

Mr. SHALLENBERGER (interposing). That is, outside of rifle ammunition?

Col. HOFFER. Yes, sir; altogether.

Mr. SHALLENBERGER. Does that leave the difference between \$277,800,000 and \$431,000,000 as all the money you will have available for rifle ammunition?

Col. HOFFER. I so understand.

Mr. SHALLENBERGER. It looks like you are taking almost all of the money for explosives rather than for rifle ammunition. If you take \$277,800,000 out of \$431,000,000—

Col. HOFFER (interposing). That happens to be the case all along the line with reference to this class of material which is in the nature of projectiles.

Mr. SHALLENBERGER. Does that leave you the amount that you think you need, Col. Thompson?

Col. THOMPSON. I understand that it does.

Mr. SHALLENBERGER. I thought he was cutting into your appropriation?

Col. THOMPSON. No, sir.

Col. HOFFER. In order to properly classify the various articles required, it is necessary to ask for them under various appropriations, and when it comes to the question of these various articles which have only come into existence in the last two years it is difficult to find appropriations that they will fit, and so it is necessary to put them under the appropriations which appear most applicable, and hence avoid changes in the wording of the appropriation acts. Perhaps, in order to avoid any possible misunderstanding, it should be stated this way: The bill now calls for \$390,000,000 under the heading "Ordnance stores-ammunition"; I request that that amount be increased by \$41,000,000, and that, in addition thereto, there be appropriated and be made immediately available the sum of \$277,800,000.

The CHAIRMAN. You want \$277,800,000 made immediately available?

Col. HOFFER. Yes, sir; \$277,800,000 should be made immediately available.

Mr. SHALLENBERGER. Have you any assurance that you can procure \$277,800,000 worth of this character of explosives and weapons at once?

Col. HOFFER. This class of material can not be procured at once, but under the existing law we can not enter into a contract without having either the funds on hand or a contract authorization to an amount equal to the total amount carried by the contract, and so, in order to start the work of procurement of the material that we require, we must either have the funds or a contract authorization for the entire amount, although it may be a year before final payment is made.

Mr. SHALLENBERGER. Is there any place where you can produce \$277,800,000 worth of that character of explosives in this country or in any other country?

Col. HOFFER. We expect to be able to procure it. We must procure it, and every effort is being made to develop additional capacity to provide it. In some cases we are asking almost the impossible, but that must be our program, and every effort must be made to procure the material. The first thing we need is either the appropriation or a contract authorization to start the work, because we can not enter into a contract unless we have, as I have said, sufficient funds in cash or a contract authorization to complete it.

Mr. SHALLENBERGER. Will you not have to construct some factories in this country for that purpose?

Col. HOFFER. Undoubtedly we will have to construct factories.

The CHAIRMAN. Are you advancing money for these enterprises now, or for factories to be established?

Col. HOFFER. We are covering the provision of additional facilities in several ways. In some cases the additional facilities are provided by the extension or rounding out of existing plants. In minor cases the additional plant facilities remain the property of the contractor, and a certain part of it is allowed to be amortized in the price that we pay for the material. If the plant extension is of sufficient magnitude and of a character which would make it of little value to the contractor at the conclusion of the war, we are agreeing to pay for and take title to the additional facilities we are providing. In that case we pay for the additional facilities as they are installed, upon the presentation of proper vouchers, checked by our officers and certified to as properly coming under the contract both as to quantity, quality, and price, and in that way we make partial payments during the preparatory work. We are also in many cases making partial payments during the manufacture of articles. For example, we are agreeing to pay contractors 80 per cent of the cost of raw materials when delivered and paid for. Now, as a further step, we are beginning to operate under the provisions of the recent legislation authorizing advance payments not to exceed 30 per cent, under such regulations as the Secretary of War and the Secretary of the Navy may prescribe. The Secretary of War has established a war-credits board, to which board are referred all cases where an advance payment is considered desirable. Action has been taken on one or two cases, so far as our department is concerned, and, undoubtedly, there will be many cases arising, as the manufacturers are finding it very difficult, indeed, to finance operations of the magnitude that they are called upon to undertake.

The CHAIRMAN. Who constitutes that War Credits Board?

Col. HOFFER. One member is Col. Samuel McRoberts, of the National City Bank, of New York, who has been commissioned a colonel in the National Army and is on duty with the Ordnance Department. The plan is for the contracting officer to pass on the reliability of contractors and their capacity to do the work—in other words, to carry the work up to the point where it is decided a contract should be placed with a certain firm. Whether or not the contractor should have financial assistance, whether it is required, and how that financial assistance should be rendered, and what protection the Government should demand, are the points which are being passed upon by the War Credits Board.

The CHAIRMAN. Authority was given in one of the appropriation bills of last year—

Col. HOFFER (interposing). In the bill of October 6.

The CHAIRMAN (continuing). To advance money to private manufacturers, but I notice you are not asking for that authority to be continued in the next appropriation bill.

Col. HOFFER. I think it is the intention to have it continued, and I think it is most desirable and most necessary.

Mr. SHALLENBERGER. Are you going to manufacture those explosives in this country or in France? I am referring to the \$277,-800,000 worth of high explosives.

Col. HOFFER. We can not rely upon any country outside of the United States to help us in regard to powder or explosives.

Mr. SHALLENBERGER. Will it not be a very dangerous proposition to try to remove these high explosives across the sea, and would it not be advantageous if they could be produced in France? For instance, how many ships of the size of the ship that exploded at Halifax would it take to transport these explosives? They are very dangerous to handle, are they not?

Col. HOFFER. They are dangerous unless they are properly designed and properly manufactured, and the latter depends upon the degree of watchfulness in the inspection. For example, take a round of 3-inch ammunition and consider the severity of the shock it receives when fired from a gun. There is no blow that it could possibly get in handling or shipment that would compare with the shock of the discharge of the gun. We consider all of these explosives and all of this ammunition sufficiently safe to transport.

Mr. SHALLENBERGER. That is the point I wanted to bring out.

Col. HOFFER. There is another thing: It would be impossible for England or France or any other of our allies to take care of our demands. Furthermore, increased demands are being made upon this country owing to the shipping conditions, because so much of the raw material must come from the other side of the ocean, and the tonnage is materially reduced if we can ship finished products and not ship raw material, which weighs so much more, of course, than the finished product.

Mr. GREENE. Is some part of this ammunition that goes across shipped with the primers and other things of that kind detached to be assembled over there as a means of precaution during shipment?

Col. HOFFER. In the case of many of our projectiles and bombs the detonators are shipped separately, which would minimize the effect of a premature explosion on shipboard or in storage. Of

course, gentlemen, you will appreciate that the bulk of this amount we are asking for is for drop bombs, and it is merely tying up with the very extensive program which has been inaugurated by the Signal Corps and which everyone considers should be carried out, and we are obligated to furnish the Signal Corps with this amount of material of these classes in order that the aeroplanes may be used effectively.

The CHAIRMAN. You furnish the Signal Corps with all this material?

Col. HOFFER. Yes, sir; we furnish the bomb-dropping device, which is fitted into the aeroplanes; we furnish the sights for controlling the time at which the bomb should be dropped; and we furnish the bombs themselves.

The CHAIRMAN. We passed an appropriation of \$640,000,000 for the Signal Corps last summer. Did you handle that part of the appropriation in the purchase of this material?

Col. HOFFER. It has not been considered that that sum or any part of it was available for this class of material for which we are now asking funds and have asked funds in the past.

The CHAIRMAN. Then you have not actually used any part of that appropriation for this purpose?

Col. HOFFER. Not a cent, sir.

Mr. KAHN. Colonel, following up the line of questions of Gov. Shallenberger, as a matter of fact, England, when she found the great need for ammunition, took over sewing-machine factories, typewriter factories, and all activities of that kind and set them to work manufacturing parts of ammunition?

Col. HOFFER. Yes, sir.

Mr. KAHN. Have you attempted to do anything of that kind in this country as yet?

Col. HOFFER. We have in the case of hand grenades; yes, sir; and we contemplate, in the procurement of this class of material, interfering as little as possible with organizations that are capable of and should be called upon to work upon the more difficult and more highly technical materials.

Mr. KAHN. But if you really need all this material for which you are asking will you be able to manufacture it by taking over those various factories and putting them all at work manufacturing the stuff you want?

Col. HOFFER. The only doubtful element is that of time. It takes time to do all this. It takes time to find these people; it takes time to train them and get them started in this work.

Mr. KAHN. You mean the laborers and the mechanics?

Col. HOFFER. That is a problem which the manufacturer is struggling with; but the selection of the people to do this work and entering into negotiations as to the terms under which they will do it requires time.

Mr. KAHN. Then, we find ourselves practically in the same position that England found herself in at the beginning of the war?

Col. HOFFER. Yes, sir.

Mr. KAHN. And we are not taking any lessons from England by putting these factories at that work now so that they will be turning out the material. The most important thing now is to win this war.

It is much more important than making sewing machines and typewriters, and this committee, I take it—speaking for myself at any rate—wants to give the War Department every possible assistance in getting the supply as speedily as possible and in equipping factories in this country so that they can turn out the quantity that you want. Are you doing anything at all in that direction other than that little thing that the captain spoke of?

Col. HOFFER. We have gone this far, Mr. Kahn, in that we have obligated all the money which has been appropriated to date, which shows we have succeeded in finding people whom we consider satisfactory and have made satisfactory arrangements with them whereby they have started on the manufacture of all the material for which we have appropriations. We will continue the same process just as soon as we get additional money.

Mr. KAHN. Then, the apprehension of Gov. Shallenberger that you will not be able to turn out all this material within the year is rather far-fetched, is it not?

Col. HOFFER. We hope to be able to turn it out, but no one can hope to predict the difficulties that are being encountered. For instance, a powder plant shuts down to-day because it can not get coal. All those questions are coming up and are causes of delay; also the scarcity of materials. As I say, it is merely a question of time.

Mr. KAHN. Then, it would be a fair thing to say that there are many factors that make for delay and not Congress alone?

Col. HOFFER. Correct, sir; but we can not move, as I said, without the funds or the authorization. As long as we have money which is not obligated then the responsibility is upon us at least to obligate that money, because we have not utilized the funds or the authorization which Congress has given us; but when we have reached the point where we have exhausted our funds any further expansion of our activities must wait upon appropriation or authorization.

Mr. KAHN. Then, if this committee authorizes the amount of money you require, as you have stated to us, you will be able within the next fiscal year, practically, to furnish all the munitions of the character with which you are charged to get ready; you will have them all ready probably by the end of the fiscal year?

Col. HOFFER. We hope to be able to have them all ready. We would immediately start—

Mr. KAHN (interposing). Then, if Congress does appropriate the money, that is all that Congress can do, and if they are not gotten ready, it is somebody else's fault, is not that it?

Col. HOFFER. Except that these other factors, the factors of labor and the other elements which affect and retard manufacture are factors beyond the control of the Ordnance Department.

Mr. KAHN. And beyond the control of Congress.

Col. HOFFER. Well, it may be.

Mr. KAHN. How could Congress control it? If there is any way that Congress can do anything, let us know. You are the gentlemen who are charged with the duty of getting the material, and we are charged with the duty of appropriating for it. If we do our share, why will it be the fault of Congress, if the material is not turned out, and what further thing ought Congress to do to enable you to get it out. Is there any legislation you need?

Col. HOFFER. I am not qualified, Mr. Kahn, to speak in regard to the general subject of legislation which would assist the Ordnance Department, because my own particular troubles are troubles which every one in the Ordnance Department is experiencing and every one in the department, and I would hesitate to express an opinion upon that subject.

Mr. KAHN. But Congress is rather sensitive about these things, too, and Congress is being blamed by a high officer of your department for not being willing to do things that it ought to have done. Now, speaking as one member of this committee, I want to say to you that I want to do everything that can be done to put you on a sound footing and to put the Army on a sound footing. Now, tell us wherein Congress must act so as to enable you to get just what you need.

Mr. GREENE. Right along that line, if Mr. Kahn will permit me, I have a concrete case to bring before you, and if it is of any advantage to the department to know about it, there are perhaps a number of similar cases and this is a good time to emphasize it. I know of a town which is ordinarily a very busy, bustling town along certain manufacturing lines which now, on account of the pressure of war, has been put somewhat in the shade. I have letters from responsible persons there asking whether their plants as they now stand, consisting of several varieties of plants, might be utilized by the Government in any way, by transformation of machinery or readjustment in some fashion for the purpose of making war munitions or Army supplies or anything that might be needed. To whom should I present such a proposition? Do you people in the Ordnance Department want it?

Col. HOFFER. We will be very glad to have it.

Mr. GREENE. Would somebody go there and make an examination and see if those plants actually can be made available for your service. They are at your service if they can be made available.

Col. HOFFER. In the expansion of our organizations we are developing production sections or divisions, and the production section, for example, of my division is charged with the duty of locating, of developing, and recommending the companies with whom my purchasing section should negotiate for the procurement of the articles we need. All that information is being tabulated and assorted. One great trouble is the difficulty of organizing in such a short time a body capable of doing this work. You can get some idea of the magnitude of the problem confronting us when I tell you that the gun division, of which I am at present the head and which is charged with the procurement of cannon, cannon ammunition, and trench-warfare material, started this war with three officers and eight clerks. We were able to get probably 1 dozen officers of the Army, including officers of the Ordnance Department, who had some familiarity with this work. The organization has grown so far to over 500 officers and 1,800 clerks. We should have now at least 1,000 officers and practically double that number of clerks, and you can see the difficulty of trying to build up an organization of technical men at that rate.

Mr. GREENE. Yes; I appreciate that. Now, let us take the concrete case, for instance, which I have in mind. If I should go to the Ordnance Department and say that I was coming in the interest of

a community that had a diversity of idle or partly idle manufacturing plants, would I be assigned to call upon some officer who could take a comprehensive view of the situation in the sense that he could detail some one to examine all the plants and see what parts of your different functions could be supplied by any or all of the various plants, or would I have to be put through the usual process involved in the traditional "passing of the buck" and sent all around to various offices and finally find out that there is not a single man who could take a comprehensive view of the situation, but that they would have to send a specialist to each plant?

Col. HOFFER. The organization is not large enough at the present time to make an actual inspection of every plant and every community that is brought to its attention. There are certain companies and certain organizations so well known and whose experience is such that there can be no question of their ability to handle many of the problems that are confronting us, that for the time being we are naturally utilizing for this purpose what you would call the best assets of the country. Now, when those companies who are known to be able to undertake this work are exhausted, then we will commence to reach out, but it is impossible at this time, with the pressure of work and trying to place there orders with responsible parties, to stop and take men, because the technical men we have are very limited and very difficult to get, and have them make this inspection of these various places.

Mr. CALDWELL. I want to call your attention to one particular case along that line. A man by the name of Dupuy, recognized by the Machinery Club of New York as one of the best machinery experts in the country, applied for a major's position in your department. He was recommended by an Army officer of the regular establishment of the grade of major and was sent for an examination and was turned down because he did not have technical skill. Now what kind of man do you want for these jobs? His name was Dupuy and he lives at Forest Hills and his application is on file in your office now, together with the Army officer's indorsement, and I know him to be one of the highest men in the great city of New York, making \$15,000 dollars a year now, and has been making \$15,000 a year for a number of years, and he is willing to take a major's commission, if you will give him such a commission.

Mr. MCKENZIE. Does he do the technical work or is he at the head of the concern?

Mr. CALDWELL. He is the man who does the technical work himself.

Mr. OLNEY. Right in line with Mr. Greene's suggestion, 10 minutes ago there was brought to my attention—and I want this for my own information—a man who has available a plant with a splendid water-power privilege, side tracks, machinery, and so forth, equipped to make twine. I realize the sense of Mr. Greene's argument about "passing the buck," and for my own information, I would like to know whether I should have that man, who has an idle plant ready to turn over to you with the labor, go to the War Industries Board or to Mr. Bernard Baruch or Mr. Robert Brookings or to you?

Col. HOFFER. The War Industries Board is collecting data with reference to the capacity and possibilities of various plants, and each department of the Government and each division of each department

is tabulating as far as it can and as fast as it can and as accurately as it can the data in so far as it affects its own particular needs.

Mr. GREENE. That is exactly the information I want to get, and without offering this in a critical sense, naturally you are interested in the gun line and somebody in some other division is interested along another line and here is a diversity of plants and nobody knows now which one of them if any will fit in with any of the particular lines, and that means there must be a general survey first in order to determine how these plants shall work, and the result is if I go to anyone of the specialists in the department he will immediately say to himself, "Will it fit my work?" Of course, I do not know, and nobody knows.

Col. HOFFER. Answering your specific question, so far as the Ordnance Department is concerned, if the matter is taken up with Gen. Wheeler, in the office of the Chief of Ordnance, who has general charge of production, he would be the proper person to take the matter to in so far as the Ordnance Department as a whole is concerned. I would be glad to have anyone sent to the gun division, and I will have my production section interview him and find out the possibility of the gun division being able to utilize such capacity.

Mr. GREENE. Of course, you can see that it might be, if I undertook such an errand, it would turn out when an inspection was made that these plants were more adapted to manufacturing quartermaster material than ordnance material. In other words, we are looking for some one general center which will undertake to make a scrutiny and a division of such capacity.

Col. HOFFER. That would naturally come under some coordinating body such as the War Industries Board, and the War Industries Board is not fully organized to do that work; and there is no organization in the Government, so far as I know, that is organized to do that work; and in the absence of such a general body capable of analyzing the entire capacity of the country and submitting lists, for example, to the Ordnance Department, which can be subdivided among the various branches of that department, and submitting another one to the Quartermaster Department to be subdivided there—in the absence of any such general body, the only thing that the various divisions and branches of the Government can do is to try to collect as much of these data as they can themselves.

Mr. GREENE. Then your answers suggest, right in line with what Mr. Kahn said, that it would evidently be wise to have Congress authorize the creation of, or constitute under such powers as it may have, a general board that would be the first collecting source, and from which the distribution to these different departments might be made, after the general board had said what the plants were and what they could do.

Col. HOFFER. The result of such a board working intelligently would be of inestimable value to all the departments.

Mr. GREENE. First a general survey of the plants themselves and then a distribution of their several specialties to the departments concerned.

The CHAIRMAN. Do you not think, gentlemen, that is a question we ought to discuss with the Secretary, as to what the policy should be?

Mr. GREENE. I understand, and I do not want to delay the hearing, but I would suggest that wherever any matter like this impinges on any one of the divisions, each one naturally will have information in particular detail as to the application of the principle to his division; that is all.

Col. HOFFER. Mr. Chairman, perhaps I have already said too much.

Mr. McKENZIE. Mr. Chairman, may I say a word and then ask a question? I have had some little experience with manufacturers from my home district, and I had a very pleasant meeting with some of the representatives of the Ordnance Department yesterday, and I fully appreciate what these men are up against and the utter futility of simply going down to these men and saying, "I have a factory in my town, and they employ 40 men and do this and do that and do the other thing," and I made the suggestion yesterday in the office of one of these gentlemen that, in my judgment, the thing that a manufacturer ought to do first is to make out a detailed statement of his floor space, the machines he has, the character of the machines, what he makes, and give a full description of the plant and a statement of how many men he employs and what the possibilities are in that community, and go armed with a statement of that sort, and then you have got something tangible to put before these officers. To ask these technical men to go to Illinois or Vermont or Massachusetts or South Carolina to look over a factory at this time, to my mind, is utterly out of the question, while I am sure they would get fair treatment if the thing is presented properly. I know I do. I was treated very nicely by the gentlemen over there in this department, and the men who were here offering their services went away feeling they had gotten a great deal of valuable information, and went home with the idea of trying to do something to help out the Government.

Now, getting down to my question: Colonel, you are manufacturing some of these bombs or having them manufactured at this time, as I understand it?

Col. HOFFER. Yes, sir.

Mr. McKENZIE. And you have made certain arrangements to manufacture them, so far as you have got money to pay for the article manufactured?

Col. HOFFER. Yes, sir.

Mr. McKENZIE. You have come to us and asked for a very large appropriation here for the continuance of the manufacture of bombs and aeroplane fixtures, etc. Have you at this time consummated, or have you in your mind's eye, even, just where you can place this money to go right on with this work; or, in other words, is the appropriation the initial thing, and then all the other work a matter which has to come afterwards, or have you in your organization now the plans laid whereby you can expend this money?

Col. HOFFER. We know now where we can place orders that will take one-third of this sum we have asked for immediately, and the placing of orders for the remainder is simply a question of locating or developing facilities.

Mr. McKENZIE. Right there, Colonel, if that statement is true, then you have made arrangements sufficient, at least, to take care of all the aeroplanes that we will be able to get to the battle front until you are prepared to go on manufacturing more; is that true? In

Col. HOFFER. But the material will not be.

Mr. GORDON. The appropriation will be available, will it not?

Col. HOFFER. Yes, sir; but in considering this plan it is necessary to consider when the material will be available, and we have usually considered some period like September 1 or October 1.

Mr. GORDON. Now, the whole appropriation will be available after the 1st of July, 1918.

Col. HOFFER. That is right, and for that purpose I ask under this general heading \$295,000,000, or \$254,000,000 plus \$41,000,000, but in order that we may now inaugurate the manufacture of material that must not only be started now but must be mostly completed by September 1, 1918, we must have appropriated and made immediately available, if possible, the additional sum of \$277,800,000.

Mr. GORDON. So that you can make contracts before the beginning of the next fiscal year?

Col. HOFFER. Yes, sir; to make contracts promptly, if necessary. My people are prepared now to place orders for material that will take one-third of that \$277,800,000.

Mr. GORDON. What is the total appropriation, including what you want to be made immediately available and what you want at the beginning of the next fiscal year? What is the aggregate of it in dollars and cents? You said \$295,000,000 plus \$277,800,000.

Col. HOFFER. Three hundred and ninety million dollars plus forty-one million dollars. For example, the object would be attained by immediately appropriating \$277,800,000 and increasing the amount carried in this bill under ordnance stores ammunition from \$290,000,000 to \$431,000,000.

Mr. GORDON. Four hundred and thirty-one million dollars includes all you want; that is, including what is needed to be made immediately available and what is to be available for the next fiscal year?

Col. HOFFER. No, sir; that does not include the \$277,800,000.

Mr. GORDON. What is the total amount of money you are asking for? Would you add the \$431,000,000 to the \$277,800,000?

Col. HOFFER. The total amount of money that we want is \$708,800,000.

Mr. GORDON. Have you the figures to show what you will buy with that money?

Col. HOFFER. Yes, sir.

Mr. GORDON. Will you put those figures in the record?

Col. HOFFER. The total amount that should be appropriated under the heading "Ordnance stores, ammunition," is \$708,800,000, of which a certain portion has been accounted for by Col. Thompson, amounting to approximately \$135,000,000, which leaves a total amount for the particular purposes that I have discussed of \$572,800,000. So far as hand grenades, rifle grenades, and drop bombs are concerned, the total amount we are asking for immediately and for the next fiscal year is \$572,800,000. I have here a tabulated statement of the estimates used in making up those figures, and if the committee desires it I will, of course, submit it.

Mr. KAHN. When we had the aviation bill before us we received from the Signal Corps certain blue prints, which were not printed. Every member of the committee had a blue-print copy of the items, and why would it not be proper at this time to ask that we be given blue prints of these items?

The CHAIRMAN. I think that would answer our purposes, and you can have a copy made for each member of the committee.

Col. HOFFER. I will do so.

Mr. SHALLENBERGER. When you first appeared before the committee, did you not state the amount you wished to have made immediately available as very much less than the amount you now ask to be made immediately available? Did not your first statement give the amount that you wanted to be made immediately available as something less than \$50,000,000?

Col. HOFFER. No, sir. If I made that statement, it was incorrect.

Mr. SHALLENBERGER. I think the record will show that you did.

Col. HOFFER. The total amount is \$708,800,000, of which \$41,000,000 should be added to the estimates in the regular way and \$277,800,000 of it should be made immediately available.

Mr. SHALLENBERGER. I understand. That is the statement you made to-day; but when you first made your statement I gathered from it that you did not ask for any such sum as that, and I wanted to know how it was possible for you to make such a mistake as I gathered was made.

Col. HOFFER. In what statement—in my statement the other day?

Mr. SHALLENBERGER. Yes.

Col. HOFFER. That was for a different class of material.

Mr. SHALLENBERGER. No; it was in regard to this particular item. When you appeared you gave us a statement of what you wanted for bombs, and you asked that a certain amount of it be made immediately available; but that amount you asked then was less than this amount.

Col. HOFFER. That covered a different class of material, and I will be glad to enumerate what class of material that statement covered. The item that we have been discussing to-day is not the item I discussed at the last meeting at all.

Mr. SHALLENBERGER. You said it was for bombs.

Col. HOFFER. No, sir; I said bomb sights. I will be glad to enumerate the items which were considered yesterday. They were rifle lights, illuminating rockets, signal rockets, signal lights, position lights, smoke torches, aeroplane flares, Very pistols, bomb sights and drop apparatus, chemical apparatus, and flame projectors.

Mr. SHALLENBERGER. The language that I recall was about hand grenades, rifle grenades, and aeroplane bombs.

Col. HOFFER. On yesterday?

Mr. SHALLENBERGER. I understood you to say that.

Col. HOFFER. No, sir; I think not. We were discussing yesterday the appropriation, Ordnance Stores and Supplies, and to-day we are discussing the item, Ordnance Stores—Ammunition. Reference was made to some of these articles the other day, but I do not believe my testimony referred to these items. Such items as hand grenades come under the latter appropriation.

Mr. QUIN. You are not asking for a dollar more than you need for that business, are you?

Col. HOFFER. It is our best guess and estimate for our requirements.

Mr. QUIN. My notion is that this committee wants to give, and ought to give, every dollar you need. We ought to have a surplus for this purpose instead of a deficiency.

Col. HOFFER. It is as careful an estimate as we could make. When these appropriations are made and the money is available, as we are constantly being obliged to revise certain estimates in accordance with the latest information, we adjust those funds so as to meet the situation at the time. All of these contracts contain a cancellation clause, and we can stop manufacture at any particular time. The department is not going any further in the manufacture of any of these articles than is shown to be necessary.

Mr. QUIN. If the war should end you could stop the manufacture!

Col. HOFFER. We could cancel the contracts; yes, sir.

Mr. GARRETT. In making your contracts with the various concerns of the country for the manufacture of the munitions and articles mentioned here, do you make any inquiry or do you have any estimates made to you of the profits they make on the articles to be furnished to the Government?

Col. HOFFER. Yes, sir; that is very carefully gone into.

Mr. GARRETT. What has your department considered a reasonable profit for those men that the Government is aiding?

Col. HOFFER. Opinions as to the proper profit vary somewhat with the class of material and the risk involved in its manufacture, as well as with the difficulty and ramifications of the manufacture. In the cost-plus contract the general rule is about 10 per cent.

Mr. GARRETT. That is where the contractor assumes no financial responsibility at all?

Col. HOFFER. Practically none; no, sir.

Mr. GARRETT. Now, in the case of a plant where the Government is furnishing the money in advance for the raw material, or is making such additions as are necessary to turn out the work the Government desires to have turned out, and where at the end of the contract the Government is to take the extension property off the hands of the contractor, what kind of profit do you figure on in a case of that kind?

Col. HOFFER. If it is a fixed-price contract it is very difficult to determine exactly what the profit is. In that case the contractor takes many risks in regard to labor, delays due to difficulty in getting raw material, and all the other questions which affect production and affect costs. Our general plan in procuring material where there is competition has been to send letters of inquiry to responsible parties who have been passed upon by my production section as being reliable and competent to do this work. We estimate on how much they can undertake, and send out letters of inquiry asking them for the terms under which they will undertake this business, how much they think they can make, and what is a fair price, and upon the basis of the replies received our negotiators try to make the best possible bargain for the Government. I think that in most of the business we have placed there is a very reasonable profit for the manufacturers. I think they are doing our business at excellent prices, considering the conditions. In that case the profits may run as high as 15 per cent or 20 per cent on a fixed-price contract. I think in many cases the expectation of profit will not be realized.

Mr. GARRETT. The reason I asked that question is that there has been considerable discussion over the country on the subject of profit-taking. In fact, the President referred to something of that sort

in his message, but not in connection, of course, with the Ordnance Department, but with reference to the country generally he referred to the fact that people are trying to make money out of the war. The question in my mind was whether or not the time has not about arrived when the Government should commandeer all of those plants necessary in the making of munitions of war and take charge of them, thus cutting out the question of profit altogether, and when the war is over, the plants could be turned over to their owners in as good condition as the Government received them, with a reasonable compensation for the use of them, thus doing away with the question of profiteering.

Mr. GREENE. Is not that already taken care of?

Mr. NICHOLLS. His question is why they do not do it.

Mr. GARRETT. Of course that is a question of policy, and I will not insist on an answer to it.

Mr. HULL. At the outbreak of the war, how many cannon of the type that you are sending to France did you have on hand?

Col. HOFFER. We have not sent any to France.

Mr. HULL. But you are going to send them. How many of the type you are going to send have you on hand?

Col. HOFFER. We will send seventy-fives, for example.

Mr. HULL. How many of them have you on hand?

Col. HOFFER. We have now approximately about 800 guns of that type.

Mr. HULL. I asked how many you had at the outbreak of the war—that is, about the 1st of April?

Col. HOFFER. We had approximately 600 guns actually completed.

Mr. HULL. Of the type that you are going to use?

Col. HOFFER. No, sir; not of the type we are going to use, the guns are principally 3-inch caliber, not 75 mm.

Mr. HULL. Did you have any?

Col. HOFFER. Except for some 4.7-inch guns, I think none of the exact types that we are going to send abroad. All of those guns, however, are being used in training. Those 800 guns are being used in training.

Mr. CALDWELL. You keep accurate cost data of the operations in the Government plants, do you not, for the manufacture of arms and munitions?

Col. HOFFER. Yes, sir.

Mr. CALDWELL. Have you compared the cost of those munitions when manufactured by the Government with the cost when manufactured under contract?

Col. HOFFER. Yes, sir.

Mr. CALDWELL. Which do you find to be the cheaper?

Col. HOFFER. The price at which we are getting material from private manufacturers is cheaper, and should be because of the greater quantities produced. Our arsenals are very small, and are insignificant manufacturing establishments when compared with the undertakings in which we are now involved.

Mr. CALDWELL. The conditions now, then, are different from what they were before the war?

Col. HOFFER. Yes, sir; because we were manufacturing greater quantities than we were procuring outside.

Mr. HULL. You are purchasing these things cheaper than you are manufacturing them or could manufacture them at your arsenals?

Col. HOFFER. I think that general statement is correct. There may be exceptions, but that is the general rule.

Mr. HULL. Let me ask Col. Thompson if he is manufacturing rifles cheaper?

Col. THOMPSON. I can not say that we are.

Mr. CALDWELL. One more question: Are you paying royalties on the patents that are used?

Col. HOFFER. Practically none.

Mr. CALDWELL. Are you paying a royalty on rifles?

Col. THOMPSON. No, sir.

Mr. CALDWELL. Are you paying a royalty on the pistol?

Col. THOMPSON. The Government is not paying a royalty.

Mr. CALDWELL. Who is?

Col. THOMPSON. I think the company from which we buy pays a royalty.

Mr. CALDWELL. The Government has to pay them a sufficient sum of money to cover the royalty?

Col. THOMPSON. I mean the Government is not paying a royalty directly.

Mr. CALDWELL. What is the royalty on the pistol you are using now?

Col. THOMPSON. I do not know, but I can put that in the hearing.

Mr. CALDWELL. Will you put that in the record, please?

NOTE.—Colt. Co. states it is 75 cents per pistol.

Col. HOFFER. I would like to qualify my statement by saying there are a few articles we intend to pay royalties on.

Mr. CALDWELL. Will you put in the record a statement naming those articles and the royalty? I would also like to know whether the patent is held by American enterprise or whether it is foreign enterprise in each instance.

Col. HOFFER. Yes. No royalties are now being paid on the articles procured from the appropriations under discussion. Negotiations are, however, under way for the following:

Type.	Owner of patents.	Nationality.
Barlow heavy drop bomb..... Contract made on 10 per cent basis, but must be re-adjusted in view of present conditions.	Marlin-Rockwell Corporation....	American.
High-capacity bomb (certain features).....	do.....	Do.
V. B. rifle grenade.....	General Electric Co. of Paris.....	French.
3-inch Stokes guns and ammunition.....	Sir Wilfred Stokes.....	British.

Mr. TILSON. I would like to ask Col. Thompson if he is entirely correct as to the rifle, or whether or not we are paying a slight royalty on the Buffington sight?

Col. THOMPSON. We are paying no royalty on the Buffington sight.

Mr. TILSON. Were we not paying one a short time ago? I had understood there was a royalty on the Buffington sight, but I may have been misinformed.

Col. THOMPSON. Not that I know of.

Mr. CALDWELL. Colonel, you have stated that we were buying our material cheaper at the private plants than we could make it in the

Government plants, and you stated the reason was that the Government was doing it on a much smaller scale than in the private plants. Could you form an opinion from your experience in Government manufacture as to whether or not if you took over those private plants we could make a saving in the cost of our material. Could you form an opinion from your own personal experience about that?

Col. HOFFER. I would like to ask you if you will tell me what you mean by taking over a plant. Who would operate the plant?

Mr. CALDWELL. The Government.

Col. HOFFER. How would the Government operate the plant?

Mr. CALDWELL. Just like it operates its present plants.

Col. HOFFER. How could the organization be gotten together to operate it?

Mr. CALDWELL. Employ them just like they do.

Col. HOFFER. It is the most difficult thing in the world to build up an organization, as any of you gentlemen who are in the manufacturing business knows, and practically the result would be to simply let the present organizations run them, and then we come down practically to a cost basis.

Mr. GREENE. Then you come down to the difference in overhead?

Col. HOFFER. A slight difference in overhead. The Government has not the personnel to operate these plants and could not recruit it in time and put the men in those plants in order to get the material out in time.

Mr. CALDWELL. When a business is reorganized and a new ownership comes along they carry on the business without any hitch at all.

Col. HOFFER. But how many people do they change in their organization?

Mr. SHALLENBERGER. We have had advocated from very high authority that the Government should operate all the railroads in the United States as a war proposition. Is not that a bigger thing than this?

Col. HOFFER. You are getting me rather beyond my depth, but the whole thing hinges upon the extent to which the Government will operate them; will it simply commandeer the whole organization or will it commandeer the actual operating men of these roads? You can take away, for example, probably the president of the road and replace him, but you can not take away your train dispatcher; you can not take away the man who is really running the business and replace him with another man.

Mr. CALDWELL. I hope you did not assume from my question that I expected to throw away that working organization?

Mr. NICHOLS. Mr. Caldwell's proposition, as I understand it, is this: They are making a profit of from 10 to 15 and possibly 20 per cent, and his idea is for the Government to take over the whole thing and manage it.

Mr. GREENE. May I interrupt you right there. You can take over the plant and its good will and all that sort of thing, but the personnel may not necessarily go with it.

Mr. NICHOLS. But we have got to presume that the personnel is willing to work for the Government for the same wages that they are working for now. They do not care whether they are working for the Government if you pay them the same wages. What Mr. Caldwell is trying to get at is this: Why should not the Government take

over these plants, if these men will work for the Government at the same wages they are working for these private corporations, and save the profit by manufacturing at the same cost these men are manufacturing at?

The CHAIRMAN. Gentlemen, I will have to again suggest that I do not see how this is applicable to this particular item of the bill.

Mr. GARRETT. I would like to ask the colonel one question about which I have gotten confused and I want him to straighten me out for my own information. I understood you to say that you were now procuring rifles and munitions and things of that character cheaper through private concerns than we were making them in the Government arsenals?

Col. HOFFER. Yes, sir.

Mr. GARRETT. If my memory is not serving me a trick, Gen. Crozier testified before the committee in the Sixty-third Congress that the rifles and munitions that were being made in the Government arsenals were made 33½ per cent cheaper than those made in private concerns.

Mr. TILSON. That was probably correct at that time and might not be correct now.

Mr. GARRETT. I want to know how the conditions have changed so that the Government itself can not now manufacture these articles at least as cheaply as the private concerns manufacture them.

Col. HOFFER. I did not mean to include in my statement the question of rifles or rifle ammunition. I am dealing with the general question, say, of artillery ammunition, grenades, drop bombs, etc. I made the general statement I thought an analysis would show that as a whole we were now purchasing our material at a more reasonable cost than that at which it can be manufactured at the ordnance establishments. I further stated that that is due primarily to the fact that these organizations that are being called upon to do this work are doing it on an enormous scale and they are only manufacturing probably one single article, whereas, for example, the total output of Frankford Arsenal is a half a million rounds a year, which is very small, whereas some private concerns are manufacturing 4,000,000 rounds a year, and moreover Frankford Arsenal's 500,000 rounds is divided up among seven or eight different kinds of ammunition, which places the arsenal at quite a disadvantage. There has also been a material labor increase in the Government establishments and other causes, and I think the balance is now in favor of the private manufacturer simply due to the volume of business and the concentration on a particular item.

Mr. GARRETT. For our information can you give us the combination cost of all the guns and munitions that private concerns are making for the Government at this time and those which the Government is making in its own arsenals and submit to the committee which ones are coming to the Government the cheapest?

Mr. HULL. Would not that be a question for Gen. Crozier?

Mr. GARRETT. I supposed I was speaking to Gen. Crozier through Col. Hoffer.

Mr. KAHN. Will you permit me to suggest something? The Government never gave out contracts for the manufacture of rifles. We were manufacturing them all.

Mr. GARRETT. But we were buying rifles from private concerns.

Mr. TILSON. No; there was not a single rifle of that kind made in this country except in our Government arsenals.

Mr. KAHN. And you will remember, Mr. Garrett, we put a provision in the national defense law to allow the Ordnance Department to get the various dies, etc., so that we could manufacture the rifles in other concerns.

Mr. GARRETT. Here is what I am trying to get at: If private concerns now are making munitions of war cheaper than the Government is making them, I want to know how they are doing it.

Col. HOFFER. It would be very difficult to give you that information about artillery ammunition because since the outbreak of the war we have changed practically every design of ammunition, and exact comparative data is not available, and it would be practically impossible within any reasonable time to get it, because for these new types of ammunition we would merely have the arsenal estimates, and it would be impossible to present a comparison which would clearly show the difference in cost with regard to each item, because we would not have manufactured at the arsenal the particular items. The arsenals are manufacturing some, but they have not carried the work far enough along to definitely determine the cost.

Mr. HULL. I want to call the attention of this committee to this fact, although some of the committee have stated it in a different form: There is no testimony here that you are purchasing rifles cheaper than you are manufacturing them at the arsenal; is not that right, Col. Thompson?

Col. THOMPSON. That is right, sir.

Mr. GREENE. I would like to ask Col. Hoffer this question: Do I correctly understand that one of the causes for the cheaper production by private plants, as compared with Government manufacture, is that the private plant buying in great quantities can get its raw material cheaper?

Col. HOFFER. Its being able to manufacture in greater quantities.

Mr. GREENE. Of course, that is true; and, also, is one of the factors—their ability to buy raw materials cheaper.

Col. HOFFER. No; the prices of raw materials are practically fixed now. The price of steel is fixed, and the price of copper and lead, and so on, is fixed. The Government is furnishing those raw materials.

The CHAIRMAN. There is one matter I want to call Col. Thompson's attention to.

Col. THOMPSON. And there is a matter I would like to speak about, and that is with reference to the basis of the estimates.

The CHAIRMAN. Yes; we appropriated last year on the basis of over 2,000,000 men—2,033,000 men and 86,000 officers—and you only asked for \$212,798,000. Now you say you already have a deficiency in that appropriation. I suppose it would take too long to take that up now, but I simply wanted to call your attention to it so you could explain that to-morrow morning.

Col. THOMPSON. May I say in general that what we have on hand is taken in connection with these estimates.

(The committee thereupon adjourned until Friday, December 14, 1917.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Friday, December 14, 1917.

The committee this day met, Hon. S. Hubert Dent, jr. (chairman), presiding.

**STATEMENT OF COL. JOHN T. THOMPSON, BUREAU OF ORDNANCE,
ACCOMPANIED BY LIEUT. COL. E. P. O'HEARN, MAJ. J. E. MUN-
ROE, AND CAPT. E. J. W. RAGSDALE.**

The CHAIRMAN. Colonel, yesterday I called attention to the fact that in the appropriation of the last session of Congress you asked, under this item, for \$212,000,000, and that appropriation was based on an army of a little over 2,000,000 men, and now you are asking for double that amount for an army of 1,500,000 men.

Col. THOMPSON. This refers to the appropriation "Ordnance stores, ammunition," as I understand it.

Under the provisions of the appropriation bill approved May 12, 1917, the total appropriation was \$21,000,000, of which \$8,804,400 was for the small-arms division and \$3,195,600 for the gun and other divisions.

Under the urgent deficiency act approved June 15, 1917, the total amount appropriated was \$131,048,000, of which \$127,516,700 was for the small-arms division and \$3,531,300 was for the gun and other divisions.

Under the urgent deficiency act approved October 6, 1917, the total amount appropriated was \$69,750,000, of which \$33,750,000 was for the small-arms division and \$36,000,000 for the gun and other divisions.

The amount appropriated under the act of May 12, 1917, for the support of the Army, amounting to \$12,000,000, was, I suppose, for the current forces. I did not prepare that estimate.

The CHAIRMAN. That is the point I am trying to get at. You have stated here that this item was based on a total strength of 1,500,000 men.

Col. THOMPSON. Yes, sir.

The CHAIRMAN. In the hearings before the Appropriations Committee last summer Secretary Baker, at page 329 of those hearings, says that the estimates he was asking for, which were finally granted in the last appropriation bill of October 6, 1917, were for an army of 2,033,000 men.

Col. THOMPSON. When did he say that?

The CHAIRMAN. That was in July last, on July 30.

Col. THOMPSON. That was in reference to the urgent deficiency act approved October 6, 1917, in which \$69,750,000 was the total appropriation under the appropriation "Ordnance stores, ammunition." Of that amount the small-arms division got \$33,750,000,

and that was for the purpose of procuring a special class of ammunition which had become of much importance since the previous acts were approved.

The CHAIRMAN. You mean to say they did not ask for enough last year?

Col. THOMPSON. No, sir. I said this was a special class of ammunition which had come into prominence since the previous acts were passed. That is to say, this \$33,750,000 was for 200,000,000 ball cartridges, caliber .30, with tracer bullets, 200,000,000 cartridges with incendiary bullets, and then 50,000,000 cartridges with armor-piercing bullets, which had not been appropriated for specifically in the previous appropriation act.

The CHAIRMAN. Do those items make up the difference?

Col. THOMPSON. Yes; they make up the difference, so far as the small-arms division is concerned. The remaining \$36,000,000 of the \$69,750,000 pertains to the gun and other divisions.

May I add, with reference to this special ammunition, that it is used in the aeroplanes, and at the time the previous appropriation acts were passed there was not sufficient information and knowledge and experience in this country, apparently, to approach the subject in order to get the specific appropriation necessary. It was covered in a general way only in previous small-arms ammunition appropriations.

The CHAIRMAN. Then the bulk of this appropriation under this item is for the air service, with which you were not entirely familiar last summer?

Col. THOMPSON. Yes, sir; especially as to the quantity required.

The CHAIRMAN. The next item, on page 62, is:

Small-arms target practice: For manufacture and purchase of ammunition, targets, and other accessories for small-arms, hand, and machine-gun target practice and instruction; marksmen's medals, prize arms, and insignia for all arms of the service; and ammunition, targets, target materials, and other accessories which may be issued for small-arms target practice and instruction at the educational institutions and State soldiers' and sailors' orphans' homes to which issues of small arms are lawfully made, under such regulations as the Secretary of War may prescribe (acts May 12, 1917, vol. 40, p. 63, sec. 1; June 15 1917, vol. 40, p. 197, sec. 1; Oct. 6, 1917, vol. 40, p. 306, sec. 1). \$75,200,000.

There is a reduction in the amount of the appropriation you are asking for under that item.

Col. THOMPSON. This item, as its title indicates, is for target practice with the arms which use the small-arms cartridges; that is, the caliber .30 rifles, and caliber .45 pistols and revolvers. It also includes an appropriation of \$6,500,000 for grenade work, which is under Col. Hoffer, who is represented here this morning by Lieut. Col. O'Hearn.

This item is for 1,612,000 men, instead of 1,500,000 men, as I before stated. There have been 112,000 men added for the Aviation Corps. These men use, largely, pistols for their personal equipment.

* * * * *

Mr. SHALLENBERGER. When we had this matter under discussion the other day, and the question came up as to the rifle cartridge, it was brought out that you expect to use, in the beginning, the French machine gun, the light machine gun, which a man carries, and which would use the French ammunition, and I asked you if it was not

true that you also expected to use the Browning, which is a light machine gun, and as I recall it now, both you and Mr. Kahn said that that was not in contemplation. Did I understand that correctly?

Col. THOMPSON. May I say in that connection, that this business is such that in one division we do not know the details of what the other divisions are doing, but so far as my knowledge is concerned, the light Browning gun will be used.

Mr. SHALLENBERGER. I have read in the newspapers that in the discussion which has taken place at the hearings now being held by the Military Committee of the Senate, where the Chief of Ordnance is testifying, he has said that the Browning machine gun has displaced the other machine guns, and I want to know if that is true, why it is that this committee is told that that gun is not going to be used? Why can not we get the information in this committee which is given to the other committee?

Col. THOMPSON. To the best of my knowledge, sir, the Browning gun and the Lewis gun and all those guns will be used as a matter of necessity, and those that are used first will be used because they have them first. Lieut. Col. John H. Rice, who is in charge of that subject, can give you definite information about it.

Subject to correction, I would say that all the machine guns are going to be used, and it will be quite a problem even then to get the required number in the required time.

Mr. SHALLENBERGER. I recall that in your statement in regard to the delay in the manufacture of these rifles, you gave us to understand, as I gathered from your statement, that the War Department had had under consideration the subject of the most efficient cartridge, and that finally the rimless cartridge was determined upon, although it required a change of the British rifle to use our cartridge, but that was deemed essential, and it was also deemed essential to use one kind of ammunition throughout the Army, if possible.

Then it was brought out later that the French machine gun, which is similar in type to the Browning gun, would use the French ammunition. Can you tell us how much of this French ammunition would be taken in proportion to the amount of our ammunition? How many of the French machine guns would be given to each company, and how much ammunition would they be required to carry?

Col. THOMPSON. If the proper proportion of machine guns were with modern troops, theoretically, if the firing were maintained in proper proportion, in my opinion, at least two shots would be fired from a machine gun to one from a rifle.

Mr. SHALLENBERGER. I will say, Colonel, that since the testimony that has been given here, I have talked somewhat with a French infantry officer who has had experience with these particular guns, and he tells me that they carry 16 of these light machine guns with each company of men, and that practically 50 men operate the machine guns, or one-fifth of the company. That is to say, that about one-fifth of the company is operating these machine guns, and they shoot so much more rapidly than the other guns that they require a greater percentage of ammunition per man for the machine gun than for the other guns.

Take the machine guns as they are operated at present; each man would be required to carry one-third as much more ammunition for the machine gun as for the ordinary rifle.

The point I would like to have you make clear to this committee is why you told the committee, in response to my question, that we were not going to use this gun. I suppose that you did not know at that time that that was to be done.

When I asked you if it was not a fact that the Browning gun was to be used, I think you stated that it was not in contemplation that that gun was to be used. Was that because you did not have the information, or did you think that the committee ought not to have the information?

Col. THOMPSON. The only thought I had was that the present conditions—we have not got the guns, we will not have them for some time.

Mr. SHALLENBERGER. You meant, rather, to state the present condition, that the prospective condition—

Col. THOMPSON. Yes, sir. If you will permit me to state the prospective conditions, the French Chochaut guns, which are the French lighter machine guns, are simply a temporary expedient that will be used and that will be replaced as quickly as possible by our own style of guns, as soon as they are manufactured.

Mr. SHALLENBERGER. And that is the Browning gun?

Col. THOMPSON. Yes, sir. May I add, as I said before, pretty nearly every suitable kind of machine gun that we can get manufactured will be used.

Mr. SHALLENBERGER. Do you know whether or not you have provided a lot of ammunition to be used in the aeroplane which is going to be fired from a Lewis gun or from some other sort of gun? Do you know what type of machine gun that is going to be fired from?

Col. THOMPSON. It will be fired from the Lewis gun and the Browning gun and the Colt gun and the Marlin-Colt gun.

Mr. SHALLENBERGER. All those guns are going to be mounted in our aeroplanes?

Col. THOMPSON. In our aeroplanes?

Mr. SHALLENBERGER. Yes.

Col. THOMPSON. That is a question I could not answer. I believe, however, there is one—Lieut. Col. O'Hearn tells me that the Lewis gun and the Marlin-Colt will be used in the aeroplanes.

Mr. SHALLENBERGER. I have been informed by an officer, one of the officers of the British Army, a flier, who has had vast experience in the flying corps, that he had been informed that we were not going to use any Lewis guns in our aeroplanes, and the officer who told me this spoke about it as being a state of affairs which tremendously disappointed him, because he thought that their experience on the other side showed that the Lewis gun had demonstrated that it was the gun par excellence for aeroplanes. Can you tell us whether that ammunition is to be fired from the Lewis guns, or has that gun been disqualified from aeroplane service in this country?

Col. THOMPSON. I can not tell you that. That is not within my jurisdiction. All I know is that the ammunition is tested in all machine guns, including the Lewis gun.

Mr. SHALLENBERGER. Do you know whether or not we are buying the Lewis gun in quantities?

Col. THOMPSON. Yes, sir; I would suggest, if I may, that you can get very definite and specific information from the officer in charge

of that particular work. We are all so busy in these tremendous operations that it is practically impossible for any one division to know the details of what the men in other divisions are doing.

Mr. NICHOLS. You do not know what they are going to do with the ammunition after it is purchased?

Col. THOMPSON. That is about all, except that I know all that ammunition is tested in the Lewis gun.

Mr. NICHOLS. Your division furnishes the Army with the material, and it is their duty, and not yours, to determine where they are going to use it.

Col. THOMPSON. Yes, sir. The Ordnance Bureau, as a rule, does not determine what guns are to be used in an aeroplane. I can tell you definitely, however, that all this ammunition is tested in the Lewis gun.

Mr. SHALLENBERGER. It has been constantly stated before this committee that it has not been demonstrated to the satisfaction of the Ordnance Bureau that the Lewis gun would handle the American ammunition satisfactorily. Your ammunition is apparently for the French gun, which is a caliber .30 gun, and I was wondering whether it has been demonstrated that the Lewis gun can handle the American ammunition satisfactorily.

Col. THOMPSON. There is no doubt about that. I can tell you that. Col. O'Hearn says that there are some of those mounted in the aeroplanes now.

Mr. SHALLENBERGER. Then the information I had is evidently incorrect. The information I got about the Browning gun I had to get on the outside.

Mr. McKENZIE. Is it the intent to use identically the same caliber ammunition in the Browning gun, the Lewis gun, and the Marlin gun?

Col. THOMPSON. Yes, sir.

Mr. McKENZIE. Then there will be no difficulty about getting the ammunition mixed. It will all be interchangeable?

Col. THOMPSON. Yes, sir. That is the benefit; but I want to say that with the various types of machine guns the cartridges are inserted into the chamber in a different manner and they are extracted in a different manner, and it is one of the hardest problems we have had. It takes all our intelligence and skill to solve it, because some of the guns require the cartridges to be a little softer near the head, others a little harder than usual, in order to prevent the head of the cartridge case from breaking off. You can make a cartridge for one machine that will be fired beautifully by that machine gun. Put it in another with another action and it will begin to give a great deal of trouble, and that is one of the hardest problems that we have to solve.

Abroad the cartridges for the machine guns usually are limited to fewer types of guns, and I also understand that in France there is just one factory that makes cartridges for aeroplane guns.

There is a certain kind of ammunition that is shipped abroad for aeroplanes—and, of course, it can be used in the hand-operated rifle, which is much easier on cartridges, as you can see—and this ammunition for aeroplane machine guns is issued and marked separately.

Mr. QUIN. How many cartridges will a machine gun shoot in a minute?

Col. THOMPSON. It fires between 400 and 500. It has a shooting capacity very much higher, but when you reach the higher capacity there are apt to be pretty serious mechanical difficulties. You can see that if you shoot 600 rounds a minute that makes an allowance of one-tenth of a second for each shot, and the trouble comes when the extractor pulls out the cartridge case which has just been fired. There is a residual gas pressure there which presses the fired cartridge case against the walls of the chamber of the gun with great pressure, tending to hold the fired cartridge case in the chamber at the same time the bolt with the extractor is trying to extract the case.

Mr. QUIN. That forms a vacuum?

Col. THOMPSON. On the contrary, there is a residual gas pressure in the bore and chamber of a gun firing so rapidly, and that residual pressure comes against the interior wall of the cartridge and presses it out against the chamber, and it holds there, and while held the extractor is pulling rearward on the head; and if the cartridge case is not annealed just right the head is pulled right off; and when you fire rapidly you get into that trouble. You sometimes find it said that the machine gun will fire a thousand rounds a minute. Of course, that is not correct. You would get into serious trouble if you fired at any such speed as that.

Mr. GARRETT. The moment the head of the cartridge is pulled off, the firing has to cease until the other part of the head is shot out.

Col. THOMPSON. Indeed it does—until the other part of the case has been removed by hand.

Mr. GREENE. Does not this experience lead to an approximate standardization of the quantity of supplies, as distributed between the hand rifle and the machine gun, in this respect, that while the hand rifle has now probably arrived at something like the law of averages for its use, and the number of cartridges which a certain number of men will expend in a given time, and you can fix it now with something like accuracy, although the machine gun is in constant use and fires a great many more cartridges at a time than the hand rifle, yet the law of averages can also be applied there, too, so that you have a ratio which is pretty well fixed, between the shoulder rifle and the machine gun, so far as the use of cartridges is concerned! In other words, putting those guns side by side, it would look as if the machine gun was devouring cartridges, whereas it is not, because it is in constant use.

Col. THOMPSON. We have little or no experience in this country about it. All we know is from our research and our experience abroad, and that is constantly changing. In fact, officers who are experts in that line will tell you that such and such a thing was true when they left the firing line, but that they do not vouch for it now. The tendency has been rather to increase the number of cartridges used in machine guns, and we base our experience on their experience. No one can say it is fixed, because every one would use more automatic rifles if they could get them, and the ratio changes for the different armies.

Mr. GREENE. It is not constant?

Col. THOMPSON. No, sir.

Mr. GREENE. Have you approximated any estimate, so far as the supplies you would use are concerned, as to a probable ratio?

Col. THOMPSON. Yes, sir.

Mr. GREENE. What is that ratio?

Col. THOMPSON. I stated it to be about two to one. That is a good proportion, because any cartridges that can be used in a machine gun can be used in a rifle. Some give the proportion as 60 per cent for the machine gun and 40 per cent for the rifle. It runs at about that ratio.

Mr. GREENE. Then, inasmuch as the ammunition is interchangeable, the appropriation for the bulk is not disproportionate; but, you say, the average percentage used in the machine guns and for the shoulder rifles is a variable factor?

Col. THOMPSON. Yes; and the mechanical factor should be considered, to get cartridges good enough to use in those machine guns.

Mr. SHALLENBERGER. Did I understand you to say that, taking an infantry company going into action, they would carry about 50 per cent as much more ammunition than the individual men who have the rifles, or do you mean to say that the machine guns will shoot away more than the shoulder rifles?

Col. THOMPSON. The data we get would show that the machine gun would shoot away out of all the cartridges fired about 60 per cent, and the hand-operated rifles would shoot away about 40 per cent.

Mr. SHALLENBERGER. If we use the French machine gun our troops are going to carry into action more of the rim cartridge than the French, and this matter of not having a light machine gun has put us into the position that we are going to furnish those troops with ammunition we can not use in those rifles?

Col. THOMPSON. Yes, sir; temporarily.

Mr. SHALLENBERGER. It is unfortunate that we have not these light rifles?

Col. THOMPSON. Very.

Mr. SHALLENBERGER. Do you know whether or not the heavy machine guns ordered out of last year's appropriation have been delivered?

Col. THOMPSON. No, sir. I am very anxious to give the committee all the information I can. This operation is a tremendous operation, and we are very much scattered. I just came back about the 1st of May, which accounts for my lack of knowledge on many of these questions which are outside my own work. If I had the information the members of the committee desire, I would take the greatest pleasure in giving it to them, because I know how important it is for them to have full information and the exact truth.

Mr. GORDON. Do you know what the relative range of the machine gun is as compared with that of the rifle? Which one of them has the longer range and by how much?

Col. THOMPSON. The rifle is sighted for about 2,850 yards. I think the machine gun has about the same range; perhaps a little bit longer range. The extreme range of our rifle is about 5,180 yards, but no country utilizes the full range of the rifle. When a man begins to shoot with his naked eye above 1,200 yards he is not very effective. I have seen rifles fired at these high ranges—at a range of 2,500 yards and at 2,700 yards. But that is in targeting, and but very few men have seen a rifle fired at over 1,200 yards.

Mr. GORDON. Would that extreme range apply also to machine guns?

Col. THOMPSON. No; I think the machine gun must be sighted for a longer range, because there you can sometimes get the range by looking at the effect of the striking bullets. I will find out exactly what range the machine gun is sighted for and put that in the hearing.

Mr. GREENE. The shoulder rifle sighted at 2,500 yards and the machine gun fixed at that range can not be absolutely compared as to effectiveness, can they? There is more accuracy and certainty of fire in a well-aimed single shot from a shoulder rifle than there is from many bullets from a rapidly operated machine gun?

Col. THOMPSON. That is a subject of discussion among the theorists—as to the probability of fire in that case. I think it is settled very definitely in favor of the machine gun, because you can see the effect of a swarm of bullets striking at any point in the dust or the clutter of stuff made. I think that the machine gun can be more effectively used at the longer ranges than the shoulder rifle.

Mr. GREENE. I have no doubt but what the effect of machine-gun fire, so far as volume is concerned, must be incalculably deadly, but I was thinking of the law of averages, and I was wondering whether or not in the rapid operation of the machine gun there was a tendency to disperse the fire rather than to concentrate it.

Col. THOMPSON. The law of averages for accuracy alone would be in favor of the shoulder-operated gun for the same number of shots. I should say, positively.

Mr. MCKENZIE. Colonel, do your estimates in this appropriation bill take into consideration the amount of money you expect to have to expend in the purchase of trench ammunition?

Col. THOMPSON. Yes, sir.

Mr. MCKENZIE. That is all included?

Col. THOMPSON. Yes, sir. I do not like to occupy the time of the committee, Mr. Chairman, but that is a very serious problem with us—this French ammunition. We got a quantity from the French, and if we want any more of it we have to furnish them with the raw material—the copper and the lead, and the other necessary raw material; and if we do not do that, we have got to manufacture those cartridges in this country. We are, as I think I previously stated, manufacturing these cartridges at Swanton, Vt., and we are trying to manufacture them in Upper Alton, Ill., and in Kansas City.

Mr. NICHOLS. You are manufacturing the same kind of cartridges that the French are manufacturing, and they are used in the French guns?

Col. THOMPSON. If anything should happen that our French cartridges should not be found suitable for their machine guns the Chocaut guns, we will use their cartridges and they will allow us to replace those cartridges by our cartridges, which will be good for use in their hand-operated rifles.

Mr. NICHOLS. You make cartridges for French guns in this country?

Col. THOMPSON. Cartridges were made for the French Government at Swanton, Vt. Maj. Monroe corrects me in the statement I made awhile ago, and says that it is the Hotchkiss gun that is the hardest on the cartridge, and not the Chocaut gun; but these cartridges that we are making in this country will be used in both the Hotchkiss and

the Chochaut guns, provided they are satisfactory, and if not, the French will furnish their cartridges made at their special arsenal for that purpose, and we will replace that number by our cartridges for use in their shoulder rifles. But it is quite a problem to make the French cartridge in sufficient quantity.

Mr. McKENZIE. The statement you have just made shows the vital importance of our Government putting every pound of pressure on in getting a sufficient number of our own guns, in order to do away with the complications that occur in sending over raw material, and all the that sort of thing.

Col. THOMPSON. It is a matter of tremendous importance, and the greatest concern to everybody.

Col. O'Hearn has some change in this estimate which he would like to speak to the committee about.

The CHAIRMAN. We will be glad to hear Col. O'Hearn.

Col. O'HEARN. Mr. Chairman, I have a revision of the estimate under the item, "Small-arm target practice," with a view to adding to the estimate as it appears in the committee draft of the bill, the sum of \$3,131,000, making the total that we would now ask for \$78,331,000, in lieu of \$75,200,000.

The material concerned, and which is provided for under this item of the bill, comprises hand grenades, dummy, such as men in the training camps use for practice throwing; hand grenades, practice; live grenades, but of a somewhat cheaper type of manufacture, and those parts which are destroyed when the practice grenades are thrown can be replaced, and the grenades themselves used again.

Then there are also included dummy rifle grenades, for training purposes; live-rifle grenades for training purposes, and dummy-drop bombs, and a considerable number of drop bombs. These we make of an inexpensive type, and they are smoke-producing bombs, and are made in such a way that when the bomb is dropped, it is made possible for the aviator to see how close he has come to the target. They are a concrete bomb.

For this class of material there has heretofore been appropriated a total of \$13,455,000. The estimates, as previously submitted, has included for this material the sum of \$7,640,200. We are now asking that this be increased by \$3,131,000, making a total now required for this class of material of \$10,771,200.

The \$3,131,000 increase asked for is made up of \$900,000 to cover a deficiency in the appropriations already made, covering the year 1917-18. We ask that this sum be immediately available.

In addition it includes the sum of \$2,231,000, and that is what we would call a revision of the estimate heretofore submitted.

The reason of the need for the \$900,000 to cover the current fiscal year is that the increase in the number of aeroplanes which the Signal Corps states they will have in service requires a very large increase in the number of the practice drop bombs. The number required, according to their estimates as given to us, is increased from about 10,000 to about 450,000, and as their cost is a couple of dollars apiece it means an increase of about \$900,000 in the amount of money needed.

The revision of the estimate calling for something over \$2,000,000 for the next fiscal year, in addition to what we have heretofore asked

for, comes from the increase in the expected number of aeroplanes in service, as previously referred to, and also arises from an increase in the allowances as asked for by the Signal Corps.

The CHAIRMAN. What is the total you are asking for?

Col. O'HEARN. We are asking for a total of \$10,771,200 for this class of material and a total of \$78,331,000 for all classes of material, including those which Col. Thompson asked for.

The CHAIRMAN. Your total appropriation, then, would be \$88,000,000?

Col. O'HEARN. It would be \$78,000,000. The present estimate is \$75,000,000 and we add \$3,000,000, making a total of \$78,000,000.

The CHAIRMAN. The \$10,000,000 you referred to was included?

Col. O'HEARN. Of that amount, \$7,000,000 was previously included.

Mr. MCKENZIE. Col. O'Hearn, if you have no objection, will you state what a rifle grenade is? Describe it.

Col. O'HEARN. The rifle grenade is a small explosive projectile. It weighs about 1 pound. It is fired from an ordinary rifle in the trenches. The type that we are using has been taken from the French. It is a very successful type. We like it very much.

Mr. NICHOLS. I saw some of those rifle grenades at Fort Shafter. They have to strike a hard surface before they explode, do they not?

Col. O'HEARN. A reasonably hard surface. They are rather sensitive. Perhaps the type you saw was the older type, which had a stem that went into the end.

Mr. NICHOLS. That is what I saw. They were firing them against hard surfaces, and they stated that if they struck the ground they would not explode.

Mr. GREENE. Are they all impact?

Col. O'HEARN. All impact. There are two very distinct types of rifle grenades. The one which was heretofore in common use, our service type, is a type in which this explosive projectile is fastened through a rod that is inserted in the bore of the rifle. A blank cartridge is used to propel this grenade which is driven out and acts solely upon impact, and if it does not strike squarely or does not strike a reasonably hard surface it may fail to function. The French have developed, and we have adopted, a greatly improved type of rifle grenade that has no stem attached to it. It is fired using the standard small-arm rifle cartridge. It is not necessary to provide a special type of cartridge for that. There is attached to the muzzle of the gun for the purpose of firing these grenades a holder, consisting of a hollow cylinder, about 6 inches long, that is put on and in no way interferes with the use of the rifle as a rifle.

The projectile is about that long [indicating] and about 2 inches in diameter. There is a hole through the center through which the small-arm bullet passes when being fired from the rifle. But behind the bullet there is sufficient gas pressure which spreads out in the rear of this grenade and carries it out of this holder and gives great accuracy of flight up to a range of 200 yards.

This particular type that we have adopted does not depend upon impact to set it off. Incorporated in the projectile is a Bickford fuse, or slow match. That is ignited by an attachment; it is a primer

which is operated by the projectile in passing through the grenade. It is set to explode in about seven seconds, so that regardless of how or where the projectile strikes it will explode after impact. That is a type which is being made by the millions. It does not appear under this item, except such as are to be used for target-practice purposes. The main quantity, the large quantity for service use, appears under one of the items we have previously discussed.

Mr. NICHOLS. These troops that I saw down at Fort Shafter, that I spoke of a few minutes ago, were making their own grenades. They took certain ingredients, and would make the grenades themselves. The officer in command said that he thought it was a very useful thing for the men to learn how to manufacture those grenades, and that they could make them in the trenches. They will take them on a paddle and throw them, just as you throw a rock from a sling.

Col. O'HEARN. We understand that in the earlier days of the war, perhaps not so much in these times, the British did a great deal of manufacturing work, in the manufacturing of grenades and bombs, immediately in the rear of the firing line.

Mr. NICHOLS. That is what I was speaking of.

Col. O'HEARN. I doubt if much of that is done now, because I think the supply from home sources is sufficiently great so that it is not necessary to manufacture them so near the battle line.

Mr. GORDON. These rifle grenades will be used when the enemy is pretty close, will they not?

Col. O'HEARN. Entirely so.

Mr. GORDON. Their extreme range is 200 yards?

Col. O'HEARN. Yes. The inner or near zone is covered by the hand grenade. You can throw that up to a distance of 100 yards. Then the rifle grenade extends the zone 200 yards farther, and then comes the trench mortar. The trench mortars are of varying caliber and power. They cover from that point, and perhaps their shortest effective range is about 500 yards. They will cover up to about 3,000 yards, although 2,700 yards is the best we have now. Then the standard howitzers and guns pick up the zones of fire from that point upward. This grenade has a steel cylinder or sometimes a malleable-iron cylinder filled with high explosives.

Mr. ANTHONY. In the hand grenades do you depend for their explosion on impact or on a time fuse?

Col. O'HEARN. On a time fuse.

Mr. ANTHONY. What facilities has the Ordnance Department for testing out various new devices in hand grenades?

Col. O'HEARN. We have our proving grounds where extensive tests are made.

Mr. ANTHONY. If a citizen should come to you with a device which he deemed of value to the country would his device be properly tested out and carefully examined into by the Ordnance Department?

Col. O'HEARN. It certainly would be carefully examined, and if it showed merit we would be glad to encourage the manufacture and test of it.

Mr. ANTHONY. So the Ordnance Department is organized so that it can receive and test all suggestions of that kind?

Col. O'HEARN. It is. We have tested some 12 different types already.

Mr. GARRETT. The hand grenade you speak of—is that the character of hand grenade they are practicing with at the present time at the various cantonments? Is it about the size of a baseball and cut in various directions?

Col. O'HEARN. Yes, sir.

Mr. GARRETT. Do you think they can throw that 100 yards with their hands?

Col. O'HEARN. A hundred yards was perhaps an overestimate.

Mr. GARRETT. I noticed the men practicing with them, and I think 50 or 60 feet was about as far as they could throw them.

Mr. FIELDS. What is the weight of a hand grenade?

Mr. GARRETT. They weighed 2 or 3 pounds.

Col. O'HEARN. I think they use mechanical devices in the throwing of those grenades.

Mr. GARRETT. I think that they have a stick screwed in the end of the grenade in some way.

Col. O'HEARN. They have various mechanical devices for the purpose of increasing the range.

Mr. GARRETT. I was speaking of the ones they throw with their hands. I understood that they had some kind of a handling device which they used, and, of course, they would get a greater range with that.

Col. O'HEARN. The usual limit of hand-grenade throwing is about 45 yards.

Mr. GARRETT. That would be about 135 feet.

Col. O'HEARN. The rifle grenade then comes in.

Mr. MORIN. The range of the rifle grenade is about 200 yards?

Col. O'HEARN. We have gotten them to nearly 200 yards, as I remember.

Mr. GORDON. On the first page of this statement you have furnished to the committee is an item for offensive gas bombs, \$25,000,000. How many bombs will that purchase?

Col. O'HEARN. The offensive gas-bomb work has not progressed far enough for us to be able to say what type will be ultimately adopted. It is rather a new development.

Mr. GORDON. On the second page you have a similar item of \$50,000,000, and that makes a total of \$75,000,000 which it is proposed to appropriate, without any definite knowledge or suggestion as to what should be done with it other than to develop these offensive gas bombs.

Col. O'HEARN. Yes, sir.

Mr. GORDON. Assuming that those bombs will cost approximately the same as the others—

Col. O'HEARN. They will cost approximately the same, whether we fill them with gas material or explosives.

Mr. GORDON. What will be the average price for each of those bombs?

Col. O'HEARN. You will note that the cost of the other bomb varies from about \$27 to about \$200.

Mr. GORDON. What would you say the average would be for the gas bombs?

Col. O'HEARN. The average will be below rather than above the mean of those two prices. You will note that the mark 2 bomb is

being furnished in considerably greater quantities than any of the others, and that that is the cheapest.

Mr. GORDON. What would you say then would be a fair average price for the bombs for which an appropriation of \$75,000,000 is asked, if you concluded to buy bombs with that amount?

Col. O'HEARN. The estimate would be about \$75.

Mr. GORDON. You estimate that they would cost about \$75 apiece?

Col. O'HEARN. Yes, sir.

Mr. GORDON. Then \$75,000,000 would buy 1,000,000 of those bombs?

Col. O'HEARN. Yes, sir.

Mr. GORDON. And adding that 1,000,000 to the number already estimated for specifically it would make about 8,000,000 bombs?

Col. O'HEARN. Yes, sir.

Mr. FIELDS. How many bombs will one of the standard bomb-dropping machines carry at one time?

Col. O'HEARN. The standard machine will carry about 16 of what we designate as the mark 2 bomb. That is a 25-pound bomb. Probably other machines would carry about the same total weight.

Mr. FIELDS. They can drop bombs as rapidly as they care to?

Col. O'HEARN. The machines have a very simple mechanism by which they can drop the bombs. It is under the eye of the observer.

Mr. MCKENZIE. Am I correct in the understanding that the gas bombs are dropped from the flying machines?

Col. O'HEARN. Yes, sir.

Mr. LUNN. I would like to ask how they arrive at the unit cost of the bombs—whether it is done by competitive bidding? Here is the Barlow drop bomb, \$110. If I remember rightly, we ordered 10,000 of those? Were 10,000 of those bombs ordered last spring?

Col. O'HEARN. Ten thousand of those bombs were ordered last spring, I believe. Capt. Ragsdale is familiar with the details of what we are buying.

Mr. LUNN. Have those been finished yet?

Capt. RAGSDALE. Five thousand of them are due on January 1 and 5,000 more on March 1. In addition to those, 3,000 more have been asked for.

Mr. LUNN. What are they charging per unit?

Capt. RAGSDALE. About \$100.

Mr. LUNN. The reason I am asking about those figures is because I do not understand how that cost is arrived at. We simply have to take your judgment in reference to it, and it looks like a tremendous amount of money.

Col. O'HEARN. It represents about what we expect to pay, based on what we are paying, on our best estimate of what we will have, judging from such information as we have.

Mr. LUNN. And the difference between the smaller price and the larger price is the difference of weight and material?

Col. O'HEARN. The difference in weight. The bombs vary in weight from 25 pounds to 500 pounds. We have developed a bomb as heavy as 500 pounds.

Mr. LUNN. Then the \$200 bombs of mark 5 are heavier bombs?

Col. O'HEARN. Five hundred pounds.

Mr. LUNN. What is the weight of the Barlow bomb that has a long sort of shillaleh stick attached to it?

Col. O'HEARN. That weighs 96 pounds.

Mr. LUNN. It seemed to me a very large price to pay; but I am not an ordnance expert, and, of course, I am not familiar with those things. I wanted to get at the point as to whether or not, with those prices, there were tremendous excess profits in the sale of these bombs.

Col. O'HEARN. I think not. It is a class of material which can be made in a considerable variety of shops. I think we are getting good prices.

Mr. ANTHONY. In reference to these bombs, are you buying this material on a cost plus profit basis or at a price fixed by the Government? I am referring to these explosives.

Col. O'HEARN. Capt. Ragsdale tells me everything except the Barlow heavy drop bombs have thus far been ordered on a cost plus basis.

Mr. LUNN. Then the contract for Barlow bombs, the \$34,000,000 contract, is not on a cost plus basis, but on a price fixed by the company?

Col. O'HEARN. We have not yet ordered that quantity of material.

Mr. LUNN. In reference to this estimate given here, calling for a deficiency appropriation, is that a deficiency for September, 1917, to September, 1918?

Col. O'HEARN. That is correct.

Mr. LUNN. Of \$272,000,000?

Col. O'HEARN. Yes.

Mr. LUNN. What is the occasion of that deficiency? In bringing in the estimate here has something happened between the time this estimate was made and the present time that would call for such a tremendous deficiency or is the deficiency practically in this original bill?

Col. O'HEARN. The deficiency arises for the most part from the increase in the expected number of aeroplanes to be in use during this period. It arises to a considerable extent, in addition, from an increase in the stock, or it might be called a reserve, although that is not a good term.

Gen. Pershing has recommended that in lieu of our proposed stock supply between the factory and the front that there should be a much larger accumulation. He has recommended, and this estimate calling for the additional quantities is based upon the provision of one month's supply with the troops, three month's supply in the reservoir in France, one month's supply in transit, and two months' supply in reserve in the United States. That accounts for the greater part of this \$277,000,000, which we need immediately for the placing of orders for this class of material.

Mr. LUNN. Part of this is for the increased number of machines over what you anticipated you would have to provide for?

Col. O'HEARN. Yes, sir.

Mr. LUNN. Is there an expectation on the part of the aviation section that they are going to be able to purchase more machines than they expected?

Col. O'HEARN. Yes, sir.

Mr. LUNN. The budget being submitted, and then so soon after its submission such a deficiency being asked for is astonishing to me,

and I want to find what the reason is for it. We will spend lots of money, and all that is needed, but there is a limit even to the purse of Uncle Sam.

Col. O'HEARN. Capt. Ragsdale tells me that it is only within the past few weeks that the Signal Corps program has advanced to the point where they could predict with reasonable certainty what aeroplanes would be available, and that leads to this increase—that comes with the increase of the stock to insure a supply at the firing line when needed.

Mr. LUNN. Then all these bombs in these estimates, except the Barlow drop bomb, are purchased on a cost-plus basis?

Col. O'HEARN. The orders thus far placed.

Mr. LUNN. What is the percentage of profit you allow?

Col. O'HEARN. The contracts thus far placed have been in general on a basis of cost plus 15 per cent.

Mr. LUNN. May I ask this question: Is there any allowance in the cost for interest on capital invested? How do you arrive at the cost? The question was raised in some way, where there unfortunately had been allowed, under cost, a certain percentage for capital invested, and instead of 15 per cent profit it would be practically the Government guaranteeing them a great deal more than they could possibly be guaranteed under a private contract.

Col. O'HEARN. It is my understanding that the cost does not include interest on capital invested. It is something that has been prescribed in a standard form of contract by our legal department, with which, personally, I am not very familiar. I am the head of the design work, and after we have prepared our designs and indicated what quantities are needed the matter is passed to the purchase section, which section negotiates the purchase and the terms of the contract.

Mr. LUNN. Mr. Chairman, is there some way in which we could have the matter before us? Where we are passing upon these appropriations for so many millions of dollars' worth of material to be purchased on a cost plus 15 per cent basis, it seems to me we should have some information as to whether, in addition to that 15 per cent, these men get a percentage on their capital invested. Could we not have that information furnished?

Col. O'HEARN. I will be glad to put in the hearings more definite and accurate information on that point. That is a matter that is not handled by me directly.

Mr. LUNN. If you get that information and put it in the record, I will very greatly appreciate it.

NOTE.—The purchase section advises that in no contracts so far let for drop bombs have features been embodied whereby the contractor receives a percentage on the capital invested. I further understand that this is the general rule in negotiating contracts.

Mr. DAVIDSON. Are all those bombs that are dropped from aeroplanes concussion bombs or fuse bombs?

Col. O'HEARN. They are all concussion bombs, I would say.

The CHAIRMAN. Col. Thompson, there is just one more item we want to inquire about, and that is at the top of page 63:

Manufacture of arms: For manufacturing, repairing, procuring, and issuing arms at the national armories, \$50,000,000.

Col. THOMPSON. That is for manufacturing, procuring, repairing, and issuing arms, manufacturing at the Springfield Armory and

the Rock Island Arsenal, and purchasing from the plants outside. It also includes automatic pistols, spare parts for reserve, bayonets, sabers, and spare parts for the rifles, and overhauling and cleaning these articles.

In this estimate we also have to provide for the small arms for the Army, Navy, and the Marine Corps, and also incidentally for pretty nearly all the authorized military organizations that are gotten up in the United States, like the United States Guards, which they are proposing to call out; for any reorganization of the National Guard; for all State and home guards; for certain military schools; National Rifle Association; arms issued to other departments for the protection of Government property; and for large working and actual reserves of arms in the United States and outlying possessions. It involves a considerably larger number of guns that are actually used in the Army itself, and this is the explanation why this appropriation is not limited in its purposes to any fixed number of men.

The last appropriation that was submitted for this purpose was in the act of October 6, 1917. That was submitted to piece out the rifles for 2,300,000 men and for the other authorized purposes just mentioned. There was submitted an estimate of \$32,690,000 for these purposes, but it was reduced to half that amount in the act.

The CHAIRMAN. You got more money under this item last year than you are asking for this year?

Col. THOMPSON. We are really asking for a reserve supply of rifles for more than 2,300,000 men, as I will show you a little later.

Out of that amount of money that was asked for under the act of October 6, 1917, we got about \$16,695,000; but the urgent deficiency act of October 6, 1916, contains the following:

Manufacture of arms: For manufacturing, repairing, procuring, and issuing of arms. \$16,695,000: *Provided*, That the Chief of Ordnance of the United States Army is authorized to enter into contracts for \$16,000,000 in addition to the appropriations herein and hereafter made.

It has been necessary, on account of the necessities arising abroad and in this country, to fully utilize that \$16,000,000 authorization. We have constantly new requirements as to the number of telescopic sights and attachments by which the soldiers can fire without exposing their heads over the parapet, such as periscopes and many new devices.

To give the committee full information about this matter, the total number of rifles on hand and ordered is 2,370,000. This estimate is for 985,000 rifles, making a total of 3,355,000; and if we take that, less a third allowed for wastage for one year, we would deduct 1,118,333, leaving 2,236,667 rifles that would remain at the end of the year for which this amount is appropriated; and adding one-half the number of men more that could be served by the number of rifles, since only 66½ per cent of the men carry a rifle, we would have rifles for an army of 3,355,000 men. But, as previously explained, a large number of rifles is required for the Navy, Marine Corps, and other men not included in the field or other armies of the United States.

That is a large number, and I desire to say, with reference to rifle making, that this is, in my opinion, the most difficult kind of munitions to manufacture. It takes more time and requires greater precision to make a rifle than to make a big gun. It takes a greater

number of gauges to make a rifle than to make a big gun, and therefore we deem it best to give information of this character to the committee, so that they may determine what is best to be done. The same remark applies to a great extent to cartridges. We have not the capacity for making them that we have for rifle making.

Mr. TILSON. As to the causes of the great wastage of rifles before you actually reach the battle line, what would you say about that?

Col. THOMPSON. I suppose it is due to the fact that the men leave on certain duties not requiring the use of a rifle, or get ill and go to the hospital, and the rifles may not be properly cared for. The greatest wastage is when the men are retreating.

Mr. TILSON. What would you say about the wastage due to the handling of the rifles by green members of the National Guard, etc.?

Col. THOMPSON. In regard to that, it is estimated that there is a loss of some millions of dollars, due to the mistreatment of the rifles or in not taking care of them by any body of partially trained or untrained soldiers in any country.

Mr. TILSON. And there is great difficulty in taking care of them?

Col. THOMPSON. Yes, sir. A civilian told me recently that, in passing through a camp not long ago where there were some Regulars, he saw some of the rifles suspended under cots, which showed the men were taking good care of them, and he saw other rifles on the ground, with the muzzles exposed outside the tent. Great care must be taken of a rifle.

Mr. ANTHONY. Can not these minor injuries to rifles in the training camps be repaired at the camps?

Col. THOMPSON. To a great extent.

Mr. TILSON. But when they affect the inside of the barrel, it is vital.

Col. THOMPSON. Getting the barrel rusty is vital, and it is almost impracticable to make repairs at the camps which require replacing the barrel.

Mr. TILSON. Why it is not practicable, from an economic standpoint, without decreasing the value of the service at all, to have a training rifle? I showed you one the other morning in my office, I think, a perfect reproduction of the Springfield rifle, including the mechanism of the bolt, of the snapping of the trigger, and yet not a rifle at all. But for all the earlier stages of the training of the troops it would be absolutely equal to the rifle itself. I would like to get your opinion, as a practical rifleman, as to the probable economy in using such a rifle as that.

Col. THOMPSON. The matter, of course, has been seriously considered—

Mr. NICHOLS. What would a rifle like that cost?

Mr. TILSON. That would cost five or six dollars.

Col. THOMPSON. This matter has been very seriously considered in the department, especially with the temporary shortage of arms in mind. But with the Krag rifle, to the amount of 170,000 on hand for training purposes, the department decided that that would be sufficient. I think, personally, the general idea is a good one.

Mr. TILSON. But all the earlier stages of training of recruits and the training of boys in the schools, it would be as useful as any rifle until the recruit reaches the stage when he understands the mechanism of the rifle.

Col. THOMPSON. That is true.

Mr. GREENE. Is there not another factor entering into that which may make it of doubtful value? If you are going to train a soldier so that he will have practical understanding of the care of his rifle, will you not have difficulty in doing that if you do not use a regular rifle from the beginning? If you let a man go along, and he is not habituated to the use and care of a regular rifle, but is habituated to the use and care of this gun with which Col. Tilson refers to, will you not have a great difficulty to overcome?

Col. THOMPSON. It is expected that we will have enough rifles to arm the troops in a few weeks.

Mr. SHALLENBERGER. Will you give me the figures in regard to the number we have now?

Col. THOMPSON. We have a total on hand now and ordered of 2,370,000.

Mr. SHALLENBERGER. How many service rifles have you on hand now?

Col. THOMPSON. We have on hand now over 1,000,000 rifles, and they are coming in at a rapid rate—at the rate of about 40,000 a week.

Mr. SHALLENBERGER. This money you are asking for is to be used in manufacturing in the arsenals. Have you any figures to show about what it has cost to manufacture the Springfield rifle in the arsenals—what it costs at the present time?

Col. THOMPSON. The arsenals are just getting fully started and settled down as to matters of that kind, because of the various changes and increases of product. We are now allotting to the arsenals \$25 per rifle.

Mr. SHALLENBERGER. In your estimate as to the number of rifles you are going to produce that includes those that you are going to purchase from private manufacturers as well as those you are going to get from the arsenals. How many do you expect to produce in the arsenals?

Col. THOMPSON. 415,000 in the arsenals.

Mr. SHALLENBERGER. You expect to produce that number before this money is expended?

Col. THOMPSON. Yes, sir; and get 570,000 by purchase. We fill up the armories to their capacity first.

Mr. SHALLENBERGER. Can you tell us about what the model of 1917 is costing us—the modified Enfield rifle?

Col. THOMPSON. No, sir; I can not now, because we are just getting at the point where that matter is getting straightened out.

Mr. SHALLENBERGER. Is it not something like \$50?

Col. THOMPSON. No, sir; it will be nothing at all like that.

Mr. SHALLENBERGER. Will it not be about \$40?

Col. THOMPSON. No, sir; it is dangerous to make a prediction about matters of that kind.

Mr. SHALLENBERGER. You have not been able to make a direct contract; it is all done on the cost-plus basis?

Col. THOMPSON. It is for rifles.

Mr. SHALLENBERGER. In the hearings on the 1917 bill Gen. Crozier said in making 21,000 rifles the cost was \$16.25 a rifle at that time.

Col. THOMPSON. That was our old cost.

Mr. SHALLENBERGER. This is a matter concerning which I wanted to get confirmation from you, because it enters into the cost of this rifle, and we shall probably have considerable discussion about it.

When the question of the manufacture of this rifle was up about a year ago I made a speech on the floor of the House in which I called attention to the small number being manufactured. Later a luncheon was given here in the Speaker's room at the Capitol, and Mr. Vauclain, of the Baldwin Locomotive Works, was there, and he gave us quite a little talk in reference to the problems in the manufacture of rifles. The question arose during this discussion, in which the Speaker and others engaged, as to whether or not we could purchase the rifle. Mr. Vauclain was there, and he told us we could purchase the rifles through private manufacturers.

During the course of that discussion Mr. Vauclain spoke of the troubles the manufacturers were having in producing rifles for foreign Governments, and, as I recall the discussion, he said you had gone there to have superintendence of the manufacture of the rifles. That was right, was it not?

Col. THOMPSON. No, sir; I went there as consulting engineer.

Mr. SHALLENBERGER. He quoted you at any rate. The cost of the rifle was then something like \$30, and that, he said, proved too cheap, and a statement was made something like this, that you had told them that the Government was manufacturing the rifles for \$9.50, and they said: "Surely we can make them for \$15 apiece; and if we charge these other fellows \$30 for them, we can make plenty of money."

Of course, that statement that the Government had made them for \$9.50 was something that we did not know about; it was a cheaper price than any of us had known about and I was wondering whether that was a correct statement.

Col. THOMPSON. It can only involve two factors, the material and the direct labor.

Mr. SHALLENBERGER. Not the full cost of the rifle?

Col. THOMPSON. No, sir.

Mr. SHALLENBERGER. I asked afterwards who you were, and Mr. Kahn told me you had the same position that Col. Babbitt had. I therefore considered that you were an authority, and I was anxious to get your explanation of those things.

Col. THOMPSON. That price involved only those two items—the material and the direct labor.

Mr. ANTHONY. What is the lowest cost at which the Government turned out Springfield rifles before the war?

Col. THOMPSON. During one year we claimed a cost of \$12.60.

Mr. ANTHONY. That included everything entering into it?

Col. THOMPSON. Yes, sir; but I was rather doubtful as to that price myself.

Mr. ANTHONY. What would be your idea of the present cost?

Col. THOMPSON. The present cost of the rifle?

Mr. ANTHONY. Yes; those that are coming out now from the Springfield Armory.

Col. THOMPSON. As I just stated, the allotment price that we give them is \$25 per rifle, but during recent months the Government armories have been coming back for more money on various allotments.

Mr. ANTHONY. You think it would be more than that, then?

Col. THOMPSON. I would rather say it will be about that.

Mr. GREENE. In that connection, Colonel, is it possible to determine the actual cost of the production of a Government rifle with the same precision and certainty that a commercial or industrial concern can determine the cost of a similar article?

Col. THOMPSON. No, sir.

Mr. GREENE. The overhead charge for Government production of any kind can be figured on varying lines of detail. Some people will figure in certain things which pertain to the rifle and others will regard those things as excluded. If you chop off a certain part of the overhead and increase the number of officers engaged in the ordnance work, the overhead for each rifle is increased, and there is no way to determine what that is.

Col. THOMPSON. We operate under so many different appropriations. If we have a boiler repair that is going to cost, say \$3,000, we may get that in a special appropriation, including that item from another committee. That boiler repair may put that boiler in good shape for three or more years. Should it be charged to the cost of the rifle or not? I will admit the determination of exact governmental cost is a very difficult proposition.

Mr. GREENE. The commercial house, having one pocket and one central head, may reduce all expenses, and may be able to determine them accurately, because there is but one source of receipts and one outlet. But you have to utilize all the varying factors of overhead, and it is distributed through all the various functions of the service and is appropriated for by various committees and operating in plants under dissimilar conditions.

Col. THOMPSON. Yes, sir.

Mr. SHALLENBERGER. This item also includes the manufacture of pistols.

Col. THOMPSON. Yes, sir; the manufacture of pistols, of bolos, and spare parts for the same, and any kind of side arms, and anything that is attached to the rifle, such as a telescope or a periscope.

Mr. NICHOLLS. Did you say that provides for bolos?

Col. THOMPSON. Yes, sir.

Mr. NICHOLLS. What is a bolo?

Col. THOMPSON. It is a short bayonet or knife that comes from our service in the Philippines.

Mr. NICHOLLS. A curved steel blade?

Col. THOMPSON. The back may be straight, but the front is curved, more or less, like a meat knife.

Mr. SHALLENBERGER. Have you got enough pistols to supply the troops?

Col. THOMPSON. No, sir; we are very short on pistols, and it is a matter of gravest concern.

Mr. SHALLENBERGER. Do you think this is enough to supply us with all the pistols we need?

Col. THOMPSON. This money, with what we have, will supply pistols for about 2,000,000 men.

Mr. SHALLENBERGER. Does every man carry a pistol?

Col. THOMPSON. No, sir; 40 per cent of the men carry pistols.

Mr. SHALLENBERGER. I was told by the father of an officer who was about to start for Europe that the officer could not secure a pistol.

Col. THOMPSON. We are using the pistol or the revolver, and they are both firing the same cartridge.

Mr. SHALLENBERGER. Are all the pistols of one caliber—.45?

Col. THOMPSON. Yes, sir.

Mr. SHALLENBERGER. Is the revolver caliber .45?

Col. THOMPSON. Yes, sir.

Mr. SHALLENBERGER. You had some of caliber .38?

Col. THOMPSON. We had some of caliber .38, and the foreign pistols are caliber .30.

Mr. SHALLENBERGER. Do you shoot a bullet and use black powder, or do you use a jacketed bullet?

Col. THOMPSON. We use the same jacketed bullet for both revolver and pistol. It shoots with the smokeless powder.

Mr. SHALLENBERGER. You have the steel-jacketed bullet with the .45s?

Col. THOMPSON. No, sir; we do not use the steel bullet, but a cupro-nickel jacket, with a lead core.

Mr. TILSON. You were using the older Colt model, and then the new one that shoots with the clip of three?

Col. THOMPSON. Yes, sir. We are using the automatic pistol of the model of 1911 and the revolver of the model of 1909. They are both late models of their kind, and the cartridge is one of the most effective pistol cartridges in existence.

Mr. GREENE. The old six-shot revolver?

Col. THOMPSON. In a simpler and more durable model. I have received information from the division concerned in the Ordnance office that the machine-gun sight is graduated up to 3,000 yards.

(Thereupon the committee adjourned, subject to the call of the chairman.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Friday, January 4, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENT OF LIEUT. COL. J. H. RICE, ORDNANCE DEPARTMENT.

The CHAIRMAN. Colonel, there are only two items in the bill in which you are especially interested, and the first is for automatic machine rifles. You are asking for \$237,144,000, and last year you had \$291,177,000.

Col. RICE. Yes, sir; that is correct—for the Regular Army. We also had \$2,500,000 for the Militia. The amount asked for, Mr. Chairman, is made up of two principal items, one is the necessary appropriation of cash to meet the contract authorization of the act of October 6, 1917, of \$118,020,000. The other is made up of the maintenance items for the number of guns we expect to have available and for use, either entirely or partly, during the year 1919, and amounts to \$119,123,892. The maintenance item is figured at certain percentages of the cost of the original equipment, depending upon the type of gun. For the heavy type we figure 40 per cent, and for the light type 60 per cent per annum. For what we call the fixed aviation type, which is the gun which synchronizes with the propeller in the aviation service, we figure 40 per cent, and for the flexible aviation type, which is the gun used by men in the airplanes, 60 per cent; for special automatic rifles, which are really a hand arm, almost, and which are expected to be supplied to aviators for last, desperate use—it is a small automatic or semiautomatic gun carried in the aeroplane at the aviator's right hand, so that if that is the last thing he has left he can use it—we figure for that type 20 per cent for maintenance; and also 20 per cent for maintenance of fire-control accessories, and 30 per cent for automatic 1-pounders, which are used by the Infantry organizations, and also used somewhat for antiaircraft firing on the ground.

Since the last appropriation was made by this committee there have been a very large number of guns ordered, mainly from deficiency appropriations handled by the Appropriations Committee. We have something like 221,000 guns of all types now under manufacture. They include the Colt of the old type, a modified Colt, which is called the Marlin aircraft, the Lewis, the Browning light and heavy, the French Hotchkiss gun, the French Chauchat—which is practically an automatic rifle, a very light hand arm which is used by firing from the hip as the troops advance—and the Vickers.

The CHAIRMAN. How much time do you figure will be required to finish the manufacture of those guns?

Col. RICE. To finish all of them?

The CHAIRMAN. Yes, sir.

Col. RICE. Some of the contracts will be running into this time next year. We are getting considerable deliveries even now. We are getting from 500 to 750 Vickers a month. The Navy and ourselves together are getting about 1,500 or 1,600 Lewis guns a month, and very shortly we will be getting from 4,000 to 5,000 Marlin aircraft guns a month. We are getting the French guns as fast as we can use them. Pending the completion in sufficient quantities of the types of guns they want to arm the foot troops with in Europe, which are primarily either the Vickers or the heavy Browning for machine-gun companies and the light Browning for Infantry organizations, Gen. Pershing is securing from the French the heavy Hotchkiss gun, which is the arm of the entire French Army, and a light gun, called the Chauchat, which is the one also which the infantry of the French Army is using. They were quite anxious to let us have the guns, especially the Chauchat. They have tremendous capacity in the country. It was developed for original equipment, and their army has reached its peak and has been fully equipped, and all they have to do now is to provide replacement, which is nothing like as heavy as the original equipment, and therefore they have surplus capacity. Of the Chauchat guns about 17,000 are chambered for French ammunition, as an emergency measure, but we also undertook to chamber 25,000 of them for American ammunition, which they are doing over there, with some expert assistants whom we have sent, and those 25,000 ought to begin to come along pretty soon. Then, of course, as fast as we get those we will retire the French Chauchat and probably use them for training purposes.

The CHAIRMAN. Is it not a fact that the reason our troops in France have been equipped by our allies is due to the fact they had a surplus of arms over there, and we considered it would be cheaper and more advantageous for our troops to use their surplus arms rather than to manufacture and ship them across the water to the troops?

Col. RICE. In certain lines of manufacture both the English and the French Governments have been very desirous of having us order from them. We have, of course, needed equipment quicker than it was practicable to get it in this country, so that we have also been interested; but of the light machine guns, for instance, they have surplus capacity which they are very anxious to have used, and so have proposed to us that we order the Chauchat rifle from them, not only because our troops needed them, but because they would like to have their capacity in employment. The same thing holds along certain lines about field artillery and other equipment. It is a fact that our allies are not stinting themselves because of the things they have given us.

Mr. GREENE. It might be proper to ask if that is not because of the fact that during three years of fighting they have attained their own maximum of production, both as to kind and extent, so that they are now only called upon to supply wastage and similar needs?

Col. RICE. That is a fact; yes, sir.

Mr. KAHN. I heard it stated publicly by a gentleman connected with the munitions board of the English that they have only been receiving 8 per cent of the firearms and matériel that they required for their forces from the United States; that the other 92 per cent they were manufacturing in their own country and getting elsewhere. Do you know anything about that?

Col. RICE. I do not know the exact percentages, but I am certain that the greater part of the munitions have been manufactured in England for England; that our contribution has not been so very great relatively.

Mr. TILSON. Has it not been unequal, and in some lines we have furnished a considerable percentage, whereas in other lines the percentage would be quite small? For instance, we have furnished a very small percentage of heavy artillery, so that while that percentage might be exactly correct it might be misleading as to some particular items.

Col. RICE. That would necessarily be so as a manufacturing proposition. They would order here certain lines only and limit them as much as possible, and order in as large quantities as possible.

Mr. KAHN. But of heavy matériel I was informed they have only been getting about 8 per cent of the supply which they required from the United States.

Col. RICE. I should think that might readily be so.

The CHAIRMAN. Colonel, you may proceed with your detailed statement.

Col. RICE. I do not know, Mr. Chairman, whether you have had a statement in reference to the Browning gun, but I think not, and I may tell you, supplementing what was stated at the hearings less than a year ago, that the board which was appointed to test machine guns in May of last year tested all those presented, of which there were a considerable number, and recommended certain guns as serviceable, and particularly recommended certain of these guns. The guns particularly recommended were the light and heavy Browning, both invented by Mr. John Browning, who is undoubtedly the greatest automatic arms inventor in the world, and both, but particularly the heavy gun, passed a test which, as far as my knowledge goes, is practically unprecedented. They fired 20,000 rounds with it from the beginning practically without a jam or a malfunction or a broken part, and they fired 20,000 more and got one broken sear on about the thirty-ninth thousandth round, so it was pretty nearly a 100 per cent performance. That, of course, was only one gun. We also fired 20,000 rounds with another gun of the same type and there were, I think, two breakages due to misuse of the gun.

The CHAIRMAN. You mean another Browning?

Col. RICE. Another Browning of the same type. When the report came to the Ordnance Office we were not quite willing to accept the one gun alone with such an unusual performance, so we requested that they fire also the other gun. We knew they had two guns. The performance of that gun was almost equal.

Mr. KAHN. What is a sear?

Col. RICE. The trigger releases the sear, which releases the firing pin or bolt.

Mr. LUNN. What is the life of one of those guns? How many rounds is it supposed to fire before it is practically ready for repair or ready for the scrap heap?

Col. RICE. The barrel, of course, is the thing that wears out pretty definitely, and on a water-cooled gun that ought to last 15,000 or 20,000 rounds.

Mr. LUNN. The reason I asked the question is because you said they fired 20,000 rounds. Would that exhaust the function ability of the gun?

Col. RICE. Oh, no; the number of rounds is determined merely to give what would be considered a very severe test. If the guns are kept in proper repair they will shoot more than 100,000 rounds.

Mr. KAHN. How are the cartridges fed into the gun, from a revolving wheel or belt?

Col. RICE. From a belt. If you have ever seen a Vickers gun, you will find that the heavy Browning looks very similar to it, although the mechanism is entirely different. It is the same type of gun; that is, it has the barrel recoil, the barrel moves to the rear bodily in functioning the mechanism, and it has a belt feed, and correspondingly, of course, it is water-cooled, and correspondingly, it fires a great number of cartridges at one burst, if you want it to, because the belt holds 200 or 500 or 1,000 rounds, according to the way you make the belt, whereas with the drum feeds, they are, of course, limited because of the weight and size. The light Browning gun is a gas-operated gun, intended only to fire a limited number of rounds at one burst, the magazine carrying 20 rounds. Of course it did not pass such a remarkable test as the heavy gun, because that type of gun never can. It is too light. It only weighs 16 pounds all told. But, nevertheless, it passed a very successful test and was highly recommended by the board. The board also recommended as a serviceable and desirable gun the Lewis, and they recommended, less enthusiastically, of course, the old Colt, which is practically obsolescent.

Mr. KAHN. How many shots a minute will the Browning fire?

Col. RICE. The light gun will fire about 400, the heavy about 600 a minute.

Mr. KAHN. And what is the capacity of the Lewis gun in that regard?

Col. RICE. The Lewis fires about 500 shots a minute. We would rather the Browning did not shoot quite so many as it does. The number of shots is normally a question of the type of mechanism more than anything else, and if they fire anywhere from 200 rounds up for any ordinary use, we do not criticize it.

Mr. TILSON. Colonel, after all is it not largely a matter of cooling? The barrel gets so extremely hot it is impossible to use it after a large number of shots are fired rapidly, anyway; is not that the fact?

Col. RICE. That is correct.

Mr. TILSON. So that the mere fact of a gun firing 600 shots a minute or 300 shots a minute is not really as important as it sounds?

Col. RICE. No.

Mr. GREENE. That maximum is never practically effected anyway, as a matter of actual employment?

Col. RICE. The only case in which a very high rate of fire is a desirable thing—and when I say a very high rate of fire I mean something over 400 rounds per minute—is in the aircraft service, where they have only a second or two in which to use the gun, and the volume of fire is of great importance. In all other situations we think that anything over 400 is rather a disadvantage than otherwise; at least it is not a thing we would work for.

The CHAIRMAN. What about the capacity for the manufacture of these Browning guns?

Col. RICE. Fifty-five thousand of the heavy Browning, and the aviation Browning, which is a slight modification of the heavy Browning, are under manufacture in four different plants. We have 57,000 of the light Browning under manufacture in three different plants, and as soon as we can get a definite statement from a manufacturer we are going to order 20,000 more from one of them, which will make 77,000. We hope to get all of those guns within a year.

The CHAIRMAN. Within a year from now or within a year from the time of making the contract?

Col. RICE. From now. Some of the deliveries will begin to come through in February or March on the light guns, and they will probably begin to come through in May on the heavy guns.

The CHAIRMAN. And after they begin to come through, about how many guns do you expect to receive a month?

Col. RICE. We expect to get in May of the heavy Brownings 300, in June, 1,100; in July, 2,000; in August, 3,200; in September, 6,000; in October, 8,000; in November, 9,500; in December, 9,500; and we can go on at that rate indefinitely and can increase it if we try. In these plants we have not loaded them up to their full capacity as yet. We expect to be able to expand them in their production when they can get out of the experimental stage as far as concerns their jigs, tools, fixtures, and so on, and when they get a real start on production they can doubtless do more than we have given them.

The CHAIRMAN. Then, under the present appropriation and under the contracts now existing, you will run for six months during the next fiscal year?

Col. RICE. Yes, sir.

The CHAIRMAN. Six months into the next fiscal year?

Col. RICE. Yes, sir; but not at full capacity.

The CHAIRMAN. So that the appropriation you are now asking for will not be necessary until about six months after the next fiscal year begins?

Col. RICE. That may turn out to be the case, but I think under present conditions it would be a little bit dangerous to try to be sure of that. We have a little capacity, in fact considerable capacity, in one plant which has not yet been taken up. The demand from abroad for certain types only of machine guns, for instance the Vickers, is quite considerable. We furnished the French with 1,000 Vickers in place of 1,000 Hotchkiss which they gave us, because the Vickers will synchronize and the Hotchkiss will not. The same thing holds with the heavy Browning. The Browning and the Marlin aircraft will both synchronize. Therefore we may have some demand from over there for help along that line.

Mr. KAHN. What gun which will synchronize have they been using in their aircraft?

Col. RICE. The Vickers; and the supply of Vickers that can be produced abroad is very inadequate. The Vickers gun is a very difficult gun to manufacture, and there has been what pretty nearly amounts to a failure in the matter of production both in England and in this country, to meet the needs on that account; and that is one reason we are very anxious to get the Browning gun in the service, because it can be manufactured so much quicker and so much cheaper, and it gives every promise of being as good or perhaps a better gun.

The CHAIRMAN. I understand you to say that there are now under manufacture 221,000 guns of all types.

Col. RICE. A good many of those are being produced in France, of course.

The CHAIRMAN. Yes; but for our forces, 221,000 guns, which you expect to have within the next 12 months.

Col. RICE. Yes.

The CHAIRMAN. What size army will that many machine guns supply?

Col. RICE. That was really figured for 1,500,000 men.

The CHAIRMAN. In other words, can you give us the figures as to the number of guns per thousand men, or put in the record?

Col. RICE. Yes, sir; it is about 147 per thousand; but this total covers not only the guns which are put into the hands of the troops directly but allows a 50 per cent wastage in heavy guns, and it allows 100 per cent wastage in the light guns, and it allows a very large number for aviation, and that number increases daily, so that we can not really give a definite figure. The aviation service, as you know, is building all the airplanes they can, and their expectations as to what they can build increase daily, and they consequently demand increasing guns daily. Therefore the total number is not a direct computation of the number of guns needed for the troops that operate on the land.

Mr. LUNN. Colonel, you say that you receive from the Aviation Department increasing demands daily. Is it not reasonable to inquire whether or not the Aviation Department can not know approximately how many machines they are going to build this year? They can not change it every day, or if they change it every day where are we ever going to get anything definite in the way of the number of guns needed for the aeroplanes? If they come in to-day and say they are going to build 10,000 and to-morrow come in and say they are going to have 14,000 and the next day 16,000, how can you ever be able to get anywhere toward a definite production and escape the possibility of making too many of one particular type of gun when that time might be used to better advantage in producing something else?

Col. RICE. Of course, my statement that it changes daily is a little excessive.

Mr. LUNN. I realize that, but even if it changes every month.

Col. RICE. What I mean to say is that it is not a definite and fixed program in the aviation work, and I do not think it ever can be.

Mr. LUNN. It can not be fixed, but it can be approximated; otherwise they will never get anywhere.

The CHAIRMAN. I think the question of the number of guns which they are going to use would be a matter for the Signal Corps to tell us about. The Ordnance Department simply furnishes, as I understand it, what they request. Is not that true, Colonel?

Col. RICE. Yes.

Mr. LUNN. I understand that, and I am asking him how he can get anywhere toward supplying that demand unless they give him an approximate statement of what they need for at least three months.

The CHAIRMAN. Do they not do something like that?

Col. RICE. Yes; we have statements from them, and the intervals are not shorter than three months. Perhaps I exaggerated my statement in the first place. But I think it might readily happen that it would change at any time. I do not see how under war conditions it can be expected to stay fixed. The only thing in regard to machine guns which is fixed is that we are going to have difficulty, no matter what we do, in getting enough.

The CHAIRMAN. Colonel, have you expended and contracted for the total sum appropriated last year of \$291,000,000?

Col. RICE. No, sir.

The CHAIRMAN. How much have you left?

Col. RICE. We have obligations outstanding of \$162,856,089.29.

The CHAIRMAN. That is the total outstanding obligation?

Col. RICE. Yes, sir; since April 1.

Mr. KAHN. Then you have an available balance of practically \$129,000,000?

Mr. TILSON. With six months yet to run.

Col. RICE. We are obligating the money very rapidly now.

The CHAIRMAN. Will you tell the committee where the plants are located and who the people are who are manufacturing these guns?

Col. RICE. The Colt Patent Fire Arms Manufacturing Co. is operating on this work two plants, one which they have bought since the last time we were here, which is a plant at Meriden, Conn., and their own plant at Hartford, Conn. They are manufacturing about 12,000 Vickers guns, which they have under contract, 10,000 heavy Brownings, and 12,000 light Brownings. The Remington Arms Union Metallic Cartridge Co., at Bridgeport, has orders for 15,000 heavy Brownings. The Marlin Rockwell Corporation, at New Haven, has orders for 23,000 aircraft Marlin guns, which are practically the old Colt type, with a modification, and 20,000 light Brownings, which are to be manufactured in a plant at Norwich, Conn., control of which they have acquired from the old Hopkins & Allen Arms Co. The Winchester Repeating Arms Co. has an order for 25,000 light Brownings and will probably get an increase in their order shortly. The New England Westinghouse Co. has an order in process of being placed for 15,000 heavy Brownings.

Mr. TILSON. Is that the Springfield plant?

Col. RICE. At Springfield and the adjoining suburbs. The Lewis gun is being manufactured at the works of the Savage Arms Co., their total orders for the Ordnance Department being about 42,000.

Mr. KAHN. Where are they located?

Col. RICE. At Utica, N. Y.

Mr. SHALENBERGER. Is that all in one factory?

Col. RICE. That is the Savage Arms Co., and they have one plant. That covers the entire list.

The CHAIRMAN. What is the cost of each of those guns?

Col. RICE. The heavy Browning is being placed at \$600 for the gun alone, with certain spare parts, tools, and accessories in limited quantity, and the light Browning at \$280, under the same conditions. That is not a fixed price, because the contract has been written with a proviso that we shall have expert accountants go over their books and find out what their costs are, what amortization should be allowed or has been included in the original price which might be

dropped on future orders, and the second part of the contract is to be adjusted accordingly. Therefore we do not know as a fixed quantity what the price is, but those I have given you are maximum prices.

Mr. KAHN. Is there a tripod?

Col. RICE. There is a tripod for the heavy gun.

Mr. KAHN. How much do they ask for the tripod?

Col. RICE. We are not ordering it from them. We are not buying the tripod from these arms manufacturers at all. We want them to put all their energy on the guns. We are going to get them outside, and we have not yet got a price on the tripods. On the Vickers gun the tripod is costing \$165.

Mr. KAHN. I remember when we had one gun before us here the tripod seemed to cost almost as much as the gun.

The CHAIRMAN. You gave us the price of the heavy and light Browning; will you give also the cost of the other guns which you are ordering?

Col. RICE. Yes, sir. The Lewis gun is costing us \$560 without royalties. That also is a case of checking by experts of what their costs are and making adjustments for certain amortization of plant which if necessary shall be dropped. The future guns, when that has been accomplished, will undoubtedly be at a lower price. On some of the guns which we are still to get from them the price negotiation is not absolutely closed. In the royalty matter, on the Lewis gun I might say that the Savage Arms Co. has a contract with the Automatic Arms Co. of Cleveland, Ohio, who are the owners of the patent. The patents are not all owned by Col. Lewis, whose name is connected with the gun. He owns 43 per cent, according to his own testimony. One hundred dollars royalty, with large royalties also on spare parts, was perhaps a reasonable enough figure on the quantities of guns which were being delivered before this war started, but the War Department and the War Industries Board both felt that that ran into such tremendous sums on the orders we were placing for Lewis guns, that it ought not to be paid without investigation. So that there have been negotiations pending for the payment of a lump sum on all the guns secured by the Army and the Navy in lieu of that \$100 per gun royalty, and a corresponding royalty on the parts, which is expected to very largely decrease the total payments on that account. Those negotiations have been conducted by the War Industries Board and they are not yet completed.

The CHAIRMAN. Do you mean that that \$100 royalty applies to each gun?

Col. RICE. Yes, sir.

The CHAIRMAN. And that is what you have been paying?

Col. RICE. We did not pay it directly, but it was included in the price of the earlier guns.

The CHAIRMAN. Was a \$100 royalty included in the price of \$600 for the heavy Browning gun?

Col. RICE. That does not include the royalty, no, sir; but it does include the tripod. Mr. Browning's royalty on the heavy guns was to have been \$50 a gun. We have up with those people the same proposition, except that it has come to an agreement, which is, that

the royalty to be paid on the light gun shall be a fixed sum of \$1,000,000 to the Colt Co., and \$1,250,000 to the owners of the patents. The Colt Co. control the patents and pay royalties to the Browning people, who own them. The royalty agreement or contract which they had between Colt and Browning, and which has been in existence for many years, although recently modified, calls for the payment of \$25 a gun for the light gun and \$50 a gun for the heavy gun, which would have run into very large amounts relatively, if that contract was recognized by the Government.

Mr. KAHN. If Col. Lewis owns 43 per cent of the stock of the company which is manufacturing his gun, and he offers to return the royalties on his stock to the Government, you could cut down the royalty of \$100 to \$57 at the very beginning?

Col. RICE. Yes, sir.

Mr. KAHN. You could start out anyhow with that much reduction?

Col. RICE. Yes, sir; if he does that.

Mr. KAHN. I understand he has offered to do that.

Col. RICE. I think he has, as a matter of fact. He has not made that offer to the Ordnance Department, but I understand he has made some such offer to the War Industries Board, and that it probably will become a part of the agreement which is being discussed between the War Industries Board and the Savage Arms Co.

Mr. KAHN. In this matter of royalties, has your department taken up the question, or has the War Industries Board taken it up?

Col. RICE. The original negotiations have been conducted by the War Industries Board. They come to the Secretary of War and the Chief of Ordnance for approval, of course.

Mr. KAHN. Who constitute that board at the present time?

Col. RICE. You mean in reference to machine guns?

Mr. KAHN. No; the War Industries Board.

Col. RICE. Mr. Willard is chairman, Mr. Baruch is a member, Mr. Brookings, Admiral Fletcher, Col. Pierce, and Judge Lovett. Those are the people I have come in contact with. I am not sure whether there is any other member or not.

The CHAIRMAN. You may proceed with your detailed statement, if you have not finished.

Col. RICE. I have finished that, sir, except I should like to ask that a provision be put in the bill both in regard to this item and in regard to armored cars, which shall extend for another year the appropriations which may be unexpended under those headings on June 30 next. Under the appropriations as made now, unexpended balances revert to the Treasury on June 30.

(The provision referred to follows:)

Provided, That the balances remaining available and unexpended on June 30, 1918, from the appropriations for automatic rifles and armored motor cars heretofore made are hereby reappropriated and made available to and including June 30, 1919.

Mr. TILSON. Those sums will be largely obligated by contract, anyway, will they not?

Col. RICE. We hope they will all be obligated, in which case this legislation would not be necessary; but it may happen they will not be, in which case it would revert to the Treasury; that is, if they were not obligated by contract.

Mr. KAHN. I understood you to say it would take you one year to get the 221,000 automatic guns?

Col. RICE. Yes, sir.

Mr. KAHN. And that would run six months into the next fiscal year?

Col. RICE. Yes, sir.

Mr. KAHN. Could you expend the entire \$237,144,000 that you are asking for in the remaining six months of the fiscal year 1919?

Col. RICE. That is largely included, Mr. Kahn, in the guns we have under order. There is over \$100,000,000 of that which is authorized under the last bill.

Mr. KAHN. I do not quite get that.

Col. RICE. We have ordered the guns.

Mr. KAHN. But you are paying for it out of these appropriations of \$291,000,000 in the fiscal year 1918. Now you are asking for \$237,000,000 for the fiscal year 1919. That is the bill we are now considering. You say that these 221,000 guns will not be delivered until six months of the fiscal year 1919 shall have passed, and, of course, you are paying for them out of the \$291,000,000 which you have already had, are you not?

Col. RICE. Plus the contract authorization of something over \$100,000,000 which is carried in addition in the old bill.

The CHAIRMAN. But you have about \$130,000,000 left out of that appropriation?

Mr. KAHN. Yes; \$129,000,000 that you have not contracted for according to the statement you made to us this morning.

Col. RICE. Yes, sir; that is correct.

Mr. KAHN. Now, you will probably contract for that during the remaining months of the fiscal year 1918. In other words, during the present fiscal year you will probably use that all up?

Col. RICE. It will mainly go not to machine guns proper but to their tools and accessories and spare parts, and things which have not yet been ordered.

Mr. KAHN. But you will use it all up during the next six months. Assuming that you will, and that you start with a clear sheet on the 1st of July, 1918, many of the 221,000 guns will not be delivered until six months of the next fiscal year shall have expired?

Col. RICE. Yes, sir.

Mr. KAHN. Now, would you then require all of the \$237,144,000 for the six months remaining of the next fiscal year?

Col. RICE. We expect to.

Mr. KAHN. You expect to use it all in the six months?

Col. RICE. Yes, sir.

The CHAIRMAN. For what purpose, Colonel? You will already have the guns by that time.

Col. RICE. There are still very large quantities of tools, accessories, spare parts, and things of that kind which have not yet been ordered. The spare parts alone for these guns run from 40 to 60 per cent of the value of the gun, and they have mainly not yet been put in process of procurement.

Mr. KAHN. Of course, I assume the Army will be considerably increased beyond the 1,500,000 men that you are estimating for, and it may take a great many additional guns to supply them.

Col. RICE. Yes, sir; but that is not included in this estimate.

Mr. KAHN. It is not?

Col. RICE. No, sir; this estimate is intended to cover what is needed for the first million and a half men, including maintenance for the year 1919, including all of the spare parts which have to be furnished and which amount to from 40 to 60 per cent of the total, and those have not yet all been ordered. Now, this \$237,000,000 has in it \$118,000,000 which was figured in as the contract authorization for the procurement of these two hundred and odd-thousand guns which we have been talking about, with all their tools, accessories, and spare parts; so that leaves only \$119,000,000 of new appropriation.

The CHAIRMAN. Let me understand you there. You are referring to the \$119,000,000 of the \$237,000,000 we have been talking about and it will take that much to keep an army supplied with 221,000 guns?

Col. RICE. That includes the cost of the guns, those which we are still going to buy, and their maintenance, with all the parts that are necessary, and it is estimated on a liberal basis.

The CHAIRMAN. Then, you intend to buy more guns than the 221,000 you have contracted for?

Col. RICE. I spoke of 20,000 we were figuring on, of the light guns, to go to Winchester.

The CHAIRMAN. Any others?

Col. RICE. No others at this moment.

The CHAIRMAN. Except the 20,000 more?

Col. RICE. Yes, sir.

Mr. KAHN. Assuming that the Army should be increased over 1,500,000 men in the next fiscal year and this money you are asking for should be necessary for an army of 1,500,000 men, would you come in with a deficit?

Col. RICE. We would come in with a supplemental estimate; yes, sir.

Mr. KAHN. This money would not be enough if the Army were increased by 500,000 men?

Col. RICE. We do not expect it to be; no, sir.

Mr. KAHN. So that if the second increment of the draft should be called before the beginning of the next fiscal year you will start at the beginning of the fiscal year, if we just give you this amount, practically with a deficiency.

Col. RICE. Assuming that all the estimates we have made are reasonable, but, of course, we have a good deal of information to get yet in regard to the determination of the cost. When we get a definite figure we will be able to give you a far more definite statement along that line, of course. As to the estimates we have made, your statement is correct.

The CHAIRMAN. Col. Rice, how many of those rifles has the Army now?

Col. RICE. About 14,000.

Mr. TILSON. What have we now in addition to those?

Col. RICE. We have 2,500 Lewis, 2,500 Colts, and a considerable number of Vickers, approximately 2,000, and the rest are made up of the French guns.

Mr. TILSON. Those are chambered for our ammunition?

Col. RICE. Not entirely. They are all chambered for our ammunition, except the French Chauchat and the French Hotchkiss.

Mr. KAHN. Have you any French Chauchat?

Col. RICE. Yes, sir—you mean here in this country?

Mr. KAHN. No; all told.

Col. RICE. We have 2,200 delivered here.

Mr. KAHN. Are those included in the 14,000 you spoke of?

Col. RICE. Yes, sir. We have on the other side the guns needed for all our troops that are there, with a liberal allowance of spares.

The CHAIRMAN. That has been true all the time the troops have been over there, has it not?

Col. RICE. Yes, sir.

The CHAIRMAN. What have they mainly over there, the Chauchat?

Col. RICE. They are equipped with the Hotchkiss for heavy use and the Chauchat for light use, and they are now chambered for French ammunition.

Mr. KAHN. Is the Chauchat rifle a serviceable rifle for trench work?

Col. RICE. It is a light gun, with which the whole French Army is equipped.

Mr. KAHN. But they are also equipped with the machine guns which set on the edge of the trench?

Col. RICE. Yes, sir.

Mr. KAHN. And the Chauchat, as I understand it, is carried from the side in a socket that is fixed to the belt. As I understand it, that rifle is serviceable only when the man gets out of the trench, and he uses it like a hose, and points it hither and thither. Do the French themselves have any considerable use for that gun outside of the trenches?

Col. RICE. The primary use for it is as you have stated, but they do use it in firing from the prone position and in the kneeling position. The Chauchat is a shorter range gun than ours and it is not so good for the long-range firing, but taking into consideration the distances between the trenches over there, it is pretty good for sniping and things of that kind.

Mr. KAHN. How much do we pay the French Government for those guns; can you tell us?

Col. RICE. No, sir; I can not, because we have not yet been able to get a price from the French Government. They said it would not be less than \$140—what we could call practically a stripped piece, with only the normal tools and accessories and spare parts—but we have not yet been able to get from them a definite statement in regard to the price.

Mr. KAHN. Then you can not tell us at this time what the actual cost of that gun is?

Col. RICE. No, sir; the exact price has not yet been secured.

Mr. KAHN. Have we any price on the ammunition they are furnishing for those guns?

Col. RICE. I have not. As a matter of fact, we are largely furnishing our own ammunition.

Mr. KAHN. But we can not use our own ammunition in the Chauchat guns?

Col. RICE. No; but there is a lot of such ammunition being manufactured in this country, and we are continuing the manufacture of that ammunition for this purpose.

Mr. KAHN. Then we are really furnishing the ammunition for them?

Col. RICE. A part of it. The French furnished the first, until we could get our manufacturers far enough along to take it up. They have furnished a number of million rounds, but we have not a definite price on that, as yet.

Mr. KAHN. Do you expect to furnish those guns in any considerable number, over there?

Col. RICE. The Chauchat guns?

Mr. KAHN. Yes.

Col. RICE. We have something like 38,000 already under order.

Mr. KAHN. Will the new ones, which we are now having made, which are now under orders, shoot our ammunition?

Col. RICE. Yes, sir.

Mr. KAHN. They have all been fixed to shoot American ammunition?

Col. RICE. Yes, sir. Every gun in the test at Springfield, in May, shot American ammunition.

Mr. SHALLENBERGER. You told us you placed orders, out of the money that has already been appropriated, for 221,000 guns, and so far you have received less than 15,000; less than 15,000 have been delivered. Is that about the fact?

Col. RICE. That is correct; yes, sir.

Mr. SHALLENBERGER. Can you tell us when the orders were placed for the various large amounts, and how long they have been outstanding?

Col. RICE. I can give you all those dates, if you want them all.

Mr. SHALLENBERGER. Could you put them in the record?

Col. RICE. Yes; beginning with December, 1916.

Mr. SHALLENBERGER. That was the first contract you let for those guns?

Col. RICE. For the guns I am talking about; yes, sir; and the orders extend up to the present time.

Mr. SHALLENBERGER. We let contracts for about 4,000 Vickers prior to the declaration of war, did we not?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. Was this contract in December the first big contract following that?

Col. RICE. This was that one. That was the order of December, 1916.

Mr. SHALLENBERGER. That was prior to the declaration of war?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. When did the contracts begin, subsequent to the declaration of war?

Col. RICE. The first one subsequent to the declaration of war was on April 12.

Mr. SHALLENBERGER. Then the others followed?

Col. RICE. Yes, sir. There was a contract on May 26, two in June, three in July, etc.

Mr. SHALLENBERGER. Will you include in that statement the number of guns that were included in each contract?

Col. RICE. I will put in a complete statement in regard to the contracts.

(The statement referred to is as follows:)

The list of the orders placed for machine guns beginning November 19, 1915, is as follows:

Date of order.	Type of gun.	Number.	Manufacturer.
Nov. 17, 1915	Vickers.....	125	Colt's Patent Fire Arms Manufacturing Co.
Dec. 16, 1916	do.....	4,000	Do.
Apr. 12, 1917	Lewis, caliber .30.....	1,300	Savage Arms Corporation.
May 25, 1917	Colt machine gun, oscillating lever type.....	2,500	Marlin-Rockwell Corporation.
June 12, 1917	Lewis, caliber .30.....	4,470	Savage Arms Corporation.
June 18, 1917	do.....	2,000	Do.
July 9, 1917	Chauchat.....	900	French Government.
Do.....	Hotchkiss.....	380	Do.
July 23, 1917	Chauchat.....	1,720	Do.
July 16, 1917	Browning, light type.....	12,000	Colt's Patent Fire Arms Manufacturing Co.
Do.....	Browning, heavy.....	10,000	Do.
July 24, 1917	Hotchkiss.....	2	French Government.
July 26, 1917	Lewis, caliber .30.....	12,000	Savage Arms Corporation.
Aug. 4, 1917	Browning, light.....	21,000	Marlin-Rockwell Corporation.
Do.....	Browning, heavy.....	10,000	Remington Arms Union Metallic Cartridge Co.
Do.....	Browning, aviation.....	5,000	Do.
Aug. 7, 1917	Hotchkiss.....	1	French Government.
Aug. 8, 1917	do.....	60	Do.
Aug. 9, 1917	Chauchat, caliber 8 mm.....	4,000	Do.
Do.....	Chauchat, caliber .30.....	25,000	Do.
Aug. 14, 1917	Chauchat.....	1,800	Do.
Aug. 27, 1917	Hotchkiss, caliber 8 mm.....	1,500	Do.
Sept. 1, 1917	Browning, light.....	25,000	Winchester Repeating Arms Co.
Sept. 4, 1917	Chauchat.....	770	French Government.
Do.....	Hotchkiss.....	326	Do.
Sept. 5, 1917	Vickers.....	3,000	Colt's Patent Fire Arms Manufacturing Co.
Sept. 8, 1917	Lewis, caliber .303.....	750	Savage Arms Corporation.
Sept. 25, 1917	Marlin aircraft.....	13,000	Marlin-Rockwell Corporation.
Aug. 26, 1917	do.....	10,000	Do.
Sept. 25, 1917	Lewis, aviation.....	22,000	Savage Arms Corporation.
Sept. 26, 1917	Browning, aviation.....	5,000	Marlin-Rockwell Corporation.
Sept. 28, 1917	Hotchkiss.....	12	French Government.
Nov. —, 1917	Chauchat.....	8,044	Do.
Dec. 12, 1917	Vickers.....	5,000	Colt's Patent Fire Arms Manufacturing Co.
Dec. 19, 1917	Browning, aviation.....	10,000	Marlin-Rockwell Corporation.
	Total.....	221,540	

Mr. SHALLENBERGER. You gave us the price of the heavy Browning and the light Browning gun and the Vickers tripod and the Lewis gun. Have you purchased any more Vickers guns, subsequent to the order of last December, since the declaration of war?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. What price are you paying now?

Col. RICE. We are paying \$850, without the tripod or any spare parts.

Mr. SHALLENBERGER. That does not include the accessories?

Col. RICE. No, sir.

Mr. SHALLENBERGER. We had a statement from the Chief of Ordnance showing that the Vickers gun, with the tripod, cost about a thousand dollars, and then there were some accessories amounting to about \$1,700, running the price of the gun up to \$2,700. Do we still have to buy that amount of accessories with the gun?

Col. RICE. It would run a little lower than that now at the old prices, because we have adopted, in place of using mules and pack outfits, the French system of using little carts with mules attached to

them, which runs down the price \$300 or \$400. There is to be set against that the increase in the price of production, which makes the total about the same as before.

Mr. SHALLENBERGER. How much in the way of accessories do you have to have with the heavy Browning gun?

Col. RICE. Just about the same as with the Vickers, except that the belts and some other articles are cheaper.

Mr. SHALLENBERGER. So that the actual cost of the gun, ready to put in the field, would be something over \$2,000.

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. In the case of the light Browning gun and the Lewis gun, you do not require that amount of accessories, do you? They are practically built ready for fighting purposes, at the price of \$280?

Col. RICE. No, sir. While the price does not run as high with them as it does with the heavy guns, we have to have transportation for them, and have to have large numbers of magazines or clips. The Lewis gun, as originally provided, was as expensive as the Vickers, because of the great number of magazines it was necessary to have in order to get the magazines loaded with cartridges in sufficient quantities on hand before the fight began. That has been reduced somewhat by the fact that it is used now mainly as an aeroplane gun, and so we do not need so many magazines.

The Browning will be much in the same class as the Lewis was when used on the ground. That is to say, the cost of extra parts and accessories will cost not far from those for a heavy gun—partly due to a greater allowance of repair parts.

Mr. SHALLENBERGER. That is the light gun?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. While the Lewis gun is priced to-day at \$750, including a certain number of magazines, enough for about 600 shots, 47 to the magazine, and a box of accessories, so that the gun could go into action and be fired at this rate, without any additional accessories, the additional accessories required would be largely the magazines which you speak of and the necessary transportation to take the additional magazines into action. But those would not be, so far as the number are concerned, anything like the accessories contemplated for the heavy gun, would they; that is, for the Lewis gun? The metal magazines are not expensive, are they?

Col. RICE. They are \$6 apiece. That is what we did pay for them on the first order. We are paying now \$5. They were exceedingly expensive, and that was one of the things that ran the cost up so high.

Mr. SHALLENBERGER. Do you not think that is an exorbitant price for metal magazines like that, stamped out by machinery?

Col. RICE. Yes, sir; I do.

Mr. SHALLENBERGER. What do you pay each for the cotton belts?

Col. RICE. I would like to correct this figure later in the record, if necessary; but it runs something like \$8 apiece for a 250-cartridge belt.

Mr. SHALLENBERGER. In the price which Gen. Crozier gave us in the cost of that \$2,700 rifle the price of those belts was put at something like \$6 apiece for a 250-cartridge belt.

Col. RICE. That is for a 250-cartridge belt?

Mr. SHALLENBERGER. Yes. They are higher now, I suppose. You mean that each belt which carries 250 cartridges costs \$8?

Col. RICE. On the cotton belt used with the Browning gun the price is \$3, and for the flax belt I think the price of \$6 or \$8 would be about right. The last contract cost was \$8.13.

Mr. SHALLENBERGER. You know, of course, that in France the weather is very wet and rainy, and that there is constant moisture. What report have you of any difficulty in connection with these belts getting wet, and the serviceability of the belts under those conditions, as compared to the metal carrier for the cartridges? Is there anything serious in reference to that?

Col. RICE. We have had no serious reports. The most frequently used heavy guns over the—the Vickers and the Hotchiss—both use a belt.

Mr. SHALLENBERGER. You have not had any reports that those belts get wet in bad weather and refuse to work?

Col. RICE. We have not had such a report. There is no question but that a certain amount of difficulty must occur under conditions of that kind.

Mr. SHALLENBERGER. You have not had a sufficiently serious report to make it a serious proposition, as to whether or not that might make the gun practically impossible of use under the trench conditions existing? I have been informed that certain of the armies over there did not permit the heavy guns using such a belt to go into the trenches because they were not as mobile, and that the trouble with the belts was so serious that they had to confine the actual trench fighting to the fighting with the Lewis gun, which did not have that kind of a belt. Have you had any report of that kind, in reference to that matter?

Col. RICE. No, sir. Both the British and the French armies use the heavy guns with the belts, and some of them in the trenches, but a good many of them may be located in other isolated places, for strategic reasons.

Mr. SHALLENBERGER. The reason I asked you about the additional cost is because I notice, in compiling the figures that with the amount of money you ask for this time and the amount we gave you last year, the total amount for machine guns is \$529,000,000. If we take the cost of the guns and the cost of accessories it would seem that that would pay for about a million machine guns. Would it not be a better proposition to buy the guns complete than to pay the tremendous prices that are paid for the accessories, so that you would have a great many guns in reserve, behind each man?

Col. RICE. You have to have the accessories in order to operate the guns successfully.

Mr. SHALLENBERGER. A certain amount of them.

Col. RICE. You might cut down the spare parts and buy more guns.

Mr. SHALLENBERGER. Then in reference to the cost of transportation for each one of these guns, the Vickers gun, or any of the guns, do you have any statement there to show the amount of accessories you expect to buy, or the amount you expect to pay for transporting

these guns, or the amount you expect to pay for getting the transportation?

Col. RICE. Yes; I can give you an estimate of that. I have had it in a lump sum, but I can give you the figures.

Mr. SHALLENBERGER. As it appears in the statement, it would seem that we were providing the money for one gun for each man, for the fighting men of the United States over there, and it would appear that we are providing the money to buy a million machine guns for a million men, when, as a matter of fact, a great deal of the money appropriated has to be spent for accessories and not for the guns themselves.

Col. RICE. I think the best answer to give you is that we are doing in that respect only what our allies, who have been in the war three years, are doing. Our methods of the purchase of accessories and spare parts are modeled on their experience, as being necessary.

Mr. SHALLENBERGER. In order to give us better information as to how it is expended, will you give the actual cost of the accessories that go with the gun? The Vicker gun was priced before at \$2,700.

Now, according to the statement you make here, without taking into consideration at all all these other statements, it looks as though it was vastly cheaper than it was before. But I think, in order to make this statement intelligible to Members of Congress, it would be well if you would include the list of accessories and the cost of those accessories that go with each gun, so that we can see that the money appropriated does not buy anything like the number of guns it looks like it would buy.

Col. RICE. I would be very glad to put in that table.

Mr. SHALLENBERGER. I suggest that because I realized myself when these figures were given on the guns before and when the prices paid for the accessories are given it would appear that the price is much cheaper than it is when you come to find out what it really is.

NOTE.—The statement is as follows:

The price usually given for a machine gun or an automatic rifle includes a limited number of tools, accessories, and spare parts, but does not provide for a sufficient number of such articles, even for the normal service of the piece.

For heavy guns the following articles are normally in addition to those included in the price of the gun proper: Spare barrels, feed belts, ammunition boxes, water boxes, belt-loading machines, transportation equipment, including harness or pack outfits, saddlers' tools, blacksmiths' tools, sets of base spares for repair, which vary in value between 20 and 60 per cent of the original cost, depending upon the type of gun.

For automatic machine rifles these additional articles usually comprise magazines, magazine fillers, magazine containers, transportation equipment, including harness or pack outfits, saddlers' tools, blacksmiths' tools, and sets of base spares.

For machine guns, aviation type fixed, these additional articles usually comprise spare barrels, feed belts, ammunition boxes, defective-cartridge extractors, belt-loading machines, and asbestos mittens.

For automatic machine rifles, aviation type, flexible, these additional articles usually comprise special type magazines, special type magazine containers, magazine loaders, and asbestos mittens.

The following statement gives the estimated cost of machine guns and automatic rifles, including all accessories, equipment, parts, etc., necessary for service:

Type of gun.	Price of gun with usual equipment.	Price of additional equipment including base spares for one year's maintenance.	Total price.
Vickers.....	\$1,315.94	\$1,333.23	\$2,649.17
Vickers aircraft.....	1,150.00	1,198.00	2,348.00
Lewis aircraft.....	690.00	1,025.00	1,685.00
Marlin aircraft.....	552.80	623.68	1,176.48
Browning heavy.....	650.00	1,680.00	2,330.00
Browning aircraft.....	600.00	998.00	1,598.00
Browning light.....	306.00	1,741.00	2,046.00

¹ No royalties to be paid. Not a patented article.

² Royalties to be paid in a lump sum here, estimated in the price of the guns at \$50 and \$25, respectively.

Do you know how many guns are contemplated for a machine-gun company in our organization?

Col. RICE. Sixteen.

Mr. SHALLENBERGER. How many of the machine-gun companies do you have with a regiment? Do you contemplate a certain number of machine-gun companies for each regiment?

Col. RICE. The machine-gun company is no longer with a regiment, as a part of a regiment. We have 224 heavy machine guns in a division. That is without any allowance for spares or replacements that are actually needed.

Mr. SHALLENBERGER. Have brigades been done away with in the organization?

Col. RICE. No, sir; that includes the brigade companies.

Mr. SHALLENBERGER. A brigade is made up of two regiments?

Col. RICE. Two.

Mr. SHALLENBERGER. How many regiments are there in a division?

Col. RICE. There are two brigades, or four regiments in a division.

Mr. SHALLENBERGER. In order to get it a little more definitely, how many men now is it contemplated to have in our organization in a division?

Col. RICE. About 27,000 in front of the service of the rear.

Mr. SHALLENBERGER. And with that number of men you contemplate 224 heavy machine guns?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. Do you know how that corresponds with the number of machine guns that are furnished to that number of men in the French and English armies? Is that as many as they have?

Col. RICE. It is about the same. That was made up from a table furnished by Gen. Pershing's operations divisions after they had studied the French and English systems.

Mr. SHALLENBERGER. The Chauchat guns are carried by men in the companies, the men in the machine-gun companies, are they?

Col. RICE. They are carried by the men in the infantry companies.

Mr. SHALLENBERGER. How many of those is it contemplated to have to the company?

Col. RICE. Sixteen.

Mr. SHALLENBERGER. That is not the case with the French organization, is it?

Col. RICE. That is their present organization. I may say it is pretty generally expected that the number will be increased.

Mr. SHALLENBERGER. In regard to those Chauchat guns, you, of course, have no bid on them; you simply accept the offer of the French Government, and agree with the French Government upon the price for those guns, after ascertaining what a fair price for the manufacture of the guns is?

Col. RICE. We expect them to bill them to us practically at cost, as we are doing with the things we furnish to them.

Mr. SHALLENBERGER. In regard to the rifles you purchased in vast quantities, how did you arrive at the price of those guns; did you do that on the cost plus profit basis, or did you have any bids on the guns?

Col. RICE. There was no possibility of bidding, because it was a question of dragging people into the work.

Mr. SHALLENBERGER. Who fixed the price?

Col. RICE. The process was this. With two companies, we have a cost plus agreement in preparation, a cost plus fixed profit agreement. We arrive at the fixed profit by making a detailed estimate of the cost: the manufacturer makes his estimate and we make ours, and we figure 10 per cent of the cost, as nearly as we can get it, as a fixed profit. Then it is a matter of adjustment between the two estimates as to what is a reasonable cost to figure the 10 per cent profit on.

Mr. SHALLENBERGER. How do you arrive at the cost of the accessories? Is that where the profit in the manufacture of the gun is made, largely? Is there not vastly more profit in that than in the manufacture of the gun itself, at these prices?

Col. RICE. I think only in relation to the relative cost of the two. I do not think they make materially more on that cost value than they do on the others.

Mr. SHALLENBERGER. Does the company which makes the contract for the gun also furnish the accessories, or do you buy those from other companies?

Col. RICE. No, sir.

Mr. SHALLENBERGER. Do you allow the Colts Gun Co. to not only furnish the guns, but also all the accessories?

Col. RICE. In answer to that, I will have to say we do not buy accessories from the contractor for the guns, unless he offers the best prices and deliveries. We are buying all our belts, and we are about to buy all our tripods, and we are buying all our water boxes and ammunition boxes. In regard to defective-cartridge extractors, for instance, we tried to make an arrangement with the Colts people, but refused to give them the order because they wanted too much for the work. They were made by somebody else.

Mr. SHALLENBERGER. The heavy Browning gun is a water-cooled gun?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. What does it weigh, exclusive of the tripod?

Col. RICE. With the water in it, it weighs about 35 pounds.

Mr. SHALLENBERGER. It weighs practically about the same as the Vickers gun?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. You expect to mount it on a similar tripod?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. Have those guns been manufactured in this country in quantities yet? This gun has lately been developed and has not been made in large quantities yet, has it?

Col. RICE. No, sir.

Mr. SHALLENBERGER. But the tests you had with it are such as to satisfy you it is going to be a practical gun?

Col. RICE. We are quite sure that the only difficulties that are to be expected are those of manufacture, which will occur with any gun that is being newly manufactured by any company. The principle has been established as being first class, beyond question.

Mr. SHALLENBERGER. That gun carries 250 shots to the belt, the same as the Vickers and the colt gun?

Col. RICE. It may have, in practice. Our main supply is for 250-round belts, although we are buying some with 500, and some at 1,000.

Mr. SHALLENBERGER. And those 250-round belts in cotton cost \$3 and in flax about \$8?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. How many shots do you fire from the light Browning gun without reloading?

Col. RICE. Twenty.

Mr. SHALLENBERGER. The Chauchat guns fires about 16?

Col. RICE. It fires 20 also.

Mr. SHALLENBERGER. They are loaded with one clip, 20 shots at a time?

Col. RICE. Yes, sir; the clip on a Browning gun looks like a large clip for the Colt automatic pistol.

Mr. SHALLENBERGER. These guns can be used by firing them over the trench. They do not have to be fired from the hip; it is only in advancing when they shoot them that way; and they can also be used over a trench, the same as the Lewis gun?

Col. RICE. Yes, sir; the Browning gun we have would be used from the prone position, just as a rifle is used.

Mr. SHALLENBERGER. What gives you the assurance that you will have these guns, practically all the 20,000 guns delivered in a year?

Col. RICE. That is what we hope for.

Mr. SHALLENBERGER. I was wondering what gives you that assurance, when in eight months, practically, we have only gotten 14,000 guns. What have you to give you that assurance that you will get those Browning guns within a year?

Col. RICE. There is, of course, no real assurance. Our reason for that hope and expectation is that we have very many more people at work.

Mr. SHALLENBERGER. Have you got your contracts out with a heavy penalty against the manufacturers if they do not produce the guns in that time?

Col. RICE. We have a liquidated damages clause, but I doubt whether that will be very effective because the transportation situation and the labor situation and the fuel situation are such that they are beyond the control of the contractors, and it is going to be very difficult to determine whether any delay is his fault or not.

Mr. SHALLENBERGER. You let the contract for the 4,000 Vickers guns a year ago. Have you got all of them yet?

Col. RICE. No, sir.

Mr. SHALLENBERGER. How many of them have you?

Col. RICE. We have about 2,000.

Mr. SHALLENBERGER. How many do you expect to get next year? Why did they not get out the 4,000 in a year? We were told they would be gotten out in a year.

Col. RICE. We hoped they would. There are several reasons for that. As I stated a while ago, the Vickers is a very difficult gun to manufacture, and I think the Colt Co. and ourselves underestimated those difficulties.

I think also that they have had difficulty in organizing for quantity production, which was what they had to do in order to get them out. They have not been entirely successful from the manufacturing standpoint. They are getting better, and while we will probably never get as many of the Vickers as we hoped for, we will get more than we have gotten in the past. The deliveries are increasing.

Mr. SHALLENBERGER. How many of the heavy Vickers have you ordered, in addition to the first 4,000?

Col. RICE. Eight thousand.

Mr. SHALLENBERGER. What makes you think that the production of the Browning gun will be more rapid and that they will not encounter the same troubles with that gun, which is absolutely a new gun, that were encountered with the Vickers gun? It will be a serious proposition if we give out the orders and only get 50 per cent delivered.

Col. RICE. It will be somewhat serious. In our orders we are counting on 50 per cent wastage, and the delivery of the wastage guns could be a little bit delayed. I am speaking of the heavy guns.

Mr. SHALLENBERGER. If you get 50 per cent of the guns delivered that are ordered, you think we would still have enough for the coming year?

Col. RICE. I do not believe quite that, but I do not believe we would be in as bad a fix as would appear.

Mr. SHALLENBERGER. Does your purchases contemplate 50 per cent more than you expect really to put in the field?

Col. RICE. About 50 per cent more than are actually in the hands of the troops; yes, sir. Our further reason for having hope in regard to the Browning gun is that it is a simpler design, and it is very much more simple in manufacture than the Vickers gun.

Mr. SHALLENBERGER. I would like to have you explain that. Why is it so much more simple? Is it a simpler gun in itself?

Col. RICE. Yes, sir; the mechanism is simpler. The cuts are straight; the cuts are all ordinary machine work instead of being special work, as is often the case with the Vickers gun. It is practically a straight job, and furthermore, the gun was designed with larger tolerances, so that the close work of the Vickers gun is not so necessary on this gun. Then we have many more people working on it. We have put as many people on that as we can.

Mr. SHALLENBERGER. You have placed orders for 221,000 guns, and you are asking for enough money to buy something like 200,000 more for the succeeding year at the same average price. That would give you about 400,000 guns for an army of 1,500,000 men. That is vastly

greater than the Ordnance Bureau contemplated a year or so ago, taking into consideration the most extravagant figures you had under consideration.

Col. RICE. This additional amount—

Mr. SHALLENBERGER. I mean prior to the war. When we were making appropriations for machine guns a year or so ago, we were given a statement from the Ordnance Bureau about the number of rifles you thought we ought to have for 1,000,000 men, and also we were given a statement as to the time it would take to produce them. Those figures have been very greatly enlarged since war was declared?

Col. RICE. The amount of money we are asking for is for the completion of the 221,000 and their maintenance. It does not add any new guns, except the 20,000, to which I have previously referred.

Mr. SHALLENBERGER. And the \$529,000,000 has not been paid for the guns?

Col. RICE. No; there is a contract authorization carried in the last bill for \$118,000,000, which we are now asking for in the \$237,000,000. All the figures for machine guns are much larger than we anticipated they would be before the war.

Mr. SHALLENBERGER. I have before me a statement made by the Chief of the Bureau of Ordnance in answer to some questions by Mr. Kahn in 1916. He stated that the number of machine guns would, in his opinion, have to be very greatly enlarged, and the contemplated number at that time for the Army was 2,040 guns. Gen. Crozier stated:

If we had all the facilities that are in the country, could command them, it would take less than a year, very considerably less than a year.

I overstated the time that would be required to meet the present needs in my previous answer very considerably. The capacity of the country would produce enough guns, if we could command that capacity, to eliminate our present shortage in less than one month, and to eliminate the shortage which would result from an equipment three or four times as great as we have been contemplating would naturally then take three or four months. I think the whole thing could be provided for in less than six months with the capacity which is in the country now or which will be within three or four months.

Those figures covered our understanding of the requirements for machine guns, as we viewed the matter at that time. Apparently that understanding of the requirements of machine guns has been enlarged tremendously since the outbreak of war.

Col. RICE. There is no question of that, and immediately preceding the war. The figures went up very largely just before the war, but even as large as those were, they were nothing like the figures we have now.

Mr. SHALLENBERGER. It has been shown by our experience with the 4,000 guns that were ordered that we could not have gotten the 8,000 or 10,000 guns contemplated in that statement in three or four months, as was believed.

Col. RICE. Not of that type. I want to add one other thing as one of my reasons for hoping we will get the other guns. That is that we have a number of Browning's light guns that have been manufactured and fired. They have been run through the shops and made by machine operations and put together and fired, so that we feel sure they will come along.

(Thereupon, the committee adjourned until to-morrow, Saturday, January 5, 1918, at 10.30 o'clock a. m.)

ARMY APPROPRIATION BILL.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Saturday, January 5, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent, jr. (chairman), presiding.

STATEMENT OF COL. J. H. RICE, ORDNANCE DEPARTMENT, UNITED STATES ARMY—Resumed.

MR. SHALLENBERGER. Colonel, in stating the cost of some of the equipment that goes with the heavy machine guns which have a belt that feeds the cartridges to the gun, as I recall, you testified the cost of some of the linen belts was \$8 apiece?

COL. RICE. About \$8; yes, sir.

MR. SHALLENBERGER. Can you tell whether or not this [indicating] is a linen belt of that character? This was furnished me by the Marlin people.

COL. RICE. No; this is a cotton belt, such as we use in the Marlin gun, and we also use it on the Browning gun.

MR. SHALLENBERGER. This is about a \$3 belt, then?

COL. RICE. Yes.

MR. SHALLENBERGER. How much heavier is the linen belt? Is it just the difference in the material, rather than the size, or are the heavier belts larger and wider?

COL. RICE. They are wider, and they are bound with brass clips, so that they are much more expensive on that account. We have under investigation the question as to whether we can replace them with the cotton belt; but up to the present time we have not felt justified in doing that because, as you surmised in a question you asked yesterday, there has been difficulty about the warping and stretching, etc., of the belt which has been to a degree prevented by the clips.

MR. SHALLENBERGER. How many of these belts are furnished with the Marlin gun or the Colt gun at the price quoted, do you remember? What I have in mind is this, Colonel: In the price quoted to us by Gen. Crozier of \$2,700 on the heavy type of Vickers gun, he stated that with the Vickers gun there are 20 ammunition boxes at \$6 each and 20 ammunition belts. Now, the price quoted on the Marlin gun was something, as I recall, like \$650, and there were a certain number of belts which went with that gun at that price. Do you remember how many belts were quoted with this gun at these prices?

Col. RICE. Four belts are furnished with each gun and are included in the price of the gun; 19 additional are purchased, but are not included in the price of the gun.

Mr. SHALLENBERGER. With none of those guns do they quote enough belts or other accessories. I will say to you that I had a talk with Col. Lewis and also with a Marlin man as to the amount of accessories which they furnished with their guns at the quoted price of \$650 or \$750, and it appeared to me that they gave a great deal of this extra equipment with the guns, and I wondered whether you were still getting a sufficient amount of these belts and other accessories at these prices, or whether it was only in the case of these heavy guns that you had to buy this tremendous amount of extra material.

Col. RICE. No; we have to buy a considerable quantity of extra material with all of them. The value of the parts that are furnished with the gun is about the same with all of them except the Vickers, in which case there are no parts furnished with the guns. It is a total of something over \$200, between \$200 and \$300, except for the Colt gun, for which the cost is about \$40.

Mr. SHALLENBERGER. With the Marlin gun?

Col. RICE. With all of them.

Mr. SHALLENBERGER. Do you mean there is that much in value in addition to the gun, or do you get that much with the gun?

Col. RICE. We get that much with the gun.

Mr. SHALLENBERGER. But with the Vickers gun there are practically no extra parts furnished?

Col. RICE. None in the price which I have given. That has to be added in.

Mr. SHALLENBERGER. The price quoted here for the tools for loading the cartridges in the belt is \$83.94 with the Vickers gun, and one of these companies told me that they furnished a loading tool at \$5 for loading their cartridges into the extra belts or extra cartridge carriers. Do you know anything about that? The point I am making is that the cost of the extra parts for the Vickers seems to be so much in excess of the other guns that I thought it made the others apparently very much cheaper, if they were anything like as effective.

Col. RICE. If there was any such price as that quoted, it was for a charger of some kind which is very simple and not at all like the belt-loading machines, and the price of the latter includes a considerable number of spare parts carried in the belt-loading machine box for convenience, but not a part of the machine itself.

Mr. SHALLENBERGER. Does the Browning gun and all of these belt-loading guns have a loading machine of about the same cost as the Vickers?

Col. RICE. They have loading machines, and the best one we know about is the Vickers, which will probably be used with the Browning.

Mr. SHALLENBERGER. And that costs about the same?

Col. RICE. I have it quoted here at \$50.

Mr. SHALLENBERGER. It is very much cheaper now.

Col. RICE. We have worked down a good many of these prices somewhat over old figures in spite of the increase in cost.

Mr. SHALLENBERGER. In purchasing the Vickers gun now, with the reduced prices you have on all these accessories, what does it cost? Have you that statement figured out for us?

Col. RICE. The total cost is, as it was before, about \$2,695.

Mr. SHALLENBERGER. So you have not been able to—

Col. RICE (interposing). Where we have cut down one place it has gone up in another.

Mr. SHALLENBERGER. Have you any information about the profit per gun to these manufacturers? For instance, we will say the profit to the manufacturers of the Vickers gun at \$2,700, or the Browning gun. I understand they are going to cost about the same amount of money.

Col. RICE. No; the Browning gun is going to be cheaper.

Mr. SHALLENBERGER. How much cheaper?

Col. RICE. We figure it at about \$400 cheaper, as the total, including all equipment.

Mr. SHALLENBERGER. Could you give us your idea of the amount of profit per gun to these manufacturers on those guns?

Col. RICE. We have not the figures on the Vickers. The only way we could get it would be to put an expert accountant in their plant, and, of course, that is a very difficult thing to do, and we have not been able to do it on the Vickers gun as yet, although we hope to. The manufacturers claim to have lost money on the old price on the Vickers, and secured a recommendation from the War Industries Board for an increase in price on the later orders. At first the price under negotiation was cut down a trifle, \$25 a gun, and then on the next order, as I say, they convinced the War Industries Board that they were losing money and got the price raised. On the other guns I think they are making somewhere between 15 and 20 per cent.

Mr. SHALLENBERGER. You mean the other makes, aside from the Vickers?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. You think that would be a fair statement of the profit?

Col. RICE. I am quite sure it will not run over 20 per cent and probably will be nearer 15 per cent. If it does run over 20 per cent we are going to try to see that it comes down.

Mr. SHALLENBERGER. These guns, after all, are fabricated out of steel and wood, material that is very stable in price and produced in vast quantities, and known to have a fixed price per pound, and after the machines are manufactured and these implements commence to be produced in vast quantities like they are now, why should not they be greatly reduced in price like other fabricated instruments of steel and wood?

Col. RICE. We expect them to be reduced greatly, and that is why we have employed expert accountants and have a form of contract by which we can adjust on the second part of the contract any mistakes there may have been in the first. Of course, in the beginning there are a good many amortizations which are to be made, which are included in the price. When those have once been paid, then the price ought to be reduced very materially, and we expect that that will be the case. We hope, for instance, to get the Lewis gun pretty soon for somewhere around three or four hundred dollars.

Mr. SHALLENBERGER. I will say, in that respect, that in a little talk which Mr. Tilson and myself had with Col. Lewis and one of his men, he stated that if they could get a large order for those guns they could make them at a lower price than they were offering them for.

Col. Rice. They now have orders for 42,000, and we are writing off the amortization on the earlier orders, and unless we have to further increase their plant the price will come down.

Mr. SHALLENBERGER. The cost of one of these guns completed now is about that of a first-class automobile or other highly developed and specialized machine, which seems to carry a greater amount of material and require more skill, and it occurred to me that with the vast orders which the Government is now putting out, and in all probability in the future will put out, that under the ordinary experience in business these prices ought to be very materially reduced to the Government, and I wondered if you had that in contemplation.

Col. Rice. It is my expectation they will be reduced very materially within the next six months. We have laid all the foundation for that reduction, and for a knowledge of what they are costing, which, of course, is the first step.

Mr. SHALLENBERGER. Have you any figures to show the amount of ammunition that will be required for this large number of guns in case of a year's war?

Col. Rice. No, sir; I have not, but I can get it for you. The amount of ammunition which is figured for all purposes, I may say, is beyond the present capacity of the country to produce, and we have to develop additional capacity.

(The ammunition required for one year for 1,000,000 men, organized into 30 divisions, is approximately 2,464,196,000 rounds.)

Mr. SHALLENBERGER. I recall that Col. Thompson, in reply to a question by a member of the committee, Mr. Kahn, I think, about the amount of ammunition that was required in case the Army was increased 1,000,000 men over what is contemplated now of 1,500,000, in substance said that it would be a very easy computation, because the present figure was 1,400 rounds per man, and it would simply be a question of multiplying by 1,000,000 the amount of ammunition per man. Do you know whether that is the number of rounds per man now contemplated for a year's war?

Col. Rice. It is my understanding that is about correct, except, of course, for machine guns, and that is figured on guns rather than on men.

Mr. SHALLENBERGER. I was just going to ask whether that included the machine guns or whether that was for the rifles alone. The reason I am asking this, Colonel, is because we have had testimony here that the machine gun shoots about 60 per cent of the amount of ammunition used by a certain number of men armed with machine guns and rifles. In other words, that to-day the machine guns for 3,000 men, say, equipped with the same number of rifles, that the machine guns shoot about 60 per cent of the ammunition and the rifles 40 per cent. That would, of course, indicate that this number of machine guns which is to be provided, 215,000, would fire a tremendous amount of this ammunition. We have testimony here from the Chief of Ordnance that during one period the Austrian

Army alone fired 18,000,000,000 rounds of small-arms ammunition, and we are not providing for anything like that number of rounds of ammunition, according to the figures given this committee, and machine-gun fire now is much greater in value than it was at the time that statement was given to us; and I wanted to know, with this large number of machine guns and this tremendous investment of money, if we have, in your opinion, a sufficient number of small-arms ammunition to keep the guns going, because, of course, the guns will not be of any value unless we have ammunition for them.

Col. RICE. I think we have sufficient. While the number of rounds per gun is very much greater than in the case of the individual rifle, of course, there are a number of men required for the service of each machine gun, so that makes some compensation. The fact too, is that the difference between a company using 16 machine guns and a certain number of rifles is not very different from the same number of men using the rifles. There has been some compensation also, as compared with the previous situation, in that some of the people in the companies nowadays use bombs only and are not armed with the rifles. We should be able to meet the needs of small-arms ammunition requirements complete, I think. It is going to be a good deal of a pull, and we are going to have to develop further capacity. I am sure.

Mr. SHALLENBERGER. Colonel, is it your opinion that the changing of these French guns to American ammunition was essential to the proper conduct of this war? Have the other nations had any trouble at all serious with their ammunition, either the English or the French ammunition? We are using, as I understand, French guns and English guns; and I will say to you that I have been told by officers of those armies that they have had no trouble with their ammunition that was serious at all—that is, with small-arms ammunition—and that battles have not been lost on that account, and that there has been practically no trouble with that sort of ammunition, and that the complaint has not been against that ammunition.

Col. RICE. I think the ammunition of both the English and the French is fairly good, but it is nothing like as good as ours.

Mr. SHALLENBERGER. You do not think it is?

Col. RICE. No, sir.

Mr. SHALLENBERGER. And you think this delay, for instance, in the rechambering of these French rifles and the rechambering of the British rifles was worth while?

Col. RICE. There is no delay, practically, Governor. We are using the French ammunition and the French chambered guns up to the time when we are able to replace them with guns chambered for our ammunition.

Mr. SHALLENBERGER. Of course, it has been said that one of the reasons for the change of ammunition was that we did not want to have different kinds of ammunition in the hands of our troops. Of course, as long as we use these French rifles and the French Chauchat guns—and they are using more ammunition than all the rifles will use, according to the testimony we have here—you will have more French ammunition with our armies than of our own ammunition; is not that true?

Col. RICE. Probably; yes.

Mr. SHALLENBERGER. That would naturally follow.

Col. RICE. Certainly; there will be great quantities of it.

Mr. SHALLENBERGER. But, in your opinion, that will not occur very long, because we are rapidly chambering the Chauchat gun to take our ammunition, so that if we do not go into this war heavily before the middle of the summer we will have guns of the Chauchat type that will handle our ammunition. You think we can safely say that?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. So that the amount of fighting we will do with these French guns with different ammunition from ours will not be great?

Col. RICE. Not for the light gun, no. I do not think the difference in the ammunition is absolutely vital, of course, because we would not be using the French ammunition at all if it were, but it is quite an important item and the change has given us a better ammunition: it has given us uniform ammunition, and it has not been a serious matter. It has not cut any figure at all so far as our troops going to Europe is concerned. It has cut some figure in the training, but that has not been serious.

Mr. SHALLENBERGER. You think, then, we have a sufficient capacity for the manufacture of our own ammunition to supply those guns, as I understood you to say? Of course, that looks like I am duplicating that question, but I understood you to say that in your opinion there not sufficient capacity at present to furnish all the ammunition for the small arms that we need, and that we have got to enlarge that capacity.

Col. RICE. To cover future needs. We have enough for the present.

Mr. SHALLENBERGER. Yes; when we are not fighting, but when we get into real war, with the tremendous amount that will be required, do you think we will have to enlarge our capacity? Do you think we will be able to reach that period of manufacture by the time we need the ammunition?

Col. RICE. Unquestionably.

Mr. SHALLENBERGER. And you do not think there will be any shortage of ammunition because of this change in ammunition and not being able to get ammunition from our allies?

Col. RICE. I do not; no, sir.

Mr. TILSON. Colonel, before taking up the line of questioning which I mean to follow there is one question which has been suggested to be by another member of the committee. Your estimate in this item is based upon an army of 1,500,000 men, and the cost is so much, as indicated here and in your testimony?

Col. RICE. Yes, sir.

Mr. TILSON. If the Army is increased during the fiscal year for which we are appropriating, what will be the increase in the amount of money required or the number of guns required? That is, how much, for instance, per 500,000 men should this amount be increased so as not to leave us with a deficit at the end of the year or in the middle of the year?

Col. RICE. \$148,000,000 for every 500,000 men.

Mr. TILSON. And that would be so if it were an increase of 500,000 men or 1,000,000 men or 1,500,000 men, approximately?

Col. RICE. I think it could be reduced perhaps fifteen or twenty million dollars per 500,000 men if we provided all at once for 1,500,000.

Mr. TILSON. Gov. Shallenberger has covered very thoroughly the question of the total cost and comparative cost of these various guns, and I wish to ask a few questions in regard to the comparative performance of these guns or their utility for the various purposes for which they are going to be used. First, taking the aircraft guns, what type of gun do you contemplate using principally in the aeroplanes?

Col. RICE. There are two types of aeroplane guns. One is the synchronized gun, which fires through the blades of the propeller—

Mr. TILSON (interposing). What make of gun are you planning to use as your synchronized gun?

Col. RICE. We expect to use primarily, when we can get what we want, two types—Vickers guns, or as many as we can get, and the Browning aircraft gun, which is the Browning heavy gun without the water cooling. We are now using the Marlin aircraft gun, which is a modification of the old Colt gun, and which we have been able to get much more promptly and in larger quantities.

Mr. TILSON. In other words, the Marlin gun is now under production?

Col. RICE. Yes, sir; we have 23,000 under production.

Mr. TILSON. The Browning gun is not under production?

Col. RICE. It is not coming through in quantity.

Mr. TILSON. That is what I mean by production. I do not mean hand-finished guns, but I mean those that would come in mass production, with the proper gauges and everything to make them in mass production instead of one at the time. Now, you expect that gun to be synchronized?

Col. RICE. It has been synchronized. The model guns have been synchronized, and we know that it is satisfactory in that respect.

Mr. TILSON. You spoke yesterday of the Lewis gun being used as an aeroplane gun. Now, you do not mean that to be used as a synchronized gun, do you?

Col. RICE. No, sir; they will be used in aeroplanes in which we have two men. It is called a flexible gun, and it is operated by a second man, not the pilot. The synchronized guns primarily are used where there is only one man, and that gun is fired through the propeller blades. The Lewis gun is not a synchronized gun.

Mr. TILSON. And it can not be synchronized owing to the manufacture or mode of operation? It can not be synchronized?

Col. RICE. In its present form it does not adopt itself to synchronization.

Mr. TILSON. That is a very long complicated question, covering details of manufacture.

Col. RICE. I think I can give a simple explanation of it: The propeller blades revolve very rapidly, and when you shoot through the propeller blades the time intervals between the trip of the sear of the gun and the arrival of the bullet at the plane of the propeller blades must be very short and very uniform. The result is that the gun in which the movement of the firing pin is very small, or, in

other words, in which the firing pin is moved forward to strike independently of the general mechanism, can be synchronized. The shortness of time in that case reduces the variation in the time between the firing or pulling of the trigger and the arrival of the bullet in the space between the propeller blades. In those guns in which the whole mechanism causes the firing pin to move forward with what we might call the bolt action several inches, as in the Lewis gun and in some of the others, such as the Benet gun, the time movement from the tripping of the sear and the arrival of the firing pin is sufficiently great, or the variations in that time are so large, due to differences in lubrication, heat, etc., that they sometimes shoot up the propeller blade even with the best adjustment that they can get.

Mr. TILSON. As a matter of fact, the Marlin aircraft gun has been thoroughly synchronized?

Col. RICE. Yes, sir.

Mr. TILSON. What about its rapidity of fire?

Col. RICE. It is about normal.

Mr. TILSON. As a matter of fact, is it not very fast? My information is that the Marlin aircraft gun is a very fast firing gun, and, as I understand it, rapid firing is the principal thing in the aeroplane service.

Col. RICE. I do not remember the exact rate of fire, but there has been no particular comment made on it by any testing board or any other agency connected with the determination of whether it shall be used, so it is not a salient feature.

Mr. TILSON. I know that it is a very rapid-firing gun. Now, the light type Browning gun is not used for aeroplanes?

Col. RICE. It is not. At present we are not intending to use it for that purpose.

Mr. TILSON. Now, in reference to the belt used in the aeroplane guns: In the Lewis gun you use a band which carries 47 cartridges, and if that gets jammed it does not function properly. Now, in the aeroplane service it does not get jammed, and that is one reason, as I understand it, why we can use the Lewis gun in aeroplanes very successfully. But in using the belt, I am told that there is difficulty in using the web belt that trails out behind. Have you had any difficulty with that?

Col. RICE. We normally do not use a belt, but we use what we call a disintegrating link mechanism, each one carrying a bullet or cartridge. They are linked together with the cartridges so that when you fire or when you extract a cartridge from it you drop a link.

Mr. TILSON. What is the cost of those plated belts as compared with the web belt?

Col. RICE. I can not give you the figures on that, because we have not made them in quantity.

Mr. TILSON. They are making them in quantities to my knowledge.

Col. RICE. We are trying to, but have not gotten deliveries in quantity yet.

Mr. TILSON. I know one concern that is making millions of them.

Col. RICE. Not for us.

Mr. TILSON. Yes: for the Government.

Col. RICE. We have given manufacturing orders, but they are not making deliveries, and we have not determined what is a reason-

able price for them. I will check the matter up, however, and if there is any price on them, I will put it in my hearing. I think the metal belts will be more expensive. The Worcester Pressed Steel Co. state that eventually they hope to produce metal belts at an outside price of $1\frac{1}{2}$ cents per link, or \$3.75 for 250.

Mr. TILSON. It is believed that the cost will not be very much above that for the linen belts, and that its superiority for the aeroplane service is very great on account of the fact that the disintegrating mechanism does not interfere with the propeller.

Col. RICE. We are doing our best to get experts from France to come over here to help us make them, because we have not been entirely successful up to the present moment in being assured—

Mr. TILSON (interposing). I have seen them tried.

Col. RICE. In experiments; yes, sir. We have been experimenting with the Marlin aircraft gun and the Vickers aircraft gun with those links, but we have not been entirely successful up to the present time with our manufacture.

Mr. TILSON. Now, in regard to the Vickers gun: You stated that it was very difficult of manufacture, and for that reason it has been so slow. Is that due to difficulty in manufacture?

Col. RICE. That is one of the principal reasons.

Mr. TILSON. It has been provokingly slow in being delivered.

Col. RICE. Exceedingly slow; yes, sir. The same experience has been had in England in making the Vickers gun. The Vickers people themselves put up another plant for the purpose of producing that gun, but their deliveries have never been satisfactory or up to their expectations.

Mr. TILSON. Have deliveries been made on the orders that we gave some two years ago, in 1915? Have they been delivered?

Col. RICE. Yes, sir. That was an order for only 125. They were delivered in July, 1916.

Mr. TILSON. And of the 4,000 we ordered—

Col. RICE (interposing). About one-half of them have been delivered. The order was given in December, 1916, and about half of them have been delivered now.

Mr. TILSON. Are they able to get by that difficulty by the preparation of a large number of special tools, so that they can manufacture them in mass production, or are they practically a hand-finished product, and must the production be slow by reason of the nature of their construction? In other words, is it a gun that we can reduce, like we have some others, to mass production?

Col. RICE. I doubt it. I do not think anybody has done it up to the present time.

Mr. TILSON. In the matter of the Browning gun, have we taken steps to simplify that gun from the manufacturer's standpoint, instead of making of it a toy or plaything, so that it can be produced in mass quantities?

Col. RICE. Yes, sir.

Mr. TILSON. How many concerns are making those guns?

Col. RICE. Four.

Mr. TILSON. But we have not yet really arrived at the stage of production—that is, we have not finally settled on all the types of guns, have we?

Col. RICE. We have not yet begun to produce them in quantities.

Mr. TILSON. Realizing that it is more important to get the thing absolutely right and then make large preparations, rather than to go ahead and make a few guns now. It is better to prepare to make a large number of guns when we begin and have them correct, from the manufacturer's standpoint.

Col. RICE. We will lose a little time by making thorough preparations in the beginning for a large production, but we gain tremendously in a very short time by making those preparations.

Mr. TILSON. There is one more question with reference to the Vickers gun: Have we made any Vickers guns for any of our allies?

Col. RICE. The Colt Co. has made 3,000 guns for Russia.

Mr. TILSON. Have we made any for the French aeroplanes?

Col. RICE. We have turned over to them 1,000 of the guns that we made for ourselves.

Mr. TILSON. Are they able to synchronize those guns and use them in aeroplanes as we do?

Col. RICE. Yes, sir.

Mr. TILSON. Have we received in exchange any guns from France?

Col. RICE. Yes, sir.

Mr. TILSON. What guns have we received?

Col. RICE. We have received the heavy Hotchkiss.

Mr. TILSON. Is there any gun known as the Schneider gun?

Col. RICE. I do not know of any such gun. There is a large ordnance concern in France known as the Schneider company, and, in fact, it is the largest ordnance factory in France, but they have no machine guns, to my knowledge. They work on larger stuff. There is a light Hotchkiss gun and a heavy Hotchkiss gun.

Mr. TILSON. Now, coming to the bullets for the various purposes, what bullet are we preparing to use in the aeroplane gun—the same cupro-nickel jacket bullet we use in the land service?

Col. RICE. We will use the same ammunition, except that it will be very much more carefully inspected, and will, in addition to the ordinary inspection, be gauged for head space, or for thickness of head, tapering, and all that, so as to avoid as far as possible any jamming difficulties due to defective ammunition.

Mr. TILSON. What about supplying the ammunition that we will use in the Chauchat guns and Hotchkiss guns of French caliber while we are using those guns and before we change to the American caliber?

Col. RICE. The original supply has been furnished by the French, and we are also manufacturing it in this country.

Mr. TILSON. Is there any great difficulty in manufacturing the French copper bullet, or the bullet that the French use?

Col. RICE. If there is, I have not heard of it.

Mr. TILSON. Is it not more difficult, from our American manufacturers' standpoint, to produce that French copper bullet?

Col. RICE. I have no information that there is any greater difficulty with them than with other types of ammunition. However, the ammunition work is not in my division.

Mr. TILSON. They are making some of it in my State. They are making some of those copper bullets, and they find it a difficult bullet to make. That question has arisen, and, therefore, I wanted to ask

whether you think it possible to use brass for that purpose instead of copper?

Col. RICE. I would not be willing to answer that question without making a long series of experiments.

Mr. TILSON. As a matter of fact, that question probably has been put up, perhaps not to the Ordnance Department officially, but it has been put up to some officers, and I believe they are preparing to test out the performance of a brass bullet for the French calibers.

Col. RICE. I should expect that to be the case if there is any difficulty in the copper bullet itself.

Mr. TILSON. It is an alloy, I understand. It is not solid copper, but there is a little lead in it. It is a pretty difficult bullet to make. Now, what are they using in Germany? Beginning with ammunition first, do you know about their bullet for aeroplane guns?

Col. RICE. Their bullet is very much the same as ours. I am not absolutely certain whether it is a cupronickel bullet or a steel bullet with a cover somewhat different from ours, but it is very much like it. In fact, our bullet was modeled on the German bullet originally.

Mr. TILSON. Yes; apparently it was.

Col. RICE. They have what they call the "S" bullet, which was made early in 1905 or 1906.

Mr. TILSON. I was trying to get at this question, whether Germany had the same cupronickel jacket bullet that we had prior to the war and whether they had ceased from any industrial reasons to use the cupronickel jacket and had turned to the solid steel jacket. The question is if they have done so, for what reason did they do it?

Col. RICE. I can not tell you that.

Mr. TILSON. I have in my hand a German aeroplane bullet, which is a copper-plated affair. Is it not a fact that copper is necessary to serve as a lubricant in the penetration of armament? Is not our cupronickel jacket bullet sufficient to penetrate armor?

Col. RICE. For armor-piercing qualities we make a special bullet, as do the Germans.

Mr. TILSON. Do you plate it with copper?

Col. RICE. The armor-piercing bullet that we are making is a steel core with a cupronickel jacket of a somewhat different kind.

Mr. TILSON. Is it intended to make a distinct bullet for the aeroplane service, or a different one from the general run of ammunition?

Col. RICE. No, sir; not for the aircraft service; but if the demand of the aircraft service for a bullet of armor-piercing qualities—that is, a bullet particularly for the aeroplane guns—is sufficient to justify it, they will undoubtedly have a bullet for that purpose.

Mr. TILSON. I was trying to arrive at information as to what the Germans had done in the first place, from such information as we have been able to get from them, and, in the next place, the reasons for their doing it, and if there were any reasons for our doing the same thing or something like it. Now, it is a fact that they are using armor-piercing bullets in their aeroplanes. Aeroplanes have been driven down inside the allies' lines that carried machine guns with this particular type of bullet. My query goes to the point of

what we are doing in that direction, or whether we will do anything along that line.

Col. RICE. I have not heard of any intention to use armor-piercing bullets specifically in the aeroplane service, but bullets of armor-piercing quality can be used in them if it is found desirable to do so. I am sure we have had no demand from the Aviation Service for it as yet.

Mr. TILSON. There is another question I want to ask you in regard to the Chauchat gun. You spoke yesterday about this gun being manufactured in France, or said that they were preparing to manufacture it in France in quantities. Now, are they furnishing a sufficient supply of those guns, along with the Hotchkiss gun, to supply the needs at present in France?

Col. RICE. Yes, sir.

Mr. TILSON. Do you understand that they are going ahead with the necessary changes for using the American caliber of bullet?

Col. RICE. We expect to begin to get them some time this month.

Mr. TILSON. So that they will be able to make them in sufficient quantities to supply our needs?

Col. RICE. Yes, sir.

Mr. TILSON. Is there any intention to manufacture the Chauchat gun in this country at all?

Col. RICE. No, sir.

Mr. TILSON. And what you have said in regard to the Chauchat gun would apply to the Hotchkiss gun so far as being furnished by the French and being replaced by French guns to shoot American ammunition?

Col. RICE. The heavy Hotchkiss gun is not being chambered for American ammunition.

Mr. TILSON. What will we use, the Vickers and heavy Browning?

Col. RICE. Yes, sir.

Mr. TILSON. Has there been any effort on the part of the French to have us use their bullets or ammunition for our aeroplane machine guns indefinitely?

Col. RICE. No, sir; not that I know of.

Mr. TILSON. Was there any such effort on the part of the British? Did not the British ask us to use their ammunition entirely?

Col. RICE. The British were more inclined to be insistent that we use their calibers and their ammunition than the French. The French never took that point of view in regard to small-arms ammunition. They felt that we should use our own ammunition.

Mr. TILSON. There has been some criticism of the Ordnance Department for not using the British caliber ammunition. One New York newspaper has been rather insistent in its advocacy of that thing. Now, there were good reasons why we adopted American ammunition rather than British. were there not, from the ordnance standpoint?

Col. RICE. Yes, sir; there were excellent reasons.

Mr. TILSON. Both on account of the superiority of the bullet itself, or of the cartridge itself, and also on account of our preparations for making it here?

Col. RICE. Yes, sir; and the ammunition, as I said a moment ago, was very much better than the British. It is similar to ours, but

they had the old ammunition with the blunt-pointed bullets, which they had before the war and were preparing to discard, but could not discard in the throes of war. In addition to that, we have very considerable quantities of Springfield rifles on hand with our own ammunition for them, and we are manufacturing them continuously. So that if we had adopted the Enfield rifle, which, I think, you have in mind principally—

Mr. TILSON (interposing). Yes.

Col. RICE. We would necessarily have had two kinds of ammunition in our service. Now, the delay which was caused in changing over the Enfield rifle to take our ammunition was unimportant. It did cause some little delay in getting some guns in the hands of troops in training, but their preliminary training without guns was proceeding properly. So that the amount of time lost was not very material. The French and English do not use the same ammunition. So there seemed to be no sufficient reason for adopting their type of ammunition. You will, of course, realize that there has been a very strong pressure from England and a very strong pressure from the French that we should adopt their material of every kind.

Mr. TILSON. I am convinced myself that there were the best of reasons for adopting American ammunition. I went into it rather thoroughly myself, being rather inclined the other way at the beginning, but after giving it a good deal of study from every viewpoint I became convinced that the decision of the Ordnance Department was absolutely correct in regard to this ammunition. Now, there is just one more question: What is being done in the department to get automatic or semiautomatic guns even lighter than the Browning or any of the others?

Col. RICE. We have tests of guns of that type manufactured by the Winchester Co. and manufactured by the Remington Co. We have cabled to France to find out whether they want such a gun; and if so, what type they prefer. There are a good many of those guns being made now, and we have asked them, if they want such a gun, to specify the type that would be preferred.

Mr. TILSON. How light are any of those guns?

Col. RICE. They are quite short and quite light. I do not remember what the weight is, but I should say probably not more than 9 or 10 pounds.

Mr. TILSON. I was present at Springfield two weeks ago at the testing of a gun exactly of the weight of a Springfield rifle. It was put on a Springfield barrel and a Springfield stock, and it was absolutely like a Springfield except as to the internal mechanism. That was the preliminary test but not the final test. They seemed to be very much pleased with the performance of the gun from every point of view. Col. Pierce said that oftentimes they had guns brought in there that would stand the strain of the ordinary subservice ammunition, but that when they came to the full service charge they would not stand; that is, that those lighter guns would not stand. That has been the rule as to those guns that have been brought in there. This gun was tested with service ammunition and stood up quite well, so I suppose they are working along that line to try to develop an automatic shoulder rifle.

Col. RICE. I misunderstood your question, sir. The answer I gave referred to a very different type of gun to be used in aeroplanes only. The gun you speak of is an automatic shoulder arm for use on the ground, I take it.

Mr. TILSON. Yes; the same as the shoulder rifle.

Col. RICE. And is a much more powerful weapon than the gun I spoke of that we were considering for use with the aeroplanes.

Mr. TILSON. Colonel, in the Senate investigation they brought out, according to the papers, a great want of machine guns for training purposes in the camps. Has there been such a lack of machine guns for training in the camps?

Col. RICE. There has been some lack of machine guns. We have something over 7,000 now which are either in camps or available for putting in the camps and en route, which is really quite sufficient for the purpose.

Mr. TILSON. When I was at Springfield, a short time ago, I got the impression they had quite a supply of those guns on hand—perhaps 1,000 or 1,500 machine guns. That was in November, and I know just shortly before that time there was a great cry which came up from our local camp in Connecticut, in which there was a machine-gun battalion which did not have a single machine gun in it. Not a man in it had had a machine gun in his hands before they started for France.

Col. RICE. You know what the situation is in regard to shipments, and I think some of the shipments have been on the road for as much as several weeks. We did not have them as promptly as we would like to have had them. There is no question about that.

Mr. TILSON. Are a number of them stored at Springfield?

Col. RICE. Yes, sir.

Mr. TILSON. What are they—the old Colt?

Col. RICE. A small number of the old Colt and some of the Lewis.

Mr. TILSON. Has not the Marlin Co. a number of the Colt improved by Marlin?

Col. RICE. No.

Mr. TILSON. I was informed they had some 400 or 500 of those on hand.

Col. RICE. No; the guns they have on hand, as I understand it, which have not been purchased, are the old clapper-type Colt.

Mr. TILSON. In regard to that synchronizer, what type of synchronizer are we preparing to use?

Col. RICE. There are several different types.

Mr. TILSON. As I recall, they are two distinctly different types: there is the mechanical and the hydraulic.

Col. RICE. Yes; the Marlin gun has been particularly synchronized, in the first place, to the hydraulic, and so has the Browning. I think they have both been synchronized to both types.

Mr. TILSON. I am sure the Marlin has been synchronized to both types, and the Browning is susceptible of being synchronized to both types.

Col. RICE. Yes.

Mr. TILSON. Which do you regard as the best means of doing it—by the mechanical or by the hydraulic?

Col. RICE. I have not gone into it sufficiently to really express an expert opinion; but I think probably the hydraulic is better.

Mr. TILSON. Although the mechanical is the more direct?

Col. RICE. Yes; and easier. There probably will be less lost motion in the hydraulic than in the other, and therefore less opportunity for variation.

Mr. QUIN. Colonel, have you plenty of supplies, such as the nitrates and other component parts, to make ammunition?

Col. RICE. I think there is some possibility of shortage later on.

Mr. QUIN. How late?

Col. RICE. I can not give you the details, because that is not within my line of work, and I have not the exact information.

Mr. QUIN. Who would be the officer to give that information?

Col. RICE. Col. Joyes knows about the nitrate situation and Col. Hoffer would know about the powder.

Mr. QUIN. All of this type of ammunition that Mr. Tilson asked you about is being manufactured in ample quantities, according to the way the guns come out, I take it?

Col. RICE. Yes, sir.

Mr. QUIN. There will be no danger of any shortage of ammunition for any of the types of gun, either machine guns for the aeroplanes or machine guns for use on the ground?

Col. RICE. I do not anticipate any; no, sir. Certainly there is no immediate prospect of it. If there is any shortage at all it will probably be in the components for the heavy types, such as field artillery.

Mr. QUIN. Is there any truth in the statements we see published in the papers that you have not had machine guns for these different cantonments for the machine-gun companies, and so on?

Col. RICE. They had none of the late types until September or October, and mostly not until November. The National Guard troops and some of the Regular troops had some of the guns of the type which they had in their possession before the war started—the Benét-Mercié and the Lewis, chambered for British ammunition.

Mr. QUIN. Are they now supplied with the necessary machine guns for training?

Col. RICE. Yes, sir.

Mr. QUIN. There will be no danger in the future of that mistake occurring?

Col. RICE. From now on they will all have some machine guns for training.

Mr. SHALLENBERGER. Colonel, I understand that the troops in France, none of them, have our American machine guns. They are supplied with the different types of French guns?

Col. RICE. That is correct.

Mr. SHALLENBERGER. You took no American guns over there?

Col. RICE. We took a few that we could scrape up. They were second hand, in that they had been used mainly, and they were not used over there for the troops themselves.

Mr. SHALLENBERGER. And the guns they have are the heavy Hotchkiss and the light Chauchat gun?

Col. RICE. Yes.

Mr. GORDON. Under the present plan I believe you recommend in this bill appropriations for men and material for an army of 1,500,000 men?

Col. RICE. This is completing that appropriation; yes, sir.

Mr. GORDON. How many machine guns are required to equip those in the proportion which the present plans of the military authorities provide?

Col. RICE. This program provides for a total of 230,000 guns of all types and for all purposes, not only for the equipment of divisions on the ground but for the entire aeroplane service.

Mr. GORDON. What I am trying to get at is what proportion of those are for the regular machine-gun units attached to the Army?

Col. RICE. It is a good deal less than half.

Mr. GORDON. Can you not tell the number per regiment?

Col. RICE. Yes, indeed. There are 224 heavy machine guns in each division and 758 light guns in each division, without any replacements.

Mr. GORDON. How many would that make in an army of 1,500,000 men?

Col. RICE. Approximately 30,000 guns, heavy and light together, without any allowance for replacement, and we figure 50 per cent replacement on the heavy guns and 100 per cent on the light guns.

Mr. GORDON. Then it would be 30,000 guns for the whole Army as at present authorized, and out of that you leave 180,000 to be used elsewhere without replacement?

Col. RICE. We do not quite count it in that way. We count that the replacements have to be available.

Mr. GORDON. And how many do you compute for replacements?

Col. RICE. Fifty per cent on the heavies and 100 per cent on the light. That makes about 45,000 of the light and about 14,000 of the heavy.

Mr. GORDON. That includes replacements?

Col. RICE. That includes replacements; yes, sir.

Mr. GORDON. Where do you expect to use the others?

Col. RICE. On the airplane work, mainly. Then there are various incidental purposes, such as the lines of communication, depots, aircraft, use in tanks, and all sorts of things.

Mr. KAHN. Armored cars?

Col. RICE. Yes, sir.

Mr. GORDON. What proportion of those are for the airplane service?

Col. RICE. For the purpose of figuring, taking the basis as 230,000 guns, about 110,000 for the airplane service.

Mr. GORDON. And can you state approximately where the others are intended to be used?

Col. RICE. We have a very considerable number used in the coast defense.

Mr. GORDON. How many for the coast defense would you say, approximately?

Col. RICE. About 1,400. For miscellaneous uses we have about 3,000. Both of those should be increased by 50 per cent. On miscellaneous uses, of the light type, we have something like 14,000 assigned.

Mr. GORDON. Fourteen thousand?

Col. RICE. Yes. If you want a statement of exactly how that runs, I will give it to you.

Mr. GORDON. I will be glad to have it.

Col. RICE. It is figured in this way: Of the heavy type guns in companies, 12,096; coast defenses, 1,398; miscellaneous, 2,863; total, 16,357; 50 per cent wasted, 8,179; making a grand total of 24,536. Of the light type, in companies, 41,472 plus 100 per cent wastage, 41,472; miscellaneous, 13,792; making a total of 96,736. Of the aviation types, fixed guns, 53,000, fixed guns to meet possible replacement purposes of some of the older types; the Marlin aircraft, 10,000; flexible guns, 20,000; making a total of 84,000. Light automatic machine rifles for aviation purposes, 25,000; making a total of 230,272. Those are the figures upon which this particular estimate, which was made last year, was based.

Mr. GORDON. Do you know whether or not any of the estimates you have made have been duplicated by the Signal Corps?

Col. RICE. I do know. The Signal Corps included in their \$640,000,000 appropriation \$24,000,000 for machine guns, which was transferred to the Ordnance Department and is included in the total in this estimate.

Mr. GORDON. And you undertook to estimate for all the machine guns necessary for the aviation service for the coming fiscal year?

Col. RICE. Yes, sir.

Mr. GORDON. So that it would not be necessary for us to consider any estimates by the Signal Corps for machine guns?

Col. RICE. It would not. They will probably ask you for money for synchronizing connections. The division of work between the two departments is that we furnish the machine guns ready to put into the aeroplanes, arranging for adjustment of the synchronizing device, and the Signal Corps develops and furnishes the synchronizing device which really is considered to be a part of the aeroplane rather than a part of the gun.

Mr. GORDON. By synchronizing you mean to cooperate the use of the machine gun with the propeller so there will not be a collision between the two?

Col. RICE. So that when the propeller is going and you fire, the bullet will pass between the blades and not hit the blade.

Mr. GORDON. A rather delicate operation, I should assume?

Col. RICE. It is right difficult.

Mr. TILSON. I understood you to say something about replacing a certain number of older type aerial guns, and you mentioned the Marlin aircraft.

Col. RICE. Yes.

Mr. TILSON. I thought you told us yesterday you had ordered 23,000 of the Marlin aircraft guns.

Col. RICE. We have; yes.

Mr. TILSON. Is that of a new type?

Col. RICE. No, sir; that is the same one I was talking about. When this estimate was made, which was last summer, in June, we had expected at that time to provide for 10,000 Marlin aircraft, and we also expected we would probably have to replace them, which may yet be the case. You understand the Marlin aircraft gun is purely

a stop-gap gun; that is to say, we are buying them because they can be used and because we can get them.

Mr. TILSON. You do not regard them as being as good as the heavier types?

Col. RICE. No. They are not considered at the present time to be anything like as good as the Browning, and we expect in the end we will have to replace them with Brownings. That may not be the case, but we did include in this estimate funds for replacing those 10,000 guns.

Mr. TILSON. The same concern is making both guns, and I suppose the company probably would not care which one they made. I was of the impression that the Marlin aircraft gun was really a very effective gun, a very rapid firing gun and one easily synchronized, and the idea of replacing them seemed rather strange to me.

Col. RICE. If it proves to be as good as we would like to have it we will not replace it. We will use the money for buying other guns or return it to the Treasury.

Mr. GORDON. What is the estimate of the cost of these machine guns for which you have estimated this \$230,000,000?

Col. RICE. I am going to put in a table which will show that in detail.

(Inserted in earlier part of hearing.)

Mr. GORDON. Will it also include the ammunition?

Col. RICE. No, sir; not the ammunition.

Mr. GORDON. Have you made an estimate as to the cost of the ammunition for supplying these guns?

Col. RICE. There is such an estimate, and I can put it in the record if you would like to, although I think Col. Thompson testified on that score.

Mr. SHALLENBERGER. I would like to ask one further question on the matter of expense. The appropriation asked for in this bill of \$237,000,000, I understood you to state, does not contemplate the purchase of any more guns, but is to pay for completing the contracts already made; is that the case?

Col. RICE. And for procuring spare parts and some other things that have not yet been ordered.

Mr. SHALLENBERGER. But it does not contemplate increasing largely the number of guns. What I would like to know is whether this large amount of money is required because you bought more guns than was originally contemplated or because of the fact that you failed to estimate properly the cost of the entire program? Is it because you had to increase tremendously the number of guns which you expected to buy when you came in with your estimate only last summer?

Col. RICE. As compared with what time, Governor?

Mr. SHALLENBERGER. With the amount of money which was appropriated for 1918 you have already purchased or laid out orders for your entire program of 230,000 guns. If you contemplated that number of guns when you asked for that amount of money, how is it you are now asking for \$237,000,000 more, which must practically be a deficit rather than a new program? In other words, it is to complete the program which you laid out last summer?

Col. RICE. There is no deficit.

Mr. SHALLENBERGER. What I am getting at is why you have to come now and ask for \$237,000,000 more to complete your program, when you must have had that program in mind when you asked for the appropriation of last year, which you got largely, of course, from the other committee.

Col. RICE. Perhaps it would be best to explain it by going back to the beginning of the appropriation for the war. We had \$12,000,000 from the bill approved August 29, which was invested in Vickers guns and some Lewis guns. We then got \$7,500,000 appropriated by the act of May 12 from this committee. That was also put into Lewis guns and others. Then, as soon as war was declared, we put in an estimate of \$65,900,000, which was granted. That estimate was prepared in a very few days and was based on the original program before the war.

Mr. CALDWELL. What has become of that money? Has that all been used?

Mr. KAHN. You say a program that was adopted before the war?

Col. RICE. Yes, sir.

Mr. KAHN. Did you intend to use that great amount of money for supplying automatic machine guns in time of peace?

Col. RICE. Yes, sir. We had a program extending over five years, you will remember, and there had been appropriations made for part of that before the war began. Therefore, when the war came and we were called upon to submit an estimate overnight, almost, we simply submitted an estimate for the completion of that project, pending the submission of additional estimates, and that was for \$65,900,000, which was appropriated in the act of June 15.

Mr. SHALLENBERGER. And that has all been spent?

Col. RICE. If I may finish my statement about the money, then I will explain in regard to the items.

Mr. SHALLENBERGER. Yes.

Col. RICE. Then, when the tests in May were held and the report went to the War College, there was a very large increase in the program. We then submitted an estimate for \$194,277,000 to meet that, including aircraft requirements, which had then begun to be considerable. There was a further increase shortly after that in the program—very considerably—on account of aircraft requirements, which were again very largely raised. We submitted a supplementary estimate for \$188,000,000 to meet that. Now, all of those appropriations taken together cover the 232,000 guns we have been talking about.

Mr. SHALLENBERGER. But it does not pay for them.

Col. RICE. Oh, yes.

Mr. SHALLENBERGER. We voted you \$291,000,000 prior to this bill for machine guns. Now, since that money was appropriated and before you get this other money, you have made contracts, as I understand you, for 230,000 guns, we will say, in round numbers. Now, in order to complete and pay for all of those guns and their accessories and to complete your program you request in addition \$237,000,000. In other words, we are appropriating now for the year beginning the 1st of next July; but I understood you to state that that did not contemplate that you were going to buy new guns with that money, but you are going to pay for the guns which are in the pro-

gram. What I want to know is how it occurs that apparently you require \$237,000,000 more to complete the program which was laid out when the other appropriation was made.

Col. RICE. Those figures which I gave you we asked for, and of that \$168,000,000, the last figure I mentioned, \$118,000,000 was not appropriated but was given as a contract authorization.

Mr. SHALLENBERGER. I see; we did not appropriate the money!

Col. RICE. No, sir; and as to that \$118,000,000 I am now coming to you and asking for cash in place of the authorization. In addition to that, the remainder of the \$237,000,000 which we are asking for at this time is for maintenance and not for new equipment, so that all of those amounts taken together provide for 230,000 guns and their maintenance through the year 1919.

Mr. SHALLENBERGER. It was not then that you underestimated the number of guns or that you underestimated the amount they were to cost, but that you have added the maintenance of those guns and the necessary reserves which require this additional money; is that the explanation?

Col. RICE. Yes, sir; to complete the program as already provided by Congress and to provide for maintenance.

Mr. SHALLENBERGER. The point which I had in mind, Colonel, and which you have now made plain to me and I hope to the rest of the committee, is that ordinarily we would be expected to be appropriating in this bill for supplies to be furnished next year for another program of guns or rifles, but apparently this is largely to carry out the program laid out in the last appropriation bill.

Col. RICE. The instructions of the Secretary of War in regard to the regular estimates for the year 1919 were that they should not provide for the year 1919 were that they should not provide for more than 1,500,000 men, and we had already provided for them in these other appropriations and authorizations, except for the maintenance item, so that we did not have to ask in this bill for any additional original equipment.

Mr. CALDWELL. Right in that connection, when you get this money which you are now asking for, you will have money enough to pay for all of the machine guns you will need, and their repair and maintenance for 1,500,000 men?

Col. RICE. That is correct.

Mr. CALDWELL. If the program before the end of the fiscal year we are appropriating for now takes in 3,000,000 men you will have to have as much again as you have received in the last three bills and this bill combined, will you not?

Col. RICE. We will, except that the maintenance will probably not be repeated.

Mr. CALDWELL. So that if the number is increased to 3,000,000 men you will want approximately, in addition to what you are asking now, how many million dollars?

Col. RICE. Roughly, you can add \$148,000,000 for each 500,000 men.

Mr. CALDWELL. Colonel, where are you storing all the machine guns and the ammunition for them, and the spare parts and all the material which you are now buying?

Col. RICE. We are using to a certain extent the arsenals, but we are building and acquiring, by rental or otherwise, large numbers of storehouses all over the country.

Mr. CALDWELL. Did your department have anything to do with this storage plant which they have near Newark?

Col. RICE. Not to my knowledge.

Mr. CALDWELL. Are you storing any of your material there?

Col. RICE. I could not answer definitely, that being not within my department.

Mr. CALDWELL. Do you specify the character of guns being used by the Signal Corps, or does the Signal Corps make a requisition on you for a particular type of gun?

Col. RICE. That is the rule. We come as near as we can to furnishing the kind of gun they want, but it is usually a matter for agreement between their officers and ours. Our machine-gun people and their aircraft people are working together all the time. They formally ask for the guns—

Mr. CALDWELL (interposing). In using that term "formally," what do you mean?

Col. RICE. I mean they submit official applications for the guns they need; but, preliminary to that, there is a great deal of coordination between the two departments in determining what we can furnish that will meet their needs.

Mr. CALDWELL. Have you a board for that purpose, or a fixed board that works all the time?

Col. RICE. We have no fixed board, but we have a certain number of officers whose business is that, and that only, for each department. When it comes to any question of difficulty, there is a board appointed for that purpose and it is taken up in consultation with the heads of the departments.

Mr. CALDWELL. Has there been any friction or dispute about it?

Col. RICE. There have been some minor questions raised, but not enough to amount to anything.

Mr. CALDWELL. How have they been resolved, in favor of the Signal Corps or the Ordnance Department?

Col. RICE. Usually by each one giving something. If there comes up a question, for instance, of what you will do with guns, whether you will give them to the Signal Corps or to troops on land, there is apt to be a difference of opinion, and in that case we form a committee, including the General Staff. We had one case where there was a question of making a recommendation as to the disposition of guns that we expected to be available, and there was an officer who was on the War Industries Board, an officer of the General Staff, two officers from the Signal Corps, and two officers from the Ordnance Department who got together and made up a program. That was submitted as a War College memorandum to the Chief of Staff and was approved by the Secretary of War, and that is what we are operating under at present. There was no serious difficulty in coming to an agreement at all.

Mr. CALDWELL. Do you use any type of gun that shoots through the propeller shaft?

Col. RICE. On the ground?

MR. CALDWELL. Do you use a type of gun that shoots through the propeller shaft?

COL. RICE. Yes, sir. We have two—the Marlin aircraft gun and the Vickers gun, and we will use the Browning gun.

MR. CALDWELL. Do they shoot through the propeller shaft?

COL. RICE. No, sir; we are not firing guns through the propeller shaft at all.

MR. CALDWELL. That method is used to some extent by the French flyers, is it not?

COL. RICE. I am not very thoroughly informed about that. The Signal Corps has not cared to have that arrangement made, so far as I know.

MR. MCKENZIE. As the matter of the appropriation has been gone over very thoroughly by these other gentlemen, I will not ask you any questions about that. I want to ask you one of two questions, perhaps, to relieve my own mind, if I may. I have heard the different types of guns discussed here, and it is apparent that you are proceeding with the purchase and manufacture of at least half a dozen different kinds of automatic rifles. Now, I would like to ask why that is. Is it on account of the necessity of the case, or is it the view of the War Department that you can get better service from half a dozen different kinds of automatic rifles?

COL. RICE. There are several elements entering into it. The first is to utilize going concerns, as far as possible, if their guns are satisfactory for use. That saves a great deal of time, and time is the principal element at the present moment and has been ever since the war broke out. We had no machine guns, practically. We would not normally prefer to have a number of different types, but would prefer to get it down to two or three types, and some day we may be able to do that, but at present if the guns are serviceable for use and can be obtained, we have got to utilize the manufacturing capacity to supply them.

MR. MCKENZIE. Then it is on account of necessity rather than that you think it is better policy to have a number of different types in the service?

COL. RICE. We would like to reduce the types as much as possible.

MR. MCKENZIE. Of course, I am not a military man, but it does seem to me that if we had one type and if we could have the Army equipped with that one type of gun it would be better.

MR. TILSON. Of course, if you mean by "one type" one make of gun, that is one thing, but if by "type" you mean the weight of the gun, we would want at least two and possibly three different weights of guns for different purposes.

COL. RICE. Yes, sir; and eventually we expect to have in the hands of our troops the heavy and light Browning guns. They are to be used for different purposes.

MR. MCKENZIE. I thank you for making that suggestion. Of course, I know the difference between heavy and light automatic guns, and know that both are necessary.

COL. RICE. We also have a third type, the Lewis gun, which is a very good flexible gun in the aircraft service. Those three guns, with the exception of those very light semiautomatic guns, ought to meet all of our needs.

Mr. McKENZIE. I want to ask one or two questions in regard to the matter of royalties paid. On yesterday, as I remember it, you stated that the royalty on the Lewis gun was \$100 per gun, and that Col. Lewis owns 43 per cent of the stock in that gun; you stated this morning and also yesterday that you had let a contract for 42,000 Lewis machine guns, and that the price was approximately \$780, if I remember it correctly.

Col. RICE. No, sir; the price is \$660 with the royalty and \$560 without the royalty. That is for the gun proper.

Mr. McKENZIE. If the royalty is paid, it will cost the Government \$660 apiece for those guns. Now, what I want to get at is the percentage of cost to the Government. One hundred dollars on \$560 would be about what?

Col. RICE. About 18 per cent.

Mr. McKENZIE. Now, then, if you let a contract at cost and 10 per cent, would the 10 per cent be figured on this \$100 royalty?

Col. RICE. No, sir. .

Mr. McKENZIE. At any rate, it would cost the Government about 30 per cent, would it not, over the cost to buy these guns?

Col. RICE. No, sir; a little under 20 per cent, if we accepted that figure, which we are not doing.

Mr. McKENZIE. If that royalty is paid on the 42,000 guns, it will amount to \$4,200,000.

Col. RICE. Very much more than that, because we also pay royalty on the spare parts.

Mr. McKENZIE. I mean on the gun alone.

Col. RICE. Yes, sir.

Mr. McKENZIE. If Col. Lewis remitted his part of it, as I figure it, it would still cost the Government \$2,394,000 in royalty for the 42,000 guns. Now, I want to ask you whether or not, in the absence of any congressional action, the War Industries Board has absolute power to fix the price of royalties to be paid?

Col. RICE. The Secretary of War has that power.

Mr. McKENZIE. He has the power to fix it through the War Industries Board, or upon their recommendation?

Col. RICE. It is likely that he would do that; but he could fix it for any reason that suited him. The national-defense act gives the Secretary the power to determine what a reasonable price is, and if it is not accepted, then it becomes a matter of claim, of course.

Mr. GORDON. You do not mean to say that the Secretary of War can fix the amount of royalty?

Col. RICE. Yes, sir.

Mr. McKENZIE. Have you any further explanation to make in regard to that?

Col. RICE. I was going to say that the Secretary of War under the national-defense act, paragraph 120, has the right to place an order and fix a price as being reasonable. There is no question, of course, but that that price is subject to a later review by the courts, but he has the right to fix the price.

The CHAIRMAN. That section expressly says that the Government shall pay what is fair and just.

Col. RICE. Yes, sir. In this particular case the War Industries Board has been endeavoring to effect an arrangement with the Auto-

matic Arms Co. whereby they would accept \$1,000,000 on account of all claims for all guns ordered during the war. That, I think, is in a fair way to be arranged. At any rate, we are not paying \$100 per gun, or anything like it.

Mr. McKENZIE. Do you know what has been paid to the stockholders, outside of Col. Lewis, on account of the 57 per cent held by them?

Col. RICE. That has been paid, but it can be deducted from the total of \$1,000,000.

Mr. KAHN. With regard to the manufacture of these automatic guns, has your department made a survey of the possible factories in this country that can be utilized for turning out all the machine guns or parts of machine guns required in case this war should be a protracted war and we should require many more guns than you are now able to produce?

Col. RICE. Yes, sir.

Mr. KAHN. You have made such a survey?

Col. RICE. Yes, sir; and we have already started all of the manufacturers who have experience along that line, and we believe that we are developing a sufficient capacity so that, unless some very remarkable demands are made by the allies upon us, we can supply the machine guns, when we get to going full swing, faster than we can raise men.

Mr. GREENE. My questions, perhaps, may inadvertently cover some ground that has been gone over in your rather protracted hearing, but they are meant to sum up some of the statements that have been made so that I can get a proper view of what has been the result of your efforts thus far. As I understand it, up to this time you have been able to equip, either through purchases made here or in France, the troops that we have sent over to France?

Col. RICE. Yes, sir.

Mr. GREENE. That is, with all the ordnance that the department is expected to furnish?

Col. RICE. Yes, sir.

Mr. GREENE. Do you feel that you are at this time in such shape that as fast as successive contingents go from this country to France they will be likewise fully provided for?

Col. RICE. Yes, sir; either here or in France.

Mr. GREENE. So there is no immediate prospect of holding back any number of men from being sent to France because of the lack of ordnance supplies that ought to go with them?

Col. RICE. No, sir.

Mr. GREENE. And troops are not being held back because of the lack of such equipment?

Col. RICE. The only element in the time of sailing is the tonnage or shipping.

Mr. GREENE. And it is not for want of supplies?

Col. RICE. No, sir.

Mr. GREENE. So that, in that sense, you are quite confident of the ability of the department to keep pace with the movement of troops from now on?

Col. RICE. Yes, sir; taking into consideration the fact we are fortunately able to get large amounts from our allies.

Mr. GREENE. Is there any objection to stating for the record what that proportion appears to be—that is to say, are you furnishing machine guns for more than one-half of our troops, or do they expect to get more than one-half over there?

Col. RICE. We are furnishing certain things entirely rather than in proportionate shares of articles. They are supplying all of our machine guns and all our field artillery and a great part of our field artillery ammunition and some of our small-arms ammunition. That condition, of course, will gradually become less and less until we reach the point in our own production where we will replace it entirely and probably supply them with certain things that they are not equipped to produce, such as propellants and explosives.

Mr. GREENE. There is no apprehension that they will break down in their supply systems before we are ready to supplement them?

Col. RICE. There has been a conference held with Gen. Bliss and other representatives on the mission headed by Col. House that has been to Europe with that idea particularly in view, and a program has been drawn up which has as its basis the understanding that the French and English Governments will not be hampered in that respect.

Mr. GREENE. Then we have the moral certainty that no soldier will leave our shores from now on without being provided with all that the Ordnance Department is expected to furnish, either here or in France, on his arrival?

Col. RICE. That is our expectation; yes, sir.

The CHAIRMAN. I would like to ask this question before taking up the next item: Can you give us any idea or can you estimate how long these machine guns will last when in action in time of war? Have you any idea of that?

Col. RICE. It depends altogether upon what happens to them. A great many of them will be lost and a great many are going to be damaged by poor usage, and some will probably have to be abandoned. If a gun is properly cared for, I should say that it ought to last through somewhere between 100,000 and 200,000 rounds fired.

The CHAIRMAN. On what basis did you get up this wastage estimate?

Col. RICE. We have arrived at that from records from the other side, and that is about what they figured they ought to have.

Mr. TILSON. The experience of our allies?

Col. RICE. Yes, sir; and we have made it liberal.

The CHAIRMAN. You have made it liberal?

Col. RICE. Yes, sir; we have made it liberal.

Mr. GORDON. Of course the wastage in the present war, since it first began, has been very much greater by reason of the relative equipment on each side than it will be from now on—is that true?

Col. RICE. I do not know why it should be true.

Mr. GORDON. Well, I suppose the allies are very well equipped now, but at the Battle of the Marne they were not very well equipped. They were outnumbered and ill equipped. Didn't they lose more guns in the first six months of the war than they have lost at any time since?

Col. RICE. I do not think they did; no, sir. I think, perhaps, that the losses in the recent Italian campaign have been heavier than in any other.

Mr. GORDON. That, of course, was due to captures.

Col. RICE. From all causes. There was a lot of equipment thrown away and a lot of it was captured.

Mr. GORDON. Any estimate of wastage, of course, is a mere guess?

Col. RICE. Yes, sir; absolutely.

Mr. GORDON. It depends upon the success of our armies in any event?

Col. RICE. To a degree; yes, sir. I conceive that the main thing is to be sure that your wastage item is high enough.

Mr. GREENE. May I ask whether the plans for salvage, which seem to be worked up into a quite efficient and effective organization, contemplate the saving of any number of such delicately formed weapons as machine guns?

Col. RICE. Yes, sir; they do.

Mr. GREENE. They can be restored to some usefulness in the making of new guns?

Col. RICE. Yes, sir.

Mr. GREENE. They are returned to the manufacturers?

Col. RICE. No, sir; we will have our own shops in France for that purpose.

Mr. GREENE. So they will not go into new guns, but in the reconstruction of partially disabled guns?

Col. RICE. Yes, sir.

Mr. TILSON. Are you requiring universal interchangeability of parts in those guns that are being manufactured in the different factories, or are you simply requiring a factory interchangeability? If you salvage those guns in the highest degree, it would be necessary to have universal interchangeability.

Col. RICE. Yes, sir; but we are not requiring universal interchangeability, because of the fact that it is not a practicable thing to do now.

Mr. TILSON. You do not standardize the gauges so as to have universal interchangeability of parts?

Col. RICE. No, sir; but we are requiring an interchangeability of parts which might, perhaps, be expressed as 60 or 70 per cent of the most important parts.

Mr. TILSON. If you had universal interchangeability of parts, you could take the parts made at any factory over here and have them in the salvage shops over there so that you could take out a disabled part and put in a new part made in any of these factories.

Col. RICE. We are doing that as between shops, and that applies to something like 60 per cent of the parts. Those are the parts that we expect to be most likely to be replaced. We are applying it to the others as much as we can, and we expect to raise that percentage very considerably in the future, but if we tried to make it 100 per cent interchangeable as between the different plants, we would not get the production.

Mr. TILSON. That is the ideal, but at present you can only go to a certain degree?

Col. RICE. Yes, sir. We are requiring that as between factories. We are not allowing it to be handled so that the only parts that will fit a gun are the parts made in the factory where the gun was made.

Mr. TILSON. In other words, you are requiring that the parts made in the other factory shall fit the guns made in this factory?

Col. RICE. Yes, sir; I am glad to say that we have the very best sort of spirit among the manufacturers. They have certain men detailed from among their engineers, men for each plant, who do nothing else but look after matters of coordination, and we have an organization in New Haven of two majors with a lot of junior officers who are doing nothing else but that.

Mr. TILSON. Trying to standardize the gauges?

Col. RICE. Yes, sir; and keeping the manufacturers together.

The CHAIRMAN. In the general equipment of our armies, are you providing as large a proportion of machine guns for our fighting units as are employed in other armies in Europe?

Col. RICE. Yes, sir.

The CHAIRMAN. Are we providing a larger percentage of guns than the French and English?

Col. RICE. Our plans are, perhaps, a little more liberal.

Mr. CALDWELL. Referring to the interchangeability of parts, do the articles manufactured by each factory carry on them any mark or indication that they were made in the particular factory in which they were made?

Col. RICE. No, sir.

Mr. CALDWELL. So that the parts that are not interchangeable would not be readily discoverable?

Col. RICE. They would have to be fitted anyway.

Mr. CALDWELL. How closely do they work them—down to the one-thousandth of an inch, do they not?

Col. RICE. Yes, sir; whenever it is necessary. We are trying all of these guns and I think it will be possible to make the average tolerance at least two one-thousandths of an inch.

Mr. CALDWELL. Taking the plus and minus into consideration, that would make a tolerance of four one-thousandths?

Col. RICE. Yes, sir.

Mr. CALDWELL. You have to make the plus and minus fit together?

Col. RICE. Yes, sir.

Mr. TILSON. As a matter of fact, are there not some parts of guns in which a much more liberal tolerance can be allowed in order to facilitate the manufacture?

Col. RICE. That is being very carefully worked out.

Mr. TILSON. And in other parts that would have to function very minutely, the tolerance would not be the same.

Col. RICE. That is true. One of the advantages about this Browning gun is that it will work satisfactorily with quite a good deal of looseness in nearly all of its parts.

Mr. TILSON. And the greater the tolerance the easier the manufacture?

Col. RICE. Yes, sir.

The CHAIRMAN. For armored motor cars you are asking \$75,550,000.

Col. RICE. Yes, sir; we are asking for \$75,550,000, which is wholly the case of asking for money to cover a contract authorization in the bill which was passed on October 6, in which there was an appropriation of \$21,750,000. I might say that that item came in as a supplemental estimate due to a cablegram from Gen. Pershing, in

which he said that the program for tanks had been worked out and adopted in Europe. Up to that time, as you will remember, there had been considerable question as to whether the troops should be supplied with tanks or not; that is, whether or not they were successful. It is agreed now that they are a success, and the numbers that are required have been specified from the other side. We therefore submitted a supplemental estimate at the last minute on the bill of October 6 and got an appropriation and this authorization of \$75,500,000. We have to have that money in cash to complete the work which is in process. When we get that money we will have provided for the tanks intended for 1,000,000 men instead of 1,500,000. That fact was not known when this estimate was submitted, and therefore it was not increased by the amount required to provide the tanks for a half million men to bring it up to the 1,500,000 which we are trying to cover in these bills. It will therefore be necessary for me to ask that there be added \$55,650,000 to this estimate, of which \$35,000,000 is a year's maintenance. The maintenance is 15 per cent a month on tanks, so that you see the maintenance item becomes greater than the original equipment, and by maintenance in this case we properly mean largely replacements.

The CHAIRMAN. How many of these cars do you figure it will take for an army of a million men?

Col. RICE. Six hundred of the heavy type and 1,500 of the light type as original equipment, with replacements at 15 per cent a month.

The CHAIRMAN. How many will it take for 2,000,000 men?

Col. RICE. Twice that.

Mr. TILSON. Does this item apply solely to tanks?

Col. RICE. That is all. The armored motor car as it originally appeared in the warfare over there is a dead issue.

The CHAIRMAN. The tank takes the place exclusively of the original armored motor car?

Col. RICE. Yes, sir; they have two types, one a light type of about 5 to 6 tons, which is really an armored motor car of the tank type, and then one running about 30,000 pounds in weight, which is the big fellow.

Mr. GORDON. Do you know what the speed of these light caterpillar cars is?

Col. RICE. About 8 miles.

Mr. GORDON. Does that not leave them open to artillery attack?

Col. RICE. Mr. Gordon, we thought, and I think it is the reason why everybody was doubtful about the success of the tanks, either light or heavy, that anybody that had a field gun could knock them into blazes, but as a matter of fact they do not do it, and I have tried my best to find out why they do not do it, and as far as I can see there are several elements. In the first place, they use a smoke screen. Then they bring them up into position at night. They protect them by barrage fire, and in addition to that before they send them forward they try to shake the enemy's nerve so that he can not shoot his guns like he would if it was a perfectly peaceful day. So that all told, after a great length of time, they have been tried out, and they have finally come to the conclusion that they are worth having.

The CHAIRMAN. They demonstrated that at the battle around Cambrai.

Col. RICE. Yes, sir. It may interest the committee to know that we sent a man over to France—Maj. Alden, who is the vice president of the Timken Axle Co., of Detroit, when in civil life—some time back. We brought him into the Ordnance Department and put him on the tank job, and he has a couple of experimental tanks out here now being finished in this country. When he learned what the thing was and how to go about it, being a very expert engineer, he was sent to Europe and he has arranged with the director of tanks of Great Britain, under the direction of Gen. Pershing, so that we are preparing to combine on the heavy tanks and build one type for both England and the United States. England is to furnish certain parts; the United States is to furnish certain parts; and they are to be assembled in a factory in France for both countries. Maj. Alden is now on his way home to round up the end here. In the meantime we are preparing here for the manufacture of our part of the program. It is really getting to be quite a business.

The CHAIRMAN. How do you estimate the number of these cars?

Col. RICE. We did not estimate that, Mr. Chairman. We asked Gen. Pershing how many he wanted for 1,000,000 men and then we have been trying to get them.

The CHAIRMAN. So it was just arbitrary?

Col. RICE. So far as our knowledge goes we do not know what he based it on. He is going to send us a report after a while by mail and we then will know, but at the present time we are not informed as to what his reasons are for saying that this number is what ought to be furnished, but we accept his statement.

Mr. KAHN. Did I understand you to say that this estimate is based on 1,000,000 men?

Col. RICE. The estimate, which was covered in the act of October 6, was based on 1,000,000 men. I am now asking for additional funds to cover another 500,000 and to cover the authorization given in that bill.

The CHAIRMAN. Colonel, what do these tanks cost?

Col. RICE. We figure the heavy one is going to cost all told about \$35,000 and the light one about \$12,000.

The CHAIRMAN. Are any made in this country, or do you propose to make any in this country complete and transport them to France?

Col. RICE. Yes; we are making all the light tanks in this country, and probably will make large quantities for the French in addition.

The CHAIRMAN. You mean you make them complete here and transport them in completed form?

Col. RICE. Yes, sir.

Mr. KAHN. Is there included any royalty in that cost of \$35,000?

Col. RICE. We are now negotiating on the subject. This light tank is of a type made by the Renault Co. of France. They sent sample tanks and drawings and an engineer over here, and we are building according to their drawings, modified in some respects to improve it. Their representative desires that they be paid for their design, which is a reasonable request. They have not patents, but they are furnishing us a going design which we can build by. They asked \$250,000, and I happened to be conducting the negotiations, and I told the representative that if an American firm were doing that, that somewhere between \$50,000 and \$100,000 would be what

would be paid, and I think eventually the amount paid will be somewhere between those two figures.

Mr. KAHN. I understand the patents in this country are in the hands of a man named Holt. Are you paying him a royalty?

Col. RICE. We are making him an allowance on some other work for his patents, so that we will have no trouble in using anything in the way of designs that Holt has.

Mr. KAHN. Will that take any appreciable amount of the \$12,000 or the \$15,000?

Col. RICE. That is not figured in here at all. That has been covered in contracts we hold for artillery tractors.

Mr. KAHN. Now, coming back to the efficacy of these cars, you said that they are protected by barrage fire, did I understand you to say?

Col. RICE. They have been in a good many cases; yes, sir.

Mr. KAHN. I was going to say that I saw in the report of the battle of Cambrai that there was no barrage fire on the side of the allied forces and that the tanks got into that battlefield quite unexpectedly and without that kind of protection.

Col. RICE. Yes, sir; they had no protection.

Mr. KAHN. After the English had gone forward I also noticed by the papers that they were again driven back. Do you know how the tanks were used after the advance had been made?

Col. RICE. No, sir; I have not that information.

Mr. KAHN. You do not know what part—

Col. RICE (interposing). I do not think they played any part afterwards. They are used normally only in advance work.

Mr. KAHN. You ask for this sum to be available until the fiscal year 1920. I think the Constitution does not permit Congress to appropriate for more than two years.

The CHAIRMAN. You are quite right about that. We will have to change that language.

Col. RICE. All right, sir. I would only like to have it available as long as possible.

The CHAIRMAN. We can only make it available for two years. That is as far as we could go.

Col. RICE. That will be plenty of time.

Mr. KAHN. Can you spend all of that money which you are asking for in that time?

Col. RICE. Yes, sir.

Mr. KAHN. If the Army is increased very considerably, say by another 500,000 men, in the next fiscal year, will you have to have a corresponding additional amount of tanks?

Col. RICE. Yes, sir; about \$55,000,000 for each 500,000 men.

Mr. KAHN. So that if the Army should be increased before the beginning of the next fiscal year by an additional 500,000 men you would begin this practically with a deficiency?

Col. RICE. We would need more money.

Mr. SHALENBARGER Colonel, you spoke about the adjustment of the royalty to this French firm for furnishing drawings and an engineer, etc., for making these tanks, and you stated you were attempting to adjust the prices. That suggests to me that in the expenditure of this vast amount of money perhaps it would be well

to put in here a statement of how these matters are adjusted. Are you authorized to make that sort of a contract?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. Would there be any check upon the price you finally determined? Is that the general course of letting contracts in the Ordnance Bureau? I had an idea, possibly, now, in making these different contracts, for instance, for machine guns and armored cars, which have to be an agreed price because there can be no bidding, there was some sort of checking of your price by the War Industries Board?

Col. RICE. If the amount is sufficient to justify that, we practically invariably, before we finally put a bargain into the form of a contract, ask for their views and recommendations. This particular item probably would not go to them, because it is comparatively small. In my own division, as a rule, I do not send them to the War Industries Board if it amounts to \$100,000 or less. That is just an arbitrary rule, but we have adopted very carefully the plan of getting their views on all important contracts, with very rare exceptions.

Mr. SHALLENBERGER. In the past, before we went into this war and before we created this board, was it the practice of the officers of the Ordnance Department to make these contracts upon their own judgment?

Col. RICE. Yes, sir; in those times, normally, we had competition, and therefore we had a check upon the price. We now have no competition. In former years, if we were making a very considerable royalty contract or patent contract in which there was no competition, it was frequently taken up with the Secretary of War and his approval obtained before any action was taken by the Ordnance Department, although the law does not require that.

Mr. SHALLENBERGER. So that all of this sum of money under the law and under the Constitution would ordinarily be in the control of the Ordnance Department and its different bureaus?

Col. RICE. So far as the law is concerned, that would be possible. As I have explained, that is not the policy and not a thing we would want to do.

Mr. SHALLENBERGER. The reason I asked you that is because I recall that one member of the Appropriations Committee once stated to me that in the conduct of our affairs in a business way between the Government and individuals, the general policy of the Government had been to so conduct it that the money of the Government could not be wasted or lost or embezzled; or in other words, that the Government would not lose money, but that sufficient attention had not been paid to the efficient spending of the money, which, of course, is one of the questions being agitated right now in connection with the matter of the creation of a department of munitions, and so on, and I wanted to get a general idea of the business procedure heretofore in the letting of these vast contracts; whether there was any system of check other than what you have mentioned. The last word is with the Ordnance Department.

Col. RICE. It must be. I think if you will consult with any of the members of the War Industries Board, who are familiar with the subject, they will tell you that the Ordnance Department has

driven the hardest bargains of anybody in the Government service up to date.

Mr. SHALLENBERGER. I did not mean any reflection upon the Ordnance Department in asking the question, but I asked it because I think that question is going to come up before we get through with this matter.

Col. RICE. I understand that, and I mentioned it merely because we have devoted the greatest amount of care and attention to it. We have gotten men from civil life to take commissions who are expert in all of these things. We have great numbers of people who investigate plants and investigate the standing of the people we do business with, and who find out what proper prices are, and who do everything, pretty nearly, that it is possible to do to insure that the Government is getting as good a bargain as can be gotten under the conditions as they exist now; and if we are in doubt we then insist upon some sort of a limitation. I have negotiations on hand now with the Bethlehem Steel Co. and the Midvale Steel Co., who are not favorable to taking contracts on a cost plus a fixed profit, or any other kind of cost basis, except this one where we are trying now to insist that their fixed price contract shall be subject to examination of their accounts by an expert accountant of the Ordnance Department; and that the total profit shall be limited to 15 per cent.

Mr. SHALLENBERGER. Colonel, I think you will agree with me that the expenditure of these vast sums of money puts a great responsibility upon your department?

Col. RICE. Yes, sir.

Mr. SHALLENBERGER. There has been the charge made in some of the hearings over in the Senate, according to the papers, that certain members of the Civilian War Industries Board, possibly in one way or another, have been interested in some contracts that were let whereby, at least by insinuation, the interests of the Government have not been as well protected as they might have been. I would like to ask you in a general way if there is any evidence or any record in the War Department of any officer of the Ordnance Department ever having been charged with favoring contractors in letting contracts or if the Ordnance Department itself has ever been charged with anything of that sort?

Col. RICE. If so, I have not heard of it.

Mr. SHALLENBERGER. So far as you know, nothing of this kind in connection with this war, so far as the Ordnance Department is concerned, has been charged, and the officers of the Ordnance Department have not been charged with favoring anybody?

Col. RICE. No, sir. My division has let contracts approximating a billion dollars, up to the present time, and as yet I have not heard any rumor of any charge of that kind.

Mr. SHALLENBERGER. The reason I ask you that question is that there is at the present time a great deal of agitation of the charge that the Army organization, perhaps, has not got the business experience and the business executive ability to handle these things in a businesslike way, and therefore there has been a good deal of agitation in regard to the injection of civilians into the conduct and management of this matter, and that is going to be one of the matters that will be considered before we are through. I can see how there

would be an opportunity for the people in the Ordnance Bureau, perhaps, to favor contractors, if they wanted to do so.

Col. RICE. That is true. But I think the question will be only how civilians ought to be employed. Our Ordnance Department had in it, during peace times, less than 100 officers, and we now have somewhere near 3,600, and all the rest of them were civilians when the war started.

Mr. TILSON. Has not one theory of the criticism of the Ordnance Department been that you have been too slow in making your contracts? In other words, that you have taken too much pains to examine carefully and thoroughly every individual item before letting the contract, so that in the view of the public you have been tardy in getting your arms and ammunition?

Col. RICE. I think that is one of the principal charges, yes.

Mr. TILSON. And the cause of that, in your mind, is your care and investigation you make before letting the contract?

Col. RICE. No, sir.

Mr. SHALLENBERGER. Is it not possible that the first complaints were due to that cause, but that the other complaint which is possibly to follow late is the charge that they are not a businesslike organization?

Mr. TILSON. I was taking them as they have been arising, and the one now is that they have not been advanced fast enough, and I know of more than one case where organizations have been in existence for the manufacture of those guns, and have been willing to take over those contracts. They finally got them, but after considerable loss which might have been saved.

Col. RICE. I think nobody could have placed the contracts normally any more rapidly for various reasons. I would prefer not to say what I consider to be the reasons why some of these things have been slower than the public would like.

Mr. TILSON. How far are those tanks you have been speaking of calculated to go, with the power they will carry?

Col. RICE. I never made a computation of that. I know they are normally kept very near the front line, and when I say that I mean within a few miles. They do not allow them on the road, normally, and if they do take them on the roads they put them on trailers.

Mr. TILSON. They do not travel there by their own motive power?

Col. RICE. Normally not, because of the damage they would do to the road and their comparatively slow speed.

Mr. TILSON. But I suppose it is calculated that they will travel far enough of their own motive power to do the business they are supposed to do, and develop sufficient power to carry them?

Col. RICE. Yes.

Mr. TILSON. What about the arming of those cars; what number and caliber of armament do they carry?

Col. RICE. The smaller cars carry machine guns.

Mr. TILSON. Only?

Col. RICE. Only.

Mr. TILSON. How large a gun is carried on the largest tank?

Col. RICE. A short 3-inch.

Mr. TILSON. A 3-inch howitzer?

Col. RICE. Yes.

Mr. TILSON. How many of those?

Col. RICE. Normally not more than two.

Mr. TILSON. How many men ride on one of these cars, when it is in actual use?

Col. RICE. There are only three or four on the small ones. On the larger ones they will take 15 or 20 men.

Mr. TILSON. Do they steer them? Is there a steering arrangement, so that they can be easily manipulated by a man on board?

Col. RICE. Yes.

Mr. TILSON. Have we given any attention to the use of these things on the Italian front?

Col. RICE. Not to my knowledge.

Mr. TILSON. Do you know what the Italians themselves have done along this line?

Col. RICE. I do not. We have no information that they have any tanks at all.

Mr. TILSON. On the southern end of the western-front lines, where the French hold the lines, they have had these tanks in the same general number as the English have had, have they not?

Col. RICE. No, sir.

Mr. TILSON. The tanks really have been confined largely to the north end of the western line?

Col. RICE. Mostly. The French for a good while were doubtful about the utility of the tanks, and while they made experimental ones and put some in for a while, they did not get them in very great quantities. Their decision to use them in large quantities has only been recent, within the last couple of months.

Mr. TILSON. Does not the terrain affect the use of the tanks to a very large degree? I mean whether there are mountains or whether, as a general proposition, there are plains, or whether it is a rolling country.

Col. RICE. It would make some difference.

Mr. TILSON. In other words, if there was some precipitous ground to pass over, naturally you could not use them to the same extent that they could be used on level ground or rolling country?

Col. RICE. No, sir; they would not be so useful. In very mountainous country they could not be used at all.

Mr. GORDON. Have you ceased the construction of armored motor cars?

Col. RICE. We have made of the ordinary armored motor cars three experimental models, on which we have put crews, and started them for Fort Sill to find out what would happen to them. I have not heard what has happened to them. We are not intending to make any more unless there is some special demand for them.

Mr. GORDON. To what extent are armored motor cars used in Europe?

Col. RICE. Practically none on the western front. There are a few in Russia.

Mr. GREENE. Is it now your experience that the armored motor car, such as was originally contemplated, has turned out, so far as present purposes are concerned, to be more of a messenger car that carries personnel, and is not a combat car?

Col. RICE. We have no information that the messenger cars on the western front are armored.

Mr. GREENE. The French type of these cars was not very heavily armored, but were used more as a means of quick mobilization of machine guns, and for riot purposes, or to do some quick dispatch work of that kind. That does not appear to be of any use in the present situation.

Col. RICE. In the early days, when there was a good deal of movement of troops, the light armored motor car had a place. It has no place at all in the present situation on the western front, and consequently we are merely making the models and being ready to build them if they want them.

Mr. GREENE. Have we any tanks now constructed?

Col. RICE. No, sir. We have two or three experimental models, but they are not of the type we are going to use on the other side.

Mr. CALDWELL. Are we making tanks after the model of the one which was brought to New York for exhibition purposes a few weeks ago?

Col. RICE. Not exactly. It is something of that general type, but the tank commissioner in England and our man who is on that work have new designs, which both countries are going to use.

Mr. CALDWELL. When they brought that one to New York they attempted to take it across the bridge over the East River, but it could not climb the incline at the bridge, and it had to be pulled over the top of the hill and allowed to roll down.

Col. RICE. In this heavy tank that we have been designing, we are going to use the 400-horsepower liberty motor, strengthened up so that I guess we will have enough power.

Mr. CALDWELL. You said the tank is not used under its own power because it tears up the road. I thought that the tank laid its own track, and that therefore it did not hurt the road.

Col. RICE. The ones they have over there have cleats. We are making some of the caterpillar tracks. The caterpillar proposition, originally, was an American proposition entirely, and what they know over there about it they have gotten here, and we think we may be able to do better than they in that line.

Mr. CALDWELL. What is the weight of the armor they put on there? What is the thickness?

Col. RICE. I have not the drawings, but I think it 1 or 1½ inches.

Mr. CALDWELL. What kind of steel do they use?

Col. RICE. For the armor belt they use chrome nickel, largely.

Mr. CALDWELL. Have you conducted any experiments with nickel copper steel, which the Canadians are now testing in their department?

Col. RICE. I do not know of any. What were they testing it for?

Mr. CALDWELL. For armor. They find that by using the nickel-copper steel, a combination of the original ores, without first melting them and mixing them—they take the original ore and run it through the furnace, having first taken the samples of the various ores and put them in so that they know they are getting the proper constituents, and run that into a plate by itself. It will not rust, I understand, and it is stronger and has more resistance to a drill than the chrome nickel steel.

Col. RICE. I will find out whether the experimental people know anything about it.

Mr. CALDWELL. They have been testing it in the Canadian department, and I think they have there a bureau of standards which they use just as we use our Bureau of Standards here.

Mr. GREENE. Colonel, I have had an inquiry as to whether the Ordnance Department would be glad to consider a device which proposes to regulate the firing speed on machine guns. Is there any likelihood of the necessity for use or desirability to use that?

Col. RICE. It would not be a bad thing to try.

Mr. GREENE. Something of that kind has been sent down to Col. Anderson.

Col. RICE. There is some advantage in being able to regulate the fire, the rate of fire of a machine gun, but it has never been considered to be great enough to justify any very considerable complication. As usual in cases of that kind it would depend upon what the device was.

Mr. GREENE. If it was a simple thing the device might be desired?

Col. RICE. It might be.

Mr. DAVIDSON. I was very much interested in the colonel's statement in reference to the operation of the tank. What would you say about Von Hindenburg's trenches, which are 16 feet in width? What will a tank do with them?

Col. RICE. I think those trenches, excepting in an unusual case like that at Cambrai, will be sufficiently hammered down so that the tanks will go over them. If you have a vertical wall, which is some little higher than the distance from the ground to the point of the track, the tank might be stopped. It will go over anything below that.

Mr. KAHN. You do not intend to build any of these tanks in this country?

Col. RICE. We are going to build all of the light tanks in this country. They are now under contract and being built.

Mr. KAHN. At what factories?

Col. RICE. There is the C. L. Best Co., who are tractor people, and they are combining with the Platt Iron Works, of Indianapolis, and there are three or four motor companies that are building them. We have so many of the contracts out that I will have to look up the companies that have them. About four of them are on this job, and they are all working at Dayton, Ohio.

Mr. KAHN. I just wanted to know whether they are being built in this country or abroad.

Mr. MCKENZIE. Colonel, is it not a fact that these tanks are more efficient in tearing down barbed-wire entanglements and making openings for the infantry to get through than they are for any other purpose?

Col. RICE. In the normal case, I should say, no. In other words, the evidence is that the tanks can not go out in front without previous artillery preparation and all of that sort of thing, except in an unusual case where the line of the enemy is very thinly held and he is more or less surprised. They are very efficient in destroying barbed-wire entanglements, if they get there before the troops.

Mr. McKENZIE. Is it not a fact that heretofore the barbed-wire entanglements were supposed to be torn down by shell fire?

Col. RICE. Yes, sir.

Mr. McKENZIE. What I am thinking of now is the investment of this tremendous amount of money in these tanks. There ought to be some recompense from the financial as well as from the military standpoint. Would it not be cheaper to use these tanks to tear down those entanglements than to undertake to blast them down with high explosives, and in that case the artillery could be used as a barrage, and then they could go ahead and be driven through the wire entanglements?

Col. RICE. We figure it would not cost any more.

Mr. McKENZIE. As a matter of fact, you know, as a military man, that when these tanks, having a rate of speed of about 8 miles an hour, advance, if the army is compelled to retreat at all it is good-night for the tanks, and if they have not served the purpose of tearing down the barbed-wire entanglements, it seems to me they would be a useless incumbrance to an army.

Col. RICE. Those were some of the considerations that made everybody doubtful for awhile, but they have apparently worked that matter out, and they are satisfied the advantage is there.

Mr. McKENZIE. They were very satisfactory at Cambrai?

Col. RICE. The decision in reference to the use of tanks was made before the battle of Cambrai, so that the use of the tanks was based upon experience had prior to that battle, and in the service they have been found sufficiently successful, so that the English, French, and American Governments have agreed on a program for the use of the tanks.

Mr. HULL. How much of an embankment can one of these tanks go over? Of course, there is a limit.

Col. RICE. If you have a vertical wall which is some little higher than the distance from the ground to the point of the track, the tank might be stopped. Anything below that it will go over.

Mr. HULL. That is, 10 or 12 feet?

Col. RICE. I do not know what the exact figures are. I should say, not far from that.

Mr. CALDWELL. One of the greatest difficulties, as I understand, which you have now is the question of the transportation of men and materials for the war?

Col. RICE. Yes, sir.

Mr. CALDWELL. I understand that some of these tanks are to be assembled in France, and I suppose they will be sent over knocked down, and the parts will go over in boxes, so that they will occupy as little space as possible.

Col. RICE. Yes, sir.

Mr. CALDWELL. What are you going to do with the smaller tanks? Are you going to send those over and have them occupying the room in the ships?

Col. RICE. That will be a matter for the embarkation service to determine. Usually bulk is not particularly considered because ammunition is very heavy, and therefore there is usually much more space than weight-carrying capacity.

Mr. CALDWELL. I think if you will make further inquiry into the question of space you will find that space is being given very serious consideration, as well as weight, and if they have to assemble them it will take as many hands to assemble them over there as here, if our own people are going to assemble them, and it would seem to me that would tend to relieve us of a good deal of our trouble in the line of transportation. I only call your attention to that so that you can look into it.

Col. RICE. The original building of them and putting them together over there again would be very different. There would be no great difficulty in arranging it so that they could occupy less space.

(Thereupon the committee adjourned to meet Monday, January 7, 1918, at 10.30 o'clock a. m.)

ARMY APPROPRIATION BILL, 1919.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Monday, January 7, 1918.

The committee this day met, Hon. S. Hubert Dent (chairman) presiding.

STATEMENTS OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, AND MAJ. GEN. GEORGE W. GOETHALS, ACTING QUARTERMASTER GENERAL, ACCOMPANIED BY COL. S. M. DALLAM, MAJ. EZRA DAVIS, CAPT. CHARLES P. DALY, AND LIEUT. J. Q. A. BRETT, QUARTERMASTER CORPS.

The CHAIRMAN. Gen. Sharpe, I would like to ask one or two general questions before proceeding with the particular items of the bill. What is the total number of men you are estimating for?

Gen. SHARPE. Under instructions from the Chief of Staff, we are estimating for 1,612,245 men.

The CHAIRMAN. General, the appropriation for the pay of the Army at the last session of Congress amounted to \$844,639,118.30. Now you are asking for a total of \$1,003,933,676.04. According to the testimony given before the Committee on Appropriations, which granted both of these appropriations at the last session, I understood that both you and the Secretary of War based your estimates upon an Army of slightly over 2,000,000 men.

Lieut. BRETT. The number was 2,033,345.

The CHAIRMAN. How is it that the appropriation asked for is so much larger than was the appropriation for a less number of men?

Lieut. BRETT. Our estimate for the number of men was \$1,471,813,909.28, but Congress only gave us \$844,639,118.30.

The CHAIRMAN. Then your estimates were practically what they are now?

Lieut. BRETT. About \$300,000,000 more; nearly \$400,000,000 more.

The CHAIRMAN. So this amount is really accounted for by the fact that the Committee on Appropriations did not give you what you estimated for?

Lieut. BRETT. Yes, sir; that estimate and this estimate were arrived at by using the same per capita.

The CHAIRMAN. What is the per capita cost of the Army now?

Lieut. BRETT. For the entire Army?

The CHAIRMAN. Yes, sir.

Lieut. BRETT. The per capita is \$586.32 for pay; for all the appropriations of the Quartermaster Corps the per capita is about \$1,416; for all the appropriations of the Army the per capita for 1919 will be about \$4,380.21.

The CHAIRMAN. Does that include both officers and men?

Lieut. BRETT. Yes. If the total of the Army runs up to 2,000,000, we can cut that down somewhat, because the overhead charges do not increase in the same proportion as the increase in men. Up to 1,800,000 men that is a good, fairly accurate per capita to use; and when you get above that number you can decrease that a little, because various things in the matter of overhead charges disappear. That includes 1,612,245 enlisted men and 100,000 officers.

The CHAIRMAN. The first item on page 13, under "Pay of the Army, Quartermaster Corps." is "Officers of the line: For pay of 62,000 officers of the line, \$142,943,400." That is for 62,000 officers?

Lieut. BRETT. Yes, sir; and it is arrived at by using a per capita of \$2,313 for an officer.

The CHAIRMAN. Is that the correct number of officers, 62,000?

Lieut. BRETT. That is just an arbitrary distribution between the line and the various staff corps. We have no means of making an accurate distribution.

The CHAIRMAN. You mean to say you do not know how many line officers there are?

Lieut. BRETT. Yes, sir; there were 77,795 on November 30. For the enlisted men the per capita is \$393.69, and that gives us almost absolutely accurate information.

Mr. KAHN. These 62,000 officers that you are estimating for are predicated on an Army of what strength?

Lieut. BRETT. On an Army of 1,612,245 men.

Mr. KAHN. If the President of the United States should call the next increment of the National Army before the beginning of the next fiscal year you would start this item with a deficiency, would you not?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. Can you put into the hearings a statement of how many additional officers and the grades of the officers who would be required for each additional 500,000 men for an Army of 3,000,000 men?

(The data requested are as follows:)

For each increment of 500,000 men added to the Army there should be added 27,778 officers; hence—

27,778 officers, at \$2,313 each, for one year-----	\$64, 250, 514
500,000 men, at \$393.69 each, for one year-----	198, 845, 000

Base pay of officers and men, one year-----	261, 095, 514
For all other expenses allow \$75 each, which for 27,778 officers and 500,000 men gives-----	39, 583, 350

Total cost for pay of officers and men, one increment-----	300, 678, 864
--	---------------

Probably we might be able to pay out on \$290,000,000.

The \$75 per capita used above covers service pay and foreign-service pay for both officers and men, increased number of Army field clerks and nurses, court-martial expenses, commutation of quarters and of heat and light for officers and men, and additional pay for mounts for officers.

Lieut. BRETT. We can not very well give you the grades. This estimate here gives 100,000 officers for 1,612,245, and that gives practically 1 officer for 16 men. If you use 1 officer for 18 men you will have a fair estimate. That will give probably a well-balanced force, as far as officers and men are concerned.

Mr. KAHN. Does that proportion obtain in the European armies—1 officer for every 16 or 18 men?

Lieut. BRETT. As I understand it, our divisions have been organized after the organization of the European armies—that is, the armies on the firing lines—and that gives us a division composed of just under 27,000 officers and men.

Mr. KAHN. How many officers are there to a division under that new arrangement of the divisions that contain a little less than 27,000 men each?

Lieut. BRETT. Eight hundred and eighty-nine.

Mr. KAHN. Can you put into the hearings the number of officers required for a single division and the salaries paid to them—that is, the officers of each arm?

Lieut. BRETT. The following shows the commissioned officers in an Infantry division, with their pay:

	Major general.	Brigadier generals.	Col-onels.	Lieutenant col-onels.	Majors.	Captains.	First lieutenants.	Second lieutenants.	Total.
1. Division headquarters.....	1	1	4	7	7	4	5	29
2. Infantry brigades (4 regiments of infantry, 2 machine gun battalions).....	2	4	4	24	88	204	138	464
3. One Field Artillery brigade (2 regiments 3-inch guns, 1 regiment 4.7 or 6 inch howitzer, 1 trench mortar battery).....	1	3	3	11	43	81	62	204
4. One machine gun battalion (4 companies).....	1	4	10	12	27
5. One regiment engineers.....	1	1	3	17	15	12	49
6. One field signal battalion.....	1	4	9	14
TRAINS.									
7. Train headquarters, and military police.....	1	1	6	5	2	15
8. Ammunition.....	1	2	8	9	8	28
9. Supply.....	1	4	3	8
10. Engineers.....	1	1	2
11. Sanitary.....	6	22	21	49
Total for one division.	1	3	10	13	57	199	363	243	889
Yearly pay of grade.....	\$3,000	\$6,000	\$4,000	\$3,500	\$3,000	\$2,400	\$2,000	\$1,700
Yearly pay of 889 officers of a division.....	8,000	18,000	40,000	45,500	171,000	477,600	726,000	413,100	\$1,890,200

Pay given is base pay only.

Lieut. BRETT. Yes, sir; we have that. If the entire Army is composed of divisions, we can give you the various corps, but there are so many technical and special troops, provided for under the act of May 18, that I am not sure that that same proportion obtains through all the technical troops.

Mr. FIELDS. This is in the line, is it, where you figure an officer for 16 or 18 men?

Lieut. BRETT. That is for the entire Army.

Mr. FIELDS. If you take into consideration the other branches of the service, such as the Quartermaster Corps and the Ordnance Corps, it seems to me you are figuring about 11 or 12 men to an officer.

Lieut. BRETT. It runs all the way from five and a fraction up. In the Ordnance Corps the percentage is one officer to five and a fraction men, so that it is not safe to take these figures here, which is a purely arbitrary distribution.

Mr. FIELDS. Is that due to the fact that the Ordnance Department contains a good many civilians?

Gen. SHARPE. The men are employed in the different manufacturing plants, superintending the construction.

Lieut. BRETT. In the Ordnance Bureau the proportion is 1 officer to 5.7 men; in the Quartermaster Corps it is 1 officer to 16.37 men; in the Medical Department it is 1 officer to 10 men; in the Signal Corps it is 1 officer to 9.37 men. That is the way they run.

Mr. CRAGO. Take an entire division and it makes 1 officer to about every 33 men?

Lieut. BRETT. Yes, sir.

Mr. FIELDS. Are any branches of the service suffering from a shortage of officers at this time?

Lieut. BRETT. I could not say about that, although I think the Medical Department is.

Gen. SHARPE. I think the Ordnance Department has appointed a great number of officers. There will be some in the Quartermaster Corps, too. The Engineers have 6,015 officers, and they want 6,550 in 1919. There are in the Ordnance Department 2,306, and they want 7,988. The Engineer Corps are more nearly up to their requirements than any other corps I have any information about. The Medical Department wants 38,089 officers, and they have 24,060.

Mr. FIELD. In what corps is the greatest shortage of officers; or can you give us that information?

Gen. SHARPE. The Medical Department do not give the officers they have. They put it in this way: Medical Corps, 716; Medical Reserve Corps, 14,901; Medical Corps of the National Army, 1,460; Dental Corps, 178; Dental Reserve Corps, 4,398; Dental Corps, National Guard, 229; Veterinary Corps, 118; Veterinary Reserve Corps, 228; Veterinary Corps, National Army, 260; Veterinary Corps, National Guard, 78; Sanitary Corps, 477; Ambulance Service, 97.

The shortages are generally in the lower grades. The higher grades are filled up, because they are there by promotion.

Mr. CALDWELL. In Europe, as I understand it, in a great many of the sections of the armies they have what they call junior and senior captains; is that true?

Lieut. BRETT. I could not state about that.

Mr. CALDWELL. Have we adopted that policy in any of our corps?

Lieut. BRETT. No, sir; we have a captain and a first lieutenant.

Mr. CALDWELL. We have also a second lieutenant in a great many organizations?

Lieut. BRETT. There are six officers now in a company of Infantry, composed of 250 men, whereas normally we had with a company of 150 men three officers.

Mr. CALDWELL. We have not 3 captains?

Lieut. BRETT. We have just 1 captain, 3 first lieutenants, and 2 second lieutenants.

Mr. CALDWELL. One captain, 3 first and 2 second lieutenants?

Lieut. BRETT. Yes.

Mr. CALDWELL. Was that policy adopted following the same system used on the other side, or was it thought out on this side?

Lieut. BRETT. That was made pursuant to the authority granted in the selective-draft act of May 18.

Mr. CALDWELL. What I mean is this: I have heard some criticism, some friendly criticism, as regards the fact that over there the companies have junior and senior captains—I do not know how accurate the basis of the criticism is—but I have heard that over there the companies have a junior and a senior captain, and when the senior captain is not there they have a junior captain on the job, so that you have both a junior and a senior captain and the lieutenants, while we have a captain and lieutenants, and when the captain is not present the first lieutenant is doing the captain's work. What I was inquiring about was whether our policy was adopted on a special study made here or whether we were following some policy established on the other side. My informant may have been mistaken.

Gen. SHARPE. That system was adopted after a study made here, and they established the system of having 1 captain, 3 first and 2 second lieutenants. I think it was a compromise on the numbers they have over there.

Mr. CALDWELL. What do you think about the plan? Do you think we ought to continue in this way, or whether we should have 2 captains?

Lieut. BRETT. We would have to have legislation in order to have 2 captains, unless they were of the same rate of pay.

Mr. CALDWELL. Congress is in session, and that is what we are trying to find out—whether we should give you more legislation.

Lieut. BRETT. I think if the General Staff made a study of that proposition they would be in a better position to express an opinion as to the desirability of increasing the number of officers than we are. We are just simply following the figures as they are given to us.

Mr. CALDWELL. Mr. Kahn started to ask you a question, and I think the answer got off the direct question. Will these same percentages obtain for each additional increment authorized under the draft? In other words, you have figured now on 1,612,245 men. If they take additional increments of 500,000 or 600,000 men, as they have been doing in the past, will we add to the sum you ask for the same percentage of increase, according to the percentage of increase in the number of men.

Lieut. BRETT. I think the usual average proportion is 1 officer to 18 men.

Mr. CALDWELL. Will you put into the record a memorandum for each additional increment, so that we can have an actual figure for each additional increment up to 3,000,000 men?

Lieut. BRETT. For each increment of 500,000 men?

Mr. CALDWELL. Yes.

Lieut. BRETT. For each increment of 500,000 add 27,778 officers.

Mr. KAHN. You stated that with a company of 150 men you had three officers?

Lieut. BRETT. Yes.

Mr. KAHN. That with a company of 250 men you have 6 officers. Now, it has always been claimed that when you increase the number of men the ratio of officers is less.

Gen. SHARPE. I think that was all arranged by the General Staff, due to the difference in the methods of warfare now being conducted on the other side. I think that has had its influence on the organization of the companies.

Mr. KAHN. Probably the General Staff officers can tell us about that.

Gen. SHARPE. Yes, sir.

Mr. CRAGO. They have never had satisfactory experience with a company of 150 men managed by 3 officers?

Lieut. BRETT. We were limited by the act of June 3, 1916, until you gave us this act of May 18, and a study of the conditions abroad indicated that if we carried the proportion of officers to a company of 150 men up to a company of 250 men it would not be sufficient.

Mr. ANTHONY. I want to ask Gen. Sharpe some questions about the commissioned personnel of the Quartermaster Corps. Gen. Sharpe, is your corps full now of commissioned officers?

Gen. SHARPE. We are not full now, taking into consideration the number which were recently authorized. Col. Dallam can tell you about that.

Col. DALLAM. There are 330 vacancies at the present time.

Mr. ANTHONY. In the line corps?

Col. DALLAM. No vacancies in the line corps. We have 1,500 excess.

Mr. ANTHONY. From what sources do you obtain commissioned officers in the Quartermaster Corps now?

Gen. SHARPE. We are obtaining them from the camps which have graduated them.

Mr. ANTHONY. You are taking in young men?

Gen. SHARPE. Young men; yes, sir. The present sources now are the Regular Army, the reserve officers we have appointed, and then we have some 3,000 officers which we secured from the first training camp.

Mr. ANTHONY. From the training camp?

Gen. SHARPE. Yes.

Mr. ANTHONY. What is your age limit for the appointment of an officer in the Quartermaster Reserve Corps?

Gen. SHARPE. I think it is from 25 to 59.

Mr. ANTHONY. Did you not start with an age limit of 45?

Col. DALLAM. No, sir; that does not exist in the Staff Corps.

Mr. ANTHONY. I understand you are now taking men from the reserve officers' training camps. I have been told that you have been taking men that were needed more in the line of the Army.

Gen. SHARPE. Those men were assigned to us from the first training camp—3,000 men.

Mr. ANTHONY. What is the military logic in taking a young man from a training camp, men who have been trained and who are competent and who are needed in the line of the Army, and not accepting the service of business men, who are trained in business usages, and who are offering to go into the Quartermaster Corps, but who are being rejected because they are over 45 years of age?

Gen. SHARPE. We have not made any appointments in the corps since April 12, except of special and technical men. We got 3,045 men from the first training camps.

Mr. ANTHONY. What do you think of that policy? Would it be a better or a poorer policy to take trained business men of mature age, which could not be utilized on the fighting front—would it be better policy to take men of that class for the work of the Quartermaster Corps and let the younger fellows go to the fighting front?

Gen. SHARPE. The men we got from the training camps were the men who were in excess of the number desired for assignment to the line. They did not intend to assign more than a certain number of men to the line at that time, at the time the first training camp was established. They gave us 3,045 men from that camp, and we intend to send them through our school of training. My purpose for the future was to get the men from the ranks.

Mr. ANTHONY. Here is the point: This country will probably need every man it can get who can perform some military duty. What is the argument by which you are utilizing these young men from the training camps who are competent to serve on the fighting line and turn down applications, as I say, of trained business men who are anxious to get into the Quartermaster's Department, where they are competent to serve the Government?

Gen. SHARPE. We had no vacancies after the 3,045 men were assigned to us.

Mr. ANTHONY. I know of cases in the last three or four months where men of the class I am telling you about have been utterly unable to get any encouragement from the War Department, and still during that time you have been taking levies of young men from the training camps.

Gen. SHARPE. No, sir; we have only taken one levy. From the first training camp we got 3,045 men, and we received none from the other training camps.

Mr. ANTHONY. What do you think of utilizing the services of those men that I have referred to?

Gen. SHARPE. If those men demonstrate their ability, I think it would be a very good thing.

Mr. ANTHONY. Is there any way in which they can get in touch with your department?

Gen. SHARPE. Not now, because the department was practically closed with the 3,045 men we have gotten in and with the men we have taken in since the act of May 12.

Mr. ANTHONY. Would it not be a good plan for you to have these young men in the training camps whom you have already taken transferred to the line of the Army and their places taken by men of more mature years?

Gen. SHARPE. They have had considerable training in our department now.

Mr. ANTHONY. That would not hurt them for fighting purposes?

Gen. SHARPE. No. They are going through our school and getting trained in our work.

Mr. ANTHONY. Then it apparently is not the policy of your department to afford recognition to these practical business men who want to get into the service?

Gen. SHARPE. I would not say that, but it had been our policy up to April 12 to make use of those men as reserve officers, and we made use of as many of them as had the ability.

Mr. ANTHONY. The age limit is 56 years?

Gen. SHARPE. Fifty-nine.

Mr. ANTHONY. Did you decide you did not want their services?

Gen. SHARPE. Yes, sir; we have made no appointments since April 12, except those of technical and special men.

Mr. ANTHONY. I think it is a grave error of your department not to utilize the services of men of this class.

Mr. McKENZIE. Has there been any lack of applications from men in civil life to get into your department?

Gen. SHARPE. No, sir.

Mr. McKENZIE. There has been an abundance of applications?

Gen. SHARPE. Yes, sir.

Mr. McKENZIE. Has your department looked with any degree of favor upon applications of young men who were, perhaps of draft age or military age, trying to get a commission in your department, young men from civil life?

Gen. SHARPE. We can not appoint men of draft age, and that has been true since August 11.

Mr. McKENZIE. Prior to that time?

Gen. SHARPE. Prior to that time we closed the department on April 12, and then we were counting on those men we got from the training camps—3,045.

Mr. McKENZIE. Has there been any apparent desire exhibited by the type of young men Mr. Anthony has spoken of, assigned to you from the training camps to be transferred from your department to the line?

Gen. SHARPE. Col. Dallam can answer that question. I do not recall any, except one or two cases.

Col. DALLAM. We have a number of applications of individuals, although I would say it is a small number, and of officers who have applied for transfers to different arms of the service or to the other staff corps, and in many cases, where they could show a good reason, the application was approved.

After they got settled at the training camps the policy was to disapprove those applications, because they have been getting training in the Quartermaster Corps, and, having been once trained in the work of the Quartermaster Corps it would be, in our opinion, a poor policy to break up the work of a trained man and start him all over again.

Mr. McKENZIE. General, is it not a fact that your department has been unusually embarrassed by the outrageous pressure brought to bear from the outside by men in civil life endeavoring to get into your department in order to escape service in the line?

Gen. SHARPE. We have had a great many applications coming in from men of the draft age.

Mr. McKENZIE. Is not the Quartermaster's Department looked upon as rather a haven of refuge in time of storm? I do not say that in an offensive way.

Gen. GOETHALS. That has been my experience since I have been here in the last 10 days.

Mr. McKENZIE. I have no reference to a military man who is an officer, but I am speaking now and have reference to the men outside, in civil life, who might be subject to active military service. Is it

not true that the pressure has been something enormous by men in civil life endeavoring to get into the Quartermaster Corps?

Gen. GOETHALS. Yes; it has been enormous.

The CHAIRMAN. In line with the questions asked by Mr. Anthony and Mr. McKenzie, you say you have not made any appointments to the Quartermaster Corps since April 12, except those of special and technical men. What do you mean by special and technical men?

Gen. SHARPE. We have appointed them for duty in the motor-repair shops—motor men. You can not get those men beyond the draft age, for the reason that we want men with college training in the motor industry, and it is a new business, and the courses in that work have only been started within the last few years; so that the men you get are practically all within the draft age.

The CHAIRMAN. That is one illustration. Can you give us some other illustrations?

Gen. SHARPE. The stevedore regiments were selected because of the supposed familiarity of the men with the stevedore business, and some of the men who were appointed were in the draft age.

The CHAIRMAN. You say there have been no appointments of men within the draft age in your department since last August?

Gen. SHARPE. None within the draft age.

The CHAIRMAN. Since last August?

Gen. SHARPE. Yes; except in these exceptional cases; in the cases of technical and special men.

The CHAIRMAN. As a matter of fact, the general order prohibiting appointments of men within the draft age did not go into effect until December?

Gen. SHARPE. No, sir; on August 11 we got our instructions from the Secretary.

The CHAIRMAN. For all Staff Corps?

Gen. SHARPE. I do not know that it is limited to the Staff Corps. I think it applied to all.

Mr. NICHOLLS. You stated you got something over 3,000 men from the first training camp assigned to your department.

Gen. SHARPE. Yes.

Mr. NICHOLLS. Are you allowed to give those men preference under that order? Suppose you wanted to appoint somebody else; have you got the power to do it, or do you have to take them from those 3,000 men?

Gen. SHARPE. We have to take them out of the 3,000 men. When we requested the Adjutant General's Department for some men for the special and technical units, they asked us if we had looked over the 3,000 men.

Mr. NICHOLLS. They had the preference, however?

Gen. SHARPE. If we can find anybody there who is suitable.

The question was asked whether or not we had few officers in our corps. I think the total number authorized for the Quartermaster Corps is 6,701, and we are about 300 short of that number. The total number of enlisted men authorized for the Quartermaster Corps is 164,147. I do not think either of those numbers is going to be anything like adequate, for this reason:

The Quartermaster's Department has much greater activities than the quartermaster department of the English Army. We do the

transporting of the troops, and we construct the quarters for them, and we have many activities which the quartermaster's department of the English Army does not have.

There is one branch of the quartermaster's department over there known as the Army Service Corps. At the outbreak of the war they had 435 officers in that department and between 10,000 and 12,000 enlisted men. To-day they have 10,000 officers and 200,000 enlisted men.

While their army is larger than ours, our activities are so much greater and along so much more varied lines that it is fair to assume that the total number of officers in our corps and the total number of enlisted men would at least equal what they had in one branch of that department over there. I do not think we can say we have anything like the number of officers and men that we have got to have in the Quartermaster's Department.

Mr. GORDON. I understood one of your officers to suggest that the safety-first men are importuning you with a good deal of persistence to get into the Quartermaster Corps, these fellows of draft age.

Gen. SHARPE. There was a good deal of that, particularly just before the closing of the volunteer enlistment period about December 15.

Mr. GORDON. Just what was the reason for transferring these 3,000 men who had been in the training camps to the Quartermaster Corps?

Gen. SHARPE. They were at the camp, and we thought it would be a good opportunity to have men with a certain amount of training in military matters, and we asked for the assignment of 200 men from each one of the 16 training camps.

Mr. GORDON. You give these men a special course of training for the work in your corps?

Gen. SHARPE. After they get in.

Mr. GORDON. How does the training they receive in the training camps fit those men for the Quartermaster Corps.

Gen. SHARPE. It does not do that, especially.

Mr. GORDON. Then why would they assign 3,000 officers who had graduated from the training camp to the Quartermaster Corps?

Gen. SHARPE. They were over and above the total number of men they wanted for the line.

Mr. GORDON. They were surplus?

Gen. SHARPE. They were surplus; yes, sir.

Mr. GORDON. Why then did they start right in with another training camp?

Gen. SHARPE. I do not think they anticipated having more than one camp at that time. They are going on now; they have had two, and now they are going to have another one.

Mr. GORDON. When they discovered they were going to be short of officers, why did they not transfer those 3,000 men back to the line, as Mr. Anthony suggested?

Gen. SHARPE. I do not know.

Gen. GOETHALS. They did not want them, in the first place, in the line, and so they turned them over to the Quartermaster Corps.

Mr. GORDON. They were not skilled for the line?

Gen. GOETHALS. They did not think they were as skilled as they ought to be. They did not think they would make officers in whom the men would have confidence.

Mr. OLNEY. Do you think they would make good privates in the line?

Gen. GOETHALS. I do not know.

Mr. ANTHONY. Have you sufficient authority, as Quartermaster General, if you have an application from a man of unquestioned ability to serve in your department, to avail yourself of the services of that man?

Gen. SHARPE. We had not until recently.

Mr. ANTHONY. Not until recently?

Gen. SHARPE. Except on special and technical lines.

Gen. GOETHALS. There are a great many business men willing to come into the Quartermaster Corps, men claiming they are getting from \$15,000 to \$30,000 a year, and they will come in if they are made colonels. Everybody is coming in after rank.

Mr. ANTHONY. The question I had in mind was suggested by the case of a big lumber man from the West, a very wealthy man, who said he had offered his services in any capacity. He did not care about getting a commission, but he offered his services in any capacity, and he said he was ashamed not to be giving his services to the Government, and he said he had been here a month and that they told him they could not take him. He was a man of the very best business ability, and probably far superior to the men you got from the training camps.

Gen. SHARPE. Possibly that is so, but the point is this: We announced that the department was closed after April 12, except to special and technical men, and it has been our endeavor to live up to our statement. If we made appointments such as you refer to in one case we would have to make them in all cases.

Mr. QUIN. When did they make the change in the age to 59 years?

Gen. SHARPE. We appointed officers of the Reserve Corps up to 59 years of age whenever they took their examination, under the act of June 3, 1916, from that time on; that limit was fixed at 59 years at that time.

Mr. QUIN. Now nobody can get in?

Gen. SHARPE. No, sir; we have not taken anybody in recently, except the technical and special men.

Mr. QUIN. Forty-six years is the maximum now?

Gen. SHARPE. I do not know whether any age has been fixed recently.

Mr. MCKENZIE. General, it has been stated by Col. Dallam that you are short about 300 officers in your department at the present time.

Gen. SHARPE. Yes, sir.

Mr. MCKENZIE. And it has also been stated that there are probably 1,500 men on the waiting list.

Col. DALLAM. Twelve hundred and twenty.

Mr. MCKENZIE. On the waiting list? Now, of course, those men on the waiting list would come in and be commissioned.

Gen. SHARPE. They have been.

Mr. MCKENZIE. They have been?

Gen. SHARPE. Commissioned as second lieutenants, now. We have sent others of them to the training camps for instructions. These 1,200 men are to go after the first lot of men have finished their course of instruction.

Col. DALLAM. The 1,500 men are at the training camps now, and they include everybody not on duty now. They are being absorbed from time to time, and it is very difficult to obtain them at this time from the training camps.

Mr. McKENZIE. The point I am trying to bring out is why you can not supply the deficiency of 300 men from the 1,200 men by the promotion of the men now in the service.

Gen. SHARPE. That includes the 1,200 men. The deficiency is in excess of 1,200 men.

We had in the corps some 6,400 men, and in the last authorization from the Chief of Staff we were allowed to have 6,701 men in the Quartermaster Corps. We have only gotten that within the last few days, and there has not been time to make those appointments.

Mr. McKENZIE. If that is true, would not this be the proper time to take down this embargo against the commissioning of such men as Mr. Anthony speaks of and allow enough men to come in to fill up your required number?

Gen. SHARPE. That is for Gen. Goethals to decide.

Mr. McKENZIE. I am not asking whether it is for you to decide, but would it not be a good thing to do?

Gen. GOETHALS. I would rather close down on appointments until we can get our organization lined up. I have started in on a reorganization of the department. I do not know where we could use a lumber man at the present time.

I have divorced subsistence from clothing and equipage, and I am reorganizing the clothing department, and I am trying to get the biggest men in the country in the various specialties and put them at the head of those specialties in the volunteer service, because I can not give them the rank they should have occupying those positions.

As I select the heads, I am going to let them select their subordinates, so that they can get results. I am going to commission the men we get in this way with such rank as I can get for them, but whether I can use a lumberman in that organization is doubtful.

Mr. McKENZIE. That is a satisfactory explanation.

Mr. CRAGO. Is it not a better policy to provide that the men commissioned shall have had some military training?

Gen. GOETHALS. That is true, but the Quartermaster Corps is a business corps. I told the Secretary of War the other day that if I could take off my uniform and get across the table with another civilian, so that we could talk very frankly between ourselves, I could get better results.

Mr. CALDWELL. Is it not a fact that in the foreign armies the Quartermaster Corps is made up largely of civilians?

Mr. CRAGO. I think that is and should be true, but I think whenever they are given rank they ought to have some military training and some knowledge of what the rank means. I agree thoroughly with the general that we had better have a good business organization, but if they are going to give the men rank at all there ought to be some knowledge of military affairs going with it.

Mr. GARRETT. I wanted to ask Gen. Sharpe if Gen. Goethals is correct in his conclusion that the 3,000 men rejected at the training camps were all rejected because they could not maintain the respect of the men in the line, and if that is true, I wondered why they should

be transferred to any department, and why they should not be stricken off the list entirely and sent back home, and let it be known that they were not suited for commissions?

Gen. SHARPE. They certified them to us as being suitable for the Quartermaster's Department. In the last training camps, where we were getting no men from them at all, a great deal of trouble has been brought to you gentlemen here, I know, by some of the officers at the training camps writing a letter to some of the students at the camps and stating that they regretted sincerely that they were not able to certify them for commissions in the line, but they thought they would make good officers in the Quartermaster's Department. That simply put trouble up to you gentlemen here.

Mr. GARRETT. Here is a young man in a hardware store, we will say, who is 25 years old, and who knows the hardware business from top to bottom, and who is a hustler in the business. I would like to know what is the matter with that fellow when he comes to the training camp, if he can not make a good man in any line? If he is a good man in that particular line, why would he not make a good man in the line of the Army? If he is a hustler among his associates and recognized as such, a man who can order men around and get things done when he is in a hardware store, why can he not get things done anywhere?

Mr. GORDON. He might be gun-shy.

Gen. SHARPE. Those men were passed upon by the officers at the camps.

Mr. GARRETT. What has developed at any of the training camps to show whether a man is gun-shy or not gun-shy?

Gen. SHARPE. They have had a very thorough system by which they selected them.

Gen. GOETHALS. If I were a line officer in charge of the training camps, I would be especially interested in the officers that would be assigned to my branch of the service. Officers are selected from the training camps by boards of line officers, and they are going to select the best for themselves. They are going to turn over to somebody else what they do not think is the cream of the list, and I do not suppose that if they knew a man was a first-class business man, if the youngster impressed them that he would make an admirable officer they would sacrifice him to the Quartermaster Department, because their ideal is the line.

Mr. GARRETT. Then I will ask you if in your opinion it would not be practically impossible to find good men for the Quartermaster Corps?

Gen. GOETHALS. I think so.

Mr. FIELDS. I believe you said that in the case of the technical men and the special men you require them to have a college education.

Gen. SHARPE. I said in the case of the men in the motor service we try to get men who are really trained by study in that work, and that necessarily that would throw us men within the draft age, because that is a new business, and instruction in that work has been only recently introduced.

Mr. FIELDS. Suppose a man applies who has not a college education but who by nature and by practical experience is a most valuable man in that line of service. Do you consider his application?

Gen. SHARPE. No, sir.

Gen. GOETHALS. No; they are being selected and I am appointing those men now. They are being selected for their actual ability to do the work required of them and their capacity to handle men.

Mr. OLNEY. You have what is called a shoe-repair unit?

Gen. SHARPE. Yes.

Mr. OLNEY. What is the size of this unit? I have heard that there are about 6,000 men in the cantonments here and going abroad. There have been a number of men trying to get in, waiting to join that unit.

Gen. SHARPE. Maj. Davis can give you the information about that.

Maj. DAVIS. The shoe-repair unit at the cantonments is composed of about 21 men. It is expected that the allotment will be increased as soon as they get their machinery under way.

Mr. OLNEY. What is the pay of the men in the shoe-repair unit?

Maj. DAVIS. It is according to the grade they have. Those men are made up of certain grades of noncommissioned officers—sergeants (first class), sergeants, and corporals.

Mr. OLNEY. Is the pay large enough to induce men beyond the draft age who are expert shoe workers to enlist?

Maj. DAVIS. Not except for patriotic motives.

Mr. OLNEY. Is the pay \$60 a month or more?

Maj. DAVIS. The pay of the sergeants, first class, would probably induce men beyond the draft age to enlist. We have in some of the cantonments men who feel that they want to render service to the country, and they are employed in the work with the pay of a sergeant, first class.

Mr. OLNEY. Is it necessary to take these young men, between the ages of 21 and 31 years, to go beyond as a part of the shoe-repair unit?

Maj. DAVIS. Not necessarily. If a man should volunteer for the shoe-repair unit, beyond the draft age, with a shoe-repair unit which was going over, he would go over with that unit.

Mr. OLNEY. But you can not get those men, the pay being so small?

Maj. DAVIS. Not to any great extent.

Mr. KAHN. General, this first officers' training camp, assigned the students of those camps to the various line organizations; that is, they graduated some for the Field Artillery, some for the Infantry, some for the Coast Artillery, some for the Cavalry, and then I understood that those whom the officers felt did not have the qualifications to lead men were put into the staff departments; is that your understanding of it?

Gen. SHARPE. We asked for about 200 men from each one of the camps, and I suppose that was the way in which it resulted. They made their own selections first and gave us the best of the men still left.

Mr. KAHN. There were a great many men in those first camps who were not commissioned at all. They were just wedged out, and became subject to the draft?

Gen. GOETHALS. That is true.

Mr. KAHN. Have all the men under the first draft gone to the camps?

Gen. SHARPE. No, sir; not all of them.

Mr. KAHN. What percentage have not gone to the camps?

Gen. SHARPE. I think there are about 200,000 men not yet gone to the camps.

Mr. KAHN. Why have they not gone?

Gen. SHARPE. They have not been called yet. Mr. Kahn.

Mr. KAHN. You would not be able to tell why they have not been called?

Gen. SHARPE. They have not been called into the service because they are not ready to take care of them.

Mr. KAHN. What do you mean by that?

Gen. SHARPE. They expected to take care of them by the 15th of February, and clothe them.

Mr. KAHN. Is that because we have not the necessary clothing, the necessary supplies, and the necessary equipment?

Gen. SHARPE. Yes, sir.

Mr. KAHN. So that out of that first increment there are still one-third of the total called that are not in camp?

Gen. SHARPE. Yes, sir.

Mr. KAHN. How long do you think it will take to get the necessary supplies and clothing and equipment for those men?

Gen. SHARPE. It is expected to be ready by the 15th of February, the date set.

Mr. KAHN. Are you pretty sure that these necessities will be ready on that date?

Gen. SHARPE. Yes, sir; I think that is reasonably sure.

Mr. KAHN. Have you contracts made for all these things?

Gen. SHARPE. Yes, sir.

Mr. KAHN. Are there penalties involved in case the things are not ready?

Gen. SHARPE. There is no way of enforcing the penalty now, for deliveries.

Mr. KAHN. Why not?

Gen. SHARPE. There is no place we can go on the outside and buy against those men. We have tried to do that, but all the mills were supposed to be operating, so that we could not buy on the outside, and charge them up with the difference in cost.

Mr. KAHN. I suppose the contracts were drawn by competent lawyers?

Gen. SHARPE. The contracts are the same we have always had, and the contractors give bonds, but the bond does not always produce the goods.

Mr. KAHN. I understand that the situation in Europe is exceedingly critical.

Gen. SHARPE. Yes, sir.

Mr. KAHN. That unless we get over there mighty soon, we are going to have a serious time, and so are the French and the English. Is there any possible way of speeding up our getting there?

Gen. GOETHALS. Yes, sir; ships.

Mr. KAHN. Is it all a question of ships?

Gen. GOETHALS. It is all a question of ships.

Mr. TILSON. How many officers came in under the first call, up to the 12th of April, of those who made application before the 12 of April.

Gen. SHARPE. I think there were over 2,000.

Col. DALLAM. There were about 1,840, sir.

Mr. TILSON. Were those men of all ages, from 25 years up?

Col. DALLAM. I could not say the minimum age; but the maximum age was 59.

Mr. TILSON. Colonel, there is a natural suspicion about some of those men who got over the top, that the learned there was to be an examination and passed what might be called a civil-service examination to get in, that they were not the best men in their particular lines to go into the business department of the Army. What would you say as to the class of men you got on first examination?

Col. DALLAM. I would say this, that whenever there is an opportunity offered for a good thing, you do not find the best men in any profession going after it. The finest grade of men in any profession are the men you have to pick out. A great many unpromising men took the examination under the Reserve Corps law. Some of these men have since been discharged.

Mr. TILSON. My own observation of them was that there were a number of men who passed that examination and were commissioned as high as the rank of captain who were good boys, who passed a good civil-service examination, and who would have been all right, possibly, as second lieutenants to have been trained later, and who would possibly have become experienced officers.

Gen. SHARPE. We could not commission them below the grade of captain.

Mr. TILSON. You could not commission them below the grade of captain?

Gen. SHARPE. No, sir.

Mr. TILSON. As a matter of fact, have you not filled up the department with a number of boys who are captains, who really had little experience, and who were simply able to pass a good examination; is not that about the facts?

Gen. SHARPE. No; they appointed some young men, but I do not think the great majority of them were of that class.

Mr. TILSON. And by reason of that you are not able to consider the applications of men of real ability, who are desirous of serving?

Gen. SHARPE. The law authorized us to appoint in the lower grades, and the grade of major only in the Officers' Reserve Corps. We tried, just after the draft, to have men commissioned in the National Army, and it was not till very late, I think somewhere along in August or September, that we got authority to appoint men in the National Army as first and second lieutenants.

The CHAIRMAN. I think it was about October, just before Congress adjourned.

Is there any data you wish to furnish in connection with pay of officers in the line?

Gen. SHARPE. No, sir.

The CHAIRMAN. The next item is "additional pay to officers for length of service, \$3,500,000." That is figured according to law?

Gen. SHARPE. Yes, sir; that is based on law.

The CHAIRMAN. At the top of page 14 there is an item for "pay of officers of the Officers' Reserve Corps, \$231,300," and "pay of officers, National Guard, including Staff Corps, \$231,300."

Lieut. BRETT. That is just put in, Mr. Chairman, so that in the event there should be peace we could have a little money to pay those men.

The CHAIRMAN. I do not think you would need that item during war times.

Lieut. BRETT. No, sir.

The CHAIRMAN. It is only put in there with the idea that peace might be declared during the next fiscal year?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. How do you get at the figures?

Lieut. BRETT. We take 100 men of each grade. The amount is \$231,300, and that provides for 100 men of each grade. It is just to have something in that particular item in case peace is declared.

The CHAIRMAN. As a matter of fact, then, that item might be dispensed with.

Gen. SHARPE. No; that item ought to be in, because unless there is some item in the bill of that kind, if we did have peace and wanted to pay these men we would have no fund out of which to pay them. Even if you only make the amount one dollar it ought to be there.

The CHAIRMAN. You want some sum for this item?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. That is true in reference to both of those items?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. And the same reason applies to the item in reference to the National Guard officers as applies to the officers of the Reserve Corps?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. How do you get at that second item?

Lieut. BRETT. By just taking 100 officers. That is just to comply with the law.

The CHAIRMAN. You could make it \$100 if you want?

Lieut. BRETT. Yes, sir; you can make it any amount you want.

The CHAIRMAN. The next item is "Enlisted men of the line: For pay of one million two hundred and eight thousand three hundred enlisted men of the line, \$478,695,627."

Gen. SHARPE. That is for the enlisted men of the line. The balance of the 1,612,245 men is made up in the staff departments.

The CHAIRMAN. As a matter of fact, General, have you not more than that number of men in the line now?

Lieut. BRETT. No, sir. In the line of the Army we had on November 30, 1,020,486 men.

The CHAIRMAN. On what date?

Gen. SHARPE. On November 30 we had 1,020,486 men.

The CHAIRMAN. Is that the latest figure you have?

Lieut. BRETT. No, sir. Take the Regular Army on December 31, and the National Guard on December 31, and the National Army as it will be when the first draft is complete.

The CHAIRMAN. That is, the 687,000?

Lieut. BRETT. The exact figures are 656,360; we will have 1,488,245 men.

The CHAIRMAN. Then, can you give the committee the exact number in the Regular Army on that date?

Lieut. BRETT. On December 31 it was estimated that on January 5 there would be 383,000. We can give you the exact figures of October 31.

The CHAIRMAN. Give us the exact figures and your estimate figures.

Lieut. BRETT. The exact figures on October 31 for the Regular Army was 332,505; for the National Guard, 380,070. On November

30, for the National Guard, there were 480,000 men. On December 31 the rate of recruiting indicated that there would be on that date in the Regular Army 383,000 and the National Guard 448,885, in the National Army, when it was completed, 656,360, and that would give us 1,488,245.

The CHAIRMAN. Then, as a matter of fact, the probabilities are that before this bill becomes a law you will have more men than you estimate for.

Lieut. BRETT. A great many more. We have a great many more officers now than are carried in this bill.

The CHAIRMAN. How many extra officers?

Lieut. BRETT. There have been commissioned 121,089 officers, and there are more than 110,000 actually in the service. In the Regular Army on December 31 there were 11,948 officers and in the National Guard 16,150. On November 30 there were actually in the National Army and the Reserve Corps combined 82,841, and that makes 110,939; and from November on up to this time both the National Army and the Reserve Corps officers have probably been increased, and it would probably bring the number up to the other figure of 121,089.

The CHAIRMAN. So that, as a matter of fact, instead of appropriating for 62,000, the appropriation ought to be for twice that number.

Lieut. BRETT. In the line they actually had on November 30 77,795 officers, and that was over a month ago.

The CHAIRMAN. Of the 82,840 in the National Army and Reserve Corps, how many are National Army officers and how many are Reserve Corps officers?

Lieut. BRETT. The Adjutant General gave me those figures altogether, and I have not got them separated.

Mr. KAHN. Possibly you can get these figures from The Adjutant General segregated and put them in the hearing.

Lieut. BRETT. Yes, sir. Reserve officers, 59,566; National Army, 23,275.

Mr. KAHN. As I understand the situation, then, the bill shows a deficit on its face now.

Lieut. BRETT. Yes, sir.

Mr. KAHN. In line with the suggestion which has been made, I wish you would also put into the hearings what the additional cost would be for each increment of 500,000 additional men.

Lieut. BRETT. For the officers and men?

Mr. KAHN. Yes.

(For statement of cost, see page 192.)

(Thereupon, at 12.15 o'clock p. m., the committee took a recess until 7.30 o'clock p. m.)

The total extra cost of the pay of the Army because of the increase provided in the act of May 18, 1917, is as follows:

For 1,612,245 men pay is.....	\$247, 785, 934.05
Foreign-service pay	34, 690, 030.77
	<hr/> 282, 475, 964.82
For 3,000,000 men pay is.....	461, 070, 000.00
Foreign-service pay.....	64, 549, 800.00
	<hr/> 525, 619, 800.00

Or \$175.21 per man per year.

In arriving at foreign-service pay it is assumed that 70 per cent of the men are in places where foreign-service pay accrues.

AFTER RECESS.

The committee reassembled, pursuant to the taking of recess, at 7.30 o'clock p. m.

STATEMENTS OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, AND MAJ. GEN. GEORGE W. GOETHALS, ACTING QUARTERMASTER GENERAL, ACCOMPANIED BY COL. S. M. DALLAM, MAJ. EZRA DAVIS, CAPT. CHARLES P. DALY, AND LIEUT. J. Q. A. BRETT, QUARTERMASTER CORPS—Continued.

The CHAIRMAN. General, there are a few more questions the members of the committee desire to ask you in regard to the pay of enlisted men in the line.

Mr. FIELDS. General, in line with what we were talking about this morning, in reference to the strength of the Army, I want to ask you how many men we had, on April 1, and how many we had on September 1 in each branch of the service. If you have not those figures at hand, I would be glad if you will put them in the record.

Lieut. BRETT. We will have to put those figures into the hearings.

Strength, 1919.

⁴ Dec. 31, 1917.

Mr. FIELDS. I would like to have the total strength of the officers and men in each branch of the service.

Lieut. BRETT. Do you want the strength of the Regular Army, the National Guard, the National Army, and the Reserve Corps stated separately?

Mr. FIELDS. Yes; I would like to have them stated separately.

(The matter referred to is as follows:)

WAR DEPARTMENT,
OFFICE OF THE QUARTERMASTER GENERAL OF THE ARMY,
Washington, January 9, 1917.

No. 1006-A-E.

From: Acting Quartermaster General.

To: The Adjutant General of the Army.

Subject: Data called for at hearings on Army appropriation bill before House Military Committee January 7 and 8, 1918.

1. What was the strength in (a) commissioned officers and (b) enlisted men on April 1 and September 1, 1917, stating each separately for the Regular Army, the National Guard, the National Army, and the Reserve Corps. Numbers in each grade not required.

GEO. W. GOETHALS,
Acting Quartermaster General.

(Received A. G. O., January 10, 1918.)

[First Indorsement.]

111.05, Misch. Div.]

WAR DEPARTMENT,
ADJUTANT GENERAL'S OFFICE,
January 12, 1918.

To the Quartermaster General, inviting attention to the inclosed statement, containing the information requested herein.

By order of the Secretary of War:

H. G. LEARNARD, *Adjutant General.*

(2 incls. Synopsis made.)

Statement showing strength of commissioned officers and enlisted men on Apr. 1, and Sept. 1, 1917, of the Regular Army, National Guard, National Army, and Reserve Corps.

	Commis- sioned.	Enlisted men.
REGULAR ARMY.		
Apr. 1, 1917.....	5,791	121,797
Sept. 1, 1917.....	7,022	308,145
NATIONAL GUARD.		
Apr. 1, 1917.....	2,493	51,224
Sept. 1, 1917.....	12,945	350,256
NATIONAL ARMY.		
Sept. 1, 1917, number reserve officers 59,556.		
Sept. 1, 1917, National Army not yet mobilized.		
RESERVE CORPS.		
Apr. 1, 1917 (approximately).....		500
Sept. 1, 1917 (approximately).....		50,000

I am attaching a table prepared by me after the passage of the national defense act to show the commissioned and enlisted strength of the Regular Army as prescribed in that act.

It must be borne in mind that the act does not fix the enlisted strength of the Quartermaster Corps, the Signal Corps, nor the Ordnance Department, but leaves them to be fixed from time to time by the President as the demands of the service require. It therefore follows that the President can increase the enlisted strength of these three departments as much as he pleases, being limited only by the power of the Congress to withhold appropriations to pay the men. Hence, the War Department can increase the enlisted strength of these three departments under (1) the national defense act or (2) under the act of May 18, 1917.

Since the enlisted strength of the Medical Department is "5 per cent of the total enlisted strength of the Army authorized from time to time by law," it will vary as the enlisted strength of the three departments named varies.

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, January 21, 1918.

From: The Adjutant General of the Army.

To: The Quartermaster General of the Army.

Subject: Data called for at the hearings before the House Military Committee on 1919 estimates.

1. Having reference to your letter of January 11, 1918, stating that at the hearings before the House Committee on Military Affairs the following information was called for:

"How many officers and how many enlisted men, with the numbers of each in the various grades, have been authorized for the special and technical troops provided for in the proviso contained in section 2 of the act of May 18, 1917?"

You are advised that the following estimates are submitted by the chiefs of the various Staff Corps in reply thereto:

CORPS OF ENGINEERS.	
Colonels.....	27
Lieutenant colonels.....	28
Majors.....	130
Captains.....	717
First lieutenants.....	1, 185
Second lieutenants.....	855
Total commissioned.....	2, 942
Master engineers, senior grade.....	476
Master engineers, junior grade.....	658
Regimental sergeants major.....	28
Regimental supply sergeants.....	56
Battalion sergeants major.....	130
Battalion supply sergeants.....	127
First sergeants.....	468
Sergeants, first-class.....	1, 306
Sergeant, buglers.....	28
Color sergeants.....	58
Supply sergeants.....	468
Mess sergeants.....	491
Stable sergeants.....	290
Sergeants.....	4, 975
Corporals.....	9, 203
Horseshoers.....	285
Saddlers.....	271
Wagoners.....	3, 057
Cooks.....	2, 322
Buglers.....	932
Privates, first-class.....	31, 306
Privates.....	62, 543
Total enlisted.....	119, 476
Total commissioned.....	2, 942
Aggregate.....	122, 418

The above does not include pioneer regiments of the Regular Army, National Guard, and National Army.

ORDNANCE DEPARTMENT.	
Ordnance sergeants.....	2, 800
Sergeants, first-class.....	400
Sergeants.....	2 000
Corporals.....	3, 000
Cooks.....	400
Privates, first-class.....	3, 600
Privates.....	7, 200
Total.....	20, 000
No officers authorized.	

SIGNAL CORPS.

Twelve thousand five hundred and seven officers and 151,747 enlisted men of the Signal Corps of grades as shown below have been authorized to date:

	Aviation section.	Signal section.
Major general (1).		
Brigadier generals.....	2	2
Colonels.....	38	12
Lieutenant colonels.....	181	24
Majors.....	358	159
Captains.....	2,578	346
First lieutenants.....	2,774	697
Second lieutenants.....	4,864	441
Master signal electricians.....	2,191	582
Sergeants, first class.....	12,654	3,161
Sergeants.....	14,984	3,690
Corporals.....	12,896	7,077
Chauffeurs, first class.....	5,609	214
Horseshoers.....		230
Cooks.....	4,136	609
Chauffeurs.....	11,799	859
Privates, first class.....	18,585	10,068
Privates.....	30,029	12,330
Buglers.....	24	

QUARTERMASTER CORPS.

Officers:

Brigadier generals.....	4
Colonels.....	13
Lieutenant colonels.....	49
Majors.....	49
Captains.....	348
First lieutenants.....	1,986
Second lieutenants.....	1,751
Total.....	4,200

Enlisted men:

Quartermaster sergeants, senior grade.....	187
Quartermaster sergeants.....	1,013
Sergeants, first class.....	2,206
Battalion sergeant major.....	50
Battalion supply sergeants.....	50
First sergeants.....	424
Mess sergeants.....	428
Supply sergeants.....	313
Sergeants.....	11,617
Corporals.....	20,139
Mechanics.....	582
Wagoners.....	796
Cooks.....	2,662
Buglers.....	657
Privates, first class.....	37,068
Privates.....	61,474

Total..... 140,266

MEDICAL DEPARTMENT.

Commissioned :

Colonel.....	1
Lieutenant colonels.....	2
Majors.....	8
Captains.....	32
First lieutenants.....	160
Total.....	203

The total number of enlisted men is 7,605, distributed in the various grades, as follows:

Enlisted :

Sergeants, first class.....	169
Sergeants.....	338
Corporals.....	169
Mechanics.....	338
Cooks.....	338
Privates, first class.....	4,394
Privates.....	1,859
Total.....	7,605

Veterinary Corps, National Army, established by G. O. 130, 1917. The total number of commissioned officers authorized, allowing for a total of 400,000 animals, is 1,000, distributed in the various grades, as follows:

Commissioned :

Majors.....	70
Captains.....	200
First lieutenants.....	360
Second lieutenants.....	370
Total.....	1,000

The total number of enlisted men is 16,000, distributed in the various grades, as follows:

Enlisted :

Sergeants, first class.....	400
Sergeants.....	800
Corporals.....	800
Farriers.....	3,200
Horseshoers.....	100
Saddlers.....	80
Cooks.....	240
Privates, first class.....	3,440
Privates.....	6,880
Total.....	16,000

Sanitary Corps, established by G. O. 80, 1917. The total number of commissioned officers "may be approximated equal to but not to exceed 1 for every 1,000 of the total strength of the military forces authorized from time to time pursuant to law." Allowing 1 sanitary officer for every 1,000, as above quoted, and distributing proportionately "among the several grades, as in the Medical Corps, now established by law," the number of commissioned officers in each grade would be as follows:

Commissioned :

Majors.....	484
Captains and lieutenants.....	1,016
Total.....	1,500

The authorized enlisted strength at the present time is 3,945.

By order of the Secretary of War.

A. M. FERGUSON, *Adjutant General.*

Captain	2,400
First lieutenant	2,000
Second lieutenant	1,700

Mr. CALDWELL. Gen. Sharpe, ever since the national-defense act, which prescribed the organization of the Regular Army and also provided for a reorganization of the National Guard, we have been, from time to time, asking the War Department for a statement as to the authorized strength of the Regular Army, and up until the National Army bill was passed it was my impression that the figure was given at something like 287,000, but we never had that number.

The National Army bill has provided for certain technical troops, and the reorganization has gone into effect. The question has been raised as to whether or not the National Army bill authorized more than 287,000 men, exclusive of the special or technical troops. I make this general statement of facts so that you will understand the question I want to ask you.

I wanted to know if the Auditor for the War Department has ever rendered an opinion as to the validity of the paying of men over and above 287,000 in the Regular Army?

Gen. SHARPE. The question has not been raised, Mr. Caldwell. The Comptroller of the Treasury would render an opinion in a matter of that kind.

Mr. CALDWELL. The reason I asked that question is this: You can see how embarrassing it would be if we had more than 287,000 and that number was all that was authorized, and then at some time or another somebody raised the question and said that we could not pay them, or that they were illegally in the Army. Personally, I believe if there is any doubt or any question of that kind, we ought to amend the law, and the quicker we do it the better, in order to bring the enlistments in the Regular Army up to the extent we can get them.

The CHAIRMAN. I think if you will read the act of May 18 you will find that the President has ample authority to increase the Regular troops.

Gen. SHARPE. That is what I understand—that he is given the authority in that bill.

The CHAIRMAN. There was a limitation on it under the national-defense act, but the act of May 18 gave the President the right to make an expansion of the Regular forces.

The CHAIRMAN. The next item is "Additional pay for length of service, \$8,520,000." Of course, that is arrived at purely as a matter of law, and that would not affect, as I understand it, the increase of

the Regular Army at all. That applies only to the forces we have had prior to this increase?

Gen. SHARPE. Yes, sir.

Mr. KAHN. But why is there such a large increase—practically \$5,000,000?

Lieut. BRETT. That is caused by the fact that heretofore, whenever the National Guard has been in the service, they were not drafted under section 111 of the national-defense act. Section 111 says that the National Guard, when drafted into the service, shall have the same pay and allowances and length of service as the Regular Army, and the comptroller rendered a very long decision upon that.

Gen. SHARPE. That applies to officers, too.

Lieut. BRETT. It applies to both officers and enlisted men; and from the amount of National Guard service an enlisted man had on August 5, 1917—the day of the draft—we determine his enlistment period on that day. So that if a man had 20 years' service, if you divide that by 3, you would find that man would be in his seventh enlistment period.

Mr. KAHN. How does that work out in the case of a man in the Regular Army who has had National Guard service?

Lieut. BRETT. He can not get it.

Mr. KAHN. That is where the National Guard gets the better of it!

Lieut. BRETT. Yes.

The CHAIRMAN. Will you put a statement in the hearings showing to what this increase is due and the ruling which gave the decision that National Guardsmen were entitled to this?

Lieut. BRETT. Yes, sir.

(The matter referred to is attached:)

TREASURY DEPARTMENT.

OFFICE OF THE COMPTROLLER.

Washington, August 18, 1917.

The honorable the SECRETARY OF WAR.

SIR: By your reference of the 3d instant of a letter of the Quartermaster General of the Army, my decision is requested upon six questions with reference to continuous-service pay of enlisted men and longevity pay of officers of the National Guard drafted into the service of the United States August 5, 1917, under section 111 of the national-defense act of June 3, 1916 (39 Stat., 211).

The questions as stated by the Quartermaster General are as follows:

"(a) Will officers of the National Guard be entitled, from and including August 5, 1917, to count all service which they have had in the Organized Militia or National Guard, either as officers or enlisted men, in computing their longevity pay?

"(b) If the question (a) be answered in the affirmative, will the officers be entitled to count time which they may have been on the reserve list as enlisted men, either under State laws which may have provided for the furloughing of a soldier to the reserve or under section 69 of the act of June 3, 1916, for the purpose of longevity increase?

"(c) Will enlisted men of the National Guard or of the National Guard Reserve be entitled to count all continuous service which they have had in the Organized Militia or National Guard, whether on the active list or on the reserve list, up to and including August 4, 1917, for the purpose of continuous-service increase of pay from and after August 5, 1917; and if so, by what rule will their enlistment periods on August 5, 1917, be established? Example: Sergeant X first enlisted in the Organized Militia January 2, 1898; discharged

January 1, 1901; reenlisted January 2, 1901; discharged January 1, 1904; again enlisted January 2, 1905; discharged January 1, 1908; reenlisted January 2, 1908; discharged January 1, 1911; reenlisted January 2, 1911; discharged January 1, 1914; reenlisted January 2, 1914; called into Federal service June 19, 1916, and served therein until furloughed to the reserve, January 1, 1917; remained in the reserve until drafted into the service of the United States, August 5, 1917. What enlistment period is he serving in on August 5, 1917, and when will he pass into his next enlistment period, the present law providing that current enlistments shall remain in effect until the end of the present war, and assuming that the war will continue beyond the date of his change to next enlistment period?

"(d) Will enlisted men of the National Guard or of the National Guard Reserve whose service in such organizations is continuous with prior service in the Regular Army or Marine Corps be entitled to count all service in the Regular Army, Marine Corps, National Guard, and Organized Militia, whether active or in the reserve, up to and including August 4, 1917, for the purpose of continuous-service increase of pay from and after August 5, 1917? Example: Corporal Y enlisted in the Organized Militia July 1, 1898; furloughed to the State Reserve June 30, 1901; discharged from the State Reserve June 30, 1904; reenlisted in the Organized Militia July 1, 1904; discharged June 30, 1907; enlisted in Regular Army July 1, 1907; discharged June 30, 1910; enlisted in the Marine Corps July 1, 1910; discharged June 30, 1914; enlisted in National Guard July 1, 1914; furloughed to the Reserve under State law July 1, 1916; drafted into Federal service August 5, 1917. What enlistment period is he serving in on August 5, 1917, and when will he pass into the next enlistment period?

"(e) Will enlisted men who have been furloughed to the National Guard Reserve be entitled to count service with the reserves in the determination of their enlistment periods, or will such service, whether more or less than three months, serve simply to determine the continuity of their active service?

"(f) Will enlisted men of the National Guard or National Guard Reserve who have served one or more enlistments in the National Guard or Organized Militia, and who have remained out of the military service in National Guard or Regular Army more than three months before entering into an enlistment from which their service has been continuous, be entitled to count such service as one enlistment period, so as to be given an additional enlistment period for such prior service upon being drafted August 5, 1917; and, if so, what length of service must such prior service consist of, consideration being given to the fact that many States formerly provided for enlistments in the National Guard or Organized Militia of two years, and possibly some of one year; also to the prior laws providing for 'reenlisted pay periods.'"

The act of May 11, 1908 (35 Stat., 109), provides:

"That hereafter any soldier honorably discharged at the termination of an enlistment period who reenlists within three months thereafter shall be entitled to continuous-service pay as herein provided: * * * *Provided*, That hereafter any soldier honorably discharged at the termination of his first or any succeeding enlistment period who reenlists after the expiration of three months shall be regarded as in his second enlistment; that an enlistment shall not be regarded as complete until the soldier shall have made good any time lost during an enlistment period by unauthorized absences exceeding one day; but any soldier who receives an honorable discharge for the convenience of the Government after having served more than half of his enlistment shall be considered as having served an enlistment period within the meaning of this act; that the present enlistment period of men now in service shall be determined by the number of years' continuous service they have had at the date of approval of this act, under existing laws, counting three years to an enlistment, and the former service entitling an enlisted man to reenlisted pay under existing laws shall be counted as one enlistment period."

The longevity pay of officers in the Army of the United States is governed by sections 1262 and 1263, Revised Statutes, and the acts of June 18, 1873 (20 Stat., 130); February 24, 1881 (21 Stat., 346); and June 30, 1882 (22 Stat., 118). They are entitled to count all time served in the Army or Navy, or both, for longevity purposes. Their right to count service does not depend upon

its continuity. All legal service is counted for said purpose (23 Comp. Dec. 156).

Continuous-service pay of enlisted men of the Army prior to the act of May 11, 1908, was governed by sections 1281, 1282, and 1284, Revised Statutes, as amended by the act of August 1, 1894 (28 Stat., 216).

The act of August 24, 1912 (37 Stat., 590), provided that on and after November 1, 1912, all enlistments in the Regular Army shall be for a term of seven years, the first four years in active service with the colors and the last three years on furlough and with the Army Reserve, as provided for in the act. Said act also provided that for all enlistments accomplished thereafter four years shall be counted as an enlistment period in computing continuous-service pay.

Section 27 of the national-defense act of June 3, 1916 (39 Stat., 185), provides that on and after November 1, 1916, all enlistments in the Regular Army shall be for a term of seven years, the first three years in active service with the colors and the last four years in the Regular Army Reserve provided for in the act. Said act also provides that for all enlistments accomplished thereafter under the provisions of said act three years shall be counted as an enlistment period in computing continuous-service pay.

Sections 57 and 58 of the national-defense act (39 Stat., 157) provide for the composition of the militia and the National Guard.

Section 111 of the national-defense act of June 3, 1916 (39 Stat., 211), relates to the National Guard when drafted into the Federal service and provides:

"When Congress shall have authorized the use of the armed land forces of the United States for any purpose requiring the use of troops in excess of those of the Regular Army, the President may, under such regulations, including such physical examination as he may prescribe, draft into the military service of the United States, to serve therein for the period of the war, unless sooner discharged, any or all members of the National Guard and of the National Guard Reserves. All persons so drafted shall, from the date of their draft, stand discharged from the militia and shall from said date be subject to such laws and regulations for the government of the Army of the United States as may be applicable to members of the Volunteer Army, and shall be embodied in organizations corresponding as far as practicable to those of the Regular Army or shall be otherwise assigned as the President may direct. The commissioned officers of said organizations shall be appointed from among the members thereof, officers with rank not above that of colonel to be appointed by the President alone, and all other officers to be appointed by the President by and with the advice and consent of the Senate. Officers and enlisted men in the service of the United States under the terms of this section shall have the same pay and allowances as officers and enlisted men of the Regular Army of the same grades and the same prior service."

The act of May 18, 1917 (Public, No. 12), in section 1, authorizes the President—

"To draft into the military service of the United States, organize, and officer, in accordance with the provisions of section 111 of said national defense act, so far as the provisions of said section may be applicable and not inconsistent with the terms of this act, any or all members of the National Guard and of the National Guard Reserves; and said members so drafted into the military service of the United States shall serve therein for the period of the existing emergency, unless sooner discharged: *Provided*, That when so drafted the organization or units of the National Guard shall, so far as practicable, retain the State designations of their respective organizations."

Under the proclamation of the President of July 3, 1917, all members of the National Guard and all enlisted members of the National Guard Reserves (with certain exceptions) were drafted into the military service of the United States as of and from August 5, 1917, and the question to be determined is what prior service under the last sentence of section 111 of the act of June 3, 1916, may be counted in fixing the rate of pay at which the officers and men so drafted are entitled to be paid.

The provision of the law is that officers and enlisted men drafted into the Federal service shall receive the same pay and allowances as officers and enlisted men of the Regular Army "of the same grades and the same prior service."

In the decision of this office of August 28, 1916 (23 Comp. Dec.. 152), the view was indicated, though this was not the case before the office at the time, that the prior service contemplated by section 111 of the act of June 3, 1916, was the service in the Organized Militia or National Guard, including both Federal and State service and service in the Army and Navy.

The language of the statute might have been more explicit and words used which would have left no doubt of what was intended, instead of the use of such as have left the meaning more or less doubtful, as is evidently the case from the different views about it, but to my mind Congress could not have meant by the language "the same prior service" merely the *same character of service*. Rather, it seems to me it must have been intended by such language the *same length of service* as well in the militia or guard. (See in this connection sec. 10 of the act of May 18, 1917, Public, No. 12.)

It should be borne in mind that a very small percentage of the members of the National Guard over the country has had any service whatever in the Army or Navy and that the Guard as a whole has had only a few months in the Federal service under the call of the President, and to say that Congress was legislating for this small percentage only seems to me too literal a construction. I have no means of knowing what is the percentage of officers and men who have had service in the Army or Navy; but judging from what we know generally about the composition of the guard, the men, taken as they are from all elements of the community where a company or regiment exists, it must be remarkably small; and certainly Congress could not have been legislating for these only, to the exclusion of the far greater number who have had no such service.

The correct view of the law, in my opinion, is that by the language "the same prior service" is meant the same length of service in the militia or guard, including service in the Army and Navy, if any. The real difficulty comes when we undertake to determine the rate of pay of the enlisted men of the guard drafted into the Federal service, in view of the fact that the act of May 11, 1908, provides for enlistments, enlistment periods, honorable discharges, and reenlistments thereafter, most of which have little or no application in the case of the enlisted men of the Organized Militia or National Guard.

It is different with officers, inasmuch as their right to count service for increase-of-pay purposes does not depend upon enlistment periods or upon the continuity of the service. With them all legal service is counted for such purposes, and under the view I take of the law of June 3, 1916, officers of the National Guard drafted into the Federal service under section 111 of said act are entitled to have counted all legal service which they have had in the Organized Militia or National Guard and in the Army and Navy, if any, in computing their longevity pay.

If the enlisted men of the National Guard drafted into the Federal service under said section 111 of the act of June 3, 1916, are to be paid anything more than in their first enlistment period it must be by an application of the law of May 11, 1908, by analogy. The two acts must be considered together. It will be observed that the act of May 11, 1908, provides:

"That the present enlistment period of men now in service shall be determined by the number of years of continuous service they have had at the approval of this act, under existing laws, counting three years to an enlistment." and also that—

"The former service entitling men to reenlisted pay under existing laws shall be counted as one enlistment period."

Service entitling an enlisted man of the Army to reenlistment pay depends upon three things: (1) A service of five years; (2) an honorable discharge within or at the end of this period of service; (3) a reenlistment within three months (prior to Aug. 1, 1894, 30 days) from date of discharge. In other words, to place a soldier in the status of entitled to "reenlisted pay" he must have completed, prior to May 11, 1908, five years of continuous service, *including one reenlistment*, and then remained out of the service *more* than the time prescribed by law to entitle him to count his service as being continuous. The prescribed time prior to August 1, 1894, was 30 days; after that, three months. An enlisted man of the Organized Militia or National Guard fulfilling these conditions prior to May 11, 1908, is on draft into the Federal service entitled to be credited with one enlistment period. The cases will undoubtedly be few in

number where enlisted men of the National Guard drafted into the military service of the United States have had service of the nature required to place them in a "reenlisted-pay" status, but in the instances where they may have had such service I see no reason why they should not be given credit for one additional enlistment period therefor in determining their enlistment period on the date when drafted.

Under the view I have taken of the last sentence of section 111 of the act of June 3, 1916, in order to give effect to it so far as relates to enlisted men of the National Guard drafted into the Federal service under said section it will be necessary to adopt a rule similar to that prescribed by the act of May 11, 1908, for enlisted men then in service in the Army and applying such a rule here the enlistment period of a man drafted as of and from August 5, 1917, would be found by dividing the time actually served continuously by him in the Organized Militia or National Guard and including Army, Navy, or Marine Corps service prior to August 5, 1917, by 3, which is counting three years to an enlistment period. I can see no other way of giving effect to what I conceive to be the evident intent of Congress in enacting the legislation of June 3, 1916, in section 111. It seems evident to me that Congress intended that prior service in the militia or National Guard should count for continuous-service pay purposes. If any such enlisted man had service which was the equivalent of reenlisted-pay service in the Army that would entitle him to credit for one enlistment period.

I do not think, however, that service with or in the reserves should be counted in determining enlistment periods, but it may be counted for the purpose of determining the continuity of active service, whether such service with the reserves be more or less than three months. In other words, service with the reserves has the effect of making the active service continuous and nothing more.

In view of what has been said I will now take up and answer in their order the several questions submitted.

Question (a) is answered in the affirmative, with this qualification, however, that service as an enlisted man with the reserves may not be counted in computing the longevity pay of officers. The answer to this question answers question (b), which is in the negative.

Question (c) is answered by saying that enlisted men of the National Guard or of the National Guard Reserve will be entitled to count all continuous service they have had in the Organized Militia or National Guard on the active list *only* up to and including August 4, 1917, for the purpose of continuous-service increase of pay from and after August 5, 1917. The enlistment period in which serving on August 5, 1917, will be determined by dividing the time so served by 3, and the integer in the quotient will represent the number of enlistment periods to his credit. To illustrate: If the soldier has served seven years continuously with the Organized Militia or National Guard up to and including August 4, 1917, he will be entitled to credit for two enlistment periods served, and upon his draft into the Federal service on August 5, 1917, he will be entitled to be carried as in his third enlistment period.

In the example you cite, applying the principles announced above, I think the enlisted man will be entitled to be carried in his sixth enlistment period, which is arrived at by giving him credit for one enlistment period for his service from January 2, 1898, to Jan. 1, 1904, which is the equivalent of reenlisted-pay service, and four enlistment periods for his continuous active service from January 8, 1905, to January 1, 1917, when furloughed to the reserve, where he was when drafted into the Federal service.

As to when such enlisted man will pass into his next enlistment period, I am of opinion that the enlistment period in which he is found to be serving on August 5, 1917, will continue during the existing emergency unless sooner discharged. The enlistment period in which serving on August 5, 1917, having been determined, it continues until the termination of his service, which is for the existing emergency unless sooner discharged. (See 15 Comp. Dec., 82.)

Question (d) is answered by saying that enlisted men of the National Guard or of the National Guard Reserve whose service in such organizations is continuous with prior service in the Regular Army or Marine Corps will be entitled to count all active service in the Regular Army, Marine Corps, National Guard, and Organized Militia, up to and including August 4, 1917, for the purpose of continuous-service increase of pay from and after August 5, 1917.

In the example cited in said question, I am of the opinion that the enlisted man on his draft into the Federal service August 5, 1917, will be entitled to be

carried in his sixth-enlistment period. That is arrived at by giving him credit for 15 years continuous active service up to and including August 4, 1917, which is equivalent to five full enlistment periods. The answer to the question as to when he will pass into his next enlistment period is the same as under question (c) *supra*.

Question (e) is answered by saying that enlisted men who have been furloughed to the National Guard Reserves will not be entitled to count service with the reserves otherwise than to determine the continuity of their active service.

Question (f) is answered by saying that only that prior service in the Organized Militia or National Guard which has been continuous, or has been the equivalent of reenlisted pay service, may be counted in determining the enlistment period in which an enlisted man may be entitled to be carried upon his draft into the Federal service August 5, 1917, under section 111 of the act of June 3, 1916. According to your letter, there has been prior to June 3, 1916, no uniform period of enlistment in the Organized Militia or National Guard in the several States, and such being the case I do not think that the provision of the act of May 11, 1908, which is to the effect that a soldier honorably discharged at the termination of his first or any succeeding enlistment period who reenlists after the expiration of three months shall be regarded as in his second enlistment, can be made to apply by analogy.

Respectfully,

(Signed) W. W. WARWICK, *Comptroller*.

The CHAIRMAN. The next item is, "Pay of enlisted men of the Regular Army Reserve, \$20,865.57."

Lieut. BRETT. That is put in for the same reason that those two items for officers were put in, which we referred to this morning, so that in case peace came we would still be able to pay those three classes of men—the Regular Army Reserve, the Enlisted Reserve, and the National Guard.

Mr. KAHN. Under the provisions of the national-defense act?

Lieut. BRETT. Under the provisions of the national-defense act of June 3.

The CHAIRMAN. And the same thing is true in regard to the next item, "Pay of enlisted men of the Enlisted Reserve Corps, \$20,865.57"?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. And it is also true in regard to the next item, "Pay of enlisted men, National Guard \$20,865.57"?

Gen. SHARPE. That is the same.

Lieut. BRETT. That is the pay for their 25 per cent.

The CHAIRMAN. The next item is "Ordnance Department: Pay of 20,000 enlisted men, \$7,873,800." We had that up with the Chief of Ordnance.

Lieut. BRETT. We just take 1,612,245 and divide that into the Staff Corps and the line in a purely arbitrary manner.

Mr. KAHN. Do you make a purely arbitrary apportionment, or do you get these figures from the Chief of Ordnance?

Lieut. BRETT. No, sir. We asked the Chief of Ordnance how many men he wanted in 1919, and he said he wanted 46,000 men. These 20,000 men, of course, would not make that many.

Mr. KAHN. So you fixed the number at 20,000?

Lieut. BRETT. Yes, sir.

Mr. KAHN. You fixed it on the basis of the statement you made a few moments ago?

Lieut. BRETT. Yes, sir. We just divide it up, giving each one what we consider to be a due proportion of the 1,612,245. They have already in the Ordnance Department 15,120.

Mr. KAHN. Yes; but they tell us they need a total of 78,000.

Lieut. BRETT. They ought not to tell you that, and I will tell you why. This question was asked of Gen. Crozier on November 30, 1917, the number of enlisted men it is estimated that the Ordnance Department will require during the fiscal year 1919, and their reply is quoted, and this is signed by Gen. Crozier, by James L. Walsh, major, Ordnance Department. He says he wants in the Regular Army 8,840 ordnance sergeants, 720 sergeants, 1,200 corporals, 1,080 privates (first class), 2,160 privates; and for the National Army, 5,600 ordnance sergeants, 800 sergeants (first class), 4,000 privates, 7,200 corporals, 800 cooks, 7,200 privates (first class), and 14,400 privates, making a total of 40,000, and the 6,000 additional a total of 46,000. That is under date of December 8, 1917.

Mr. KAHN. That is on the very day on which he came up here to testify.

Mr. SHALLENBERGER. Was not that enlarged figure in anticipation of calling out 500,000 additional men, and not based on an army of a million and a half men?

Lieut. BRETT. The question was asked what he would require for 1919.

Mr. SHALLENBERGER. He had the same-sized army in contemplation when he made that reply to you. Have not all these replies been based on an army of a million and a half men?

Lieut. BRETT. No, sir; they are based on whatever the increase may be. In this case the statement was made that the Army might run to 3,000,000 men, and we wanted to know what they wanted for 1919, knowing that the first estimate was based on 3,000,000 men for 1919.

Mr. KAHN. The 46,000 he called for?

Lieut. BRETT. I do not know whether Gen. Crozier based his reply on the supposition that the Army would be composed of 1,612,245 or 3,000,000, but he was given an opportunity to say just how many enlisted men and how many commissioned officers he wanted for 1919, and that was the reply.

Mr. SHALLENBERGER. I recall that we were told that the first proposition was to make an estimate for three million and a half men, and then it was reduced to one million and a half; but I can not see how you get your figure. It seems to me if one bureau chief figures on a basis of an Army of 3,000,000 men and another bureau chief figures on a basis of an army of a million and a half men, we would not get intelligent estimates in that way of the number of men any bureau chief wanted.

Lieut. BRETT. Until the complete enlisted strength for the particular year is given, the bureau chief is working more or less in the dark as to the number of men which he may require in his bureau.

Mr. SHALLENBERGER. I do not recall how that was given. It occurred to me that possibly the larger figure was for the larger army and that the smaller figure was based on an army of a million and a half men.

Lieut. BRETT. It is possible he so understood.

Capt. DALY. The Quartermaster General, in his original estimate, based it on 3,000,000 men, and that estimate was returned by the War Department with instructions to make the estimate for 1,612,245 men, and the estimate as it has been submitted covers 1,612,245 men.

Subsequently we were directed to submit a supplemental estimate providing for the supplies that it would take more than six months to obtain, based on an army of 3,000,000 men, and the supplemental estimate included those things, but it does not include pay based on an army of 3,000,000 men.

Mr. KAHN. Have you submitted to the House supplemental estimates on these various items?

Capt. DALY. Yes, sir; for three things—regular supplies, Army transportation, and clothing and camp and garrison equipment.

Mr. KAHN. When did you send those in?

Capt. DALY. They were sent in early in December.

The CHAIRMAN. Those are the items printed in italics under those particular items in this bill before you. Those are the only three items I have received, and they are printed in italics in that part of the bill.

Lieut. BRETT. There is one on page 32.

Mr. KAHN. I wanted to know whether or not you have put in any supplemental estimates for pay?

Capt. DALY. No, sir; the pay is based on an army of 1,612,245 men.

Gen. SHARPE. We were instructed not to do that.

Mr. KAHN. If before the beginning of the next fiscal year—that is, before July 1, 1918—the second increment of the National Army should be called into service these estimates would not be sufficient?

Gen. SHARPE. They would not.

Mr. KAHN. You would practically have a deficiency with the beginning of the fiscal year?

Gen. SHARPE. I have a table which shows a statement of the estimates for the Army bill of 1919, showing the original estimate made was for 3,000,000 men, the estimate as modified by the War Department, and then the additional amount which we added to the modified estimate, and then the total of the modified estimate, and then the difference between the total of the modified estimate and the total for 3,000,000 men. I think perhaps the committee would like to have that in the hearings. I also have the two memoranda limiting the number of enlisted men for whom we were to estimate.

Mr. KAHN. I think it might be well to have them put in the hearings.

Gen. SHARPE. It makes the total appropriations for the 3,000,000 men \$5,335,641,092 and for 1,612,245 men \$3,324,991,583.68, or a difference of \$2,011,948,071.20.

(The table referred to is as follows:)

OCTOBER 19, 1917.

Memorandum for the Quartermaster General:

The Secretary of War desires that you submit a modified estimate based on the assumption of 1,500,000 men to be maintained in the Military Establishment during the fiscal year 1918-19.

TASKER H. BLISS,
General, Chief of Staff.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, October 22, 1917.

Memorandum for the Quartermaster General:

Referring to the memorandum dated October 19, the number of men called for by the program of the Aviation Section, Signal Corps, in France, is 11,941 officers and 112,245 men. These should be in addition to the 1,500,000 men referred to in memorandum of October 19.

TASKER H. BLISS,
General, Chief of Staff.

Statement of estimate, Army bill, 1919.

Designation of appropriations.	Original estimate, 1919, as submitted by Quartermaster General.	Estimate as modified by the War Department.	Amount of reduction.
Pay, etc., of the Army.....	\$1,002,580,122.99	\$1,003,933,676.04	\$688,646,446.95
Subsistence of the Army.....	424,237,514.52	298,405,655.57	125,831,858.95

Purchase of land, addition to Jeffersonville Depot.....			23,000.00
Total.....	1,298,662.30	1,122,713,106.81	4,447,704,690.49

¹ No reduction made in these estimates for the reason that the amounts originally asked for therein are not based entirely on strength, but to meet the requirements based on existing conditions rather than strength.

Mr. GREENE. Gen. Sharpe, do you find from experience with these appropriation bills in fixing an estimate on a given number of men at a time when the Army is being recruited that the figure may be less than you have expected, but that the total cost usually averages up as it runs through the year, because some of the men may be in for a much less period, and the money will be sufficient to cover the final period, and that you have a shorter period at the end?

Gen. SHARPE. It has been in the past estimated on a fixed strength of the Army, and now with the enormous increments coming in I do not think there will be any difficulty.

Mr. GREENE. I anticipated just that answer, and that is why I was trying to figure out whether there could have been such an idea in estimating for only 46,000 ordnance men when it was their expectation to have nearly twice that number, whether it was thought that that was an error and that the amount named would be sufficient or whether it was mostly guesswork?

Gen. SHARPE. No; we were trying to allot to the different bureaus what we considered their proportional number of the 1,612,245 men.

Mr. GREENE. That is, 20,000 for the Ordnance Bureau?

Gen. SHARPE. Yes, sir.

Mr. GREENE. I am talking about the 46,000 asked for by the Chief of Ordnance.

Lieut. BRETT. When Gen. Crozier answered that question he had before him the directions in reference to those supplies which could not be procured within six months, and that provision should be made for 3,000,000 men.

Mr. GREENE. That is in line with what I have said. If you anticipate a fixed total, which might be 40,000 and knew they would come along progressively so that only a few of them would be in for six

months, then the pay would be fixed on the basis of 40,000 men, and perhaps under some circumstances you can tell what the necessary amount would be for the next 6 months or the next 12 months, but in times like this I do not see how it can be done.

Capt. DALY. Along that line the Committee on Appropriations figured the same way, and they cut our estimates of June 15 and of October 6 by \$892,000,000. We have a deficiency estimate in now for a little more than that amount. If they had appropriated all we had asked for, our present deficiency estimate would probably be only \$4,000,000 or \$5,000,000.

Mr. GREENE. That exposes the fallacy of trying to reduce a thing to a mathematical ratio in times like these.

The CHAIRMAN. We have got to have something to go on when we get on the floor of the House.

Lieut. BRETT. We were requested to put into the hearings a statement showing what it would cost for each additional 500,000 men for pay, if it is decided to increase the appropriations before the bill is passed, and it is contemplated by the War Department to call the second draft. In answer to that, if you put in \$290,000,000 for that purpose it will cover each additional 500,000 men.

Mr. QUIN. How many men are they going to take on the next draft on February 15?

Lieut. BRETT. The selective draft law calls for men in bunches of 500,000 each; that is, apart from the special and technical troops.

The CHAIRMAN. The next item is "Quartermaster's Corps: Pay of 100,000 enlisted men, \$39,369,000."

Lieut. BRETT. We had on the 30th of November in the Quartermaster Corps 62,395 men.

Gen. SHARPE. Maj. Davis can give you the figures under our present allotment.

Maj. DAVIS. The authorized strength of the Quartermaster Corps to-day is 154,776. We have in the Quartermaster Corps, estimated to December 31, 109,253.

Mr. KAHN. That is on December 31?

Maj. DAVIS. That is estimated; yes, sir. It is not exact.

The CHAIRMAN. You are not asking for as many as you have?

Gen. SHARPE. We could not, with the Army fixed at a strength of 1,612,245 men.

The CHAIRMAN. Is that based on that sized army?

Gen. SHARPE. As far as we could apportion it.

The CHAIRMAN. How do you arrive at that basis for the number of men in the Quartermaster Corps in that sized army?

Gen. SHARPE. How do we arrive actually at the number of men we have been allotted?

The CHAIRMAN. Yes.

Gen. SHARPE. By the organizations we have been authorized to establish. Maj. Davis can give you the details in regard to that.

Maj. DAVIS. The authorized strength of the Quartermaster Corps, Regular Army, under section 9 of the national defense act, is fixed by the President at 15,000; the strength of the Quartermaster Corps of the National Guard is 9,510; the authorized miscellaneous strength—that is to say, men who do not pertain to any special and technical units—to-day is 55,239; and the remainder allowed out of any special

and any technical units, which are growing from day to day, in accordance with the recommendations made by Gen. Pershing, and also because of certain conditions that arise in this country that necessitate militarizing a peace-time activity that might have formerly been furnished in some other way by the hire of civilian employees, for instance.

So that our strengths are constantly growing, as the result of men that are coming up, and the militarizing of special units in this country, and all units that have gone abroad.

The CHAIRMAN. How many of those special units have you organized up to date?

Maj. DAVIS. We have about 22 different kinds of units.

The CHAIRMAN. Will you put a list of those in the record, and the number in each?

Maj. DAVIS. Yes, sir.

Mr. KAHN. Evidently, General, this estimate of yours begins with a deficiency right now?

Gen. SHARPE. Yes, sir. You see, Mr. Kahn, the figures we have here were not received until after the estimates went in. That is one explanation of it. But we could not exceed the number of men for whom we were directed to estimate.

Mr. KAHN. What is going to be the policy of the bureau? Are you going to put in a supplemental estimate, so that this committee can pass upon it, or are you going to the Committee on Appropriations and ask for a deficiency?

Gen. SHARPE. We would like to put in a supplemental estimate.

Mr. KAHN. Do you know how many men of these 109,253 you have estimated you had on December 31 are of the draft age?

Maj. DAVIS. I have no figures for that, sir. Taking the actual strength of the Quartermaster Corps on November 30 and the strength of the corps on December 31, you will recall that covers a period when men of the draft age were permitted to enlist, and it shows a net gain in two months—in reality a month and a half, because there were no enlistments of men of the draft age after December 15—of 46,858. I think it is reasonable to assume that about 99 per cent of those were of the draft age.

Mr. KAHN. They had a right to select the service they wanted to go into?

Maj. DAVIS. Yes, sir.

Mr. KAHN. If you carry out the law and get your full authorized strength of 164,776 men, you will have to resort hereafter to men who are over or under the draft age?

Maj. DAVIS. Except, sir, that under section 150 of the selective-service regulations men of the draft ages may ask for induction, out of order, provided that they are not in the current quota, or provided that any condition that places them in classes 2, 3, or 4 is removed, may come in the service and select the branch of the service that they desire, if there is a vacancy in that branch.

Mr. KAHN. And they still can exercise the right of selection?

Maj. DAVIS. Yes, sir.

Mr. FIELDS. In that connection, an order has been issued——

Mr. MORIN. That has been stopped by telegraph.

Maj. DAVIS. It was stopped by the Quartermaster Corps because our camp was quarantined.

Mr. MORIN. The orders I have seen stopped it on all units except the bricklayers in the Ordnance Department.

We had 18 men in one of the boards in Pittsburgh, and they stopped them all. It went out on the 2d of January. We had 5 men to go to the camp that night, and they were taken off the train.

Maj. DAVIS. I did not know that other bureaus had taken steps to stop it.

Mr. MORIN. It came through from Gen. Crowder, and he said that that was done on advice of the staff officers.

Mr. KAHN. Are there many men offering to enlist in the Quartermaster Corps who are above the draft age?

Maj. DAVIS. Quite a number, sir.

Mr. KAHN. Do you enlist men above the draft age who have special qualifications?

Maj. DAVIS. Yes, sir.

Mr. KAHN. As chauffeurs, for instance?

Maj. DAVIS. We make all enlistments in the grade of private and send the men to our quartermaster's training camp, and there an occupational census is made and the men are placed in the part of the camp they are best fitted for, and they are given instruction, if instruction is needed—and some military instruction is always needed. Later they are promoted to such vacancies as may exist, in accordance with their merit.

Mr. KAHN. How many men can you accommodate at Jacksonville?

Maj. DAVIS. We have construction there for 12,500 enlisted men.

Mr. KAHN. That would take care of only a very small percentage of your total enlisted strength.

Maj. DAVIS. That is quite true; but organizations are being made up constantly that are being sent over sea. Again, there are quite a number of men with the divisions; there are 474 men of the Quartermaster Corps with each division—10 with its headquarters and 461 with the supply train.

In addition to that, each of the camps requires from 150 up to as high as 959 men for the operation of the camp and its utilities. Those numbers vary according to the utilities installed, or according to whatever utilities are called for as a result of the supply of water or heat and light, as the case might be.

Then, again, Gen. Pershing's requirements in the phases in which he has called for troops take a large number.

The ports of embarkation, the established posts throughout the country, the quartermaster mechanical repairs shops, the master repair shops (of which we have three in the United States), the motor-truck repair units, and the ship repair company at the port of embarkation, and others I might mention, if you wish, take a large number of men.

Mr. KAHN. Of course, in all those activities you try to get men who have had previous experience?

Maj. DAVIS. Yes, sir. In addition to that, one item I left out was the bakery company of 101 men. The number of bakers and cooks undergoing instructions, amounting to a very large number, are scattered throughout the country, and we have a large reservoir at Camp Johnston, where the men are undergoing instruction.

Mr. KAHN. Is that a camp of embarkation?

Maj. DAVIS. Not as yet.

Mr. KAHN. You send the boys from Jacksonville to the various ports of the country, and then embark them to go abroad.

Gen. SHARPE. You may be interested, in this connection, in the bakery companies and schools for cooks and bakers, which we have at the National Army camps. We are also establishing those same schools at the National Guard camps, and we are in hopes that with the establishment of those schools it will not be necessary to have to resort, as we did when the National Army was called out, to the employment of a number of civilians as cooks. We will have these men from the different schools to handle the new draft. That saves us about \$100,000 on account of these civilians alone. We save that much money by using our own men, who have been trained.

Maj. DAVIS. Of the 11,677 men that we had at Camp Joseph E. Johnson on December 29 a report just received shows that there were only 366 unskilled, and the remainder of them were skilled men.

Mr. KAHN. How were they designated for that training?

Maj. DAVIS. All the men who enlist are sent there from the recruit depots, and all men inducted while the induction process was on, and when it opens again, are sent there from their local boards.

Mr. KAHN. The local boards sent them?

Maj. DAVIS. Yes, sir.

Mr. KAHN. Have you any commissioned officers in training there at all?

Gen. SHARPE. Yes, sir.

Col. DALLAM. There are 1,119 commissioned officers.

Mr. FIELDS. How long do you keep them in training before you assign them?

Col. DALLAM. Six weeks for the officers.

Mr. FIELDS. How long for the men.

Col. DALLAM. And 30 days for the men.

Mr. KAHN. Can you train them in 30 days to perform the multifarious duties of the Quartermaster's Department?

Maj. DAVIS. By reason of our classification, and the taking of the occupational census of the men, we can place them in lines that they have been trained for in civil life. It requires practical military training to prepare them for our service.

Gen. SHARPE. As an illustration take the chauffeurs. Probably they have had experience before they come to us, but the discipline is lacking, and they do not know how to make use of a map in driving. So there is a map posted down there in the school, and the towns and crossroads are given French names, and the man is told to drive in the motor up through that point [indicating] and up to that point there [indicating], giving the names, and he is given a map, and he has to meet off there another column coming in there [indicating], and the other column is sent in the other direction coming down. He has got to get there at the hour designated, and he can not get any help around there. It is only by using a map that he can do it. The names are absolutely foreign. They do not even know that the crossroads have a name. That is done to familiarize them with the use of maps in driving on the roads.

Mr. KAHN. Are all the truck companies in the Army manned by men from the Quartermaster Corps?

Maj. DAVIS. Only those pertaining to the supply trains and truck companies of the Army. We have to have them for the supply columns along the line of communications.

Mr. TILSON. I would like to ask Gen. Sharpe about his attitude toward skilled men in the National Army who are already in the National Army and wish to be transferred to the Quartermaster Corps in order to be employed in their particular line.

Gen. SHARPE. We try to get them, but they objected to the transfer and objected to taking so many men from the draft for that purpose.

Maj. DAVIS. We took a list of a large number, not only in our corps, but other staff corps, of skilled men, and numerous complaints were had from the division commanders, and under date of November 19 the Secretary of War issued instructions that no more men would be taken from the drafted divisions.

Mr. TILSON. Regardless of their skill or qualifications for any particular work, they must remain in the line, although they might be unfitted for such work, and especially fitted for a particular work in the Quartermaster Corps. Is that correct?

Maj. DAVIS. We can not initiate action. If the man himself initiates the action and his request bears the approval of the local commanding officer and the division commander, the transfer can be effected. We can not initiate the action.

Mr. TILSON. You can not ask for that man by name?

Maj. DAVIS. No, sir.

Gen. SHARPE. It was objected to because it was said that these organizations depended upon John Jones, and if you took him away it would break up the organization.

Maj. DAVIS. If we wish 25 men of a given trade they will gladly give us those men from their divisions, from their own records, thereby saving men that might be vital to their organization.

Mr. TILSON. It seems to me that there is a big reservoir for men of that special work, but they retain them in the line when they are particularly fitted for work in the Quartermaster Corps.

Mr. GREENE. This line of questioning brings out a matter of policy which was referred to this morning, and you may be disposed to amplify it a little.

Under cover, perhaps, of finding the service in your department more in line with their past experience in civil life, it is noticeable that there are a good many men who seem to have some sort of instinctive dread of the trenches, and they are now qualified as most remarkable artisans and craftsmen of one kind or another. Do you find it embarrasses you somewhat to have a great number of applications for the Quartermaster Corps on the supposition that it is more or less a noncombatant arm of the Army?

Gen. SHARPE. Yes, Mr. Greene, it is very embarrassing. While it is not a combatant arm of the service, the ambulance service is the arm of the service where a man is under fire very constantly, without any opportunity of returning the fire. It requires a much higher degree of courage for a man to bear that kind of attack than an attack in which he has an opportunity to hit back.

Mr. GREENE. I can understand, because I have endeavored to explain to men that instead of avoiding that danger, they were running into it. Of course there is always that popular wrong impression of the different activities of the service, anyway, and there are a few of our friends that we have felt were ready to avoid it, and what I wanted to get at was whether you are now so well informed as to some of those activities of the men who, under the cover of patriotism, want to avoid fighting, that you are able to detect them, and in some way to turn away from the Quartermaster Corps the men who might otherwise get in there but not be fitted for that special service, in order to avoid the risk and hazard of the trenches.

Gen. SHARPE. Personally, I have not seen many of those men. Maj. Davis may have seen them.

Maj. DAVIS. During the period from December 1 to 15, when our office was bombarded from every side, there were, perhaps, a very large percentage of men who were gun shy. Their every effort seemed to be to get into the Quartermaster Corps. Of necessity, it

was very hard to charge an individual with that. If he came to us with a story as to his abilities, and upon questioning we found him to have those qualifications, and to all intents and purposes they appeared to be perfectly honest, your opinion might be that he wanted to avoid service at the front. I have no doubt but that there were a number who did come in that 44,000 during the period of about a month and a half who thought they were evading the front-line service. But, on the other hand, they will probably find that it is quite the opposite.

Mr. GREENE. Having that in mind, and the decided gain within the last few months, with the higher development of your organization, are you beginning to think somewhat of the need of reorganization and weeding out of the personnel as men are found to become unfit who had tried to get into this special line of work because of this fear which they tried to conceal, but who are not fitted for that service?

Maj. DAVIS. That particular objection hardly develops, because if a man feels that way and gets in with a body of men who are going over the spirit generally is to want to go over and get in the service. That particular type of man will not dare to show that characteristic, and it will not really develop in service. It may develop in isolated cases, but as yet none has developed.

Mr. GREENE. Being associated with that class of men, but not having a proper purpose in view, he will, in your opinion, partake of the atmosphere and have a change of heart?

Maj. DAVIS. Practically so. It is very likely that because of his life and association with these men he will get the spirit of the men who surround him. I believe we will find that to be true.

Mr. GREENE. My questions were intended to bring out whether you were keeping in mind what we see in civil life, a very manifest direction toward your corps.

The CHAIRMAN. The next item is "additional pay for length of service, \$270,000." Will you put a statement in the record in regard to that?

Lieut. BRETT. Yes, sir.

(The statement desired is as follows:)

The cost report for the fiscal year 1917—received after this estimate went in—shows as actually paid out for this item (service pay of enlisted men, Quartermaster Corps) \$343,597.27. The amount appropriated for 1918 was \$400,000, of which \$300,000 was appropriated in the act of May 12, 1917, and \$100,000 in the act of June 15, 1917. We will need at least \$400,000 for 1919.

Mr. KAHN. There is a little reduction there, from \$300,000 to \$270,000.

Gen. SHARPE. That is for the same reason given heretofore in reference to previous items. It may not be used.

Lieut. BRETT. That is based on what we will need. These are based on the costs in the past.

The CHAIRMAN. The next item is, "Signal Corps: Pay of 153,945 enlisted men, \$60,606,607.05."

Lieut. BRETT. That is based on 41,700 enlisted men in the Signal Corps proper, which amounts to \$16,416,873; 112,245 enlisted men in the aviation section, amounting to \$44,189,734.05, making a total of \$60,606,607.05.

Mr. TILSON. What do you mean by the next item, "Aviation increase, \$4,916,800"?

Lieut. BRETT. That is for the increase allowed under the act of July 18, 1914, and the act of June 3, 1916.

Mr. TILSON. That is for additional pay?

Lieut. BRETT. Fifty per cent.

The CHAIRMAN. How many men are there in that service now?

Lieut. BRETT. The Signal Corps proper, on November 30, had 21,875, and the Aviation Section had 41,988. They want for 1919, 90,000 in the Signal Corps proper, and 168,708 men in the Aviation Section. Increase of pay because of aviation is provided for 20,000 men.

The CHAIRMAN. That is not based on the size of the Army in general, is it?

Lieut. BRETT. I think that is based on an Army of 3,000,000 men.

The CHAIRMAN. So that this appropriation would provide for a Signal Corps for an Army of 3,000,000 men?

Lieut. BRETT. No; this appropriation covers the Signal Corps for an Army of 1,612,245 men, the amount of the estimate being \$60,606,607.05.

Mr. SHALLENBERGER. How many men are provided for the Signal Corps proper in this estimate?

Lieut. BRETT. The actual strength——

Mr. SHALLENBERGER. What is the estimate?

Lieut. BRETT. The estimate for the Signal Corps proper is 41,700.

Mr. SHALLENBERGER. And the actual number?

Lieut. BRETT. The actual number is 21,875.

Mr. FIELDS. How are they going to get those men?

Lieut. BRETT. They can get them either by voluntary enlistments or from the selective draft.

Mr. FIELDS. Men of the draft age can not enlist in the Signal Corps, can they?

Lieut. BRETT. Yes, sir.

Mr. TILSON. That is the one exception; they can enlist at any time.

Mr. OLNEY. They can be transferred to the Signal Corps from the draft Army?

Lieut. BRETT. Yes.

Mr. MORIN. That refers to the order I spoke about a while ago, the order of January 2. We had 18 men in one local board in Pittsburgh, and they could not get in. They stopped them from getting in.

Mr. FIELDS. I know several men who have been trying to get in, but who have not been able to get in yet.

Mr. MORIN. I know hundreds who have been trying to get in.

Maj. DAVIS. I am sure you will find that that is only a temporary suspension.

Mr. MORIN. A lot of men who have been taken into the camp asked to be transferred, and out of about 100 I think only 4 effected a transfer. As soon as a captain says "No; I do not want to break up my company," that ends it. I have been making a special effort to get those Pittsburgh men transferred, and I saw Gen. Crowder, and he was astonished that they had refused to transfer them.

Mr. OLNEY. I think probably one explanation is that it has been because there are so many applications that they can not take care of them. I know in Boston they are 2,000 applications behind.

Mr. MORIN. They need them in the Army.

Mr. OLNEY. That is true.

Mr. MORIN. I am speaking of privates whom they do not put in the school.

Mr. OLNEY. I am speaking of the privates in the nonflying service.

Mr. MORIN. They need men of all kinds.

Mr. ANTHONY. It is only aviators who can be transferred.

Mr. MORIN. There is a squadron of 10 men for each flyer, and the men in those squadrons do work of all kinds.

The CHAIRMAN. That is a matter of policy for the Signal Corps.

Mr. FIELDS. If you can not give to me this information now, I would like to have you put it in the record. When a man is taken in under the draft, and he requests to go to the Aviation Section, is he given that privilege or is he put into the line?

Gen. SHARPE. I understand he has to make his choice, and he is assigned where he has asked to go.

Mr. KAHN. Would he have to make application for transfer through his commanding officer?

Gen. SHARPE. That is what I understand; yes, sir.

Mr. MORIN. Through his colonel and through his captain.

Mr. FIELDS. I have a constituent who has been in the Medical Department, who has been trying to get into the Aviation Section since last spring, and he has not yet been able to make it.

Mr. OLNEY. Is he a flyer?

Mr. FIELDS. No.

Mr. OLNEY. That is quite different.

Mr. KAHN. This item, as I understand you, takes care of the forces that would be required with an army of 1,612,245 men?

Gen. SHARPE. Yes, sir.

Mr. KAHN. If an additional increment of the National Army is called into the service before the next fiscal year, this item, like all the rest, would begin with a deficit?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. Have you fixed the number of men in the Signal Corps, including the Aviation Section, according to each division of the Army?

Lieut. BRETT. Yes.

The CHAIRMAN. Would you have too many men in the Signal Corps in proportion to a division?

Lieut. BRETT. Yes, sir; there is one field signal battalion which is with the division. That is according to the table of organization.

The CHAIRMAN. How many men are in that?

Lieut. BRETT. Two hundred and forty-one men and seven enlisted medical men.

The CHAIRMAN. With each division?

Lieut. BRETT. With each division; yes, sir.

Mr. GREENE. There is sometimes a spirit of criticism in civil life as to the multiplicity of officers, and it is difficult for the lay mind to understand why a man who works, for instance, as a stevedore, which is associated in their minds with a simple kind of toil, should be a

sergeant, first class, or a second lieutenant. I think the committee understands, but the record might be well employed in giving an explanation, to be quoted. These men are given these grades, even up to that of second lieutenant, in order to establish not only the military command necessary to such a kind of semimilitary employment, but for pay purposes. So that a second lieutenant stevedore practically amounts to a foreman getting that pay. That is how it comes up, is it not?

Gen. SHARPE. Yes, sir.

Mr. GREENE. I think it would be well to have such an explanation to give to our friends on the floor, who sometimes think of a second lieutenant as a man of blood and iron with a cannon on his shoulder, and they do not see why he should be a stevedore.

Gen. SHARPE. It is a special organization, and different entirely from the ordinary laborer's work, requiring men of technical training in the use of the various machines for unloading the vessels and also requiring a knowledge of how to load the vessel itself. Of course, the foremen must be skilled men in that particular line of work, and they must be paid salaries which the work entitles them to. The work naturally develops, in the main, in operating various machines on the dock itself.

Mr. GREENE. I had in mind simply that the statement might show that the use of the military grades and the pay was something in the matter of bringing it into the military organization and does not imply a military command, so far as his place in the organization is concerned.

Gen. SHARPE. It does not in any of our organizations. That is one of the unfortunate things we have always had in our service, where we have maintained a military title instead of a title indicative of the work which is done. It would have been much better if we had adopted, as is the case in other armies, a title which recognizes the importance of the work done.

Take, for instance, the French Army, if I may. Officers go into that corps from the line of the army, and they are graduates of a school which is provided for that corps.

After graduation a man then enters the corps as an assistant intendant. He goes in that corps because of the more rapid promotion in the line, and because he probably likes that work.

Of two captains, the senior one in the line who went into the staff and then became an assistant intendant would salute his junior the day he met him on the street after he got his position, recognizing the subordination of supply to the command; but as an officer this man wears a distinct uniform, and he gets his promotion only in that corps.

They are never addressed by their military title. They are addressed either as field intendant or subintendant. Their rank in the military hierarchy starts with the grade of captain and runs to major general, and they are never addressed by the military titles at all, and therefore the importance of the work which the men are doing is recognized at once. We have, unfortunately, always had the other idea, that we ought to give military titles.

Mr. KAHN. I think the German Army has a plan of that kind.

Gen. SHARPE. In the German Army it is a little different. The corps is made up of military officials and civilians. They are no officers in that branch of the service in the German Army.

Mr. KAHN. In the quartermaster department?

Gen. SHARPE. Yes; they wear a uniform and are saluted by the enlisted men as any other officer. Personally, I can not tell their uniforms apart. They look exactly alike to me, except that the men in the quartermaster department do not wear spurs. This is the only way I can tell them from the line officers. The uniforms look identically the same, except for that exception. They are military officials only, but the great majority of that corps is made up of civilians.

Mr. KAHN. Just as it is in our Army?

Gen. SHARPE. No; there are some of the minor officials in this corps who are civilians. The military officials are heads of the corps. In the English Army it is more like ours, except that they do not have any detailed officers; they are all permanent officers in their corps.

Mr. KAHN. By the way, how has the detail system worked out in this war?

Gen. SHARPE. The detail system has ruined the Quartermaster Department. We practically lost 66 men when the war started.

Mr. KAHN. How?

Gen. SHARPE. By assignment to line positions in the National Army.

Mr. KAHN. How long had those men been with the Quartermaster Corps?

Gen. SHARPE. From two to four years.

Mr. KAHN. And they had required a great deal of very useful information?

Gen. SHARPE. Very useful; yes, sir.

Mr. KAHN. That could have been utilized to great advantage in preparing this country for this war?

Gen. SHARPE. It would have been very useful.

Mr. KAHN. But when the war broke out they preferred to be transferred to their positions in the line?

Gen. SHARPE. They were transferred sometimes without being given any discretion, and they were transferred because if they had not been they would lose their rank and be jumped over.

Mr. KAHN. That materially interfered with the efficiency of the corps?

Gen. SHARPE. It very seriously crippled the Quartermaster's Department.

Mr. KAHN. Was the order of the Secretary of War or the Chief of Staff to the effect that no staff officer should get promotion responsible for that condition? You recall that at first—

Gen. SHARPE. No permanent officers of the staff.

Mr. KAHN. Was that only for permanent officers?

Gen. SHARPE. Detailed officers were given the advanced rank in the National Army.

Mr. KAHN. In the organizations they joined?

Gen. SHARPE. Yes, sir.

Mr. KAHN. But the detail system, when the war broke out, practically broke down, or at least it disrupted your Quartermaster Corps in a measure?

Gen. SHARPE. Just the same as it did before we had the detail system in the Spanish War, when they took men from the different staff departments and gave them volunteer commissions.

Mr. KAHN. Is there any way of stopping that kind of a performance?

Gen. SHARPE. I do not know of any, except to stop the detail system, except in the lower grades, as they have in the Ordnance Department. I think that is a very excellent detail system, because you can get good men; and if they are responsive and like your work, you can use them on. But with us we must lose them after four years and can not get them back until two years later.

Mr. KAHN. Have you recommended any change in legislation in reference to that matter?

Gen. SHARPE. I have recommended that the law as it affects the Ordnance Department shall be applied to our department. It is a very serious condition which we would have had if it had not been that there were about 50 permanent officers in the corps. But that is not enough to disburse this enormous sum of money we have to disburse, amounting to over \$4,000,000,000, or three times the amount of money which it cost to run the Government a year before the war commenced.

Mr. KAHN. According to your statement you really lost more detailed officers than you had permanent officers in the corps?

Gen. SHARPE. Yes; we lost 66 officers. I think some of them have gotten back, but we have not gotten them all back.

Mr. SHALLENBERGER. Is this provision a matter of legislation?

Gen. SHARPE. Yes; it is a matter of legislation.

Mr. SHALLENBERGER. It would require congressional legislation to correct it?

Gen. SHARPE. Yes, sir.

Mr. CALDWELL. Gen. Sharpe, I remember very distinctly that at the time we had the Mexican trouble you told us of the plans you had in the Quartermaster Department, that you had worked out three or four different sets of things that could be done in the event of hostilities occurring, so that the next morning after it was decided to send a force into Mexico everybody would know exactly where they were going, or something of that kind. Did we have such a plan as that for this war?

Gen. SHARPE. Not in the Quartermaster Department. We did not expect such a thing as this. I think all our studies have been confined to an invasion of Mexico, or possibly an expedition to Cuba or some of the South American States.

I do not think before 1914, or probably much later than that, anyone expected any such war as this that this country would be engaged in.

The CHAIRMAN. The next item is "additional pay for length of service, \$150,000."

Gen. SHARPE. That is based on the law.

Lieut. BRETT. It is all figured up, with the number of men they are supposed to have in the service, and the length of service that entitles them to service pay.

The CHAIRMAN. Will you put in the record the number of those men?

Lieut. BRETT. Yes, sir. The estimate for service pay is based on 2,572, with sufficient service to entitle them to service pay. The average amount for service pay for enlisted men of the Signal Corps is \$4.86 per month.

The CHAIRMAN. The next item is, "Medical Department: Pay of 124,108 enlisted men, \$49,146,078.52."

Gen. SHARPE. That is, for 124,108 enlisted men.

The CHAIRMAN. That is based on an Army of 1,612,245 men?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. How many men are actually in the Medical Department now?

Lieut. BRETT. On November 30 they had 75,000 men.

The CHAIRMAN. Is that the latest figure you have?

Lieut. BRETT. Yes, sir.

Mr. SHALLENBERGER. Did you give us the number they asked you to furnish?

Lieut. BRETT. They asked for 10 per cent of the total strength of the Army.

Mr. SHALLENBERGER. That would be 161,000 men.

Lieut. BRETT. Yes, sir.

Mr. QUIN. What do the 75,000 men in the Medical Department consist of?

Lieut. BRETT. Those are the enlisted men in the Medical Department, consisting of hospital sergeants and on down to privates. They are hospital attendants.

Mr. KAHN. Some of them are ambulance drivers?

Lieut. BRETT. Yes, sir. They perform all the services that enlisted men perform in the Medical Department.

Mr. TILSON. That includes sanitary troops?

Lieut. BRETT. Yes.

Mr. QUIN. Does that also include the doctors?

Lieut. BRETT. No, sir; the doctors are commissioned.

Mr. KAHN. Is this department also affected by that order that no man shall enlist of draft age after December 15?

Maj. DAVIS. That affects all corps.

Mr. KAHN. Hereafter they can only fill up the number they want in excess of the 75,000 they now have by using men who are over the draft age or who are under 21 years of age?

Maj. DAVIS. Or by induction. The process of induction is practically enlistment, except that it is performed through the local board instead of through the recruiting officer. It is practically the same thing.

Mr. KAHN. In this item, too, if the Army is increased there would be a deficiency?

Gen. SHARPE. Yes, sir; under their proportion of 10 per cent they would be entitled to 300,000 men.

Mr. KAHN. If you have an Army of 3,000,000 men?

Gen. SHARPE. Yes, sir.

Mr. KAHN. And they wanted 161,000 for the Army we now have?

Gen. SHARPE. Yes, sir.

Mr. KAHN. You allowed them only 124,108?

Gen. SHARPE. Yes, sir.

Mr. KAHN. Who is going to win out in this proposition? Are you going to get away with your figures?

Gen. SHARPE. They will probably get the increase; but the point is this: If we simply made the greater number of men in the line of the Army, the pay would be practically the same.

Mr. KAHN. If they have their way, this item already represents a deficiency, does it not—this item of \$49,000,000—without any increased increments of the Army?

Gen. SHARPE. Yes, sir.

Lieut. BRETT. Of course, you have to bear in mind that the item for pay is a lump sum.

Mr. KAHN. Yes; I am aware of that fact.

The CHAIRMAN. The question is, Why did you estimate for less than they asked for?

Lieut. BRETT. Because we are limited. The number of enlisted men that the bureau chiefs have asked for, outside of the fighting men, is 1,117,898. If you gave them all of the men they asked for you would not have many men in the trenches.

Mr. KAHN. Some day some bureau chief will get up and say, "I asked for all these things, and Congress would not give them to me," and will put the blame on Congress. I, for one, want to know what you want, because I do not propose to have the buck passed to Congress this time.

Lieut. BRETT. In the same way the bureau chiefs have asked for 96,577 commissioned officers, and we have 100,000 altogether. That would leave 449 officers for the line if they were given all they asked for.

(Copy of request for authority to estimate for larger number of enlisted men is shown on page 257.)

The CHAIRMAN. The next item is, "Additional pay for length of service, \$360,000." That is figured, according to law, in the same way as the other items for additional pay for length of service?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. The next item is for "Pay of clerks, messengers, and laborers, office of the Chief of Staff."

Gen. SHARPE. The total of that item amounts to \$160,240. This is approved by the Secretary of War. It includes the following employees: One chief clerk, at \$2,250; 1 clerk, at \$2,250; 6 clerks, at \$2,000 (increase of 1 submitted), \$12,000; 8 clerks, at \$1,800 each (increase of 1 submitted), \$14,400; 13 clerks, at \$1,600 each (increase of 1 submitted), \$20,800; 21 clerks, at \$1,400 each (increase of 1 submitted), \$29,400; 24 clerks, at \$1,200 each, \$28,800; 26 clerks, at \$1,000 each (increase of 14 submitted), \$26,000; 1 captain of the watch, at \$900; 6 watchmen, at \$720 each, \$4,320; 1 gardener, at \$720; 1 packer, at \$840; 1 chief messenger, at \$1,000; 3 messengers, at \$840 each, \$2,520; 15 messengers, at \$720 each, \$10,800; 2 laborers, at \$720 each, \$1,440; 1 laborer, at \$600; 5 charwomen, at \$240 each, \$1,200; in all, \$160,240.

The CHAIRMAN. An increase of how many?

Headquarters clerks increased under following acts:

Clerks, etc., in the Office of the Chief of Staff:

Authorized by act of May 12, 1917—

1 chief clerk, at \$2,250 per annum	\$2,250
3 clerks, at \$2,000 each per annum	6,000
6 clerks, at \$1,800 each per annum	10,800
10 clerks, at \$1,600 each per annum	16,000
12 clerks, at \$1,400 each per annum	16,800
17 clerks, at \$1,200 each per annum	20,400
8 clerks, at \$1,000 each per annum	8,000
1 captain of the watch, at \$900 per annum	900
6 watchmen, at \$720 each per annum	4,320
1 gardener, at \$720 per annum	720
1 packer, at \$840 per annum	840
1 chief messenger, at \$1,000 per annum	1,000
3 messengers, at \$840 each per annum	2,520
15 messengers, at \$720 each per annum	10,800
2 laborers, at \$720 each per annum	1,440
1 laborer, at \$600 per annum	600
5 charwomen, at \$240 each per annum	1,200

104,590

Authorized by act of June 15, 1917—

2 clerks, at \$2,000 each per annum	4,000
1 clerk, at \$1,800 per annum	1,800
2 clerks, at \$1,600 each per annum	3,200
8 clerks, at \$1,400 each per annum	11,200
7 clerks, at \$1,200 each per annum	8,400
4 clerks, at \$1,000 each per annum	4,000

32,600

Clerks and messengers at headquarters of Territorial departments, Territorial districts, tactical divisions and brigades, and service schools:

Authorized by the act of Oct. 6, 1917—

7 clerks, at \$2,000 each per annum	14,000
11 clerks, at \$1,800 each per annum	19,800
14 clerks, at \$1,600 each per annum	22,400
32 clerks, at \$1,400 each per annum	44,800
57 clerks, at \$1,200 each per annum	68,400
49 clerks, at \$1,000 each per annum	49,000
39 messengers, at \$720 each per annum	28,080

246,480

12 clerks, at \$2,000 each per annum	24,000
36 clerks, at \$1,800 each per annum	64,800
67 clerks, at \$1,600 each per annum	107,200
100 clerks, at \$1,400 each per annum	140,000
285 clerks, at \$1,200 each per annum	342,000
500 clerks, at \$1,000 each per annum	500,000
100 messengers at temporary headquarters, at \$720 each per annum	72,000

1,250,000

15 clerks, at \$2,000 each per annum	30,000
32 clerks, at \$1,800 each per annum	57,600
120 clerks, at \$1,600 each per annum	192,000
318 clerks, at \$1,400 each per annum	445,200
895 clerks, at \$1,200 each per annum	1,074,000
370 clerks, at \$1,000 each per annum	370,000

1,628,600

¹ Should be \$2,188,300.

Gen. SHARPE. An increase of 1 clerk at \$2,250; an increase of 1 clerk at \$2,000; an increase of 1 clerk at \$1,800; an increase of 1 clerk at \$1,600; an increase of 1 clerk at \$1,400; and an increase of 14 clerks at \$1,000.

The CHAIRMAN. There is a total increase of 19, is there not?

Lieut. BRETT. In reference to this item Gen. Bliss says:

[Memorandum for the Quartermaster General.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, August 8, 1917.

The Secretary of War has approved the following estimate for 1919:

Pay of clerks, messengers, and laborers, office of the Chief of Staff.

1 chief clerk, at \$2,250 per annum.....	\$2, 250
1 clerk, at \$2,250 per annum.....	2, 250
6 clerks, at \$2,000 each per annum.....	12, 000
8 clerks, at \$1,800 each per annum.....	14, 400
13 clerks, at \$1,600 each per annum.....	20, 800
21 clerks, at \$1,400 each per annum.....	29, 400
24 clerks, at \$1,200 each per annum.....	28, 800
26 clerks, at \$1,000 each per annum.....	26, 000
1 captain of the watch, at \$900 per annum.....	900
6 watchmen, at \$720 each per annum.....	4, 320
1 gardener, at \$720 per annum.....	720
1 packer, at \$840 per annum.....	840
1 chief messenger, at \$1,000 per annum.....	1, 000
3 messengers, at \$840 each per annum.....	2, 520
15 messengers, at \$720 each per annum.....	10, 800
2 laborers, at \$720 each per annum.....	1, 440
1 laborer, at \$600 per annum.....	600
5 charwomen, at \$240 each per annum.....	1, 200
Total appropriation.....	160, 240

1. The appropriation for the civilian personnel of this office for the fiscal year ending June 30, 1918, was as follows:

Chief clerk, \$2,250.....	1
Clerks:	
\$2,000.....	3
\$1,800.....	6
\$1,600.....	10
\$1,400.....	12
\$1,200.....	17
\$1,000.....	8
	<hr/>
	57
Captain of the watch, \$900.....	1
Watchmen, \$720.....	6
Gardener, \$720.....	1
Packer, \$840.....	1
Chief messenger, \$1,000.....	1
Messengers, \$840.....	3
Laborers, \$720.....	2
Laborer, \$600.....	1
Messengers, \$720.....	15
Charwomen, \$240.....	5

2. The clerical force being insufficient to accomplish the work required, an additional force was requested, and in the urgent deficiency bill, commonly

known as the three billion dollars bill, provision was made for 24 additional clerks, as follows:

Clerks:

\$2,000-----	2
\$1,800-----	1
\$1,600-----	2
\$1,400-----	8
\$1,200-----	7
\$1,000-----	4
	<hr/>

24

3. Even with this additional force of 24 clerks, it has been found to be impossible to transact the work of the office without detriment and delay to the public business in its charge, and accordingly estimates for 9 additional clerks for incorporation in the so-called five-million-dollar bill have heretofore been made by this office, as follows:

Clerks:

\$2,250-----	1
\$2,000-----	1
\$1,800-----	1
\$1,600-----	1
\$1,400-----	1
\$1,000-----	4
	<hr/>

9

4. The 24 clerks referred to in paragraph 2 are already on duty in this office, and the 9 additional clerks referred to in paragraph 3 will also be employed if authorized by Congress. The Secretary of War, therefore, directs that these 33 clerks be incorporated in the regular estimates for the fiscal year ending June 30, 1919.

5. Owing to the constantly increasing volume of correspondence and the business connected therewith, it is certain that the clerical force now available and the additional clerks already requested will be insufficient to meet the clerical needs of this office. It is difficult at the present time to state positively the total number of clerks that will be required, but it is believed that at least 10 additional clerks will be needed to dispose of the rapidly increasing work, and the Secretary of War has therefore authorized this office to secure this additional number of clerks, at \$1,000 each per annum.

6. No addition to the personnel of the subclerical force is contemplated.

TASKER H. BLISS,
Major General, Acting Chief of Staff.

Capt. DALY. That is 43 clerks more than were appropriated for in the Army appropriation bill of 1918.

Mr. KAHN. How many additional did they get in the urgent deficiency act?

Lieut. BRETT. They got 24. They have asked for 9, and now they ask for 10 more.

The CHAIRMAN. Are they all under civil service?

Lieut. BRETT. I think so.

The CHAIRMAN. The next item is, "Pay of clerks and messengers at headquarters of the several territorial departments, territorial districts, tactical divisions and brigades, and service schools."

Lieut. BRETT. That provides for 111 clerks, at \$1,800 each; 321 clerks, at \$1,600 each; 768 clerks, at \$1,400 each; 2,132 clerks, at \$1,200 each; 1,289 clerks, at \$1,000 each; and 139 messengers, at \$720 each; making a total of \$5,838,080.

The CHAIRMAN. What is the increase in the number of those clerks over those provided for in the Regular Army appropriation bill of last May?

Lieut. BRETT. I think the amount of that appropriation was \$1,626,000. which was considerably less than what they asked for.

I think they asked for 3,570 clerks and messengers altogether, but you did not give them anywhere near what they wanted. The number of clerks and messengers carried in this appropriation bill will suffice for 3,000,000 men, I was informed this afternoon.

The CHAIRMAN. That is, the number you are asking for here?

Lieut. BRETT. The clerks asked for in this bill.

Mr. CALDWELL. Will all these clerks and other employees be needed if we only have an army of 1,612,245 men?

Lieut. BRETT. They will not be authorized by the War Department. The money will not be taken out of the Treasury.

Mr. FIELDS. Then, if the whole appropriation is made, you will only use such a part of it as you need?

Lieut. BRETT. That is the idea.

Mr. FIELDS. Why did you estimate in this item for an army of 3,000,000 men? You only have an army of 1,612,245 men.

Lieut. BRETT. This was done by order of the Secretary of War. That is our authority for making the estimates. Gen. McCain can answer that question.

Mr. SHALLENBERGER. Are the field clerks in this item?

Lieut. BRETT. Yes, sir; they are in this item. They are not in the War Department.

The CHAIRMAN. Are they also under civil service?

Lieut. BRETT. No, sir; they go into the service after an examination.

Mr. OLNEY. A very complete examination?

Lieut. BRETT. A very complete examination and a very stiff one.

The CHAIRMAN. How are they selected?

Lieut. BRETT. They are selected because of special qualifications.

The CHAIRMAN. Who has the authority to select them?

Lieut. BRETT. I think Gen. McCain has that authority.

The CHAIRMAN. The division commanders do not name them?

Lieut. BRETT. I could not state as to that.

Capt. DALY. They are selected under rules that are published by Gen. McCain, and the division commanders can make recommendations, but I think the appointments are made by The Adjutant General.

Mr. TILSON. Are they selected here and sent out to the various field headquarters, or are they selected by the local commanders of the various headquarters?

Mr. FIELDS. One was appointed from my State and was required to take a physical examination, and he had to come here for his mental examination.

Mr. KAHN. Have these clerks any military rank?

Capt. DALY. No military rank, but they have a military status.

Mr. SHALLENBERGER. Are these the same clerks who are to be made assistant adjutants general under the act?

Capt. DALY. These clerks are covered by that bill. That bill was intended to cover these clerks.

Mr. OLNEY. What is the pay of these clerks?

Lieut. BRETT. It runs from \$1,000 to \$2,000.

Mr. KAHN. And do you give them quarters and heat and light?

Lieut. BRETT. Yes, sir.

Mr. KAHN. How many clerks in the War Department get commutation of quarters and heat and light?

Gen. SHARPE. None of the clerks in the civil service get heat and light. But these are not War Department clerks. They are field clerks.

Capt. DALY. Two hundred quartermaster clerks.

Gen. SHARPE. But they can not be employed in Washington.

Lieut. BRETT. They are clerks with divisions.

Capt. DALY. These clerks, before they become entitled to commutation, must have had 12 years' service.

Mr. CALDWELL. Is this allowance given to field clerks when they are in the field?

Lieut. BRETT. No; no officer, under the present law, in the field gets anything in the shape of quarters except a tent.

Mr. CALDWELL. You say these clerks only have a military status and I was wondering whether they could get any commutation in the field.

Lieut. BRETT. Those who are in the field get none. They get a tent. Those who are at department headquarters, if they have had 12 years' service, get commutation for two rooms at \$12 a room a month, and their allowance for heat and light depends on where they are. If they are at a military post they get it in kind.

Mr. FIELDS. What are the salaries of the field clerks?

Lieut. BRETT. From \$1,000 to \$2,000. None of the clerks get any commutation of quarters and heat and light unless he has had 12 years' service.

Mr. SHALLENBERGER. Where are the \$2,000 men in this list located?

Lieut. BRETT. I imagine those are at department headquarters.

Mr. SHALLENBERGER. Are they in this list?

Lieut. BRETT. Yes, sir; they are in the 51.

Mr. KAHN. Do the provisos at the end of the section pertain to clerks already provided for by the law?

Gen. SHARPE. Yes, sir. Those appear every year.

The CHAIRMAN. The next item is, "General Staff Corps: For pay of three hundred and forty-seven officers, \$802,611.00."

Gen. SHARPE. That provides for 347 officers, the total amount being \$802,611.

Lieut. BRETT. The act of June 3, 1916, as amended, provides for 91 officers, but these 347 are my own allowance. Under date of January 3, 1918, the acting secretary of the General Staff submitted a reply, which is based on a study of the War College and they make the number 348, which is one more than I have got here. They want 3 generals, 1 major general, 9 brigadier generals, 50 colonels, 110 lieutenant colonels, 126 majors, and 59 captains, a total of 348.

The CHAIRMAN. Under what authority do they ask for that number?

Lieut. BRETT. Under the authority of the act of May 18.

The CHAIRMAN. How many officers have they in the General Staff now?

Lieut. BRETT. They have 91.

The CHAIRMAN. They are full up?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. How long have they had the complete number?

Lieut. BRETT. I guess they had them soon after the act was passed, as soon as they could get them.

Mr. SHALLENBERGER. What was the act of May 18?

Lieut. BRETT. That is the selective-draft act.

Mr. SHALLENBERGER. Was there any limit at all to the number of officers in the General Staff?

Lieut. BRETT. The act authorizes the President to increase the number temporarily.

Mr. SHALLENBERGER. To what limit did we raise the General Staff in that act?

Lieut. BRETT. I do not think there is any limit; there is no limit.

Mr. SHALLENBERGER. The Secretary of War or the President makes the General Staff as large as he wants it?

Lieut. BRETT. Yes, sir; he fixes the number.

Mr. KAHN. Has the President or Secretary of War fixed the figure for the General Staff Corps?

Lieut. BRETT. I judge the Secretary of War has approved this figure.

Mr. KAHN. Three hundred and forty-seven?

Gen. SHARPE. This was only a few days ago. I understand all of those War College estimates have been brought up in this form, receiving the approval of the Chief of Staff.

Mr. SHALLENBERGER. As I understand it, then, as soon as the national defense act permitted an increase to 91, they raised the number to 91, but in May we amended the act so that they could make the corps very much larger, but it has not been put about 91 until this time.

Lieut. BRETT. It is not above 91, substantially, now.

Mr. SHALLENBERGER. Although permission to make that increase was granted, through the passage of the act nine months ago, they have not filled the General Staff Corps up yet?

Lieut. BRETT. No.

The CHAIRMAN. The department did not ask in any deficiency estimate last year for any increase of the number?

Lieut. BRETT. No.

The CHAIRMAN. The next item is, "Additional pay for length of service, \$40,000."

Lieut. BRETT. Those are all based on the requirements of law.

The CHAIRMAN. The next item is, "Adjutant General's Department: For pay of two hundred and eighty-one officers, \$649,953."

Lieut. BRETT. That is based on a per capita, and they have now 152, and they want for the year 1919, a total of 1,783 officers, based on an army of 3,000,000 men.

The CHAIRMAN. That is based on an army of 3,000,000 men?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. This estimate is based on an army of 3,000,000 men?

Lieut. BRETT. This estimate is based on an army of 1,612,245.

The CHAIRMAN. I thought you said this estimate was based on an army of 3,000,000 men.

Lieut. BRETT. No; I say they asked for 1,783 men for 1919, on the basis of 3,000,000 men.

The CHAIRMAN. What would be the amount for that number of men?

Lieut. BRETT. You mean for 1,783?

The CHAIRMAN. Yes.

Lieut. BRETT. It would be \$2,313 for each officer. For The Adjutant General's department that per capita is low, because they have not many officers in the lower grades. The per capita probably ought to be \$3,000 for The Adjutant General's office.

The CHAIRMAN. What is the lowest rank in The Adjutant General's office?

Lieut. BRETT. I think the lowest rank is major.

Mr. SHALLENBERGER. The act which we amended some time ago permits the appointment of officers as low as lieutenant?

Lieut. BRETT. Yes, sir.

Mr. SHALLENBERGER. Have there been any lieutenants appointed in The Adjutant General's department?

Lieut. BRETT. There have been some. I know there have been some appointed in connection with the Bureau of War-Risk Insurance, but whether there have been any appointed outside of that I do not know.

The CHAIRMAN. I believe you understand that in all of these items it is the sense of the committee that they would like to have you complete the record with a statement of the increase that would have to be made for every additional 500,000 men under each item.

Lieut. BRETT. I gave you the figures awhile ago—\$290,000,000—and if you add \$290,000,000 that will just include pay of 27,778 officers, which is the number of officers required for every 500,000 enlisted men, making a total of 527,778 officers and men.

Mr. FIELDS. You estimate that for an army of 3,000,000 men it will be necessary to raise this amount by \$290,000,000?

Lieut. BRETT. \$290,000,000 for every 500,000 enlisted men, and for the 500,000 men there would be required 27,778 officers, making 1 officer for every 18 men.

Mr. SHALLENBERGER. Then, we can simply add \$290,000,000 for the pay of each additional 500,000 that may be added?

Lieut. BRETT. Yes; that will cover every item of pay.

Mr. CALDWELL. It does not make any difference whether we divide it or not, because it is all one proposition?

Lieut. BRETT. Yes, sir.

Mr. FIELDS. That calculation would apply throughout the entire pay items?

Lieut. BRETT. Throughout the bill. It amounts to \$301,000,000 a year; about \$11,000,000 can be knocked off, because amongst the officers you will get there will be none who have had service, unless the enlisted men are commissioned. There will be no overhead charges such as commutation of quarters and mileage, and the amounts will not be in proportion to what they are here.

The CHAIRMAN. The next item is "Additional pay for length of service \$35.000." That is figured in the same way as the other similar items?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is "Inspector General's Department: Pay of two hundred and forty-six officers, \$568,998."

Lieut. BRETT. They have 90 officers at the present time.

Mr. TILSON. Is that their pro rata share according to your plan?

Lieut. BRETT. That is their pro rata.

Mr. TILSON. Of an army of 1,612,245 men?

Lieut. BRETT. Yes.

The CHAIRMAN. Did they ask for any more than you have estimated for?

Lieut. BRETT. They asked for 296 officers for an army of 3,000,000 men.

The CHAIRMAN. You estimate for 246?

Lieut. BRETT. Yes, sir.

Mr. TILSON. That is a very small increase.

Lieut. BRETT. That is in accordance with their own reply, under date of December 1, in reply to a letter from the Quartermaster General dated November 30. [Reading:]

WAR DEPARTMENT,
OFFICE OF THE INSPECTOR GENERAL,
Washington, December 1, 1917.

From: The Inspector General of the Army.

To: The Quartermaster General.

Subject: Estimates, commissioned requirements of the Inspector General's Department, 1919.

1. In reply to letter from the Quartermaster General dated November 30, 1917 (111-1006-A-E), the following is submitted:

1. The number of officers now commissioned in the Inspector General's Department is 90.

2. The estimated commissioned requirements for the fiscal year 1919 are as shown in the attached tabulated statement. 296.

W. T. Wood,
Acting Inspector General.

Estimate of the number of officers required in the Inspector General's Department during the year ending June 30, 1919.

	Major generals.	Briga- dier generals.	Colonels.	Lieuten- ant colonels.	Lieuten- ant colonels or majors.	Majors.	Total.

J. L. CHAMBERLAIN,
Inspector General.

To the QUARTERMASTER GENERAL.

WAR DEPARTMENT, OFFICE INSPECTOR GENERAL,
December 1, 1917.

They asked for 50 more than we carried in our estimates.

Mr. TILSON. Either you are pretty liberal in your figuring or they are extremely modest in increasing the number only 50 officers.

Lieut. BRETT. Perhaps we were too liberal in our distribution.

The CHAIRMAN. Do you think that number could be cut?

Lieut. BRETT. It is a lump-sum appropriation. Somebody else would have to suffer. I do not think that should be cut, because we just took 100,000 officers and distributed them in a purely arbitrary manner between the different bureaus. What each bureau gets depends upon what the Secretary of War and the Chief of Staff gives them.

The CHAIRMAN. The next item is, "Additional pay for length of service, \$23,000." Your explanation of that is the same as for other similar items?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "Corps of Engineers: Pay of 400 officers, \$925,200."

Lieut. BRETT. Of course, that is taking into consideration the acts of recent years, making the Engineers a part of the line. There are some of the 400 officers who are on rivers-and-harbors work, and not serving with troops.

The CHAIRMAN. That includes all officers in the Engineer Corps?

Lieut. BRETT. No; not the 400. The Engineer Corps is now composed of 6,016 officers, and they want 6,550. You will find the rest of the Engineer officers are in the item including officers of the line. The enlisted men in the Engineer Corps are all in the line.

Mr. TILSON. How are these officers distinguished from the other officers of the Engineer Corps?

Lieut. BRETT. Just by their assignment. If they are assigned to duty with troops, they become a part of the line, and as soon as that assignment is changed they become really staff officers.

The CHAIRMAN. Why is there this increase in this item?

Mr. SHALLENBERGER. Is there a probability that there will be a larger number of Engineer officers used for the performance of civilian duties during the war, or is that an arbitrary figure?

Lieut. BRETT. This is purely an arbitrary figure. We have no means of knowing until after all the special and technical troops have been established how many of those become troops of the line and how many are staff troops. They are all a part of the 100,000 officers.

Mr. SHALLENBERGER. If an officer was not needed for the river-and-harbor work, he would simply go back to the line again?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "Additional pay for length of service, \$110,000." You offer the same explanation of that as you have given for other similar items?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "Ordnance Department: Pay of 2,000 officers, \$4,626,000." How many officers have they now?

Lieut. BRETT. They have 2,306.

The CHAIRMAN. They have 2,306?

Lieut. BRETT. Yes, sir; they had that number on the 20th of December.

Mr. TILSON. Then you will start out with a deficit?

Lieut. BRETT. No, sir; this is a lump-sum appropriation.

Mr. TILSON. We ought not to make that proposition misleading, as it seems to be in the Corps of Engineers and some others.

Lieut. BRETT. Not in the case of the Corps of Engineers, because you will find the rest of the officers appropriated for in the other part of the bill.

Mr. TILSON. It seems to me we are going out of the way to make that proposition misleading, and it does not seem to me there is any object in doing that.

Lieut. BRETT. You can increase the officers in the Ordnance Department to 2,500 and take the difference, 500, off the line. At the time we prepared the estimates they did not have that number—2,306—of officers. It is a simple matter to take 500 officers off the line.

Mr. TILSON. Is that a fair proposition, to take 500 officers off the line and put them in here? Is that about what it will be? I think people in looking over this bill will want to get at about how many officers there are who are going to receive pay.

Lieut. BRETT. They wanted 7,988.

Mr. TILSON. How many do you estimate they are going to have? You have estimated here for 2,000, and then you tell us they have 2,300, and that is six months before the bill goes into effect.

Lieut. BRETT. But this estimate was made long before they had 2,306 officers. We had no means of knowing what officers are to be provided for in the Ordnance Department.

Mr. TILSON. Do you not think we ought to try to bring it up to date?

Lieut. BRETT. We try to do that, and we can make the figure 3,000 and take them off the line.

Mr. TILSON. We can say that is approximately correct, but here we have the hearings with your statement in it.

Mr. CALDWELL. If we specify a less number of ordnance officers and appropriate for them, when the bill becomes a matter of public property on the floor of the House, the roar that goes up over the country because we have not supplied money enough for the ordnance officers will be pretty loud, and it will be something we will have a hard time answering.

Gen. SHARPE. You can take them off the list of officers in the Quartermaster Department.

Mr. TILSON. And take off a few from the Inspector General's Department.

Gen. SHARPE. You can take them off the Quartermaster Department.

Mr. TILSON. The Inspector General only asks 50 more for 3,000,000 men.

Gen. SHARPE. We are estimating for 8,300 officers, and we have 6,701 allowed us. You can take a thousand officers off the Quartermaster Department.

Mr. GREENE. I do not think we ought take any off, but we ought to know where we shall put them on.

Gen. SHARPE. We will need 18,027 officers, if we have an army of 3,000,000 men.

Mr. TILSON. We are figuring on an army of 1,600,000, and we are figuring so much for every additional 500,000. That is the plan we

are going on. If we figure on 1,600,000, and so much for every half million men thereafter, that will be some sort of a rational basis.

Gen. SHARPE. We can make these figures corresponding to what it is now.

Mr. TILSON. That is not what it may be to-morrow.

Gen. SHARPE. That is right.

Mr. TILSON. I think we had better have your best estimate of what it is going to be when this bill is in effect.

Lieut. BRETT. Then you ought to have 4,000 officers in the Ordnance Department, at least. They want 7,988 for 3,000,000 men, and for 1,612,245 they would want practically 4,000 officers.

Mr. QUIN. How many officers would you have for another 500,000 men?

Lieut. BRETT. You would want 27,778 officers for every half million men you had.

The CHAIRMAN. My recollection is that Gen. Crozier said he would need 5,000 officers.

Mr. TILSON. Is this your best estimate of the number of ordnance officers that that department ought to have out of the appropriation in the year 1919?

Lieut. BRETT. Gen. Crozier says he wants——

Mr. TILSON (interposing). I do not care how many he wants.

Lieut. BRETT. But taking the basis of his wants, they would amount to about 4,000 for 1919.

Mr. TILSON. Would you consider that a fair estimate of what should be our apportionment to the Ordnance Department?

Lieut. BRETT. In the light of the information we have to-day I should say 4,000 would be a fair estimate.

The CHAIRMAN. Then this estimate was made some time ago, and it ought to be increased?

Lieut. BRETT. Yes, sir. Here is a memorandum for the Quartermaster General from the Chief of Staff. That was on the 19th. On the 22d the question came up as to whether the million and a half men included the large number of men they wanted in the aviation section. We sent it to the Chief of Staff, and this is what he says, referring to the memorandum of October 19 (reading):

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, October 22, 1917.

Memorandum for the Quartermaster General:

Referring to the memorandum dated October 19, the number of men called for by the program of the Aviation Section, Signal Corps, in France, is 11,941 officers and 112,245 men. These should be in addition to the 1,500,000 men referred to in memorandum of October 19.

TASKER H. BLISS
General, Chief of Staff.

The memorandum of October 19 referred to above reads:

Memorandum for the Quartermaster General:

The Secretary of War desires that you submit a modified estimate based on the assumption of 1,500,000 men to be maintained in the Military Establishment during the fiscal year 1918-1919.

TASKER H. BLISS
General, Chief of Staff.

We can not go beyond that in our estimate. We may be certain that they are going to have more men, but we can not estimate for any more without some authority.

Mr. GREENE. The Quartermaster General is obliged to confine his distribution to the original estimate?

Lieut. BRETT. Yes, sir.

The following, submitted after the hearings, speaks for itself.

111-1006-A-F. A-E.]

JANUARY 23, 1918.

Memorandum for the Chief of Staff:

At the hearings before the House Committee on Military Affairs on the pay estimate for the fiscal year 1919 on January 7 and 8, 1918, the following colloquy took place:

"Mr. KAHN. Evidently, General, this estimate of yours begins with a deficiency, right now.

"Gen. SHARPE. Yes, sir.

"Mr. KAHN. What is going to be the policy of the bureau? Are you going to put in a supplemental estimate, so that this committee can pass upon it, or are you going to the Committee on Appropriations and ask for a deficiency?"

"Gen. SHARPE. We would like to put in a supplemental estimate."

The estimate for the Quartermaster Corps for 1919, so far as the number of enlisted men to be provided for is concerned, was founded on the directions embodied in the two memoranda following:

"OCTOBER 19, 1917.

"Memorandum for the Quartermaster General:

"The Secretary of War desires that you submit a modified estimate based on the assumption of 1,500,000 men to be maintained in the Military Establishment during the fiscal year 1918-19.

"TASKER H. BLISS,

"General, Chief of Staff."

"OCTOBER 22, 1917.

"Memorandum for the Quartermaster General:

"Referring to the memorandum dated October 19, the number of men called for by the program of the Aviation Section, Signal Corps, in France, is 11,941 officers and 112,245 men. These should be in addition to the 1,800,000 men referred to in memorandum of October 19.

"TASKER H. BLISS,

"General, Chief of Staff."

These call for 1,812,245 enlisted men, and for this number this office provided 100,000 commissioned officers, which, appearing to the House Committee on Military Affairs to be too small, was increased to 126,000 officers during the progress of the hearings.

Authority is requested to submit a supplemental estimate for an increased number of enlisted men, and if granted information is desired as to the number for whom provision should be made.

GEO. W. GOETHALS,

Acting Quartermaster General.

The CHAIRMAN. The next item is, "Additional pay for length of service, \$70,000." Your explanation of that is the same as you have given for other similar items?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "Quartermaster Corps: Pay of eight thousand three hundred officers, \$19,197,900." How many officers have you now?

Gen. SHARPE. Six thousand seven hundred and one officers are authorized.

Lieut. BRETT. We actually had on December 1st, 6,190.

Mr. TILSON. That seems to be a fair proportion.

Col. DALLAM. The number authorized by the War Department, 6,701, is rather small, because the figures on which the General Staff based their number of officers were based on the data we gave them a couple of months ago, but the number of units which have been added to the Quartermaster Corps have increased the number of officers, so that the number laid down there, of 8,300, comes close to what we can figure we will need for an army of 1,612,245 men. Not having that, I have taken what we actually had at that time, and what will be the actual number required with the divisions and with an Army corps, and what is actually required for each technical unit, and for other branches, and it comes very close to 8,300 men for an army of 1,612,245 men.

Mr. QUIN. We know they are going to draft another allotment of men on the 15th day of February.

Gen. SHARPE. That is the last part of the draft which has not been called.

Mr. TILSON. It seems to me this just about represents the facts, and then we have the other formula that if another half million is added, we can give them the right appropriation for the half million and increase it by that amount, and it seems to me we are in good shape on that particular item.

Col. DALLAM. We are in very good shape, unless we have a new unit added to the corps. In that case that adds that many additional officers. For example, there was authorized the other day 51 special men in the remount service. There were 33 auxiliary remount stations authorized, and each one of them carries a certain number of officers, and we can figure how many officers we need.

Mr. TILSON. With that exception this practically takes care of you!

Col. DALLAM. Practically so.

Mr. SHALLENBERGER. Is it not a fact that the British Government appropriates every three months for the expenses of this war?

Gen. SHARPE. I do not know about that.

Mr. SHALLENBERGER. We are trying to appropriate a year and a half ahead in the biggest war in the world, and I think it is impossible that we can get close to what we need, and I think the public should understand that, so that if we have that in mind, it will perhaps make it easier for us to explain the situation. I am sure the English Government appropriates oftener than we do, and I think we will be forced to do that in order to get at an intelligent estimate of what we ought to have.

Col. DALLAM. The estimates can be made out in a much better way.

The CHAIRMAN. Can you not revise these estimates on these particular items by to-morrow or the next day in order to give us better information in reference to the Inspector General's Department and the Ordnance Department?

Lieut. BRETT. We will try to do that by to-morrow.

The CHAIRMAN. The next item is, "Medical Department: Pay of fourteen thousand officers, \$32,382,000."

Mr. TILSON. How many of those officers have actually been called into the service?

Lieut. BRETT. They have commissioned 24,060. We do not know how many they have called.

Mr. TILSON. Officers who are not commissioned do not receive pay; only those who are called?

Lieut. BRETT. Yes, sir.

Mr. SHALLENBERGER. I understood you to say 24,060 officers were commissioned in the Medical Corps. You do not know how many are called and you only estimate for 14,000.

Lieut. BRETT. The 14,000 we estimate for includes the medical officers, the dental officers, the veterinarians, the sanitary officers, the men in the ambulance service, etc.

Mr. SHALLENBERGER. You do not know how many men are actually in the service?

Lieut. BRETT. No, sir.

Mr. SHALLENBERGER. Do you know whether or not there are a great many more men commissioned in proportion to the number called in that particular corps than in the other corps?

Lieut. BRETT. I could not tell you that. Ordinarily, in peace times, the Medical Repartment has a large number of reserve officers commissioned.

Mr. SHALLENBERGER. That would not necessarily mean that we have 24,000 officers actually in the service, or anything like that?

Mr. OLNEY. Have there not been commissioned enough men in the Medical Corps for an army of 3,000,000 men?

Lieut. BRETT. Yes.

Gen. GOETHALS. The Medical Corps units have been organized and sent over in advance of our own Army.

Mr. SHALLENBERGER. Are they being paid by us?

Gen. GOETHALS. They are being paid by us.

Mr. CALDWELL. Does that include those who went over in the Red Cross units?

Lieut. BRETT. If they are commissioned in the Army.

Gen. GOETHALS. It is the Red Cross units I had reference to.

Mr. TILSON. We all know that they have commissioned a number of medical officers who have not been called into the service.

Mr. FIELDS. There are a very large number commissioned in the Dental Corps.

Lieut. BRETT. In the Dental Corps and the Reserve Dental Corps. They have in the Dental Corps 178, but they have in the Reserve Dental Corps 4,390, and in the Dental Corps of the National Guard 229. They are all carried as a part of the Medical Corps.

Mr. FIELDS. They have a Dental Corps that will supply an army of what size?

Lieut. BRETT. An army of 3,000,000 men.

Mr. GREENE. I think it will be found that a great many of the Dental Corps men are in the cantonments now, and there are perhaps more men at work now under normal conditions than are enough to take care of the Army when it gets under way. I have been informed that there are a great many men among the recruits whose only trouble is their defective teeth, and those teeth are being fixed up so that the men can be ready to go.

Mr. CALDWELL. In addition to that, there are a number of free organizations who are doing work in the Dental Corps. I understood there was some trouble about the supply of material going into the teeth.

Lieut. BRETT. Let me call your attention to the difficulty that is going to arise in revising this estimate for the pay of officers.

There are in the service at the present time, commissioned, 121,089 officers, and we have actually in service on December 31 for the Regular Army and National Guard and on November 30 for the Reserve Officers and the National Army 110,939.

When you come to correct the figures for the Inspector General's Department and the Ordnance Department and for the Medical Department, what would you have us do with the 11,000 surplus?

Mr. TILSON. They are not in the service, are they?

Lieut. BRETT. Yes, sir.

Mr. TILSON. Then you have made a mistake somewhere.

Lieut. BRETT. No, sir; we are limited on our number of officers, as we are on the enlisted men. Eleven thousand men would be about taken up by the 200,000 additional men. We have 200,000 additional men to come in, but the Secretary of War says estimate for 1,612,245. But they do not stop bringing the men in, and they do not stop bringing in the officers.

Mr. TILSON. Then you tell us you are asking for pay for 100,000 officers although there are at the present time 111,000 officers.

Mr. SHALLENBERGER. You say there have been commissioned 121,000 officers?

Lieut. BRETT. There have been 121,089 officers commissioned.

Mr. SHALLENBERGER. A lot of them have not been called into the service yet.

Mr. TILSON. But there are 11,000 who have to be paid.

Mr. QUIN. What would be the average pay of the 11,000 surplus?

Lieut. BRETT. \$2,313 apiece per year.

Mr. QUIN. We would have to add that to this bill?

Lieut. BRETT. It looks that way; but they are still taking in officers. They are not going to stop.

Mr. QUIN. But you have prorated that on each additional 500,000 men?

Lieut. BRETT. If you put in the \$290,000,000 for every additional 500,000 men we can take care of them.

The CHAIRMAN. You can take care of 1,612,245?

Lieut. BRETT. If you give us \$290,000,000 for every additional 500,000 enlisted men, in addition to the 1,612,245, we could take care of the officers without any trouble, because the officers will not be increased. They will put in no additional officers until they have absorbed these 11,000. There are 27,778 officers for each 500,000 men.

Mr. TILSON. Then your estimate of \$290,000,000 for the first 500,000 is too much, by your own statement, because you say you can take care of the 11,000 officers out of the appropriation you are asking for.

Lieut. BRETT. Because they are a part of it.

Capt. DALY. We have not estimated for the 11,000 extra.

Mr. TILSON. You have not estimated for them?

Capt. DALY. Only for 100,000.

Mr. TILSON. I thought this \$290,000,000 was for pay of officers. also.

Capt. DALY. Yes, sir; it is, but in our estimate for 100,000 officers and 1,612,245 men no provision is made for the 11,000 officers in excess.

Mr. GREENE. But you do bring into actual existence some officers not included in anybody's estimate?

Capt. DALY. We have 11,000 officers over, and we require 27,718 for every additional 500,000 men, and we will bring in that many more and add to the 11,000 the special officers for 500,000.

Lieut. BRETT. We can just write the Secretary a letter, calling attention to the fact that if they exceed a certain number there is going to be a deficiency, and stop right there, and it is then up to the Secretary of War to determine whether he desires to create a deficiency.

Mr. HARRISON. Do you not have to provide officers in advance of calling the men in?

Lieut. BRETT. Always.

Mr. HARRISON. Then the 11,000 officers are provided in advance of calling in the extra 500,000 men?

Mr. OLNEY. In the Dental Reserve Corps, although you may commission a dentist you are not going to call him into the service until he is needed, and his pay starts in then?

Lieut. BRETT. His pay does not start until he is called in.

Mr. HARRISON. Then the Secretary of War is simply providing 11,000 men for the expected increase?

Mr. TILSON. But he is not providing the pay. He has forbidden that, and they have not provided for it in their estimates.

Gen. GOETHALS. I do not think that is altogether a fair statement. The statement is that the Quartermaster General has submitted an estimate for so many enlisted men and so many officers, and, as a matter of fact, we have 11,000 officers, and those officers are in the service and have got to be paid, and I do not think that the Secretary of War has limited it to 100,000. It is our duty to put in the 11,000 men.

Mr. TILSON. That is what we are trying to get him to do.

Gen. GOETHALS. That is what he ought to do.

Mr. TILSON. He says he is forbidden to do that.

Lieut. BRETT. The Secretary of War did not fix the number of officers; that is fixed according to the number of men.

(Thereupon, at 10.15 o'clock p. m., the committee adjourned to meet tomorrow, Tuesday, January 8, 1918, at 10.30 o'clock a. m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Tuesday, January 8, 1918.

The committee this day met, Hon. S. Hubert Dent (chairman) presiding.

STATEMENTS OF MAJ. GEN. HENRY C. SHARPE, QUARTERMASTER GENERAL, AND MAJ. GEN. GEORGE W. GOETHALS, ACTING QUARTERMASTER GENERAL, ACCOMPANIED BY COL. S. M. DALLAM, MAJ. EZRA DAVIS, CAPT. CHARLES P. DALY, AND LIEUT. J. Q. A. BRETT, QUARTERMASTER CORPS.

The CHAIRMAN. Last night we finished the general discussion in reference to officers of the various corps; and as I understand it, Lieut. Brett has rearranged and redrafted those provisions. You can give that to the committee now the way it has been redrafted.

Lieut. BRETT. It will be understood that this estimate was made in October, and at that time a great many of the technical and special units had not been formed, and we did not have a great amount of data on which to found an estimate as to the officers. But the reports which have come in—and the latest one came in last Saturday—indicate that 121,089 officers have been appointed, and they are actually in the service. A great many of these are covered by a report of November 30, and since that time there have been a great many coming in. Take the report of December 31 for the National Army and the National Guard and of November 30 for the National Army Reserve; that shows there are actually in the service 110,939. There have been commissioned 121,089. For that reason I have recast the estimate for officers and made the number 126,000. After I have made this preliminary statement, if it meets with the approval of the committee, I will indicate the changes which have been made.

The 126,000 officers are divided as follows: The officers of the line I have increased from 62,000 to 78,323. They have in the line, according to the figures furnished on Saturday, 77,795. That only gives about 600 more than are already in the service. The amount of this item should now read \$180,698,499.

Mr. SHALLENBERGER. I would like you to give the number of officers actually in the Regular Army and the National Guard.

Lieut. BRETT. The number of officers in the Regular Army on December 31, 1917, was 11,948 and in the National Guard 16,150.

Mr. SHALLENBERGER. Would those men all be line officers?

Lieut. BRETT. With very few exceptions they will be line officers.

Mr. SHALLENBERGER. All the rest of the line officers would be in the National Army—all the rest of the 77,795? Taking away the officers in the Regular Army and the National Guard, and that would leave those who are in the National Army?

Lieut. BRETT. Yes, sir; they did not call in the officers of the Staff Corps of the National Guard, except in a few cases, where they called them individually, as I understand it; but they did not come in in the draft.

Mr. SHALLENBERGER. How is it that there are twice as many line officers in the National Army as there are in the National Guard and the Regular Army when that branch of the service does not have as many troops?

Lieut. BRETT. That is because of the special and technical troops.

Mr. SHALLENBERGER. You said line officers.

Lieut. BRETT. 11,948 are all the officers in the Regular Army. In the National Guard, too, they are nearly all line officers.

Mr. SHALLENBERGER. You say there are a total of 77,795 line officers, and the total of the line officers in the Regular Army and the National Guard only amounts to about 28,000. You say the rest of the line officers are in the National Army. How does it happen that you have so many line officers in the National Army?

Lieut. BRETT. All of the officers in the National Army, apart from the technical and special troops, are line officers.

Mr. SHALLENBERGER. Then there must be a lot of line officers there who are not serving with any troops, but who are waiting for service with troops.

Lieut. BRETT. I suppose there are a good many there in anticipation of the arrival of the 200,000 men in the National Army.

Mr. SHALLENBERGER. Would it be a fair estimate to say that 16,000 would be actual number in the National Army?

Lieut. BRETT. There are 480,000 men in the National Army, and there will be 656,000.

Mr. SHALLENBERGER. But they are not really serving in the National Army; they are not serving with troops that do not exist. They must be waiting.

Lieut. BRETT. They are waiting. They have to be brought in in advance of the troops, so that when the troops arrive they will have officers to care for them.

Mr. MCKENZIE. In this National Army, are not the units all organized and formed, and necessarily officered—that is, the organizations of the 656,000 men—and is it not true that this additional increment of 34 per cent that is waiting to be called in will simply go in and fill up the organizations, but the organizations are already completely officered?

Lieut. BRETT. They are being organized. The men come in as individuals, and they are being formed into organizations and the organizations are being officered just as they are in the Regular Army.

Mr. MCKENZIE. But you do not catch my point. If I understand Gov. Shallenberger's inquiry, he is endeavoring to find out whether or not a good many of these officers in the National Army are not simply sitting around in hotels, or other places, waiting to be called into the service. My understanding is that all of the units of the National Army are formed, and necessarily must be officered, and the fact that a few of the men have not been called in would not in any way affect the organizations, so far as the officers are concerned, and as I understand it, these 16,000 officers—or whatever the number may be—are all in the service. What do you know about that?

Lieut. BRETT. The selective draft act provides, of course, that the organizations now that are provided for in the Cavalry, the Field Artillery, and the Infantry will be organized under the provisions of the national defense act, and they will have the same officers. But section 2 provides for the special and technical troops. Those troops have a great many officers, and as Maj. Davis stated last night, all of the special and technical troops for the Quartermaster Corps are formed along the line of the Infantry organization. There is a regimental organization, and they have their officers in the same proportion, or about the same proportion as the Infantry. The other branches are not formed into regiments, such as the bakery companies.

Mr. MCKENZIE. I do not think you understand yet what I am trying to get at. For instance, take the situation at Camp Grant, which is designated as a certain division of the Army. There is at that camp the Three hundred and forty-second Regiment that takes in the men from my congressional district. That regiment, of course, is organized, the companies are all organized, they are all officered, and the fact that there are 200,000 in the National Army who have

They asked for 50 more than we carried in our estimates.

Mr. TILSON. Either you are pretty liberal in your figuring or they are extremely modest in increasing the number only 50 officers.

Lieut. BRETT. Perhaps we were too liberal in our distribution.

The CHAIRMAN. Do you think that number could be cut?

Lieut. BRETT. It is a lump-sum appropriation. Somebody else would have to suffer. I do not think that should be cut, because we just took 100,000 officers and distributed them in a purely arbitrary manner between the different bureaus. What each bureau gets depends upon what the Secretary of War and the Chief of Staff gives them.

The CHAIRMAN. The next item is, "Additional pay for length of service, \$23,000." Your explanation of that is the same as for other similar items?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "Corps of Engineers: Pay of 400 officers, \$925,200."

Lieut. BRETT. Of course, that is taking into consideration the acts of recent years, making the Engineers a part of the line. There are some of the 400 officers who are on rivers-and-harbors work, and not serving with troops.

The CHAIRMAN. That includes all officers in the Engineer Corps?

Lieut. BRETT. No; not the 400. The Engineer Corps is now composed of 6,016 officers, and they want 6,550. You will find the rest of the Engineer officers are in the item including officers of the line. The enlisted men in the Engineer Corps are all in the line.

Mr. TILSON. How are these officers distinguished from the other officers of the Engineer Corps?

Lieut. BRETT. Just by their assignment. If they are assigned to duty with troops, they become a part of the line, and as soon as that assignment is changed they become really staff officers.

The CHAIRMAN. Why is there this increase in this item?

Mr. SHALLENBERGER. Is there a probability that there will be a larger number of Engineer officers used for the performance of civilian duties during the war, or is that an arbitrary figure?

Lieut. BRETT. This is purely an arbitrary figure. We have no means of knowing until after all the special and technical troops have been established how many of those become troops of the line and how many are staff troops. They are all a part of the 100,000 officers.

Mr. SHALLENBERGER. If an officer was not needed for the river-and-harbor work, he would simply go back to the line again?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "Additional pay for length of service, \$110,000." You offer the same explanation of that as you have given for other similar items?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "Ordnance Department: Pay of 2,000 officers, \$4,626,000." How many officers have they now?

Lieut. BRETT. They have 2,306.

The CHAIRMAN. They have 2,306?

Lieut. BRETT. Yes, sir; they had that number on the 20th of December.

Mr. TILSON. Then you will start out with a deficit?

Lieut. BRETT. No, sir; this is a lump-sum appropriation.

Mr. TILSON. We ought not to make that proposition misleading, as it seems to be in the Corps of Engineers and some others.

Lieut. BRETT. Not in the case of the Corps of Engineers, because you will find the rest of the officers appropriated for in the other part of the bill.

Mr. TILSON. It seems to me we are going out of the way to make that proposition misleading, and it does not seem to me there is any object in doing that.

Lieut. BRETT. You can increase the officers in the Ordnance Department to 2,500 and take the difference, 500, off the line. At the time we prepared the estimates they did not have that number—2,306—of officers. It is a simple matter to take 500 officers off the line.

Mr. TILSON. Is that a fair proposition, to take 500 officers off the line and put them in here? Is that about what it will be? I think people in looking over this bill will want to get at about how many officers there are who are going to receive pay.

Lieut. BRETT. They wanted 7,988.

Mr. TILSON. How many do you estimate they are going to have? You have estimated here for 2,000, and then you tell us they have 2,300, and that is six months before the bill goes into effect.

Lieut. BRETT. But this estimate was made long before they had 2,306 officers. We had no means of knowing what officers are to be provided for in the Ordnance Department.

Mr. TILSON. Do you not think we ought to try to bring it up to date?

Lieut. BRETT. We try to do that, and we can make the figure 3,000 and take them off the line.

Mr. TILSON. We can say that is approximately correct, but here we have the hearings with your statement in it.

Mr. CALDWELL. If we specify a less number of ordnance officers and appropriate for them, when the bill becomes a matter of public property on the floor of the House, the roar that goes up over the country because we have not supplied money enough for the ordnance officers will be pretty loud, and it will be something we will have a hard time answering.

Gen. SHARPE. You can take them off the list of officers in the Quartermaster Department.

Mr. TILSON. And take off a few from the Inspector General's Department.

Gen. SHARPE. You can take them off the Quartermaster Department.

Mr. TILSON. The Inspector General only asks 50 more for 3,000,000 men.

Gen. SHARPE. We are estimating for 8,300 officers, and we have 6,701 allowed us. You can take a thousand officers off the Quartermaster Department.

Mr. GREENE. I do not think we ought take any off, but we ought to know where we shall put them on.

Gen. SHARPE. We will need 18,027 officers, if we have an army of 3,000,000 men.

Mr. TILSON. We are figuring on an army of 1,600,000, and we are figuring so much for every additional 500,000. That is the plan we

are going on. If we figure on 1,600,000, and so much for every half million men thereafter, that will be some sort of a rational basis.

Gen. SHARPE. We can make these figures corresponding to what it is now.

Mr. TILSON. That is not what it may be to-morrow.

Gen. SHARPE. That is right.

Mr. TILSON. I think we had better have your best estimate of what it is going to be when this bill is in effect.

Lieut. BRETT. Then you ought to have 4,000 officers in the Ordnance Department, at least. They want 7,988 for 3,000,000 men, and for 1,612,245 they would want practically 4,000 officers.

Mr. QUIN. How many officers would you have for another 500,000 men?

Lieut. BRETT. You would want 27,778 officers for every half million men you had.

The CHAIRMAN. My recollection is that Gen. Crozier said he would need 5,000 officers.

Mr. TILSON. Is this your best estimate of the number of ordnance officers that that department ought to have out of the appropriation in the year 1919?

Lieut. BRETT. Gen. Crozier says he wants—

Mr. TILSON (interposing). I do not care how many he wants.

Lieut. BRETT. But taking the basis of his wants, they would amount to about 4,000 for 1919.

Mr. TILSON. Would you consider that a fair estimate of what should be our apportionment to the Ordnance Department?

Lieut. BRETT. In the light of the information we have to-day I should say 4,000 would be a fair estimate.

The CHAIRMAN. Then this estimate was made some time ago, and it ought to be increased?

Lieut. BRETT. Yes, sir. Here is a memorandum for the Quartermaster General from the Chief of Staff. That was on the 19th. On the 22d the question came up as to whether the million and a half men included the large number of men they wanted in the aviation section. We sent it to the Chief of Staff, and this is what he says, referring to the memorandum of October 19 (reading):

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, October 22, 1917.

Memorandum for the Quartermaster General:

Referring to the memorandum dated October 19, the number of men called for by the program of the Aviation Section, Signal Corps, in France, is 11,941 officers and 112,245 men. These should be in addition to the 1,500,000 men referred to in memorandum of October 19.

TASKER H. BLISS
General, Chief of Staff.

The memorandum of October 19 referred to above reads:

Memorandum for the Quartermaster General:

The Secretary of War desires that you submit a modified estimate based on the assumption of 1,500,000 men to be maintained in the Military Establishment during the fiscal year 1918-1919.

TASKER H. BLISS
General, Chief of Staff.

We can not go beyond that in our estimate. We may be certain that they are going to have more men, but we can not estimate for any more without some authority.

Mr. GREENE. The Quartermaster General is obliged to confine his distribution to the original estimate?

Lieut. BRETT. Yes, sir.

The following, submitted after the hearings, speaks for itself.

111-1006-A-F. A-E.]

JANUARY 23, 1918.

Memorandum for the Chief of Staff:

At the hearings before the House Committee on Military Affairs on the pay estimate for the fiscal year 1919 on January 7 and 8, 1918, the following colloquy took place:

"Mr. KAHN. Evidently, General, this estimate of yours begins with a deficiency, right now.

"Gen. SHARPE. Yes, sir.

"Mr. KAHN. What is going to be the policy of the bureau? Are you going to put in a supplemental estimate, so that this committee can pass upon it, or are you going to the Committee on Appropriations and ask for a deficiency?

"Gen. SHARPE. We would like to put in a supplemental estimate."

The estimate for the Quartermaster Corps for 1919, so far as the number of enlisted men to be provided for is concerned, was founded on the directions embodied in the two memoranda following:

"OCTOBER 19, 1917.

"Memorandum for the Quartermaster General:

"The Secretary of War desires that you submit a modified estimate based on the assumption of 1,500,000 men to be maintained in the Military Establishment during the fiscal year 1918-19.

"TASKER H. BLISS,

"General, Chief of Staff."

"OCTOBER 22, 1917.

"Memorandum for the Quartermaster General:

"Referring to the memorandum dated October 19, the number of men called for by the program of the Aviation Section, Signal Corps, in France, is 11,941 officers and 112,245 men. These should be in addition to the 1,800,000 men referred to in memorandum of October 19.

"TASKER H. BLISS.

"General, Chief of Staff."

These call for 1,812,245 enlisted men, and for this number this office provided 100,000 commissioned officers, which, appearing to the House Committee on Military Affairs to be too small, was increased to 126,000 officers during the progress of the hearings.

Authority is requested to submit a supplemental estimate for an increased number of enlisted men, and if granted information is desired as to the number for whom provision should be made.

GEO. W. GOETHALS,

Acting Quartermaster General.

The CHAIRMAN. The next item is, "Additional pay for length of service, \$70,000." Your explanation of that is the same as you have given for other similar items?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "Quartermaster Corps: Pay of eight thousand three hundred officers, \$19,197,900." How many officers have you now?

Gen. SHARPE. Six thousand seven hundred and one officers are authorized.

Lieut. BRETT. We actually had on December 1st, 6,190.

Mr. TILSON. That seems to be a fair proportion.

Col. DALLAM. The number authorized by the War Department, 6,701, is rather small, because the figures on which the General Staff based their number of officers were based on the data we gave them a couple of months ago, but the number of units which have been added to the Quartermaster Corps have increased the number of officers, so that the number laid down there, of 8,300, comes close to what we can figure we will need for an army of 1,612,245 men. Not having that, I have taken what we actually had at that time, and what will be the actual number required with the divisions and with an Army corps, and what is actually required for each technical unit, and for other branches, and it comes very close to 8,300 men for an army of 1,612,245 men.

Mr. QUIN. We know they are going to draft another allotment of men on the 15th day of February.

Gen. SHARPE. That is the last part of the draft which has not been called.

Mr. TILSON. It seems to me this just about represents the facts, and then we have the other formula that if another half million is added, we can give them the right appropriation for the half million and increase it by that amount, and it seems to me we are in good shape on that particular item.

Col. DALLAM. We are in very good shape, unless we have a new unit added to the corps. In that case that adds that many additional officers. For example, there was authorized the other day 51 special men in the remount service. There were 33 auxiliary remount stations authorized, and each one of them carries a certain number of officers, and we can figure how many officers we need.

Mr. TILSON. With that exception this practically takes care of you!

Col. DALLAM. Practically so.

Mr. SHALLENBERGER. Is it not a fact that the British Government appropriates every three months for the expenses of this war?

Gen. SHARPE. I do not know about that.

Mr. SHALLENBERGER. We are trying to appropriate a year and a half ahead in the biggest war in the world, and I think it is impossible that we can get close to what we need, and I think the public should understand that, so that if we have that in mind, it will perhaps make it easier for us to explain the situation. I am sure the English Government appropriates oftener than we do, and I think we will be forced to do that in order to get at an intelligent estimate of what we ought to have.

Col. DALLAM. The estimates can be made out in a much better way.

The CHAIRMAN. Can you not revise these estimates on these particular items by to-morrow or the next day in order to give us better information in reference to the Inspector General's Department and the Ordnance Department?

Lieut. BRETT. We will try to do that by to-morrow.

The CHAIRMAN. The next item is, "Medical Department: Pay of fourteen thousand officers, \$32,382,000."

Mr. TILSON. How many of those officers have actually been called into the service?

Lieut. BRETT. They have commissioned 24,060. We do not know how many they have called.

Mr. TILSON. Officers who are not commissioned do not receive pay; only those who are called?

Lieut. BRETT. Yes, sir.

Mr. SHALLENBERGER. I understood you to say 24,060 officers were commissioned in the Medical Corps. You do not know how many are called and you only estimate for 14,000.

Lieut. BRETT. The 14,000 we estimate for includes the medical officers, the dental officers, the veterinarians, the sanitary officers, the men in the ambulance service, etc.

Mr. SHALLENBERGER. You do not know how many men are actually in the service?

Lieut. BRETT. No, sir.

Mr. SHALLENBERGER. Do you know whether or not there are a great many more men commissioned in proportion to the number called in that particular corps than in the other corps?

Lieut. BRETT. I could not tell you that. Ordinarily, in peace times, the Medical Department has a large number of reserve officers commissioned.

Mr. SHALLENBERGER. That would not necessarily mean that we have 24,000 officers actually in the service, or anything like that?

Mr. OLNEY. Have there not been commissioned enough men in the Medical Corps for an army of 3,000,000 men?

Lieut. BRETT. Yes.

Gen. GOETHALS. The Medical Corps units have been organized and sent over in advance of our own Army.

Mr. SHALLENBERGER. Are they being paid by us?

Gen. GOETHALS. They are being paid by us.

Mr. CALDWELL. Does that include those who went over in the Red Cross units?

Lieut. BRETT. If they are commissioned in the Army.

Gen. GOETHALS. It is the Red Cross units I had reference to.

Mr. TILSON. We all know that they have commissioned a number of medical officers who have not been called into the service.

Mr. FIELDS. There are a very large number commissioned in the Dental Corps.

Lieut. BRETT. In the Dental Corps and the Reserve Dental Corps. They have in the Dental Corps 178, but they have in the Reserve Dental Corps 4,390, and in the Dental Corps of the National Guard 229. They are all carried as a part of the Medical Corps.

Mr. FIELDS. They have a Dental Corps that will supply an army of what size?

Lieut. BRETT. An army of 3,000,000 men.

Mr. GREENE. I think it will be found that a great many of the Dental Corps men are in the cantonments now, and there are perhaps more men at work now under normal conditions than are enough to take care of the Army when it gets under way. I have been informed that there are a great many men among the recruits whose only trouble is their defective teeth, and those teeth are being fixed up so that the men can be ready to go.

Mr. CALDWELL. In addition to that, there are a number of free organizations who are doing work in the Dental Corps. I understood there was some trouble about the supply of material going into the teeth.

Lieut. BRETT. Let me call your attention to the difficulty that is going to arise in revising this estimate for the pay of officers.

There are in the service at the present time, commissioned, 121,089 officers, and we have actually in service on December 31 for the Regular Army and National Guard and on November 30 for the Reserve Officers and the National Army 110,939.

When you come to correct the figures for the Inspector General's Department and the Ordnance Department and for the Medical Department, what would you have us do with the 11,000 surplus?

Mr. TILSON. They are not in the service, are they?

Lieut. BRETT. Yes, sir.

Mr. TILSON. Then you have made a mistake somewhere.

Lieut. BRETT. No, sir; we are limited on our number of officers, as we are on the enlisted men. Eleven thousand men would be about taken up by the 200,000 additional men. We have 200,000 additional men to come in, but the Secretary of War says estimate for 1,612,245. But they do not stop bringing the men in, and they do not stop bringing in the officers.

Mr. TILSON. Then you tell us you are asking for pay for 100,000 officers although there are at the present time 111,000 officers.

Mr. SHALLENBERGER. You say there have been commissioned 121,000 officers?

Lieut. BRETT. There have been 121,089 officers commissioned.

Mr. SHALLENBERGER. A lot of them have not been called into the service yet.

Mr. TILSON. But there are 11,000 who have to be paid.

Mr. QUIN. What would be the average pay of the 11,000 surplus?

Lieut. BRETT. \$2,313 apiece per year.

Mr. QUIN. We would have to add that to this bill?

Lieut. BRETT. It looks that way; but they are still taking in officers. They are not going to stop.

Mr. QUIN. But you have prorated that on each additional 500,000 men?

Lieut. BRETT. If you put in the \$290,000,000 for every additional 500,000 men we can take care of them.

The CHAIRMAN. You can take care of 1,612,245?

Lieut. BRETT. If you give us \$290,000,000 for every additional 500,000 enlisted men, in addition to the 1,612,245, we could take care of the officers without any trouble, because the officers will not be increased. They will put in no additional officers until they have absorbed these 11,000. There are 27,778 officers for each 500,000 men.

Mr. TILSON. Then your estimate of \$290,000,000 for the first 500,000 is too much, by your own statement, because you say you can take care of the 11,000 officers out of the appropriation you are asking for.

Lieut. BRETT. Because they are a part of it.

Capt. DALY. We have not estimated for the 11,000 extra.

Mr. TILSON. You have not estimated for them?

Capt. DALY. Only for 100,000.

Mr. TILSON. I thought this \$290,000,000 was for pay of officers, also.

Capt. DALY. Yes, sir; it is, but in our estimate for 100,000 officers and 1,612,245 men no provision is made for the 11,000 officers in excess.

Mr. GREENE. But you do bring into actual existence some officers not included in anybody's estimate?

Capt. DALY. We have 11,000 officers over, and we require 27,718 for every additional 500,000 men, and we will bring in that many more and add to the 11,000 the special officers for 500,000.

Lieut. BRETT. We can just write the Secretary a letter, calling attention to the fact that if they exceed a certain number there is going to be a deficiency, and stop right there, and it is then up to the Secretary of War to determine whether he desires to create a deficiency.

Mr. HARRISON. Do you not have to provide officers in advance of calling the men in?

Lieut. BRETT. Always.

Mr. HARRISON. Then the 11,000 officers are provided in advance of calling in the extra 500,000 men?

Mr. OLNEY. In the Dental Reserve Corps, although you may commission a dentist you are not going to call him into the service until he is needed, and his pay starts in then?

Lieut. BRETT. His pay does not start until he is called in.

Mr. HARRISON. Then the Secretary of War is simply providing 11,000 men for the expected increase?

Mr. TILSON. But he is not providing the pay. He has forbidden that, and they have not provided for it in their estimates.

Gen. GOETHALS. I do not think that is altogether a fair statement. The statement is that the Quartermaster General has submitted an estimate for so many enlisted men and so many officers, and, as a matter of fact, we have 11,000 officers, and those officers are in the service and have got to be paid, and I do not think that the Secretary of War has limited it to 100,000. It is our duty to put in the 11,000 men.

Mr. TILSON. That is what we are trying to get him to do.

Gen. GOETHALS. That is what he ought to do.

Mr. TILSON. He says he is forbidden to do that.

Lieut. BRETT. The Secretary of War did not fix the number of officers; that is fixed according to the number of men.

(Thereupon, at 10.15 o'clock p. m., the committee adjourned to meet tomorrow, Tuesday, January 8, 1918, at 10.30 o'clock a. m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Tuesday, January 8, 1918.

The committee this day met, Hon. S. Hubert Dent (chairman) presiding.

STATEMENTS OF MAJ. GEN. HENRY C. SHARPE, QUARTERMASTER GENERAL, AND MAJ. GEN. GEORGE W. GOETHALS, ACTING QUARTERMASTER GENERAL, ACCOMPANIED BY COL. S. M. DALLAM, MAJ. EZRA DAVIS, CAPT. CHARLES P. DALY, AND LIEUT. J. Q. A. BRETT, QUARTERMASTER CORPS.

The CHAIRMAN. Last night we finished the general discussion in reference to officers of the various corps; and as I understand it, Lieut. Brett has rearranged and redrafted those provisions. You can give that to the committee now the way it has been redrafted.

Lieut. BRETT. It will be understood that this estimate was made in October, and at that time a great many of the technical and special units had not been formed, and we did not have a great amount of data on which to found an estimate as to the officers. But the reports which have come in—and the latest one came in last Saturday—indicate that 121,089 officers have been appointed, and they are actually in the service. A great many of these are covered by a report of November 30, and since that time there have been a great many coming in. Take the report of December 31 for the National Army and the National Guard and of November 30 for the National Army Reserve; that shows there are actually in the service 110,939. There have been commissioned 121,089. For that reason I have recast the estimate for officers and made the number 126,000. After I have made this preliminary statement, if it meets with the approval of the committee, I will indicate the changes which have been made.

The 126,000 officers are divided as follows: The officers of the line I have increased from 62,000 to 78,323. They have in the line, according to the figures furnished on Saturday, 77,795. That only gives about 600 more than are already in the service. The amount of this item should now read \$180,698,499.

Mr. SHALLENBERGER. I would like you to give the number of officers actually in the Regular Army and the National Guard.

Lieut. BRETT. The number of officers in the Regular Army on December 31, 1917, was 11,948 and in the National Guard 16,150.

Mr. SHALLENBERGER. Would those men all be line officers?

Lieut. BRETT. With very few exceptions they will be line officers.

Mr. SHALLENBERGER. All the rest of the line officers would be in the National Army—all the rest of the 77,795? Taking away the officers in the Regular Army and the National Guard, and that would leave those who are in the National Army?

Lieut. BRETT. Yes, sir; they did not call in the officers of the Staff Corps of the National Guard, except in a few cases, where they called them individually, as I understand it; but they did not come in in the draft.

Mr. SHALLENBERGER. How is it that there are twice as many line officers in the National Army as there are in the National Guard and the Regular Army when that branch of the service does not have as many troops?

Lieut. BRETT. That is because of the special and technical troops.

Mr. SHALLENBERGER. You said line officers.

Lieut. BRETT. 11,948 are all the officers in the Regular Army. In the National Guard, too, they are nearly all line officers.

Mr. SHALLENBERGER. You say there are a total of 77,795 line officers, and the total of the line officers in the Regular Army and the National Guard only amounts to about 28,000. You say the rest of the line officers are in the National Army. How does it happen that you have so many line officers in the National Army?

Lieut. BRETT. All of the officers in the National Army, apart from the technical and special troops, are line officers.

Mr. SHALLENBERGER. Then there must be a lot of line officers there who are not serving with any troops, but who are waiting for service with troops.

Lieut. BRETT. I suppose there are a good many there in anticipation of the arrival of the 200,000 men in the National Army.

Mr. SHALLENBERGER. Would it be a fair estimate to say that 16,000 would be actual number in the National Army?

Lieut. BRETT. There are 480,000 men in the National Army, and there will be 656,000.

Mr. SHALLENBERGER. But they are not really serving in the National Army; they are not serving with troops that do not exist. They must be waiting.

Lieut. BRETT. They are waiting. They have to be brought in in advance of the troops, so that when the troops arrive they will have officers to care for them.

Mr. MCKENZIE. In this National Army, are not the units all organized and formed, and necessarily officered—that is, the organizations of the 656,000 men—and is it not true that this additional increment of 34 per cent that is waiting to be called in will simply go in and fill up the organizations, but the organizations are already completely officered?

Lieut. BRETT. They are being organized. The men come in as individuals, and they are being formed into organizations and the organizations are being officered just as they are in the Regular Army.

Mr. MCKENZIE. But you do not catch my point. If I understand Gov. Shallenberger's inquiry, he is endeavoring to find out whether or not a good many of these officers in the National Army are not simply sitting around in hotels, or other places, waiting to be called into the service. My understanding is that all of the units of the National Army are formed, and necessarily must be officered, and the fact that a few of the men have not been called in would not in any way affect the organizations, so far as the officers are concerned, and as I understand it, these 16,000 officers—or whatever the number may be—are all in the service. What do you know about that?

Lieut. BRETT. The selective draft act provides, of course, that the organizations now that are provided for in the Cavalry, the Field Artillery, and the Infantry will be organized under the provisions of the national defense act, and they will have the same officers. But section 2 provides for the special and technical troops. Those troops have a great many officers, and as Maj. Davis stated last night, all of the special and technical troops for the Quartermaster Corps are formed along the line of the Infantry organization. There is a regimental organization, and they have their officers in the same proportion, or about the same proportion as the Infantry. The other branches are not formed into regiments, such as the bakery companies.

Mr. MCKENZIE. I do not think you understand yet what I am trying to get at. For instance, take the situation at Camp Grant, which is designated as a certain division of the Army. There is at that camp the Three hundred and forty-second Regiment that takes in the men from my congressional district. That regiment, of course, is organized, the companies are all organized, they are all officered, and the fact that there are 200,000 in the National Army who have

not been called into service will not increase the number of officers which are there now.

Lieut. BRETT. They are all skeletonized; they are formed.

The CHAIRMAN. In other words, if I understand it, the point is this: How many officers are there in the Regular organizations now, and how many are there in these special and technical units? You can separate them in that way.

Mr. MCKENZIE. It seems to me it is perfectly plain how many officers there must be in the different camps now in the National Army, because they are all there.

The CHAIRMAN. As a matter of fact, most of the organizations are skeleton organizations, as I understand it, and many of the drafted men are being sent to the old National Guard regiments to fill them up. The officers are there, but the men are being sent to the skeleton organizations.

Mr. SHALLENBERGER. There are practically 78,000 officers of the line in the service. There are about 28,000 of them of all corps in the Regular United States Army and the National Guard, and you say practically all of them are line officers. Counting them all as line officers, you have approximately 50,000 line officers left for the National Army. Do you mean to say they are drilling with the National Army now?

Lieut. BRETT. The Adjutant General on Saturday——

Mr. SHALLENBERGER (interposing). They are commissioned, but what are they doing?

Lieut. BRETT. The Chief of Staff will have to answer that question, or the Acting Chief of Staff. We just take the figures they give us and put them in the estimates.

The next item is the General Staff, and they have 91 officers now. For an army of 3,000,000 men they want 348 officers, and I have given them 180. I think that is a fair proportion. The amount for the General Staff should now read \$416,340.

In The Adjutant General's Department I have not made any change, but left the number at 281. They have now 150.

The Inspector General's Department I have reduced from 246 to 150. They wanted 296 for an army of 3,000,000 men. The amount for pay should now read \$346,950.

There are no changes in the Engineer officers. Most of the Engineer officers are in the line.

In the Ordnance Department I have doubled the number. They have 2,366 officers, or they had that many on November 30. We provided for 2,000, and in the new estimate we have provided for 4,000. They want 7,988 for an army of 3,000,000 men, and that is about the proper proportion. It is a little over half. The amount for pay for the officers of the Ordnance Department should now read \$9,252,000.

There are no changes in the Quartermaster Corp; I left that at 8,300.

On January 25, 1918, there were commissioned in the Medical Department the following officers: 1 major general, 4 brigadier generals, 68 colonels, 122 lieutenant colonels, 1,376 majors, 3,757 captains, 18,927 first lieutenants, and 1,384 second lieutenants, which includes the Regular Medical Department, the Dental Corps, Dental Reserve Corps, Dental Reserve Corps of the National Guard, Veterinarians.

Veterinary Reserve Corps, Veterinary Reserve Corps of the National Guard, and National Army Veterinary Reserve Corps.

The Medical Department has 24,060 officers already commissioned, and I have provided for 14,000 in the estimate. I have increased that to 20,000. They asked for 1919, for an army of 3,000,000 men, 38,089 officers. The amount for pay for the officers of the Medical Department should now read \$46,260,000.

So far as the Judge Advocate General's Department is concerned, I have reduced that from 300 to 240. They have 132 now, and they want 461 for an army of 3,000,000 men. The amount for pay should now read \$555,120.

In the Signal Corps I have taken 2,000 out of the line and put them in the Signal Corps proper, which has no provision made for it. They gave us 11,941 as required for the aviation section in France. That makes the Signal Corps 13,891, and they have 1,354 in the Signal Corps proper, and in the aviation section 2,756. For an army of 3,000,000 men they want 5,000 in the Signal Corps proper and 18,006 in the aviation section, making a total of practically 23,000, and we have given them 13,891.

There is no change in the Philippine Scouts.

Mr. CALDWELL. You say they wanted how many?

Lieut. BRETT. You mean in the Signal Corps?

Mr. CALDWELL. Yes.

Lieut. BRETT. They want 23,006 officers for an Army of 3,000,000 men.

Mr. CALDWELL. That includes all branches of the service?

Lieut. BRETT. Yes.

Mr. CALDWELL. How many have you given them?

Lieut. BRETT. Thirteen thousand nine hundred and forty-one.

Mr. CALDWELL. Half of what they wanted.

Lieut. BRETT. It is practically half.

Mr. CALDWELL. How many have they now in the service?

Lieut. BRETT. They have 1,354 in the Signal Corps proper and 2,356 in the Aviation Section.

Mr. CALDWELL. What you have given them is less than they have now?

Lieut. BRETT. I have given them 13,941. They have now a little over 4,000.

That gives us altogether, Mr. Chairman, 126,000 officers. If the committee desires it, I can indicate the pages on which the changes in the printed bill occur, that is, where the changes are to be made.

The CHAIRMAN. You can put that in the record.

Lieut. BRETT. Recapitulating what I have said, the changes are as follows:

Officers of the line: For pay of 78,323 officers of the line.....	\$180, 698, 499. 00
General Staff Corps: For pay of 180 officers.....	416, 340. 00
Inspector General's Department: Pay of 150 officers.....	346, 950. 00
Ordnance Department: Pay of 4,000 officers.....	9, 252, 000. 00
Medical Department: Pay of 20,000 officers.....	46, 260, 000. 00
Judge Advocate General's Department: Pay of 240 officers....	555, 120. 00
Signal Corps: Pay of 13,941 officers.....	32, 245, 533. 00
Making a total, pay, etc., of the Army.....	1, 068, 281, 336. 04
A difference of.....	64, 347, 660. 00
Consisting of the pay of 26,000 officers at \$2,313	
each.....	\$60, 138, 000
Foreign-service pay.....	4, 209, 660
	64, 347, 660. 00

Lieut. BRETT. I wish to state, Mr. Chairman, in regard to the changes I have made in the matter of these additional officers, that I have provided nothing but the base and foreign-service pay; no service pay, no mileage, no commutation of quarters, or of heat, or of light, on the supposition that in all probability they might not get all the officers at the beginning of the year, and you would not get many officers anyway who had had any service, unless we get them from the Regular Army, and they already have service pay computed as enlisted men in the line, so that those figures would not be good if they did not wish to provide for 126,000 officers.

The CHAIRMAN. The next item is, "Reserve veterinarians, \$700,000." Will you explain that item?

Lieut. BRETT. They want 1,875 veterinarians to care for 750,000 animals of the Army.

Mr. KAHN. Is that number, 1,875 veterinarians, predicated on an Army of 3,000,000 men?

Lieut. BRETT. Yes, sir.

Mr. ANTHONY. For the Regulars and for the Reserves?

Lieut. BRETT. Yes, sir; all classes.

Mr. KAHN. How many should there have been for an Army of 1,612,245?

Lieut. BRETT. According to that they should have a little over 1,000 for an Army of 1,612,245 men; but this amount, \$700,000, will not pay for them. These are Reserve veterinarians. The commissioned veterinarians are included among the officers of the Medical Department—in the 20,000 officers. These are Reserve veterinarians, which you provided for under the act of June 3.

Mr. KAHN. You say you will probably require 1,000 of them for the size of the Army that is now provided for?

Lieut. BRETT. That is 1,000 veterinarians—officers of all classes. These Reserve veterinarians are only to be used in case they do not get commissioned officers. If they get the commissioned officers, the \$700,000 will not be used.

The CHAIRMAN. It has already been taken care of?

Lieut. BRETT. Everything except the Reserve veterinarians. They go out and hire civilian veterinarians, and if they have to go out and get those veterinarians, they do not get a commission in the Army, and they will be paid out of this \$700,000. The Surgeon General can tell you whether he is getting all the veterinarians he requires.

The CHAIRMAN. The next item is, "Contract surgeons, \$120,000."

Lieut. BRETT. That is a slight increase, raised from \$75,000 up to \$120,000, by direction of the Chief of Staff.

The CHAIRMAN. How many of them are there?

Lieut. BRETT. The Surgeon General requested that we provide a lump sum, because they give them from \$75 up to a maximum of \$150 a month, and so it is pretty hard to state just how many there are. I can put that in the hearings.

The CHAIRMAN. I wish you would do that.

The following shows the contract surgeons in service:

Full time, \$150 per month.....	120
Special, \$100 per month.....	2
Half time, \$75 per month.....	32
Total.....	154

The CHAIRMAN. The next item is, "Superintendent of Nurse Corps, \$1,800."

Lieut. BRETT. That is a statutory salary.

The CHAIRMAN. The next item is, "Nurses, \$13,808,920."

Lieut. BRETT. That is for 20,664 nurses.

The CHAIRMAN. How many have you now?

Lieut. BRETT. There were 4,300 on last Saturday. They are making a great effort to get nurses, as they need them very badly, but they are finding great difficulty in getting the required number.

Mr. TILSON. Do you know what they are paying the nurses?

Lieut. BRETT. They start at \$50 a month.

Mr. TILSON. What do they have in addition?

Lieut. BRETT. They have commutation of quarters and heat and light and commutation of rations.

Mr. TILSON. When they are serving in the field they receive only a place to stay and the ration?

Lieut. BRETT. They get \$50 a month, and they get service pay, and there is an increase when acting as chief nurse, and they get foreign-service pay.

Mr. TILSON. All of them get foreign-service pay, but most of them will be new nurses and will get no pay for length of service?

Lieut. BRETT. That is true.

Mr. ANTHONY. Are there 4,000 on duty now?

Lieut. BRETT. Yes, sir.

Mr. ANTHONY. In hospitals?

Lieut. BRETT. Yes, sir.

Mr. ANTHONY. There is need for that number?

Lieut. BRETT. Yes, sir.

Mr. KAHN. Are they men or women?

Lieut. BRETT. All women.

Mr. CALDWELL. They have a prescribed age for entering the service?

Lieut. BRETT. They have.

Mr. ANTHONY. You have not the figures, have you, to show how many men of the Army are now in hospitals?

Lieut. BRETT. No, sir; I have not: but the Surgeon General can give you those figures. He reports 38,148 patients in hospitals on January 12, 1918, which includes all patients then in hospitals.

The CHAIRMAN. You say they start at a salary of \$50 a month. How high do they go?

Lieut. BRETT. I could not state that exactly, but I think they go as high as \$80 a month.

Mr. CALDWELL. Are these nurses to become a part of the regular military service, and be subject to military discipline?

Lieut. BRETT. Yes, sir.

Mr. TILSON. They enlist for the war, the same as the men?

Lieut. BRETT. No; they are not enlisted; they are contracted; they sign an agreement.

Mr. CALDWELL. Are they not subject to military discipline?

Lieut. BRETT. Yes, sir.

Mr. TILSON. What kind of an agreement is it that they sign as to length of service? Is it during the emergency, or for a certain term?

Lieut. BRETT. Gen. Gorgas can tell you about that.

The following are the rates of pay of the nurses:

Members of the Nurse Corps (female) shall hereafter be paid \$50 per month for the first period of three years' service; \$55 per month for the second period of three years' service; \$60 per month for the third period of three years' service, and \$65 per month after nine years' service in said Nurse Corps. All female nurses shall hereafter be entitled, in addition to the rates of pay as provided, to \$10 per month when serving beyond the limits of the States comprising the Union and the Territories of the United States contiguous thereto (excepting Porto Rico and Hawaii). When serving as chief nurses their pay may be increased by authority of the Secretary of War, such increase not to exceed \$30 per month.—Act Mar. 23, 1910; G. O. 54, Apr. 6, 1910.

Service in the Army Nurse Corps prior to March 23, 1910, as well as subsequent thereto, is to be counted in determining the rate of pay an Army nurse receives from and after March 23, 1910.—Comp., Apr. 28, 1910, P. M. G. O., 82272.

The pay of chief nurses at general hospitals, at base hospitals, and on hospital ships will be their pay as nurses plus \$30 a month. The pay of other chief nurses will ordinarily be their pay as nurses plus \$20 a month; but in cases where special skill and capability are required the Surgeon General in his discretion may increase the additional amount to not more than \$30 a month.

(a) The additional pay provided for chief nurses as above can be allowed to them only when they are actually serving as such. When on leave of absence or en route between stations they can draw only their pay as nurses.—G. O., 106, W. D. 1910.

The increased pay authorized by law for chief nurses is given them for service as such in fact, and not because they are appointed as chief nurses. When not actually serving at hospitals where there are other nurses of whom they presumably are at the head, they only get the pay provided for all nurses.—Comp., May 7, 1910.

Members of the Nurse Corps may be granted leaves of absence for 30 days with pay for each calendar year.—Act Feb. 2, 1901, 31 Stat., 753; G. O., 9, 1901.

All female nurses shall hereafter be entitled to cumulative leave of absence with pay at the rate of 30 days for each calendar year of service in the Nurse Corps.—Act Mar. 23, 1910; G. O., 54, W. D., Apr. 6, 1910.

Nurses will not be granted extra leave of absence with pay because of illness.—Manual for the Medical Dept., G. O., 141, W. D., 1907.

The CHAIRMAN. What is the length of service before they get an increase?

Lieut. BRETT. Three years.

Gen. SHARPE. The maximum yearly increase is \$180.

The CHAIRMAN. For how much service?

Gen. SHARPE. For nine years service.

Mr. TILSON. The inducement, so far as pay is concerned now, would be \$50 a month?

Lieut. BRETT. Plus foreign service pay of \$10 a month extra. If a woman is capable of being a chief nurse, she would get more. She gets from \$50 up to \$55, \$60, and \$65 for three, six, and nine or more years' service.

Mr. CALDWELL. Is that pay statutory?

Lieut. BRETT. Yes, sir; that is statutory pay.

Mr. TILSON. And the foreign-service pay is 20 per cent additional?

Lieut. BRETT. \$10 a month.

The CHAIRMAN. You have already explained the items in reference to the Judge Advocate General's Department, the Signal Corps, and the Bureau of Insular Affairs. The next item is:

Retired officers: For pay of officers on the retired list, \$2,821,125."

Lieut. BRETT. That amount is computed on 1,030 officers, and 47 officers of the Philippine Scouts. There are 3 lieutenant generals, 31 major generals, 171 brigadier generals, 176 colonels, 93 lieutenant

colonel, 212 majors, 205 captains, 88 first lieutenants, and 23 second lieutenants. Of the chaplains, there are 2 lieutenant colonels, 14 majors, 8 captains, and 1 first lieutenant. Then there are 3 professors of the Military Academy and 47 officers of the Philippine Scouts, their pay being that of a master signal electrician. The Philippine Scouts retired officers are made up of 28 captains, 16 first lieutenants, and 3 second lieutenants.

Mr. QUIN. Can you tell us who the three lieutenant generals are?

Lieut. BRETT. Gen. Miles, Gen. Bates, and Gen. Young.

Mr. CALDWELL. They got their rank of lieutenant general by reason of the fact that they had Civil War experience, and were retired one grade higher than the rank in which they were serving at the time of retirements, did they not?

Gen. GOETHALS. The grade of lieutenant general was established and Gen. Miles was appointed to that grade. On the retirement of Gen. Miles, Gen. Corbin was selected, or Gen. Chaffee, and when the next vacancy occurred Gen. MacArthur was appointed, and it went on down. That left living now those three lieutenant generals, who succeeded to that grade under the provisions of the act of Congress.

Lieut. BRETT. When the vacancy to which Gen. MacArthur should have succeeded as Chief of Staff was filled by the appointment of Gen. Bell, Congress said that if the office of Chief of Staff was not for the lieutenant general there was no use for the grade to exist, and it was abolished.

Mr. KAHN. That was not the only reason that actuated Congress. Congress felt there ought to be something to give officers who distinguished themselves in the field. If you gave that rank to every man who happened to be Chief of Staff you would not have anything to give those men whose services in the field warranted their promotion to the grade of lieutenant general.

Mr. ANTHONY. Now, as I understand it, we have revived the grade of lieutenant general for the Chief of Staff?

Lieut. BRETT. We have the grade of general for the Chief of Staff and for Gen. Pershing, and the grade of lieutenant general for the commanding generals of the Army corps.

The CHAIRMAN. There has been no lieutenant general appointed?

Lieut. BRETT. No, sir.

The CHAIRMAN. How many retired officers are there back in active service now?

Lieut. BRETT. There are 1,085—1,038 Regular officers and 47 Philippine Scouts.

The CHAIRMAN. In the service?

Lieut. BRETT. You mean in the active service?

The CHAIRMAN. Yes.

Lieut. BRETT. There are 409 in the active service and 40 Philippine Scout officers.

The CHAIRMAN. I notice this appropriation is a little larger than the appropriation last year. As a matter of fact, there are more retired officers on active duty now than there were last year?

Lieut. BRETT. A great many more.

The CHAIRMAN. Then why could not this amount be lower than it was last year, the amount for retired pay?

Lieut. BRETT. You mean the gross sum of the retired pay?

The CHAIRMAN. Yes.

Lieut. BRETT. Because those in the higher grades are becoming less all the time. In 1903 and 1904, under the act of April 23, 1904, there were a great many officers who were created brigadier generals. That act provided that all officers who had had Civil War service could be retired with an increased grade, and a great many brigadier generals were made. They are dying off.

The CHAIRMAN. But the question is the other way. That ought to make it less. You are making the amount more. The point I was making was why, with more retired officers on the active list this year than last year, the amount of the estimate for the pay of the retired officers is greater than it was last year.

Lieut. BRETT. The retired officers are paid their retired pay out of this item whether on active duty or not, and there being more retired now than in 1917 the appropriation for their pay is naturally more than in that year.

Mr. KAHN. You have a deficiency in that this year?

Lieut. BRETT. No; it is a lump-sum appropriation.

Mr. TILSON. Did you pay out more to retired officers than we allowed under this item?

Lieut. BRETT. I can give you the amount for 1917. I can give you the exact cost for 1917. The retired officers in 1917 were actually paid—we do not know whether they have all been paid, but their base pay was \$2,780,466, and service pay amounted to \$484,304. The pay of retired veterinarians amounted to \$4,652.50, and the pay of pay clerks amounted to \$21,750.72.

Mr. KAHN. How much of this \$2,700,000 that we appropriated for the fiscal year 1918 have we paid out?

Lieut. BRETT. That is impossible to tell. We have no reports on the cost for 1918 yet.

Mr. KAHN. Could you not tell how much you have expended of that amount?

Gen. SHARPE. We can have that looked up.

Mr. KAHN. Then we would know how much you have to carry you on for the balance of the fiscal year.

Lieut. BRETT. We can tell you how our pay appropriation was spent for 1917.

Gen. SHARPE. We can have that matter put in the hearings.

(The matter referred to is as follows:)

Total pay of the Army appropriated for 1918	\$842, 639, 118. 30
Obligated to Dec. 29, 1917	334, 919, 932. 45

Balance available for period Dec. 29, 1917, to June 30, 1918.	507, 719, 185. 85
--	-------------------

Lieut. BRETT. I believe this amount will see us through.

Mr. SHALLENBERGER. Is not the explanation of this amount for the retired officers' pay found in the fact that you have another item for the increase in pay of these officers while they are serving on the active list, and that you have been appropriating for them on the active officers' list?

Lieut. BRETT. This item for pay of officers on the retired list, plus the item increased pay to retired officers on active duty, comprises the pay for all retired officers. They receive no pay from the appropriations made for officers on the active list.

Mr. GREENE. Are we to understand that from month to month you can not tell the amount of money expended under any item of an appropriation?

Lieut. BRETT. Let me illustrate it: Take the routine accounts, which are paid in the Philippine Islands. They are paid for July in August. The disbursing officer has until the 20th of September to send his account off. It takes at least 35 days, probably 40 days, for the account to reach Washington. That would bring it up to the end of October. In Washington they have 90 days in which to examine the account before it is sent to the auditor, and that would bring it up to the end of January before we could get a report on the month's cost. In case it is necessary, we can take out the disbursing officers' account current and check up these items, but in order to do that we would have to stop the work of the office, but if there is an occasion to do it, we can do it. We can take the accounts current and see how much has been paid out for the pay of the Army.

Mr. TILSON. Is it not a more practicable way to compare 1917 with 1919?

Mr. GREENE. I am not looking for comparisons. I would like to see what is in the chest. Here is a banking house, for instance, that is doing business, not only in connection with incidental monthly pay rolls, but doing the actual transactions in foreign exchange, or is in connection with all sorts of commercial transactions day by day, and it has agencies located in every habitable part of the civilized globe, and yet those people know at the end of the month how much money they have got.

Lieut. BRETT. We know how much money we have got.

Mr. GREENE. They know where the money went.

Lieut. BRETT. We can not tell the items, but we do know that of the pay of the Army we gave out on requisitions we had left up to the 29th of December a balance of \$507,719.185.85 in pay for 1918. The amount in the hands of disbursing officers is supposed to carry them during the first six months of the fiscal year, or to December 31. We can tell you that in five minutes' time, at any time, but we can not get the disbursing officers' accounts; they are too far scattered, and it takes too long to analyze those accounts. But if we want to get a close analysis of the pay item, we can take out those accounts, take the accounts current and check off the items you are looking for, and we would check that against the requisition account, the money we have drawn out of the Treasury and put into the hands of disbursing officers.

Mr. GREENE. The Government does not know where this money has gone, but a private concern can tell you where its money has gone, every month.

Lieut. BRETT. We can easily find that out.

Mr. GREENE. It seems strange that the Government can not do that as well as a private concern.

Gen. GOETHALS. I do not think that is exactly fair.

Mr. GREENE. I mean the system.

Gen. GOETHALS. The system is not any different from a banking system.

Mr. GREENE. I am talking about a particular system.

Gen. GOETHALS. They have a system. They know how much they have in hand, and they know how much they have allotted the disbursing officer.

Mr. GREENE. But they do not know when a man will present a credit and get the money. That is where the delay comes.

Gen. GOETHALS. At the close of the month the disbursing officer sends his account current here, and he knows from that how much he has on hand the 1st of the month. That is all a bank would know.

Mr. GREENE. The distinction is that the commercial banking agency knows what credits may be out, and they may, in their book-keeping, figure on that until the credit is presented.

Gen. GOETHALS. It is the same way here.

Mr. GREENE. In these cases the officers and soldiers are in garrison, and they have a formal monthly pay roll according to which they are paid, and it seems to me that six months is a long time before you know where the successive items involved in the first month's accounts are.

Gen. GOETHALS. The six months he was explaining about is the final check up on the account of the officer in the Philippines by the auditing authorities in Washington. If he renders his account on the 1st of the month, his account current comes here, and he ought to know in his office just what that officer has on hand on the 1st of the month. He is talking about the final closing up of the audit in Washington, which is an entirely different matter.

Mr. GREENE. That looks slow.

Gen. GOETHALS. It is cumbersome, but he can determine, as soon as the officer's account current for the month comes in, what cash that officer had on hand the 1st of the month.

Gen. SHARPE. An extreme case was taken of the officer in the Philippine Islands. Of course, we get them in from the different officers in this country much quicker than that.

Lieut. BRETT. If the occasion arises, we can, by cable and telegraph, get the balances on the accounts in 72 hours from the remotest point.

Mr. GREENE. It does seem to me that in the final accounting in Washington six months is a long time.

Gen. GOETHALS. The law provides when the accounts shall be sent here, and the law provides that within 90 days from their receipt in Washington they must be sent to the Auditor for the War Department. The chief of the bureau may take that time, and he may not.

The CHAIRMAN. In this item you appropriate the regular pay for retired officers, and then you have another item providing for the increased pay to those who are on active duty, and you carry that in those two items, instead of carrying these officers in the regular item for the pay of officers of the Army?

Lieut. BRETT. Yes; part of the pay is carried under the other item. All the other pay for retired officers is carried under this one item, whether on active or inactive duty.

The CHAIRMAN. The item providing for the increased pay which these officers get while on active duty is carried in a separate item on this same page, the amount of item being \$750,000?

Lieut. BRETT. Yes, sir.

Mr. KAHN. Is there any likelihood of their taking any more of the retired officers into active service?

Gen. SHARPE. I do not believe so, because the list has been gone over very carefully.

Mr. KAHN. Has the President the right to order any retired officer to the active list?

Gen. SHARPE. Yes, sir.

Lieut. BRETT. Under the provisions of section 24 of the act of June 3, 1916.

The CHAIRMAN. The next item is, "Retired enlisted men: Pay of retired enlisted men, \$3,196,512."

Lieut. BRETT. That is based on a per capita of \$60.54 a month, which is a very carefully worked-out per capita, and it is for 4,400 men. On July 13 there were 4,303 men on the retired list.

Mr. ANTHONY. And they draw over \$3,000,000?

Lieut. BRETT. Yes. That is a per capita of \$726.48 a year.

Mr. ANTHONY. Nearly all of them have been retired as noncommissioned officers?

Lieut. BRETT. No; there are some privates. I can read the entire list, if you care for it.

Mr. ANTHONY. How many sergeants are there?

Lieut. BRETT. I will give you the entire list:

RETIRED ENLISTED MEN.

Sergeants major, regimental	98	Cooks	264
Sergeants major, senior grade,		Farriers and blacksmiths	4
Artillery Corps	6	Saddlers	3
Sergeants major, junior grade,		Wagoners	
Artillery Corps		Trumpeters	1
Sergeants major, squadron	17	Mechanics	5
Sergeants major, battalion	35	Musicians and first-class musi-	
Ordnance sergeants	188	clans	20
Post commissary sergeants	146	Artificers	18
Regimental commissary ser-		Privates, first class, Hospital	
geants and supply sergeants	80	Corps	33
Post quartermaster sergeants,		Privates, first class, Ordnance,	
Quartermaster Corps	187	Engineers, Signal Corps, and	
Regimental quartermaster ser-		Supply	36
geants and supply sergeants	118	Privates, second class, Ord-	
Electrician sergeants		nance, Engineers, and Signal	
Sergeants, first class, Hospital		Corps	1
Corps and Medical Depart-		Privates, Hospital Corps	
ment	147	Privates, Artillery, Cavalry, and	
Sergeants, Hospital Corps and		Infantry	96
Medical Department	57	Master signal electricians	37
First-class sergeants, signal		Battalion quartermaster ser-	
Corps	36	geants, Field Artillery	1
Chief musicians and band lead-		Acting cooks, Hospital Corps	25
ers	117	Firemen	1
Principal musicians	35	Engineers	2
Chief trumpeters	19	Master gunners	1
Color sergeants	127	Electrician sergeants, first class	
Battalion quartermaster ser-		and second class, Coast Ar-	
geants, Engineers	3	tillery Corps	3
First sergeants, Artillery, Cav-		Master electricians, Coast Ar-	
alry, Infantry, and Engineers	1,425	tillery schools detachment	
Drum majors	26	Sergeants, Quartermaster Corps	12
Sergeants of Ordnance	159	Sergeant buglers	2
Sergeants of Engineers	73	Musicians, second class	1

Sergeants of Artillery, Cavalry,		master Corps	1
and Infantry	447	Mess sergeants	2
Troop, battery, and company		Sergeants, first class, Engineers	1
quartermaster sergeants	17	Assistant band leaders	4
Stable sergeants	1	Horseshoers	1
Saddler sergeants	4	Master engineers, junior and	
Corporals, Hospital Corps and		senior grade	1
Medical Department	7	Master hospital sergeant, Medi-	
Corporals of Engineers	10	cal Department	6
Corporals of Ordnance	46		
Corporals of Signal Corps	2	Total	4,303
Corporals of Artillery, Cavalry,			
and Infantry	67		

Mr. TILSON. How many privates did you say there are?

Lieut. BRETT. There are 69 privates, first class, and 97 privates, second class, and privates.

Mr. TILSON. That is a commendably small number of privates.

Lieut. BRETT. A man who stays 30 years in the service ought not to have been a private when he retired; he ought to have been higher than that.

The CHAIRMAN. The next item is, "Pay and allowances of retired enlisted men on active duty, \$95,000." How many of those men are there?

Lieut. BRETT. On December 31 there were 380 of those men on active duty. The amount of \$95,000 is simply a guess. We had nothing to go on.

Mr. TILSON. Are they coming into the active service?

Lieut. BRETT. Very rapidly. On June 30 there were 151 and on December 31 there were 380. They are broadening their duties very rapidly.

The CHAIRMAN. How many retired men are there?

Lieut. BRETT. On July 13 there were 4,303. The estimate is based on 4,400. Gen. McCain, in his report on page 15, says:

RETIRED ENLISTED MEN.

At the beginning of the fiscal year there were 4,154 men on the retired list created by the provisions of the act of Congress approved February 14, 1885 (23 Stat. L., 305), modified by the acts of Congress approved September 30, 1890 (26 Stat. L., 504), March 2, 1907 (34 Stat. L., 1218), and August 24, 1912 (37 Stat. L., 575).

During the fiscal year 342 enlisted men were placed on the retired list, 192 of the men on that list died, and 1 was transferred to the list of retired commissioned officers of Philippine Scouts, under the provisions of the national defense act approved June 3, 1916, leaving 4,303 enlisted men on the retired list at the end of the fiscal year.

Section 7 of the selective-service law, approved May 18, 1917, authorizes the employment on any active duty of retired enlisted men of the Regular Army, either with their rank on the retired list or in higher enlisted grades, with full pay and allowances of the grades in which they are actively employed. At the end of the fiscal year 151 retired enlisted men had been ordered to active duty under the provisions of that section.

The CHAIRMAN. The next item is, "Pay and allowance of Regular Army reservists on active duty, \$5,000."

Gen. SHARPE. That item is put in there just in order to have an item of that kind in the bill.

Mr. ANTHONY. What has become of those men?

Gen. SHARPE. You mean the Regular Army reservists?

Mr. ANTHONY. Yes.

Lieut. BRETT. They have all been called to the colors.

Mr. ANTHONY. Then you do not pay them as reservists?

Lieut. BRETT. No, sir. When they called the reserve men to the colors they had 8,350 in the Regular Army Reserve, and on October 1 they had 55,000 in the Enlisted Reserve.

Mr. ANTHONY. When they are called to the colors their reserve pay stops, and when they leave the colors their pay goes back?

Lieut. BRETT. Yes, sir; in the case of the Regular Army Reserves. Members of the Enlisted Reserve Corps are paid only when called to the colors.

The CHAIRMAN. How many did you have in October?

Lieut. BRETT. Of the Enlisted Reserve there were 55,000.

Mr. ANTHONY. How many in the Regular Army Reserve?

Lieut. BRETT. There were 8,350 when they were called to the colors.

The CHAIRMAN. The next item is, "Miscellaneous, 30 hospital matrons, \$3,600."

Mr. TILSON. Where are they located?

Gen. SHARPE. They are located at the hospitals?

Mr. TILSON. Thirty of those will not go very far.

Gen. SHARPE. Where laundries were established.

Mr. TILSON. At a laundry?

Gen. SHARPE. Yes.

Capt. DALY. They get \$10 a month and their rations and, of course, they are furnished quarters. As a general thing they are the widows of enlisted men.

Mr. TILSON. The small number of them attracted my attention.

Gen. SHARPE. They are passing out. They are stationed at the larger posts.

Lieut. BRETT. They will very soon disappear completely.

The CHAIRMAN. The next item is, "For expenses of courts-martial, courts of inquiry, military commissions, retiring boards, and compensation of reporters and witnesses attending same, and expenses of taking depositions and securing other evidence for use before the same, \$250,000."

Lieut. BRETT. The amount of that item is \$250,000.

The CHAIRMAN. That is a mere guess?

Lieut. BRETT. Practically a mere guess, but it will be all of that.

The CHAIRMAN. Necessarily the courts-martial have increased very much with the increase in the size of the Army.

Gen. SHARPE. Yes, sir.

The CHAIRMAN. The next item is, "For additional pay to officer in charge of public buildings and grounds at Washington, D. C., \$1,000."

Lieut. BRETT. That gives Col. Fridley, the officer in charge of public buildings and grounds, the difference between his pay as a major and that of a colonel. That is a matter of law. The officer in charge of public buildings and grounds has the rank, pay, and allowances of a colonel.

Mr. MCKENZIE. Last year that appropriation was \$500.

Lieut. BRETT. That was because the officer in charge was a lieutenant colonel, and the difference in pay was \$500.

The CHAIRMAN. The next item is, "For commutation of quarters and of heat and light to commissioned officers, members of the Nurse Corps, and enlisted men on duty at places where no public quarters are available, including enlisted men of the Regular Army Reserve, and retired enlisted men when ordered to active duty, \$1,500,000."

Lieut. BRETT. That is a decided reduction from what you gave us for 1918.

The CHAIRMAN. The next item is, "For interest on soldiers' deposits, \$150,000." That is the same as last year.

Gen. SHARPE. Yes.

Mr. SHALLENBERGER. That is a fixed sum required by the act?

Lieut. BRETT. The law requires us to pay 4 per cent interest on soldiers' deposits.

The CHAIRMAN. The next item is, "For pay of expert accountant for the Inspector General's Department, \$2,500." That is the same as last year?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "For extra pay to enlisted men employed on extra duty for periods of not less than 10 days in the offices of coast defense artillery engineers and coast defense ordnance officers and as switchboard operators at seacoast fortifications, \$19,202.45." That is an increase of approximately \$3,000 over last year, and I suppose the increase is because of the additional number required to be employed in the service.

Lieut. BRETT. That is an increase of 7 clerks and 16 switchboard operators.

Mr. KAHN. I would like to ask you something about the item "Commutation of quarters, heat, and light to commissioned officers," at the bottom of page 23. A great many reserve officers' wives have appealed to me and have told me that they were being discriminated against; that they have no commutation, whereas Regular Army officers have commutation. Have you thought it necessary to formulate any legislation for the commutation of heat and light and quarters for the National Army officers and reserve officers generally? Have you thought of that?

Gen. SHARPE. The suggestion was made at the time the matter was brought up, in view of the verbiage of the law and the decision of the Comptroller of the Treasury that an officer occupying Government quarters was not entitled to commutation of quarters, heat, and light. The comptroller has ruled that occupying a tent is occupying Government quarters, and that it goes as a part of the service in the Army.

Capt. DALY. The provision of law that is in here—answering your question—provides for quarters for officers of the Reserve Corps of the National Army.

Gen. SHARPE. When they are stationed where public quarters are not furnished. But the question I understood Mr. Kahn to bring up was in regard to the wives of officers of the Reserve Corps and National Army whose husbands are in the field.

Under the law, we can not do that, because they are occupying Government quarters. There was a proposition brought up submitting a bill providing for the payment of commutation of quarters, heat, and light at all times, but I do not know that the matter has gone beyond the mere drafting of the measure in the department. The figures would be, I think, something like \$60,000,000 or \$70,000,000.

Mr. KAHN. You mean that that decision was to the effect that an officer in one of these cantonments would be considered in the field with troops?

Gen. SHARPE. Yes; that an officer serving in a cantonment was in the field.

Mr. GREENE. If, previous to that assignment he and his family were occupying officers' quarters in a garrison, the family were permitted to stay; is that not true?

Gen. SHARPE. That is simply a permission from the post commander; and he gets no fuel.

Mr. GREENE. But there is no turning of them out?

Gen. SHARPE. They do not turn them out, because the quarters are better occupied than vacant.

Mr. ANTHONY. But if the Government required those quarters, the Government would turn them out?

Lieut. BRETT. The act approved March 4, 1915—H. R. 20347, an act making appropriations for the support of the Army for the fiscal year ending June 30, 1916—the act under which commutation is now paid, provides—

Hereafter, at places where there are no public quarters available, commutation for the authorized allowance therefor shall be paid to commissioned officers, acting dental surgeons, veterinarians, members of the Nurse Corps, and pay clerks at the rate of \$12 per room per month, and, when specifically authorized by the Secretary of War, to enlisted men at the rate of \$15 per month, or in lieu thereof he may, in his discretion, rent quarters for the use of said enlisted men when so on duty.

It will be noted that the law says "Commutation for the authorized allowance therefor shall be paid to *commissioned officers*." Therefore, any commissioned officer of any arm, corps, or department, whether he belongs to the Regular Army, the National Guard, or the National Army, when in the Federal service and stationed at a place where Government quarters are not available, is entitled as a right to be paid commutation of quarters, and no payment in such cases can be successfully denied. This applies to all cases, except where troops take the field.

When troops are sent into the field, we are governed by the following decision of the Judge Advocate General of the Army, rendered on June 6, 1905:

When an officer is ordered to take the field his status in respect to quarters is changed. He ceases to be entitled to quarters in kind or to commutation therefor and becomes entitled to a certain allowance of tentage and camp equipage, which constitutes his shelter while engaged in field service.

On June 8, 1906, the Comptroller of the Treasury held that—

An officer furnished a tent is viewed as furnished with quarters in kind.

On June 15, 1917, the Secretary of War caused the following order to be issued:

Duty with troops in the field during present war is not temporary duty.—All duty with troops of any kind in the field, at home or abroad, during the present war will be considered as not temporary duty in the field in contemplation of the act of Congress approved February 27, 1893, which provides that officers temporarily absent on duty in the field shall not lose their right to quarters or commutation thereof at their permanent stations while so temporarily absent. Under this decision no officer or enlisted man on duty in the field can have any official station elsewhere within the meaning and contemplation of the laws and regulations relating to the allowance of quarters or commutation thereof, but while on such duty his rights as to quarters will be as prescribed for field service. (W. D. Bulletin No. 35, June 15, 1917.)

The effect of the foregoing order was to place all officers and men not garrisoning our permanent posts or stationed in cities not in command of or connected with enlisted men on a status of field duty and for quarters, bringing them under the operation of the Judge Advocate General's decision.

The act of February 27, 1893, referred to in the War Department order of June 15, provides:

Officers temporarily absent on duty in the field shall not lose their right to commutation at permanent station. (27 Stat., 480.)

Inasmuch as the order of June 15 designates all duty with troops of any kind in the field, at home or abroad, during the present war as not temporary duty, the act of February 27, 1893, can have no application to any one so long as the war continues, and all officers on duty with troops in the field are not entitled to commutation of quarters.

Mr. KAHN. The trouble seems to arise with the reserve officers.

Lieut. BRETT. They are on exactly the same status with the Regulars, because the act refers to commissioned officers of the Regular Army, reserve officers, etc., and says if they are on duty at places where the Government owns quarters, and they occupy those quarters, they shall not get commutation, but if they are on duty at stations where public quarters are not available, they are entitled to commutation of quarters until they are ordered into the field. And when they are ordered into the field they get no commutation. The decision says that when they are in the field they are entitled to a tent, and, therefore, nothing can inure to the benefit of the officer's family when he occupies a tent.

Mr. KAHN. You are simply following the decision?

Lieut. BRETT. Yes, sir.

Gen. SHARPE. There is no discrimination as to the various classes of officers. It did happen that some Regular Army officers' families were occupying quarters at posts, and they have gone off, and those quarters are not required by the Government; the families have been allowed to keep them. But the question was brought up during the Texas mobilization of troops, where officers desired to take their families with them. They could remain at the posts, but we could not keep anybody down there.

Mr. TILSON. You can recognize the injustice of that; say a man is a major, he gets five rooms or he gets commutation to pay for five rooms in the city. But if he goes to camp he only gets a tent, and his wife can not live in the tent with him in the camp. His wife must go on the street unless he has money enough to hire quarters. There is the injustice of it. He goes in a tent when he goes into the field, where his wife can not come, and his wife and children have to be thrown out.

Mr. ANTHONY. When a man accepts a commission in the National Army, the Government is under no obligations to house his family?

Gen. SHARPE. No.

Mr. GREENE. But he has no permanent station.

Mr. ANTHONY. But if he is given a station at a permanent post his family is housed.

Mr. KAHN. The matter has been brought to my attention through a great many letters, and I wanted to find out just what the status of the matter is.

Mr. HARRISON. I have been informed that there was a bill before the committee covering that.

Mr. SHALLENBERGER. There is no distinction between a reserve officer and a Regular officer on that proposition?

Lieut. BRETT. Absolutely not. The law gives to every officer in the Army the same pay and allowance, whatever branch of the service he is in.

Mr. GREENE. But the fact remains that the Regular officers, most of whom have regular posts, have been assigned to posts, and their families can stay there, while the reserve officers have no such assignments, and their families can not stay there.

Mr. SHALLENBERGER. But suppose all these Army officers in the posts have been sent away and other officers have been sent there to the post; the wives of the men who have been sent away have to get out of there.

Gen. SHARPE. That has happened.

Mr. SHALLENBERGER. It is usually so.

Mr. KAHN. Take the case of the man whom Col. Tilson refers to, a Regular Army officer who gets his commutation and who has room there for his wife and children, but who is subsequently detailed to the field. He has to pay rent, then, out of his own pocket for his wife and family.

Lieut. BRETT. There are a good many officers on duty in Washington who would rather be in the field, but somebody has to stay here to transact the business.

Mr. TILSON. But they are penalized for going to the field.

The CHAIRMAN. At any rate the law would have to be changed.

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is "For mileage to commissioned officers, members of the Officers' Reserve Corps when ordered to active duty, contract surgeons, expert accountant, Inspector General's Department, Army field clerks, and field clerks of the Quartermaster Corps, when authorized by law, \$3,000,000."

Gen. SHARPE. For mileage we received in the act of June 15, \$510,000. We received in the act of October 6, \$1,490,000, making a total of \$2,000,000 in all. We have obligated against the first appropriation of \$510,000, \$508,777.69, leaving unobligated \$1,722.31. We have obligated against the \$1,490,000, \$3,864,234.34, making a total deficit of \$2,273,012.03. Those were absolutely necessary expenditures, made in order to permit the travel of the officers ordered on duty. We will need all the money which was asked for in the bill, \$3,000,000. It is probable that more will be required.

Capt. DALY. We have a deficiency estimate in now for \$3,000,000 for mileage.

Mr. KAHN. Have you sent a supplemental estimate in?

Capt. DALY. For 1919?

Mr. KAHN. Yes, sir.

Capt. DALY. No, sir. The total of mileage for 1918, what has been appropriated, \$2,000,000, plus the deficiency of \$3,000,000 makes the total requirement of \$5,000,000 for 1918. And the estimate is \$3,000,000 for 1919.

The CHAIRMAN. Why is it \$2,000,000 less?

Capt. DALY. In the fiscal year 1918 there was a great deal more travel because the Army was in its formative period. There was a great deal more travel necessary than there will be in 1919. The great bulk of troops will probably be in France in 1919. They will be in the field with troops.

(b) Cost of seat in parlor car, one lower berth in sleeping car, or stateroom accommodations on steamer, where same are not included in the travel fare, and reasonable fees to porters or to stewards.

(c) Hire of special transportation, either by land or by water, where there are no regular means of conveyance. Ferriage, tolls, driver's service and horse keeping when transportation is hired.

(d) Transfer coach fare en route to and from depots and hotels, or when there are no such conveyances, moderate and necessary taxicab or hack hire not to exceed the authorized local rates, any cost of transfers of baggage, and reasonable fees to porters for handling baggage.

(e) All items of actual expenses authorized when traveling, are for travel by the shortest usually traveled routes, and expenses incurred by any deviation from the shortest usually traveled routes, can not be considered as actual and necessary expenses.

3. In submitting accounts War Department Form No. 330 or 330a will be used, and when traveling expenses are claimed they will be itemized on the face of the voucher and a certified copy in duplicate of the letter or order directing or authorizing the travel attached to the voucher. In stating the voucher the printed columns thereon should be ignored, as should also the second printed certificate. The officer or enlisted man will certify on the voucher that the account is correct, and when traveling expenses are claimed that the amounts charged were actually paid by him. Vouchers will be mailed by the officer to the department quartermaster of the territorial department in which he is located or to the depot quartermaster, Washington, D. C., for payment. Vouchers submitted by enlisted men will be approved by the proper commissioned officer of his Army and disposed of by said officer in the same manner as he disposes of his own voucher.

4. Officers and enlisted men of foreign armies who have been attached to and performing duties with the Army of the United States for any period from the date of the declaration of war, April 6, 1917, to October 31, 1917, will submit on the voucher forms herein mentioned, using such additional attached sheets as may be necessary, a statement of their actual expenses, using the following as a basis of what is allowable:

When not traveling, the actual and necessary cost of meals, lodging, heat, light, baths, reasonable fees to waiters and bellboys, and the actual cost of laundry.

When traveling, (a) same items as set forth in subparagraphs a, b, c, and d, paragraph 2, adding thereto the actual cost of meals when not included in the charge for travel fare.

(b) The accounts for these past expenses will be sent to the Adjutant General of the Army for the consideration of the Secretary of War with a view to settlement by the depot quartermaster, Washington, D. C., of all items which may be approved by the Secretary of War. The accounts of enlisted men will be sent through the proper commissioned officer of their Army who will indorse thereon the amount which he considers properly allowable.

(336.4, A.G.O.)

By order of the Secretary of War:

JOHN BIDDLE,
Major General, Acting Chief of Staff.

Official.

H. P. McCAIN,
The Adjutant General.

Capt. DALY. The instructions given by the War Department cover the whole situation.

The CHAIRMAN. The next item is, "For additional twenty per centum increase of pay of enlisted men on foreign service, \$56,413,355.20."

Have you estimated for 70 per cent of the Army of 1,612,245 men in reference to that item?

Gen. SHARPE. Yes, sir; the same amount.

Lieut. BRETT. The aviation increase is \$4,916,800; for marksmanship, \$3,000,000; the reservists' pay is \$9,485,000. The total amount

is \$402,959,680, 70 per cent of which is \$282,071,776, and 20 per cent of that is \$56,414,355.20.

Mr. ANTHONY. How much additional labor would it involve in the department to withhold the additional 20 per cent of pay until the men were discharged?

Gen. SHARPE. It would be considerable; with the allotment proviso we now have the work is enormous.

Mr. ANTHONY. I think the suggestion has been made that the men should not have all that money in France, but it ought to be held until they returned, and I wondered if you had given any consideration to that matter.

Gen. SHARPE. There is a requirement for a compulsory allotment.

Mr. ANTHONY. For the support of the families.

Gen. SHARPE. And also for the individual who is not married. He has to make a compulsory deposit.

Lieut. BRETT. Section 203 of the war-risk insurance act provides that that part of one-half of every enlisted man's pay may, under regulations to be formulated by the Secretaries of War and of the Navy, be compulsorily deposited.

Mr. ANTHONY. The regulation has been formulated?

Lieut. BRETT. The regulation has been formulated, compelling the enlisted men, every one of them, to deposit that part of one-half of their pay which is not allotted. The Navy Department has not yet made that regulation. My understanding is that the regulation is before the President at this time, in order that there may be uniform action.

The CHAIRMAN. That is in the war-risk insurance bill?

Lieut. BRETT. Yes, sir.

Gen. SHARPE. I think you made it so that particular amount can be differentiated out.

Mr. ANTHONY. I did not know the department had adopted such a regulation.

Mr. MCKENZIE. I understood you to say that part not already allotted.

Lieut. BRETT. Yes.

Mr. MCKENZIE. We understood, when we passed the act, that it provided that, where there were dependents, there should be a compulsory allotment of not to exceed one-half of the pay, and also that the War Department would have a right to increase that; and, if it be thought to be good policy, withhold it from the man's pay if he did not have dependents. But I understand you to say that a regulation has been made absolutely withholding one-half of a man's pay who has no dependents.

Lieut. BRETT. Yes.

Mr. MCKENZIE. Or is it only in cases where a man allots a portion of his pay to his dependents, and the Government withholds the remainder?

Lieut. BRETT. That is founded on section 203, and that regulation says that the part or portion of one-half of a soldier's pay which is not allotted will be withheld, and entered in the deposit book, the same as the other deposits under section 1305 of the Revised Statutes. He gets 4 per cent, compounded semiannually. If his amount

of pay is \$50, and he has no dependents, they make his deposit \$25, if he has no other obligations to meet.

Mr. McKENZIE. I want to know whether that applies to all?

Lieut. BRETT. To all now. That is the regulation which has not yet been approved. It is before the President now; and under it the same principle applies to both the Army and the Navy.

The CHAIRMAN. It has not been approved?

Lieut. BRETT. I understand that it has not been approved by the Secretary of War as yet.

The CHAIRMAN. My attention has been called to an instance where it has been enforced sometime ago.

Lieut. BRETT. The disbursing officer probably withholds that as a matter of precaution.

Mr. KAHN. Do you know whether the disbursing officer has been withholding it, generally?

Lieut. BRETT. Not generally; no, sir.

Mr. McKENZIE. The purpose of that, in my mind, was that it was in the interest of the morale of the Army in France, and we simply gave the Secretary of War and the President the power to enforce that if they thought it best.

Lieut. BRETT. I was detailed by the War Department to represent it on the interdepartmental committee to coordinate the work of the Treasury, War, and Navy Departments under the war-risk insurance act. I went to the secretary of the General Staff to ascertain what the policy of the War Department was to be along that line. Col. Graves immediately dictated an order of the Secretary of War, calling upon the War College to make recommendations, and they came back with a recommendation that it apply to all enlisted men wherever stationed, and the regulations were formulated accordingly, and my understanding is that they are before the Secretary of War.

The CHAIRMAN. But the regulations have not yet been promulgated?

Lieut. BRETT. Not yet.

The CHAIRMAN. They have no right to withhold it?

Lieut. BRETT. The law says under such regulations as he may prescribe—as the Secretary may prescribe—but until the Secretary has promulgated regulations requiring compulsory deposit it is not compulsory.

The CHAIRMAN. You say you are figuring on the 20 per cent additional for the enlisted men on foreign service on the same basis as the officers; that is, 70 per cent?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "For pay of one computer for Artillery Board, \$2,500." That is statutory?

Lieut. BRETT. Yes, sir.

The CHAIRMAN. The next item is, "For payment of exchange by acting quartermasters serving in foreign countries and when specially authorized by the Secretary of War by officers disbursing funds pertaining to the Quartermaster Corps when serving in Alaska, and all foreign money received shall be charged to and paid out by disbursing officers of the Quartermaster Corps at the legal valuation fixed by the Secretary of the Treasury, \$75,000."

Gen. SHARPE. I would like to submit a letter that I wrote last March addressed to The Adjutant General. [Reading:]

WAR DEPARTMENT,
OFFICE OF THE QUARTERMASTER GENERAL OF THE ARMY,
Washington, March 27, 1917.

No. .011-E-Ad.

From: Quartermaster General.

To: The Adjutant General of the Army.

Subject: Estimates and legislation.

In compliance with instructions of March 20, 1917 (A. G. O. No. 2548726) to submit all requests for legislation through the office of The Adjutant General for the consideration of the Chief of Staff and the Secretary of War, the following proposed legislation is recommended:

* * * * *

4. Payment of exchange.

The regular Army appropriation bill carries from year to year the following provision:

"For payment of exchange by acting quartermasters serving in foreign countries and when specially authorized by the Secretary of War by officers disbursing funds pertaining to the Quartermaster Corps when serving in Alaska, \$1000."

The varying cost of exchange in foreign countries, a variance in certain European countries during the present war condition that at times approximates 50 per cent, has made the accounting of funds by acting quartermasters on duty in foreign countries a most perplexing and in some cases expensive matter. Officers of the Navy, to whom the cost of exchange is a much more extensive and important matter than it is to the Army officers, have a provision in regulations that enables them to make use of the circular issued by the Director of the United States Mint as a basis for settlement. This circular, which is published quarterly by the Treasury Department, is issued in pursuance of the provisions of section 25 of the act of August 27, 1894. With the rates of exchange given in this circular legalized, the Government is very properly charged with the loss of exchange and is as properly credited with any gain by exchange. Under this system, in accounting for the proceeds of bills of exchange in their accounts current, quartermasters will credit the United States with the legal United States gold equivalent of the face value of the bills, and credit or debit the United States with the premium or loss on exchange, as the case may be. It is therefore recommended that in the estimates now being prepared an additional amount be allowed for cost of exchange which will be necessary in the event that United States troops see service in foreign countries, and it further recommended that the provision of law allowing for such cost of exchange be amended to read as follows:

"For payment of exchange by acting quartermasters serving in foreign countries and when specially authorized by the Secretary of War by officers disbursing funds pertaining to the Quartermaster Corps when serving in Alaska, \$——; and all foreign money received shall be charged to and paid out by disbursing officers of the Quartermaster Corps at the legal valuation fixed by the Secretary of the Treasury, and published on the first day of each quarter."

* * * * *

HENRY G. SHARPE,
Quartermaster General.

That was incorporated in the bill of October 6.

It is new matter coming into your bill, and we would like to have the matter continued here, because of the desirability of having a fixed rate of exchange during the period.

Mr. KAHN. You mean the appropriation bill of October 6?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. How much money did they give you in the appropriation bill?

Lieut. BRETT. In the act of May 12 they gave us \$600. That is what we have been having every year.

Mr. KAHN. But they changed the language in the appropriation act of October 6, and you want the new language?

Gen. SHARPE. We want the language the same as it is in the bill, but this is different from the former appropriation bills, and for that reason we would like to explain it to this committee.

Lieut. BRETT. In the act of October 6 you added to the \$600 appropriated in May 12 \$74,400, making a total of \$75,000, which is the amount we ask for here. It is the same amount we have for the current year.

The CHAIRMAN. Here is the language of the act of May 12:

For payment of exchange by acting quartermasters serving in foreign countries and when specially authorized by the Secretary of War by officers disbursing funds pertaining to the Quartermaster Corps when serving in Alaska.

Lieut. BRETT. I will read the language of the act of October 6:

For payment of exchange by acting quartermasters serving in foreign countries and when specially authorized by the Secretary of War by officers disbursing funds pertaining to the Quartermaster Corps when serving in Alaska, and all foreign money received shall be charged to and paid out by disbursing officers of the Quartermaster Corps at the legal valuation fixed by the Secretary of the Treasury.

This is the language in the present bill and is the language we want.

The CHAIRMAN. The next item is, "For additional pay to officers below the grade of major required to be mounted and who furnish their own mounts, \$400,000."

Lieut. BRETT. Under the law officers owning two mounts get \$200 a year in addition to their pay, and those owning one mount get \$150, and this is the appropriation to carry that out.

Mr. KAHN. How many officers do you figure on as getting this additional amount?

Lieut. BRETT. The last figure we had in regard to officers owning two mounts was that they slightly exceeded in number those owning one mount. I suppose this would cover practically 2,200 officers.

Mr. KAHN. Can you put into the hearings the exact number of officers you are asking this appropriation for?

Lieut. BRETT. It would take our entire force probably working five days to get that information.

Mr. KAHN. Then I do not want it.

Gen. SHARPE. Mr. Kahn, I do not believe that, with the exception of such officers as own their own mounts now in the service, there would be a very large payment out of that sum, because the Government is furnishing mounts now for all officers. We tried to stop the sending of privately owned mounts to Europe, because they get in the corral and you can not find them.

Mr. KAHN. Why, then, should there be this appropriation of \$400,000 if the Government is furnishing the mounts?

Gen. SHARPE. It might be cut down. There ought to be some amount left there, but, frankly, I do not think there would be a very large amount expended.

Lieut. BRETT. In the fiscal year 1917 we disbursed \$206,991.21.

Mr. KAHN. But the condition has altered.

Gen. SHARPE. The officers in this country who own their horses will not want them sent over there. Take, for instance, the Cavalry and the Light Artillery, they are the ones who own their horses. There

ought to be some amount left there, but it will not require all of that.

The CHAIRMAN. The next three items are personal items which have been carried in the bill for years. There used to be a provision in the bill for the mother of Maj. Carroll. Is she dead?

Lieut. BRETT. The bill provided that the Secretary of the Treasury should pay that. We do not pay it, therefore we do not ask for it. The language was unlike the language carried in here, and it provided that \$50 a month was to be paid by the Secretary of the Treasury. That is being paid.

Mr. KAHN. It is being paid?

Lieut. BRETT. Yes, sir.

Mr. KAHN. Did we appropriate for that much?

Lieut. BRETT. You put it into law, but you did not carry it in the appropriation.

The CHAIRMAN. I thought we put it in the appropriation bill because I remember having to ask somebody not to make a point of order on it.

Lieut. BRETT. It was not this appropriation bill.

The CHAIRMAN. I see it is in the last appropriation bill; the Secretary of the Treasury is authorized to pay that amount.

Mr. DAVIDSON. I would like to know what those items are for?

Gen. SHARPE. These ladies are the widows of officers of the Medical Department who lost their lives in Cuba while experimenting with yellow fever there.

Mr. DAVIDSON. I wonder why the better policy would not be to pension them directly, instead of carrying these amounts in an appropriation bill of this kind.

Mr. KAHN. What they did was considered of such valuable assistance to medical science, that it was put in this bill.

Mr. DAVIDSON. I remember the circumstances, and I heartily approve of it.

Mr. ANTHONY. Has the War Department any knowledge of the present physical condition of John R. Kissinger?

Gen. SHARPE. No; we have no report about him.

Lieut. BRETT. The last we heard he was completely disabled; that was not recently.

Mr. ANTHONY. I heard a report that he had largely recovered.

Lieut. BRETT. I will ascertain what can be learned and put it in the record.

(The following correspondence is inserted in the record:)

WAR DEPARTMENT.
OFFICE OF THE QUARTERMASTER GENERAL OF THE ARMY.
Washington, January 15, 1918.

No. 111-1006-A-E.

From: Acting Quartermaster General.

To: The Surgeon General.

Subject: Data for hearings. 1919 estimate.

1. On the 11th instant letter was addressed to the Surgeon General the fourth paragraph of which reads:

"What is the physical condition of John R. Kissinger, now drawing \$100 per month, as provided in the act approved February 15, 1911 (36 Stat., 1919), which reads—

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of War be, and he is hereby, authorized and directed to place on the rolls of the War Department

the name of John R. Kissinger, late of Company D, One hundred and fifty-seventh Regiment Indiana Volunteer Infantry, and also late of the Hospital Corps, United States Army, and to pay to him for and during his natural life, in lieu of all pensions, the sum of \$100 per month, in special recognition of the eminent service rendered, suffering endured, and permanent disabilities contracted by him in the interest of humanity and science as a volunteer subject for experiment in the yellow-fever hospital in Cuba."

2. In reply the Surgeon General states:

"The records of the physical condition of officers and enlisted men for the current year are kept in the office of The Adjutant General."

3. It will be noted that John R. Kissinger is neither an officer nor an enlisted man, and inasmuch as his disability was incurred in connection with the Medical Corps of the Army it is believed that any information pertaining to his physical condition at the present time, if it exists in the War Department, would be in the knowledge of the officers of the Medical Department. If no information exists there, please refer this paper to The Adjutant General of the Army.

4. Please expedite.

GEO. W. GOETHALS,
Acting Quartermaster General.

[First Indorsement.]

WAR DEPARTMENT,
SURGEON GENERAL'S OFFICE,
January 17, 1918.

TO THE ADJUTANT GENERAL OF THE ARMY:

1. This office has no information as to present physical condition of John R. Kissinger. It is believed his disability is of permanent nature.

For the Surgeon General.

ROBT. E. NOBLE,
Lieutenant Colonel, Medical Corps.

[Second Indorsement.]

THE ADJUTANT GENERAL'S OFFICE,
January 21, 1918.

TO THE QUARTERMASTER GENERAL:

The records of this office afford no information on the subject of inquiry.
By order of the Secretary of War.

HENRY C. CABELL, *Adjutant General.*

The CHAIRMAN. The last item under pay of the Army is, "Philippine Scouts: 52 captains at \$2,400 each per annum, \$124,800.

"Sixty-five first lieutenants, at \$2,000 each per annum, \$130,000.

"Sixty-five second lieutenants, at \$1,700 each per annum, \$110,500.

"For pay of 13 majors in addition to pay as captain, at \$600 each per annum, \$7,800. \$373,100.

"Additional pay for length of service, \$91,225.24.

"For pay of enlisted men, \$620,000.

"Additional pay for length of service, \$40,766.22."

Lieut. BRETT. I do not think there is any change in that, Mr. Chairman, except in the item for length of service.

The CHAIRMAN. There is no change as far as the total is concerned.

Lieut. BRETT. The number of officers would remain the same, and their salaries are statutory. Of course, there is a slight decrease in service pay.

Mr. KAHN. If this bill which we passed the other day creating a division of the Army for the Philippine Islands becomes a law and those men are called into the actual service of the United States, then they will get the same pay as the Regular Army officers and enlisted

men receive. So, in figuring on this item, we will have to take that into consideration.

Mr. ANTHONY. Was it not intended to keep up the Scout organization just the same?

The CHAIRMAN. They were to be called into the service.

Mr. ANTHONY. I understood they were to be retained in the Army.

The CHAIRMAN. They were to be taken as they are and then sent separately to the National Guard.

These two provisions at the end of the items for pay of the Army have been carried in the bill for years, have they not?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. Has the item "For reimbursements of officers of the Army pertaining to the United States troops serving in the Canal Zone all amounts of rent actually paid by them for occupancy of houses of the Panama Canal while stationed in the Canal Zone, for periods for which they received no commutation of quarters and for periods for which, having received commutation of quarters, they have been and may be required to refund the same, \$2,458.83," been carried in the bill heretofore?

Gen. SHARPE. That is a new item, and was put in by direction of the Secretary of War. The record leading up to the submission of the item of legislation is as follows:

HEADQUARTERS UNITED STATES TROOPS,
PANAMA CANAL ZONE,
Ancon, Canal Zone, December 4, 1916.

From: The Commanding General.

To: The Adjutant General of the Army.

Subject: Legislation required for the Canal Zone.

1. In accordance with your radiogram of the 11th ultimo I submit recommendations for legislation for the Canal Zone. I briefly outline the bills desired and submit texts of drafts and arguments as appendices. Other projects have heretofore been submitted.

* * * * *

C. Certain credits to disbursing quartermaster.

* * * * *

Very respectfully,

C. R. EDWARDS,
Brigadier General.

HEADQUARTERS, EASTERN DEPARTMENT,
December 20, 1916.

To THE ADJUTANT GENERAL OF THE ARMY.

* * * * *

C. Approved and strongly recommended. The quarters situation at Panama has been one embodying hardship and, in my opinion, marked injustice toward officers of the Army.

* * * * *

LEONARD WOOD,
Major General Commanding.

[Third indorsement.]

WAR DEPARTMENT,
ADJUTANT GENERAL'S OFFICE,
June 8, 1917.

To THE JUDGE ADVOCATE GENERAL—

Who will submit, as soon as practicable * * * draft of legislation that will procure reimbursement to officers of the Army pertaining to the United States troops serving in the Canal Zone of amounts of rent actually paid by them for houses of the Panama Canal, while stationed in the Canal Zone, for

periods for which they received no commutation of quarters, and for periods for which, having received commutation of quarters they have been required to refund same.

By order of the Secretary of War:

EDWARD T. DONNELLY,
Adjutant General.

[Fourth indorsement.]

WAR DEPARTMENT,
JUDGE ADJUTANT GENERAL'S OFFICE,
June 19, 1917.

TO THE ADJUTANT GENERAL.

(b) With respect to the reimbursement of officers for rent actually paid by them for occupancy of houses of the Panama Canal while stationed in the Canal Zone, I submit the following draft:

"For reimbursement of officers of the Army pertaining to the United States troops serving in the Canal Zone all amounts of rent actually paid by them for occupancy of houses of the Panama Canal while stationed in the Canal Zone for periods for which they received no commutation of quarters and for periods for which, having received commutation of quarters, they have been and may be required to refund the same, ——— dollars: *Provided*, That hereafter officers of the Army pertaining to the United States troops serving in the Canal Zone shall not be required to pay rent for the occupancy of houses of the Panama Canal to which they may be assigned."

BLANTON WINSHIP,
Acting Judge Advocate General.

[Fifth indorsement.]

WAR DEPARTMENT, ADJUTANT GENERAL'S OFFICE,
July 4, 1917.

TO THE CHIEF OF OFFICE,
Washington Office the Panama Canal, Washington, D. C.:

The return of these papers through the Quartermaster General is desired for the purpose of having the Quartermaster General insert in any appropriate legislation to be presented to Congress the draft of the first proviso recommended in paragraph (b) of the preceding indorsement hereon.

By order of the Secretary of War:

J. F. DEAN, *Adjutant General.*

When I reached the canal I established my headquarters at Ancon, Canal Zone. Shortly thereafter staff officers began to arrive. There were no quarters. Many officers lived at the Tivoli Hotel until quarters were built. Others, finding the rates at the Tivoli prohibitive considering the presence of their families, made arrangements to live in the houses of the Panama Canal employees during the absence on leave of such employees, paying rent therefor to the Panama Canal. My two aides finally secured one room each in a small house in rear of and connected with the Tivoli Hotel. The rent paid here was less than for a room in the hotel, but the miserable place was not appropriate to their position.

The auditor holds, and is upheld by the comptroller, that payment of commutation to officers while occupying Panama Canal quarters, though rent was paid, is illegal, and the officers have been directed to return the amount paid to them as commutation of quarters. However, no return was directed from those who occupied regular rooms at the hotel.

There was no authority to pay the rent in the above cases because the officers were on duty without troops. The payment of commutation seemed the only way to meet the conditions. There has been no attempt to beat the Government in any way. The decision has, in my opinion, not been based upon conditions but rather upon a theory.

CLARENCE R. EDWARDS,
*Commanding General United States Troops,
Ancon, Canal Zone.*

This was submitted by Gen. Edwards. When he reached the Canal Zone he established headquarters at Ancon, and he found that

several officers did not have quarters, and there were no quarters for them, and many of them lived at the Tivoli Hotel until quarters were built, and others found the rates there prohibitive, and they finally secured one room.

This item is to reimburse these officers because of that decision. We have the names of the officers, if you desire them. This is to remove the suspension from the disbursing officer. They have already paid it. There were three disbursing officers concerned, and the amount to be appropriated is \$2,458.88.

Mr. KAHN. Gen. Goethals used to be the governor of the Panama Canal Zone, and he says he thinks the money ought to be paid to the Canal Zone.

Gen. GOETHALS. The situation is this: The Army came down there, and we turned over all the Canal Zone buildings on the west side of the canal to the Army, and Gen. Edwards located his headquarters at Ancon, with quite a considerable staff. They found living at the Tivoli Hotel rather expensive, and they wanted quarters. The Canal Zone government is put to a certain expense for care of quarters, and we crowded in our own people and made room for the Army in various buildings and charged them for the actual cost of caring for those rooms, for janitor service, and light, and the officers drew their commutation of quarters.

The comptroller got hold of it, and he stopped the commutation of quarters, but we still charged them for this service, which is relatively small, but which amounts to something. This item is for the purpose of giving them commutation of quarters or money and will take them out of the Canal Zone buildings.

We incommoded ourselves to provide for the officers, and we ought to have the quarters back, and the officers ought to have commutation of quarters, or the Canal Zone government ought to be reimbursed for the janitor service. Our employees are paying for the janitor service. I do not see why the Army should not do the same thing.

Mr. KAHN. The Canal Zone employees are being charged for this service?

Gen. GOETHALS. They were. I do not know what the regulations are now, but the regulations required them to pay for the service, for the light and janitor service; that is, the bachelors. The married men were furnished no commutation of quarters and were charged with light and fuel.

Mr. KAHN. So that, in your opinion, if this money is paid back at all, it should be paid to the Canal Zone employees?

Gen. GOETHALS. To the Canal Zone.

Gen. SHARPE. The first proviso is to give credit to the disbursing officers who paid the money. The last part of it provides for payment. It divides itself into two parts.

Mr. ANTHONY. Evidently the officers paid the amounts of the rents. Did not those amounts go to the Canal Zone?

Gen. GOETHALS. They did. The Canal Zone got that amount and the officers took commutation of quarters.

Mr. ANTHONY. So that if we provide for the money being paid to the Canal Zone, it would have been paid twice, would it not?

Gen. GOETHALS. No; it passes to the credit of the disbursing officer. The amount of money has already been paid. This will merely clear

up the accounts of the accounting officer. There is no money passed. The Canal Zone has already got its pay. The other provision requiring us to turn over the quarters is another matter. I do not know the situation in regard to the quarters. There is an item for additional barracks and quarters for officers and that would solve it. I know we did inconvenience ourselves for the officers who could not afford the Tivoli Hotel rates.

(Thereupon the committee adjourned to meet to-morrow, Wednesday, January 9, 1918, at 10.30 o'clock a. m.)

NOTE.—After adjournment.

The CHAIRMAN. General, there is one question I would like to ask before proceeding further with the items of the bill: Will you put into the record the total extra cost of the pay of the Army on account of the increase in the pay that was made at the last session of Congress?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. Can you tell me now about what the figures are?

Gen. SHARPE. I have not that information now.

The information desired appears in the pay notes section.

ARMY APPROPRIATION BILL, 1919.

COMMITTEE OF MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Wednesday, January 9, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent (chairman) presiding.

STATEMENTS OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, AND MAJ. GEN. GEORGE W. GOETHALS, ACTING QUARTERMASTER GENERAL, ACCOMPANIED BY LIEUT. COL. GROVE, AND CAPT. CHARLES P. DALY, QUARTERMASTER CORPS—Resumed.

The CHAIRMAN. General, there is one other question I would like to ask you before we pass to the next item. Will you put into the record the total extra cost of the pay of the Army on account of the increase in the pay that was made at the last session of Congress?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. Can you tell me now about what the figures are?

Gen. SHARPE. I have not that information now. The information desired appears in the pay notes section.

SUPPLIES, SERVICES, AND TRANSPORTATION, QUARTERMASTER CORPS (SUBSISTENCE).

The CHAIRMAN. The next item is under the general heading "Supplies, services, and transportation, Quartermaster Corps," and the first item is "Subsistence of the Army: Purchase of subsistence supplies," and the amount is \$298,405,655.57. At the last session, Congress gave you \$401,500,000. Now you are asking for \$298,405,655.57.

Gen. SHARPE. The amount appropriated by Congress was in three bills, the regular Army appropriation bill for the fiscal year 1918, the act of May 12, under which we got \$18,500,000. In the deficiency act of June 15 we got \$133,000,000, and in the deficiency act of October 6 we got \$250,000,000, making a total of \$401,500,000. This year the appropriation asked for amounts to \$298,405,655.57.

The CHAIRMAN. That is based on an army of 1,612,245 men?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. With this item, as with the other items, will you put in the hearings a statement showing the increase required for each additional increment of 500,000 men?

Gen. SHARPE. Yes, sir.

Capt. DALY. It would be \$152.21 per capita.

Gen. SHARPE. I would like to submit a table giving the amounts required under each item of the bill.

The CHAIRMAN. We will be glad to have that.

Gen. SHARPE. Then the notes explain each item in detail.

(The statement above referred to and the details of the estimate are as follows:)

SUBSISTENCE OF THE ARMY.

Estimate, 1919.....	\$298,405,655.57
Appropriated, 1918.....	\$18,500,000.00
Urgent deficiency, 1918.....	250,000,000.00
	<u>268,500,000.00</u>
Increase, 1919.....	29,905,655.57

NOTE.—The deficiency act for 1917, for \$133,000,000, is available for expenditures for the fiscal year 1918.

107k. For payment of commutation of rations to applicants for enlistment while held under observation.....	12,264.00
107-l. For payment of commutation of rations to general prisoners sick in hospitals.....	122,056.00
108. Advertising.....	18,845.00
109. For providing prizes to be established by the Secretary of War for enlisted men of the Army who graduate from the Army schools for bakers and cooks.....	900.00
110. Other necessary expenses incident to the purchase, testing, care, preservation, issue, sale, and accounting for subsistence supplies for the Army.....	250,000.00
110a. Customs duties on subsistence supplies.....	50,000.00
110b. Losses on subsistence stores.....	73,921.30
110c. Hire of employees.....	10,100.00

Total..... 298,405,655.57

Item 101a.—Purchase of subsistence supplies for issue as rations to troops: Estimated, 1919, \$268,850,537.02.

Number of enlisted men for whom it is estimated rations will be issued.	Number of days for which it is estimated rations will be issued.	Estimated cost per ration.	Total.
1,470,079.....	365	\$0.4017	\$215,543,718.03
4,203.....	365	.2000	306,819.00
1,474,282.....			215,850,537.03
Reserve.....			53,000,000.00
Total estimate.....			268,850,537.00

Based on the increase in prices for the fiscal year 1918, over prices for the fiscal year 1917, it is estimated that approximately \$53,000,000 will be required to cover the probable increase in cost of subsistence supplies for issue as rations to troops (item 101a) for the fiscal year 1919, which amount has been included in this estimate.

Item 101b.—Purchase of subsistence supplies for issue as rations to civil employees: Estimated, 1919, \$268,349.42.

Number of civilians for whom it is estimated rations will be issued.	Number of days for which it is estimated rations will be issued.	Estimated cost per ration.	Total.
1,767	365	\$0.4017	\$259,078.42
52	365	.20	3,798.00
150	365	.10	5,475.00
1,969			268,349.42

Item 101c.—Purchase of subsistence supplies for issue as rations to hospital matrons: Estimated, 1919, \$4,398.62.

Number of hospital matrons for whom it is estimated rations will be issued.....	90
Days for which it is estimated rations will be issued.....	365
Estimated cost per ration.....	\$0.4017
Total estimate.....	\$4,398.62

Item 101d.—Purchase of subsistence supplies for issue as rations to nurses: No estimate is submitted under this item, as all nurses receive commutation of rations. See remarks under item 107i.

Item 101e.—Purchase of subsistence supplies for issue as rations to applicants for enlistment while held under observations: No estimate is submitted under this item, as the amount is negligible, and if any rations are required they can be supplied under item 101a.

Item 101f.—Purchase of subsistence supplies for issue as rations to general prisoners of war: Estimated, 1919, \$2,147,990.32.

Number of prisoners of war for whom it is estimated rations will be issued.....	14,650
Days for which it is estimated rations will be issued.....	365
Estimated cost per ration.....	\$0.4017
Total estimate.....	\$2,147,990.32

Item 101g.—Purchase of subsistence supplies for issue as rations to Indians held by the Army as prisoners, but for whose subsistence appropriation is not otherwise made: No estimate is submitted under this item, as Indians held as prisoners formerly rationed by the Army are now furnished rations by the Department of the Interior.

Item 101h.—Purchase of subsistence supplies for issue as rations to Indians employed with the Army as guides and scouts. No estimate is submitted under this item, as there are no Indians employed with the Army. There are 75 Indians enlisted, who are included in the line of the Army, under item 101a.

Item 101i.—Purchase of subsistence supplies for issue as rations to general prisoners at posts: Estimated, 1919, \$6,091,788.54.

Number of general prisoners for whom it is estimated rations will be issued.....	41,548
Days for which it is estimated rations will be issued.....	365
Estimated cost per ration.....	\$0.4017
Total estimate.....	\$6,091,788.54

Items 102 and subitems.—For the subsistence of the masters, officers, crews, and employees of the vessels of the Army transport service: Estimated, 1919, \$388,961.15.

For details under this item, see remarks under items 102a, 102b, 102c, and 102d.

Item 102a.—For the subsistence of the masters of the vessels of the Army transport service: Estimated, 1919, \$5,476.25.

Number of masters for whom it is estimated rations will be issued.	Number of days for which it is estimated rations will be issued.	Estimated cost per ration.	Total estimate.

Item 102d.—For the subsistence of the employees of the vessels of the Army transport service: Estimated, 1919, \$7,208.75.

Number of employees for whom it is estimated rations will be issued.	Number of days for which it is estimated rations will be issued.	Estimated cost per ration.	Total estimate.
7	365	\$1.25	\$3,193.75
10	365	1.00	4,015.00
17	7,208.75

Item 103.—Hot coffee for troops traveling when supplied with cooked or travel rations: Estimated, 1919, \$170,009.70.

Number of enlisted men for whom it is estimated hot coffee will be furnished.....	2,218
Days for which it is estimated hot coffee will be furnished.....	365
Estimated cost per man for the purchase of hot coffee.....	\$0.21
Total estimate.....	\$170,009.70

Item 104a.—Meals for recruiting parties: Estimated, 1919, \$657,000.

Number of enlisted men for whom it is estimated meals will be furnished.....	2,000
Days for which it is estimated meals will be furnished.....	365
Estimated cost per day.....	\$0.90
Total estimate.....	\$657,000.00

Item 104b.—Meals for applicants for enlistment while under observation: Estimated, 1919, \$574,875.

Number of applicants for whom it is estimated meals will be furnished..	1,750
Days for which it is estimated meals will be furnished.....	365
Estimated cost per day.....	\$0.90
Total estimate.....	\$574,875.00

Item 104c.—Meals for enlisted men reporting without means: No estimate is submitted under this item, as the cost for any rations issued to men reporting without means is charged against the man on the muster rolls and deducted from his pay.

Item 105.—Purchase of subsistence supplies for sales: No estimate is submitted for the fiscal year 1919.

Item 105a.—Purchase of subsistence supplies for sales to officers of the Army: Paragraph 1239, Army Regulations, 1913, provides that sales of subsistence stores may be made at cost prices for cash to an officer on his certificate that the stores are for his personal or family use or for the use of an officers' mess, of which he is the caterer. Funds received from such sales are available to replace the stores sold. Authorized by section 1144, Revised Statutes, and act approved March 3, 1875 (18 Stat., 410).

Item 105b.—Purchase of subsistence supplies for sales to enlisted men of the Army: Paragraph 1241, Army Regulations, 1913, provides that sales of reasonable quantities of stores may be made to an enlisted man on the active or retired list, for cash upon his declaration in writing that they are intended for his own use. Funds received from such sales are available to replace the stores sold. Authorized by section 1144, Revised Statutes, and act approved March 3, 1875 (18 Stat. 410).

Item 105c.—Purchase of subsistence supplies for sales to the Navy: Paragraph 1241½, Army Regulations, 1913 (as amended by C. A. R. No. 12, War Department, 1914), provides that officers and enlisted men of the Navy and Marine Corps are permitted to purchase subsistence supplies at the same price as is charged the officers and enlisted men of the Army, and the officers and enlisted men of the Army are permitted to purchase subsistence supplies from the Navy and the Marine Corps at the same price as is charged the officers and enlisted men of the Navy and the Marine Corps. Funds received from such sales are available to replace the stores sold. Authorized by act approved August 29, 1916.

Item 105d.—Purchase of subsistence supplies for sales to the Marine Corps: Paragraph 1241½, Army Regulations, 1913 (as amended by C. A. R. No. 12, War Department, 1914), provides that officers and enlisted men of the Navy and Marine Corps are permitted to purchase subsistence supplies at the same price as is charged the officers and enlisted men of the Army, and the officers and enlisted men of the Army are permitted to purchase subsistence supplies from the Navy and the Marine Corps

at the same price as is charged the officers and enlisted men of the Navy and the Marine Corps. Funds received from such sales are available to replace the stores sold. Authorized by act approved August 29, 1916.

Item 106.—Supplying for competitors in the national rifle match, meals, etc.: This office was advised by Maj. Bookmiller, of The Adjutant General's Office, that by direction of the Secretary of War the national rifle match and contests for places in department and Army rifle teams are suspended until further orders, and no estimate is, therefore, submitted hereunder for the fiscal year 1919.

Item 107 and subitems.—For payments of commutation of rations: For details as to this amount, see remarks under items 107a to 107i, inclusive.

Item 107a.—Payment of commutation of rations to the cadets at the United States Military Academy:

Estimated, 1919.....	\$146, 000
Expended, 1917.....	\$107, 442. 20
Number of cadets for whom it is estimated commutation of rations will be paid.....	1, 000
Days for which it is estimated commutation will be paid.....	365
Rate for commutation.....	\$0. 40
Total estimate.....	\$146, 000

Item 107b.—For payment of commutation of rations to enlisted men on furlough:

Estimated, 1919.....	\$3, 285, 000
Expended, 1917.....	\$151, 514. 76
Number of enlisted men for whom it is estimated commutation of rations will be paid.....	30, 000
Days for which it is estimated commutation will be paid.....	365
Rate of commutation.....	\$0. 30
Total estimate.....	\$3, 285, 000

Item 107c.—For payment of commutation of rations to enlisted men stationed at places where rations in kind can not be economically issued and when traveling on detached duty, when it is impracticable to carry rations of any kind:

Estimated, 1919.....	\$6, 251, 282. 00
Expended, 1917.....	1, 010, 550. 88

Enlisted men for whom it is estimated commutation will be paid.	Number of days for which it is estimated commutation will be paid.	Estimated rate of commutation.	Total estimate.

270, at.....	\$1. 00
Total estimate.....	\$2, 623, 620

Item 107e.—For payment of commutation of rations to enlisted men selected to contest for places and prizes in department and Army rifle competitions: No estimate submitted. These contests have been discontinued during the war.

Item 107f.—For payment of commutation of rations to male and female nurses on leave of absence:

Estimated, 1919.....	\$133, 371
Expended, 1917.....	\$19, 330. 54
Number of nurses to whom it is estimated commutation of rations will be paid.....	1, 218
Days for which it is estimated commutation will be paid.....	365
Rate of commutation.....	\$0. 30
Total estimate.....	\$133, 371

Item 107g.—For payment of commutation of rations to applicants for enlistment while traveling under orders:

Estimated, 1919.....	\$55, 188
Expended, 1917.....	\$1, 352. 88
Number of applicants for whom it is estimated commutation of rations will be paid.....	84
Days for which it is estimated commutation will be paid.....	365
Rate of commutation.....	\$1. 80
Total estimate.....	\$55, 188

Item 107h.—For payment of commutation of rations to general prisoners while traveling under orders:

Estimated, 1919.....	\$274, 626
Expended, 1917.....	\$541. 33
Number of prisoners to whom it is estimated commutation of rations will be paid.....	418
Days for which it is estimated commutation will be paid.....	365
Rate of commutation.....	\$1. 80
Total estimate.....	\$274. 626

Item 107i.—For payment of commutation of rations to members of the Nurse Corps (female) while on duty at hospitals:

Estimated, 1919.....	\$39, 420
Expended, 1917.....	\$44, 148. 98
Number of nurses to whom it is estimated commutation of rations will be paid.....	270
Days for which it is estimated commutation will be paid.....	365
Rate of commutation.....	\$0. 40
Total estimate.....	\$39, 420

Item 107j.—For payment of commutation of rations to enlisted men sick in hospitals:

Estimated, 1919.....	\$5, 916, 905. 50
Expended, 1917.....	\$566, 053. 90

Number of en listed men for whom it is estimated commutation will be paid.	Number of days for which it is estimated commutation will be paid.	Estimated rate of commutation.	Total estimate.
2, 307	265	\$0. 50	\$421, 027. 50
37, 643	365	. 40	5, 495, 878. 00
39, 950	5, 916, 905. 50

Item 107k.—For payment of commutation of rations to applicants for enlistment while held under observation:

Estimated, 1919.....	\$12, 264
Expended, 1917.....	\$1, 850. 28
Number of applicants to whom it is estimated commutation of rations will be paid.....	84
Days for which it is estimated commutation will be paid.....	365
Rate of commutation.....	\$0. 40
Total estimate.....	\$12, 264

Item 107-1.—For payment of commutation of rations to general prisoners in hospitals:

Estimated, 1919.....	\$1
Expended, 1917.....	\$4,
Number of prisoners to whom it is estimated commutation of rations will be paid.....	
Days for which it is estimated commutation will be paid.....	
Rate of commutation.....	
Total estimate.....	\$2

Item 108.—Advertising, estimated, 1919, \$18,845.

The estimate for 1919 has been placed at \$18,845, an increase over the amount appropriated for the fiscal year 1918. This increase is due to increase in the and it is thought will meet requirements.

Item 109.—For providing prizes to be established by the Secretary of War for enlisted men of the Army who graduate from the Army schools for bakers and cooks, estimated, 1919, \$900.

Under date of January 12, 1906, the Commissary General recommended to the Secretary of War, in order to stimulate the interest of the enlisted men who are students in the schools for bakers and cooks, that small monetary prizes be offered to each graduating class who pass the best competitive examination and request Congress be asked to provide the amount of \$900 in the next annual appropriation bill for this purpose. This was approved and a clause covering it inserted in the appropriation bill for the fiscal year 1907, the prizes to be established by the Secretary of War.

The Secretary of War, under date of July 12, 1906, approved the following recommendation of the Commissary General:

That \$150 be allotted for each of the six graduations from the school during the year. Each allotment of \$150 to be divided among the several schools proportionately to the number of enlisted men, bakers and cooks, graduated each term. The amount thus allotted each school for its graduating class of cooks and bakers to be divided into prizes as follows:

Three-tenths of such amount as first prize for cooks, three-tenths of such amount as first prize for bakers, two-tenths of such amount as second prize for cooks, two-tenths of such amount as second prize for bakers; and under date of June 11, 1906, the officers in charge of the various schools were informed that the following had been adopted for awarding of prizes to the graduates in baking and cooking at the completion of the respective courses:

Bakers:

First prize.....	\$15
Second prize.....	10

Cooks:

First prize.....	15
Second prize.....	10

The sizes of the different classes not to affect the amount of the prize provided the degree of efficiency obtained by the prize winner is such as to warrant a prize given. In certain cases, even in a large class, the degree of efficiency obtained by the first men might not be so high as to warrant a prize, and in these cases a prize should be awarded, or, if the conditions warranted it, none at all, so that the question of the award of prizes is in the discretion of the officer in charge.

There have been established at the present time six bakers' and cooks' schools which are located as follows:

Washington Barracks, D. C.; Fort Riley, Kans; Presidio of Monterey, Cal.; Sam Houston, Tex.; Schofield Barracks, Hawaii; and Fort William McKinley, P. I.

Item 110.—Other necessary expenses incident to the purchase, testing, care, maintenance, issue, sale and accounting for subsistence supplies for the Army, estimated, 1919, \$250,000.

This item, among other things, provides for twine, paper bags, cotton bags, boxes for packing, packing cases, lumber, salt for rebrining, testing apparatus, materials, grinding, roasting, and repacking coffee, electric power for bakeries, kitchen service, cost of oaths pertaining to contracts for subsistence supplies, and all miscellaneous expenses pertaining to this appropriation not otherwise provided for. This amount, \$250,000, is just 10 times as much as estimated for 1918, due to the amount of testing, etc., required due to war conditions and large increase in Army.

Item 110a.—Customs duties on subsistence supplies, estimated, 1919, \$50,000.

GRAPHIC STATEMENT OF AVERAGE COST OF THE RATION (American)

Fiscal Year 1915

Fiscal Year 1916

Fiscal Year 1917

Items on which customs duties are ordinarily collected in the Philippine Islands are currants, gelatin, handkerchiefs, tapioca, puffed rice, nutmegs, and linen textiles. If matches, tobacco, and toilet preparations (in which, exclusive of water, alcohol forms the principal ingredient), are not purchased by the Government in the Philippines, they would be subject to duty if procured in this country and sent to the Philippines.

No customs duties are paid in the United States on foreign products for use in connection with the subsistence of the Army.

Item 110b.—Losses on subsistence stores, estimated, 1919, \$73,921.30.

Losses occur through theft, deterioration, etc., and the supplies are taken up and dropped in accordance with paragraphs 205 and 206, Subsistence Manual, 1910.

Losses on subsistence stores for the fiscal years 1914, 1915, 1916, and 1917:

1914.....	\$118,318.72	1916.....	\$190,942.01
1915.....	131,168.38	1917.....	65,159.60

Item 110c.—Hire of employees, estimated, 1919, \$10,100.

Compensation of civilian employees, as follows:

1 inspector (Class A-1 supplies), at \$1,400 per annum.

1 inspector supplies, at \$1,500 per annum.

6 inspectors supplies, at \$1,200 per annum.

Compensation of meat inspectors is not estimated for the fiscal year 1919, in view of the fact that meat inspectors have been transferred to the Medical Department of the Army, under the provisions of section 16 of the act approved June 3, 1916.

ARMY APPROPRIATION BILL, 1919.

Prices paid for articles of the ration purchased at San Francisco, Cal., during the period Oct., 1916, to Aug., 1917.

Cheese.
Yeast, dried.
Brushes, hair.
Brushes, shoe.
Brushes, nail.
Oil, olive.
Sardines.
Water, effervescent.

Quantity and price of above articles not known.

All other subsistence supplies for overseas are procured by the depot quartermaster, New York.

Mr. ANTHONY. It may not be exactly germane under a discussion of this item, but I would like to ask Gen. Sharpe what steps are being taken to conserve the waste in the various cantonments.

Gen. SHARPE. I remember I submitted a proposition a while ago which perhaps did not seem feasible. It would seem that there is a lot of waste that can be conserved, such as shoe leather, clothing, and garbage, which can be sold instead of our paying for taking it away.

Mr. ANTHONY. Is it a fact that certain sums are paid to remove garbage, or is the Government saving that now?

Gen. SHARPE. The Government is being paid for the garbage and for the manure, instead of burning it up. They dispose of it, but at the same time it does not seem that there is a direct profit to the extent of the amount of money received from the garbage, because the cost of the trucks and the men employed in collecting the garbage must be taken in to account as against the revenue received from it. But that would have to be done in any event, if the Government took the garbage down to an incinerator and burned it, so that the Government is ahead the amount received for the garbage, although it may not represent an actual profit for the Government.

Mr. ANTHONY. It does not represent a loss, inasmuch as you have to pay the cantonments a certain sum of money to take away the garbage.

Gen. SHARPE. It does not represent a loss, except the cost of carting it to the places where it is to be delivered.

Mr. ANTHONY. Is not the garbage and waste worth enough to somebody to pay for it?

Gen. SHARPE. We have contracts for almost all the cantonments, where they do pay for these things, but some of the garbage at the cantonments; that is, the manure, where there is no way of disposing of it, has to be destroyed, and we have to incinerate that because there is no one we can get to take a contract in those particular places for the manure.

Now, in regard to the conservation of the other items—in the way of leather, bottles, paper, and clothing—we have taken steps to have repair shops installed at every one of the camps where all of the arti-

cles will be repaired up to the time when they can not be repaired, and any of the rags which come from the wool or cotton are kept separately.

The CHAIRMAN. You say there are some camps where nobody will take a contract for the garbage?

Gen. SHARPE. For the manure.

The CHAIRMAN. When you make a contract for that stuff, do you not require the contractor to remove that himself?

Gen. SHARPE. He is required to remove it from a designated point on the outskirts of the reservation. They did not want to have the contractor's teams and people employed on the reservation. They thought it would be better for discipline not to have them on the reservation.

Mr. FIELDS. Does it cost any more to collect the stuff at a designated place for sale than it would to collect it to be burned? There is no difference in the cost of that, is there?

Gen. SHARPE. I do not know that that has been figured out, but the haul would be a little bit greater in some cases, and sometimes it would not be as great. I think we may fairly assume that the cost would be about the same.

Mr. SHALLENBERGER. Can it not be fairly stated that the plan you have adopted represents a distinct saving over the old plan of destroying the waste?

Gen. SHARPE. Absolutely; because we get the proceeds of what the contractor pays for it.

Capt. DALY. The contracts for the removal of garbage and waste were made by the Cantonment Division. The contracts provide in one or two cases a monthly rate, which is paid by the contractor and in other cases there is a per capita based on the actual strength as shown by the reports of strength in the camps. The contracts exclude rags and bags. They are collected by the Government and disposed of. But the contracts do include all other waste, including grease and bones.

The Government furnishes receptacles for the liquid and dry garbage and delivers them to a central point designated by the commanding general of the camp, with their own teams and labor, and from that designated point it is taken up by the contractor.

Gen. SHARPE. We have made other suggestions in the way of conservation, one being that they adopt the old Army custom that when they are making coffee they shall put the sugar in the coffee instead of putting the coffee unsweetened on the table and allowing the men to use the sugar as they desire it. We have always found some balance of sugar at the bottom of the cups when the men sweeten the coffee themselves. That plan has been objected to by some men, who do not want the sugar in their coffee.

In the same way we have made suggestions about the use of corn meal in making bread, and also eliminating sugar and lard in the baking of bread. That all depends upon the quality of flour which we are given. We have not felt that we can issue any positive suggestions that that should be done, but just suggestions along lines of conservation.

As a result of those suggestions, the amount of lard used has been considerably reduced, and they have made experiments and produced good results at all camps by eliminating sugar from the bread. Of course, by the elimination of sugar that means that you have taken

from the bread the water-absorbing element which is in the bread and therefore the bread becomes stale or dry much quicker than it would ordinarily, and when you come to cut it it crumbles, and from some of the camps there has been complaint that the loss by the crumbling more than offsets the cost of the use of sugar.

We do not use bread until it is 24 hours old. Our proportions for the use both of sugar and lard are below the amounts per hundred pounds which the Food Administration has authorized the use of, so that even if we do use our receipts, we are still saving on what they consider to be necessary.

We can not make a definite recommendation or give definite instruction in regard to that, but we have made suggestions, and the men have been very helpful in trying to meet those suggestions.

In regard to the bones and grease, all those things are carefully fried out and all the fat that is possible to obtain is gotten out. So much is that true that the contractors at the camps say that they can not get anything out of the waste, that we have dried everything out of the waste and have gotten all the grease out of it to be used for frying.

We are now using a new composition, one of the cottonseed-oil products, which seems to be giving better results than the lard in the making of bread, because they found that with this particular product you can even fry fish, and then use the product again in making bread, that it does not seem to retain the odor of the fish at all, and that the heat seems to expell the odor. Those compounds cost less than the lard itself.

Mr. FIELDS. And as a result, is the bread as good as it was when made the other way?

Gen. SHARPE. Every bit.

Mr. FIELDS. Have you abandoned that method of making coffee with the sugar in it?

Gen. SHARPE. Yes, sir.

Mr. KAHN. How many of the soldiers complained of the sweetened coffee; very few of the men in a company?

Gen. SHARPE. Very few, yes, sir; just a few men.

The CHAIRMAN. Capt. Daly stated a moment ago that the per capita cost under this item was \$152.21. According to the figures given to the committee last year the per capita cost under this item was \$100. Have the rations gone up to that extent?

Gen. SHARPE. The ration is now costing practically 40 cents—39.85 cents.

The CHAIRMAN. That was authorized last year.

Capt. DALY. That 40 cents was authorized for hospitals. The regular ration was not costing that much at that time.

Mr. FIELDS. That was 29 and a fraction cents, was it not?

Capt. DALY. Yes; we figured it at 30 cents.

Gen. SHARPE. I have here a diagram which I think will be interesting to the committee, showing the advance in the cost of the ration for the last few years.

The CHAIRMAN. Will you put that in the record?

Gen. SHARPE. Yes, sir.

The chart referred to will be found opposite this page.

Mr. KAHN. Has the character of the ration changed?

Gen. SHARPE. No.

Mr. KAHN. You are still using the same ration?

Gen. SHARPE. We are still using the same ration. There have been proposals that it should be changed, but we have opposed that very strenuously for the reason that we did not believe that it was a proper thing to take men to the camp who must be put in as fine physical condition as they can be in order to enable them to do the work they will have to do when they get in the trenches.

Most of the men come from offices, where they have not had the severe exercise outdoors that they get in the Army, and that exercise requires a more liberal diet for them and requires the use of sugar to restore the muscles. That is the only thing which will restore a tired muscle, and we have opposed any reduction, either of the beef or the sugar ration, for that reason. We feel that the men ought to be put in as fine physical condition as they can be before they are called upon to make the greatest physical effort that they have ever had to make, and we have also felt that it was not proper for us to go into the camps and try any of the patent foods, or anything like that, because we do not want to have those men feel that they are members of a poison squad, as they are called in the Department of Agriculture, when they are making experiments. We also feel that as the English have not changed their ration we ought not to change ours. ■

Mr. KAHN. Can you put in the hearings a complete list of the constituents of the ration?

Gen. SHARPE. Yes, sir; and a statement of its nutritive value.

Mr. KAHN. And also the proportion allowed to each soldier?

Gen. SHARPE. Yes, sir. ■

For men at hard physical labor, such as blacksmithing, etc., it is estimated by the Agricultural Department that 4,500 calories of energy per day would be required. The analysis of the United States Army garrison ration herewith shows that it produces 4,761 calories, from which it will be seen that we get a higher fuel value from the ration than is required for men at hard physical labor.

There seems to be a general impression among the militia that the present Army ration is adequate provided they have competent men to handle it, and that it provides sufficient variety.

Mr. KAHN. How does our ration compare with the English ration and the French ration and the Italian ration?

Gen. SHARPE. I do not know about the Italian ration, but our ration is practically the same as the English. There are some few components of ours which are in excess of what the English allow, and vice versa, some of theirs are a little in excess of ours; but the nutritive values are about the same, although ours is probably a little bit greater.

Mr. KAHN. Can you put into the hearings a statement of the components of the English ration?

Gen. SHARPE. Yes, sir; I have the English and the French, but I have not got the Italian.

Mr. KAHN. Can you give us the English and the French ration in the hearings so that we will be able to show the House if any question should arise just what the difference is?

Gen. SHARPE. Yes, sir. I have also a table showing the nutritive value of our ration. The regular ration produces 4,761 calories, or if you use our field ration with certain components it produces 4,615 calories. Making use of a more reduced field ration, you get 3,797 calories. With still another change in the field ration, you get 4,068 calories. For men engaged in hard physical labor, such as blacksmithing, it is estimated by the Department of Agriculture that they require about 4,500 calories, and so ours is in excess of that, and that is done to allow them to make substitutions in order to give variety in the diet, and at the same time give full nutritive value to the ration. It is a well-balanced ration, which contains the proper amount of fat and carbohydrates and proteids.

(The tables showing the British, French, and Italian rations, above referred to, are as follows:)

The British ration in the field.

1. Calories.

2. Scale of ration:

(a) Normal ration—

	Calories.
$\frac{1}{2}$ pound fresh or frozen meat.....	683
(See letter Sept. 28, 1917.)	
$\frac{1}{2}$ pound (nominal) preserved meat.....	925
1 pound bread.....	1,185
$\frac{1}{2}$ pound biscuit.....	1,260
4 ounces bacon.....	650
3 ounces cheese.....	375
2 ounces dried vegetables.....	205
$\frac{1}{2}$ pound potatoes or $\frac{1}{2}$ pound vegetables, when supply admits.....	150
3 ounces sugar.....	345
$\frac{1}{2}$ ounce salt.....	
$\frac{1}{50}$ ounce mustard.....	
$\frac{1}{36}$ ounce pepper.....	
$\frac{1}{12}$ tin condensed milk, 1 pound—	
Sweetened.....	1,480
Unsweetened.....	755
$\frac{1}{320}$ gallon lime juice on recommendation of medical officer.....	4

2. Scale of ration—Continued.

(a) Normal ration—Continued.

Calories.

2 ounces tobacco or cigarettes per week for smokers.	
1/64 gallon rum, at the discretion of the G. O. C. on the recommendation of the medical officer.....	179
3 boxes matches a fortnight.	

8, 186

(b) Increased ration (only on authority of Quartermaster General):

1½ pounds fresh or frozen meat, or.....	1, 525
1 pound (nominal) preserved meat.....	1, 230
1 pound biscuit.....	1, 680

4, 165

(c) Iron ration (one always in possession of each man to meet emergencies):

1 pound biscuit.....	1, 680
1 pound (nominal) preserved meat in compact form.....	1, 230
½ ounce tea.	
2 ounces sugar.....	235

3, 145

(d) Extras—

½ ounce tea and ½ ounce sugar daily for men in the trenches, when considered necessary by Army commanders.....	85
2 ounces pea soup, or 2 Oxo cubes, or other equivalent available, twice a week for men in the trenches during winter months, or daily for men in the trenches during severe weather on demand of Army commanders.	
2 ounces butter, thrice weekly at the front.....	435
When stocks are available, either of the undermentioned, alternative equivalents may be issued for men in the trenches in lieu of the authorized scale of pea soup or Oxo cubes.	
(i) ½ ounce cocoa or chocolate, ½ tin of condensed milk.....	2, 255
(ii) ½ ounce tin of cocoa and milk, 1 pound cocoa.....	
Milk.....	315

When stocks are available the following will be issued to all troops:

1 ounce of pickles per man, thrice weekly, cucumber.....	4
--	---

(e) Equivalents—

4 ounces rice equal to 4 ounces bread or biscuit (once a week).....	396
4 ounces dried fruits (when available) equal to 4 ounces jam.	311
½ pound fresh vegetables (whenever obtainable) equal to 2 ounces dried vegetables.....	205
2 ounces honey equal to 4 ounces jam.....	185

3. A day's menu:

Breakfast—Bacon, bread, jam, tea.

Dinner—Meat, vegetables (as available), bread, and cheese.

Tea—Bread, jam, tea.

Supper—Soup, bread, cheese.

4. Notes:

(a) The daily rations are for consumption from breakfast (inclusive) up to and inclusive of the evening meal on the same day.

(b) Rum is rarely issued during the summer months.

(c) During the winter, and always is very bad billets, straw for bedding is issued weekly at rate of 4 pounds per man.

(d) Fuel is issued as follows: On a basis of 5½ pounds wood per man per day, and on the basis that 1 pound wood equals 1 pound charcoal, or ½ pound coal, or ¼ pound coke.

(i) For men not in trenches, 2½ pounds wood and 1½ pounds coal.

(ii) For men in trenches, 2 pounds coke and ½ pound charcoal.

The balance of the allowance under (ii), which is equivalent to ½ pound coal, may be added to the quantities drawn under (i) and used in rear of the trenches for divisional baths, laundries, etc. Fuel for authorized fireplaces may be drawn at the weekly rate of 200 pounds.

A 25 per cent increase all around may be authorized in very bad weather when supplies admit.

¹ 10 pieces or crackers.² 12 pieces or crackers.

Order dated February 4, 1916.

It will be noted that in the new tables the extraordinary supplements authorized have been considerably curtailed and that quite a number of changes have been made in the authorized substitutive equivalents.

It will also be noted that 0.275 pound of chocolate has been added to the reserve ration. This results in bringing the total weight of the reserve ration up from 2.53 pounds to approximately 2.80 pounds.

It will also be noted that the allowances of wine and beer have been somewhat increased; that cider has been added to this; and that these articles are now regular articles of issue instead of being authorized "to each man in bivouac or when specially ordered."

It will also be noted that the allowance of fresh meat in the strong ration has been reduced from 1.10 to 0.99 pounds.

EXTRAORDINARY SUPPLEMENTS ISSUED.

The sole extraordinary supplements of the normal ration authorized to be issued are as follows:

Articles.	First rate.	Calories.	Second rate.	Calories.
Fresh meat.....pounds..	0.055	55	0.11	110
Sugar.....do.....	.0182	25	.0242	45
Coffee ¹do.....	.0088		.0176	
Wine.....pints.....	.22	60	.22	60

¹ Negligible.

(a) Either the first or second rate may be authorized, or a portion at one rate, and the remaining articles at the other rate, or the issue authorized may be restricted to one, two, or three of the articles mentioned.

(b) The authorized substitutive equivalents (list follows) may be substituted for the foregoing. In this case the rate of issue of the substituted article is increased proportionately with the supplement it replaces.

(c) The supplements which may be authorized to the strong ration by the commander in chief are not fixed.

(d) Under no circumstances will the additional supplements authorized in the issue of fresh meat exceed 1.10 pounds (1,105 calories).

The order authorizing a supplement of the ration will state the corps, fraction of the corps, detachment or service to which the authorization is accorded.

Orders relating to changes of the ration and authorizing the issue of supplements will always be furnished to the intendant, who will keep a record of the same, together with the names of the corps or fractions of the corps for whom the supplements have been authorized.

	Carrots, turnips, cabbage.....	2.20	335
	Bread may be substituted by—		
.55	Wheat flour, corn meal, vegetable flour, "pates" semoule, tapioca.....	.396	610
	Potatoes.....	2.20	670
.0528	Coffee, roasted, may be substituted by—		
	Tea.....	.0176

¹ The food value of these articles is inferior to that of the meat ration which it replaces. It therefore follows that fat, cheese, vegetables, sugar, eggs, or wine must be bought from the "company fund" (funds ordinary) to make good on "loss in food value."

Italian ration.

	Calories.
1. Bread, 750 grams.....	1,955
2. Meat, 200 grams (with 25 per cent of bone and 10 per cent additional).....	445
3. Paste, 200 grams (3 days per week).....	715
4. Rice, 193 grams (4 days per week).....	635
5. Bacon, 15 grams.....	90
6. Salt, 20 grams.....	
7. Condiments or kidney beans, 50 grams.....	90
8. Occasional additions or substitutions: Tomato preserves, herbs, meat, paste, bacon.....	
9. Wine, 25 centiliter of roasted coffee 10 grams and sugar 15 grams=60 calories..	156
Total.....	4,086

In war the meat component is increased to 375 grams (824 calories), and cigarettes are added to the ration. There are also at times added 200 grams (135 calories potatoes, 705 calories vegetables) to 250 grams (165 calories potatoes, 880 calories vegetables) of vegetables and potatoes.

Typical Italian war menu.

[Breakfast, see par. 1; midday meal, see pars. 2 and 3; evening meal, see pars. 4 and 5.]

1. Some one of the following items:	Calories.
Dry figs, 120 grams.....	385
Chestnuts, 150 grams.....	320
Almonds, 40 grams with shells.....	145
Walnuts, 40 grams with shells.....	75
Hazelnuts, 40 grams with shells.....	135
Cheese, 40 grams.....	180
Olives, 30 grams.....	65
Sardines, 30 grams.....	60
Herrings, 30 grams.....	50
Fresh apples, 200 grams.....	95
2. Meat, 200 grams (190 grams of frozen) three times a week.....	440
3. Vegetable soup or broth four times per week, according to one of the following types:	
(A) Type of vegetable soup—	
(a) Vegetable (French beans, chickpeas, lentils, beans, etc.), 80 grams.....	48
(b) Paste 50 grams, or potatoes 120 grams, or greens (cabbage), 200 grams.....	60
(c) Condiments, 5 centigrams.....	Negligible.
(B) Type of broth:	
(a) Paste or rice 50 grams.....	175
(b) Vegetables 50 grams, or potatoes 100 grams.....	15
(c) Assorted greens (cabbage, endive, celery, carrots, parsley, etc.), 150 grams.....	40
(d) Condiments 5 centigrams.....	Negligible.
4. Rice 120 grams three times a week.....	350
5. Vegetables, 50 grams or potatoes 100 grams or greens 150 grams, three times a week.....	35
6. Paste 150 grams with vegetables 50 grams or greens 150 grams, twice a week..	210
7. Paste 200 grams three times a week.....	715
8. Condiments 8 centigrams.....	Negligible.
9. Wine 25 centiliters.....	156

Mr. KAHN. That ration was agreed upon by a board, was it not?

Gen. SHARPE. Yes, sir; it was agreed upon by a board, after years of very exhaustive study having been given to the matter.

Mr. KAHN. Can you recall who, or which branches of the Army, or of any other Department of the Government agreed upon that ration?

Gen. SHARPE. We have always consulted the Medical Department about any modifications in the ration, and we have also consulted the Bureau of Experiment Stations of the Agricultural Department, and the Bureau of Chemistry, Dr. Wiley, and Dr. Alsberg. Then we have taken the opinions of such men as Prof. Chittenden, of Yale, and Prof. McDonald, and we have also consulted the so-called extremists. I do not mean that we have listened to the extremists, such as the men who favor the use of oatmeal.

Mr. KAHN. My desire is to get into the hearings just what the value of the ration is, because some people complain that we do not feed the soldiers well enough.

The CHAIRMAN. That was put into the record last year, but I think it ought to be repeated this year. In connection with that, I wish you would also put into the record a statement showing the menus for breakfast, dinner and supper on the various days of the week.

Gen. SHARPE. Yes, sir; I will do that.

(The statements referred to follows.)

Bills of fare for 10 days—100 men on the garrison ration at Fort Riley, Kans.

[Value of ration (July, 1917) \$0.4123; cash allowance per day, \$41.23.]

	Cost.
First day (Sunday):	
Breakfast.....	\$11.60
Canteloupes, $\frac{1}{2}$ each.	
Oatmeal, sugar, milk.	
Fried pork sausage.	
Hot biscuits, coffee.	
Dinner.....	22.10
Fresh vegetable soup, 10 gallons.	
Croutons (diced bread toasted).	
Veale a la Creole.	
Boiled rice, string beans (fresh).	
Lettuce salad.	
Ice cream, cake.	
Bread, ice water.	
Supper (cold).....	9.00
Potato salad.	
Bread, jam, iced tea.	
Cost, first day.....	<u>42.70</u>
Second day:	
Breakfast.....	11.20
Corn flakes, sugar, milk.	
Beef stew, boiled potatoes.	
Toast, bread, coffee.	
Dinner.....	18.00
Boiled beef, with dumplings.	
Spinach, young beets, pickles.	
Apple and peach pie, iced tea, bread.	
Supper.....	9.40
Beefsteak, breaded, scalloped potatoes.	
Hot Parker House rolls, iced tea.	
Cost, second day.....	<u>38.60</u>
Third day:	
Breakfast.....	12.85
Stewed prunes.	
Oatmeal, sugar, and milk.	
Hamburger steak.	
Baked potatoes.	
Bread, toast, coffee.	
Dinner.....	12.65
Rice and tomato soup, croutons.	
Boiled bacon and cabbage.	
Macaroni with cheese.	
Lettuce and radishes or young onions.	
Brown Betty, with raisins or currants.	
Caramel sauce.	
Hot corn bread, iced tea.	
Supper.....	9.45
Hot rolls, butter, jam, iced tea.	
Cost, third day.....	<u>\$5.00</u>

ARMY APPROPRIATION BILL, 1919.

323

Fourth day:	Cost.
Breakfast.....	\$13.50
Cantaloupes, corn flakes, sugar, and milk.	
Fried liver and bacon, fried onions.	
Toast, bread, coffee.	
Dinner.....	15.30
Beef a la mode.	
Boiled potatoes, creamed cauliflower.	
Pickles.	
Tapioca pudding, Vanilla sauce.	
Iced tea, bread.	
Supper.....	8.35
Chili con carne, hot biscuits.	
Stewed peaches, iced tea.	
Cost, fourth day.....	37.15
Fifth day:	
Breakfast.....	12.30
Milk toast, fresh apple sauce.	
Beefsteak and onions, baked potatoes.	
bread, coffee.	
Dinner.....	17.90
(ream of potato soup, croutons.	
Beef potpie, boiled potatoes, boiled beets.	
Lettuce salad, cottage pudding.	
(chocolate sauce, iced tea, bread.	
Supper.....	11.50
Fried ham, hot Parker House rolls.	
Apple sauce, iced tea.	
Cost, fifth day.....	41.70
Sixth day:	
Breakfast.....	9.60
Oatmeal, sugar, and milk.	
Fried pork sausage.	
Lyonnaise potatoes.	
Bread, toast, coffee.	
Dinner.....	22.80
Vegetable soup, croutons.	
Soft roast beef.	
Mashed potatoes, stewed corn.	
Piccalilli, lemon ice.	
Spiced cake, bread, ice water.	
Supper.....	8.65
Hot tea buns, jam, butter, iced tea.	
Cost, sixth day.....	41.05
Seventh day:	
Breakfast.....	12.00
Bananas, corn flakes, sugar, and milk.	
Beef stew, baked potatoes.	
Toast, bread, coffee.	
Dinner.....	20.00
Roast ribs of beef, browned potatoes.	
Spaghetti, Italian style, pickles.	
Apple dumplings, plain sauce.	
Bread, ice water.	
Supper.....	9.10
Veal cutlets, breaded.	
Hot biscuits, jelly or jam, iced tea.	
Cost, seventh day.....	41.10

Eighth day:	Cost.
Breakfast.....	\$12.70
Cantaloupes, Oatmeal, sugar, and milk.	
Hot cakes, butter, sirup, coffee.	
Dinner.....	24.15
Fresh vegetable soup, croutons.	
Fricassee of chicken.	
Green peas, creamed potatoes.	
Sliced tomatoes and cucumbers.	
Jelly cake, lemonade, bread.	
Supper.....	8.85
Cold roast beef, potato salad.	
Bread, apple sauce, iced tea.	
Cost, eighth day.....	<u>45.70</u>
Ninth day:	
Breakfast.....	14.75
Hot milk toast.	
Fresh rhubarb sauce.	
Fried spareribs, baked potatoes.	
Toast, bread.	
Coffee.	
Dinner.....	15.55
Boiled Vienna sausage and cabbage.	
Boiled potatoes.	
Hot corn bread.	
Piccalilli.	
Plum duff, caramel sauce.	
Iced tea.	
Supper.....	8.00
Scrambled brains, Jenny Linds.	
Apple or peach sauce, iced tea.	
Cost, ninth day.....	<u>38.30</u>
Tenth day:	
Breakfast.....	12.50
Bananas, 1 each.	
Oatmeal, sugar, and milk.	
Beef hash, lyonnaise potatoes.	
Toast, bread, coffee.	
Dinner.....	13.40
Baked pork and beans.	
Spinach, piccalilli.	
Hot corn bread.	
Rice pudding, caramel sauce.	
Iced tea.	
Supper.....	11.60
Cold sliced Bologna sausage.	
French fried potatoes.	
Pickled beets.	
Hot rolls or buns, pumpkin pie, iced tea.	
Cost, tenth day.....	<u>37.75</u>

RECAPITULATION.

Allowance for 10 days..... \$412.30
Total cost of articles on bill of fare..... 399.05

Balance..... 13.25

NOTE.—The balance of \$13.25 is to be used to purchase extra ice, soup bunches, spices, such as ginger, cloves, etc., and should cover all extra costs for the 10-day period.

It is not intended that this bill of fare be blindly followed, but that it be used as a guide to variety, quantity, and cost in the locality where the troops may be stationed.

The supper meal is purposely stated light in order to give the cooks an opportunity to use left-over food, such as hash, potpies, croquettes, etc.

There is ample money left after figuring out the cost for the period to purchase all the seasonings and condiments required.

Provision is also made for the purchase of what extra ice may be needed. The cost of ice at Fort Riley is 24 cents per hundred pounds.

ALLOWANCES.

Ice..... 100 pounds per day.
Soap..... 0.64 ounce for each ration.
Candles (when other lights are not furnished)..... 0.24 ounce each ration.
Matches..... 36 boxes per month.
Toilet paper..... 1,000 sheets to each 60 rations.
Housewives (for service in the field)..... 1 to each squad.

Brooms, lye, mops, sapolio, and scrubbing brushes, such quantities as the commanding officer may approve.

Requisitions should be made for all issues and allowances.

A clean kitchen and a clean dining hall are indispensable to a successful mess.

Dishtowels may be obtained by asking for empty flourbags from the local bakeries, for which no charge should be made.

We send out from our office a cookbook and in that cookbook there are menus prescribed, showing what it is possible to make with the ration, and then for the camps we made a little extract edition of that cookbook and we sent that to every one of the organizations at the camps, to show the men how to prepare the rations.

Mr. KAHN. Of course, where there is complaint of the food it is generally due to the fact that the company cook does not know how to utilize the material that is furnished him properly; is that not the case?

Gen. SHARPE. Yes, sir.

Mr. KAHN. Did I understand you to say the other day that you were trying now to train cooks in large numbers to take care of the great increased army?

Gen. SHARPE. Yes, sir. Perhaps, Mr. Kahn, the committee would like to hear the arrangements which were made along that line in order to handle the men in the draft.

The duty of providing the cooks was assigned to our department. Ordinarily, that is a matter which is left to each company commander. Obviously, with the draft army, while the company commanders know their men they could not select their cooks before the arrival of the men who were drafted.

When this proposition was given to us, I suggested to the Secretary of War that he authorize me to employ civilian cooks. He approved that, and I told him it would involve an expense, but I thought it was justified, under the circumstances. It was my purpose to assemble those cooks at the various camps and have the equipment and the food already provided there so that when the men stepped off the trains and were assigned to their different barracks, they would find a hot meal ready for them.

I called a meeting of a number of prominent members of the Hotel Keepers' Association, and some of the members of the Chefs' Association in my office last June or July, and told them there was the biggest problem put up to the hotel community which had ever been presented to that community in any country; that we would provide the material and the implements, but we needed the cooks, and that they had information as to where they could be obtained. We needed for all the camps about 12,000 cooks.

I told them that I did not think it was possible to get that number, but I did expect them to get about 3,600. I appointed Mr. Joseph Byfield, of Chicago, as the chairman of the committee, and Mr. Cecil Craig, of St. Louis, as vice chairman. They appointed the presidents of the local hotel keepers' associations in their respective districts, and then they appointed another subcommittee from the local associations in the various districts, which committee operated in conjunction with officers that I selected in every one of the department headquarters.

They were notified of the number of men they required at the various camps, and through these committees, we got the men. We had them on the ground about the 20th or the 25th of August.

They got their equipment all in shape, and when the first men arrived at the camps they were met with a hot meal, which was served to them day and night, as the trains arrived.

As they were organized into companies, the cooks in the companies were separated out, and every organization had appointed one of these trained cooks we had selected for that purpose. They turned out remarkably well, as a general rule.

There were some few men we found who were not up to the mark, either were not sufficiently cleanly, or were not expert enough in their cooking and there were one or two cases where they came to the camp intoxicated, and we got rid of them right away.

Lord Northcliffe has referred to that in a way which shows the credit which the hotel men are entitled to for the assistance they rendered us, by saying that in every case the men at the camps were provided with a hot meal when they arrived there, and he gave the quality of the meals. We have also started in the camps throughout the country, as you know, schools for bakers and cooks. We had originally four of those schools. We have expanded that number, so that now we have one of those schools at each one of the National Army cantonments, where we are training the men as bakers and cooks, and that school remains permanently at each of those cantonments. We also have the same sort of instruction down at our own school at Camp Johnston, at Jacksonville. We have started recently these training schools in the National Guard camps, and with the accommodations of those schools, and the trained men that they will have in them, we hope to be able, in case of another draft, to provide the cooks who will act as instructors for the new draft, without going on the outside and employing civilians.

They gave us for the employment of those civilians something over \$100,000, but I think the expenditure of every cent of that amount was justified in every way. That is one of the items which we have had practically no complaints of from any of the camps.

Mr. TILSON. By way of corroborating what Gen. Sharpe has said, I saw that system in operation at one of the camps where I watched the first 40 per cent of the men come in, and the order was that there should be a hot meal ready for every man within an hour after he reached the camp, and I believe there was only one case in which the company cook failed to have the meal ready when the men arrived. There was only one such case that I saw, and that company commander received quite a blowing up, as I remember.

Mr. KAHN. When did we organize the first baking schools and cooking schools? That was in 1907 or 1908, was it not?

Gen. SHARPE. That was in 1905, and we had only one school at that time.

Mr. KAHN. It was thought by some of the members of the committee at that time that we were training men who would leave the Army and go to the lumber camps and the construction camps and take no interest in the Army at all. Have you followed this war sufficiently to have determined whether any of those men whom you trained in those schools in times of peace and who went away from the Army and probably took employment in the lumber camps came to the colors when the war broke out?

Gen. SHARPE. Yes, sir, they did that, Mr. Kahn, and I think you may recall that I stated at the time that if we did train the men and

they left us at the time of their discharge, or some of them deserted, to get \$100 a month, as they were offered in the lumber camps, I still thought the schools were justified anyway, because they would produce men we could call upon in time of need, and that that would give to our people a knowledge of cooking which we sadly lacked.

Mr. ANTHONY. You believe that a good cook upholds humanity in general.

Gen. SHARPE. Indeed I do, Mr. Anthony. As a particular illustration as to whether the men returned to the colors, Camp Lewis, in the State of Washington, is one of the most striking cases. We not only had enough of the graduate cooks from the schools, but we had men to spare, who were sent to some of the other camps.

Mr. TILSON. Is not cooking in the field quite a different operation from cooking indoors, and do you not have to have a special kind of training from the training that is required for cooking on a range in a large hotel.

Gen. SHARPE. It is very much different. They do not know how to conserve the heat. They have to cook outdoors in a rainstorm, and they have to produce the meal on time.

Mr. TILSON. Have you taken any steps in regard to educational work to help them out?

Gen. SHARPE. Yes, sir; we are helping and aiding them. Many of them had experience on the border.

Mr. TILSON. Yes; I remember that, personally.

Gen. SHARPE. Many of them went to our schools down on the border. Just before the National Guard was called, I made a recommendation that the same process should be adopted in regard to other camps as was adopted in connection with the National Army camps, and instead of employing civilians, I recommended that the cooks should be assembled from the various organizations and sent in advance together with the men to put up the tentage for them, so that the men, upon their arrival at the camps would have a hot meal provided for them. That was done, and I think that was the means of relieving the situation from any possibility of complaint.

The CHAIRMAN. How does this prize of \$900 work out for graduates?

Gen. SHARPE. It has been a very good thing in the past. I do not know that we will use much of it this year. The men are taking this up more with a desire of learning than through a desire of any of this kind of encouragement. We have continued that in the bill, in case it is desirable to give them prizes.

Mr. KAHN. How about the item of \$12,000 for feeding the men who attend target contests?

Gen. SHARPE. That simply allows us to use the funds to that extent. It does not specifically appropriate that amount of money, and so we continued that provision in the bill. I do not think there will be a rifle competition this year.

Mr. TILSON. Nothing is added to the appropriation bill by reason of the inclusion of that item?

Gen. SHARPE. No, sir.

Mr. QUIN. Have you had good fortune in securing all the good feed necessary for the Army?

Gen. SHARPE. Yes, sir; we have up to the present time.

Mr. QUIN. What is your system of inspection? I suppose it is all inspected?

Gen. SHARPE. Yes, sir; all of it before being purchased. Of course our method of procuring it now differs somewhat from what it was in the past. This year, because of the necessity for the conservation of food, it has been made incumbent upon us to resort to the Food Administration in order to get our supplies through them. In the old days we used to have the men and officers trained, who would go down to the Department of Agriculture here and take a course in chemistry, in qualitative analysis in food, not in quantitative analysis. We did not go into that, because we did not care for that thing. We did want to train the men so that they could find out what was the quality of the food which was purchased.

Take, vinegar, for instance; if that contained some mineral acid, we did not care whether the mineral acid was in solution or was due to some salt in there; we would throw it out. We would give the Government the benefit of the doubt, but we did not go into that refinement of an analysis to that extent. But we could tell whether or not there was some element in a food which ought not to be there. We did not find out the proportion that was in there. In the same way with flour; we used to have monthly analyses made up of the different samples of flour submitted to the different depots. The awards were made on that.

Mr. QUIN. Then you have no trouble in getting them?

Gen. SHARPE. No, sir; we have no trouble. We always have had the inspectors in the packing houses when the meats were being prepared.

Mr. QUIN. There will not be any danger of having any more embalmed beef?

Gen. SHARPE. No, sir. We not only have that inspection which is required by the meat-inspection law, but we have now stationed at every one of these camps a meat inspector assigned by the Agricultural Department. So that while the meat must be inspected meat, we have men there at the camp; we do not rely upon finding out the quality of the meat when it is delivered.

Mr. QUIN. With the proposed method of increasing the Army, will there be danger that you will not have enough inspectors?

Gen. SHARPE. No, sir.

Mr. QUIN. You are well equipped, so far as you can tell now, with the proposed increase of the Army, to inspect all of the food properly, and to procure it for the Army, both in the United States and across the sea?

Gen. SHARPE. Yes, sir.

Mr. ANTHONY. Are you buying your food supplies in the open market, or under the method of securing sealed bids, as heretofore prevailed?

Gen. SHARPE. We are buying them through the Food Administration. Col. Grove can give you the details in reference to that.

Col. GROVE. There are certain articles that have become rather scarce in the market, and on which the price, without that process of handling, would increase very rapidly. Our arrangements were made with the Food Administration to handle those particular items, and they called upon the trade to turn over to the Army a certain percentage of their packs, as canned goods were one of the biggest items.

It was quite evident that there was to be a shortage in the pack of peas and tomatoes, and so the dealers were asked to save a certain

percentage for the Army and the Navy, and they did so, and a price was fixed on them which was considered fair and just, and we pay that price.

Mr. ANTHONY. Who fixed the price?

Col. GROVE. It was fixed by a committee. Primarily, it was fixed by the Federal Trade Commission, but they ceased to fix the prices in October, and after that a committee consisting of a member of the Food Administration, a representative of the Army and of the Navy, and a representative of the Federal Trade Commission fixed the price. They went into the costs, and there was also present a representative of the particular industry affected. If we were fixing the prices on salmon there would be a representative of the salmon industry present. That committee went over everything in connection with the costs, and agreed on a price which should be paid.

Mr. ANTHONY. Were the prices agreed upon satisfactory to all parties in every case, and were they or not higher than the market price?

Col. GROVE. In every case they were lowered. The prices fixed were satisfactory to all the representatives of the industry present, but we had some individual protests later.

Mr. ANTHONY. Are you satisfied that the prices are lower than you could have obtained under the system of securing sealed bids?

Col. GROVE. I am.

Mr. ANTHONY. How do you obtain your beef supply?

Col. GROVE. That is obtained by competitive bids.

Mr. ANTHONY. Do you have competition?

Col. GROVE. We have what appears to be competition, as we have different prices.

Mr. ANTHONY. Do they vary much?

Col. GROVE. They vary greatly. There is a great variation in the price of beef as between the different cantonments. In the month of November they ranged in price from about 4 cents to a maximum of 20 cents, and, of course, the freight rate was nothing like that.

Mr. ANTHONY. Where was the cheapest beef?

Col. GROVE. In that month the cheapest beef was at Camp Devens, and one of the highest prices we had was near Chicago, at Camp Custer.

Mr. ANTHONY. Can you put into the record the prices paid for beef at the various cantonments?

Col. GROVE. Yes, sir.

(The matter referred to is as follows:)

Prices of fresh beef at posts, etc., fiscal years 1917-18.

Hawaiian Department.—The cost of fresh beef during the fiscal year 1917 was \$0.127 per pound, while for the fiscal year 1918 it is \$0.145, showing an increase for all posts in the department of \$0.018 per pound.

Philippines Department.—The cost of fresh beef in the Philippines Department during the fiscal year 1917 was \$0.095 per pound, which is the same as for the fiscal year 1918. The fresh beef required in the Philippine Islands during the fiscal year 1918 is being procured f. o. b. Government vessel, Tsingtan, China, and is being transported by the Government.

Mr. OLNEY. Might not the variation in price at Camp Devens be due to the supply of native beef?

Col. GROVE. Not entirely.

Gen. SHARPE. Largely.

Mr. ANTHONY. Have you had corn products in the ration in the Army?

Col. GROVE. There is no corn product specified. We have corn meal as a part of the ration and the soldiers eat it or not, as the mess sergeant sees fit.

Mr. ANTHONY. Do they use much corn meal in the Army?

Col. GROVE. They have not used it in recent months, but it is because it has been hard to obtain. They have used corn meal in the place of wheat.

Mr. ANTHONY. Do you regard corn bread as a good part of the ration?

Col. GROVE. Yes; I do.

Gen. SHARPE. I would like to say in that connection that I was speaking recently with a member of the Food Administration about the use of corn meal in making bread, substituting it for part of the flour, and suggested that that should be taken up as a conservation idea, and told them what we had accomplished in the different bakeries in the camps, and he gave me the impression that he did not think it was advisable to urge the more extensive use of corn meal, because the consumption was about up to the mill production capacity of the country.

I mentioned that the other night to a gentleman who is well informed on allied subjects, and he said he did not think that was right, because he knew that in the alcohol-producing district in Peoria all the mills there have their corn meal in connection with it, and while they can not make any more alcohol, they can still grind corn meal.

Mr. ANTHONY. The reason I asked the question was because we are trying to conserve the use of wheat, and I wondered if the Army was using a proper proportion of corn, because of the fact that the American soldier likes corn meal, and it seemed to me there was no reason why he should not get it.

Gen. SHARPE. We are using it in the bread; almost all the bakeries are using it.

Mr. ANTHONY. In regard to the grades of flour, have you lowered your requirements in regard to white flour; that is, do you accept the coarser flour now in which you use a larger percentage of grain than you used to.

Col. GROVE. The flour standard adopted by the Food Administration itself is what the Army was using before the war.

Mr. ANTHONY. So your people feel that they are following closely the standard set by the Food Administration?

Col. GROVE. We use that same flour now.

Mr. ANTHONY. So when they lowered the standard, the Army standard would go with it?

Col. GROVE. It will, but this far that has not been necessary.

Mr. ANTHONY. You take a so-called lower standard of flour, and it contains more nutriment, does it not?

Col. GROVE. It depends on how you work it.

Gen. SHARPE. It is a question as to the amount of digestible nutriment in the flour. Take, for instance, some of the patent flours, while they really contain less proteids than flour made from whole grain, the proteid which is in that patent flour is assimilated in the digestion when it is not in the case of the whole-wheat flour, because it is attached to the bran, and substances like that, which simply irritate the intestines and pass out without being digested.

Mr. ANTHONY. The ration which you have given to the committee does not represent all that the soldier gets for his subsistence, does it?

Gen. SHARPE. No, sir.

Mr. ANTHONY. Through his system of company funds, he really enjoys a meal infinitely greater in variety than that which you set forth in the hearings, does he not?

Gen. SHARPE. Yes, sir.

Mr. ANTHONY. To what extent is the ration increased in the Army in that way, in your opinion.

Gen. SHARPE. We found by numerous investigations in the past, with the smaller companies as they existed at that time, that they would expend about \$50 a month, on an average, for the company messes over and above the ration allowance.

Mr. ANTHONY. They get butter and milk?

Gen. SHARPE. They get additional butter and milk.

Mr. ANTHONY. Do you supply butter and milk in the ration?

Gen. SHARPE. Yes, sir; a small quantity of milk and butter, the milk being intended to be cooked in the coffee. It is not given for anything except for that purpose.

Mr. ANTHONY. So, it is a fact, as I believe Mr. Kahn brought out, that there is little or no complaint in regard to the quality or the quantity of the ration now being furnished.

Gen. SHARPE. No, sir.

Mr. KAHN. You say that the company funds can buy additional commodities?

Gen. SHARPE. Yes, sir.

Mr. KAHN. How are those funds saved?

Gen. SHARPE. Through the post exchange.

Mr. KAHN. Through the ability of the mess sergeant in saving money?

Gen. SHARPE. They can save it on the ration, yes, sir.

Mr. KAHN. If they have an excellent mess sergeant, he can probably save a good deal during the month, and the company gets the benefit?

Gen. SHARPE. Yes, sir.

Mr. KAHN. And then it also comes from the so-called post exchanges?

Gen. SHARPE. Yes, sir.

Mr. SHALLENBERGER. You spoke about purchase of meats for the cantonments, and I implied from what was said that perhaps there was not any real competition. Have you experienced anything like this in your bidding?

I was at one time a member of a board that purchased the supplies for the State institutions in Nebraska, and we had to furnish the meat for those institutions. Four principal packing companies bid every quarter for the meats, and there were always four different bids, and they all varied in price; but one company was always the lowest, so they got all the contracts at that time. When the next time came for bidding for those meat supplies, one of the other companies was the lowest, and they got the contracts, and by the time we had gone around through the year there had been apparent bidding, but we were sure there was no real competition at all. Have you experienced that? Does one packing house get the contract for the meat at one of your cantonments?

Col. GROVE. Yes; they run that way. It is quite natural, however, that when they get at one of those places and get their force estab-

lished to handle it at that particular place that they can handle it more economically than the other houses.

On the 1st of January, because of the very great advance in prices, the Quartermaster General's office in Washington undertook to control the awards of the contracts for all that beef, so that all bids are now submitted to Washington before being let, and the attempt is now made to get together on the matter and see what the trouble is.

Mr. SHALLENBERGER. Do you think you will arrive at any reduction in the price of meat?

Col. GROVE. When we opened the bids this month we found that there had been a greater rise in prices of the beef than the rise of the price of beef in Chicago would warrant, and we asked the reason for that rise. We wrote letters to the packers asking why there was that rise in price, and we have received replies from none of them as yet.

Mr. SHALLENBERGER. Has the investigation started by Mr. Heney had anything to do with your purchases?

Col. GROVE. I think that is entirely outside.

Mr. ANTHONY. In purchasing your beef for the cantonments, do you buy the whole carcass or just the hind quarter?

Col. GROVE. The whole carcass.

Mr. ANTHONY. That is more economical, of course?

Col. GROVE. Yes, sir.

Gen. SHARPE. Perhaps the committee would like to know about the price of beef in the Philippine Islands. The cost of beef in the Philippine Islands during the fiscal year 1913 was 9½ cents a pound and it is the same for this year. The beef there is obtained by Government vessels going to Tsing-Tao, in China, and bringing it back. That was a plant built there by the Germans, and after the Japanese had captured the place we made arrangements to go there and get this beef from a corporation which has it. The cattle are smaller than the ones we ordinarily use, but they are very good healthy cattle.

The CHAIRMAN. There has been no increase in the price of beef in that locality during the last year?

Gen. SHARPE. Not over there. That is because we are buying it from the same place. There had been considerable advance while we were getting it from Australia, and then, during the first year of the war we had considerable difficulty because of an embargo placed on the shipment of any beef from Australia. On two occasions we had to go to the State Department to get the British Government to release the embargo for us, and it was done with the distinct statement that it would only be used for our troops.

The CHAIRMAN. Does the Government continue to pay a tariff on its own products used for the Army and imported to the Philippine Islands from foreign countries?

Gen. SHARPE. Yes, sir; it does.

Mr. KAHN. In reference to the beef you get from Tsing-Tao, are the abattoirs there inspected?

Gen. SHARPE. Yes, sir.

Mr. KAHN. I know when they undertook to send pork products from China to the Philippine Islands some years ago there was great

complaint made that the abattoirs were very insanitary, and that the products were not inspected as the products from Australia and the United States were inspected. You have no trouble of that kind at Tsing-Tao?

Gen. SHARPE. No, sir; not at all. The plant at Tsing-Tao, we understand, is very much up to date.

Mr. ANTHONY. Is it still operated by the German company?

Gen. SHARPE. No, sir; the Japanese have taken it over.

Mr. SHALLENBERGER. What is the opinion of your department, General, as to getting the best price upon this beef, if under the circumstances you do not think you have real competition? Would it not be better to apply the same principle you have in other cases and ascertain the cost of the meat and fix a fair price, rather than to have so-called competition?

Gen. SHARPE. That matter is being discussed with this board in connection with the Food Administration, and the Food Administration had their agent to look into that matter very carefully, and we expected to go on that basis on the 1st of December; but he decided, and we concurred in his opinion, after a careful consideration of the facts in the case, that the time was not quite ready, but it is being looked into very carefully.

Mr. SHALLENBERGER. I realize that it is a difficult matter to determine rapidly. I know in Nebraska we attempted to investigate the price on the outside and find out whether or not we were getting a fair price, because we knew we were getting no competition, but we could not ascertain, with our limited means, sufficient data to inform ourselves.

Mr. ANTHONY. What is the Government price for beef in the Missouri Valley?

Col. GROVE. I do not know, in any particular case; it will probably run along there at about 16 cents for the entire carcass.

JANUARY 10, 1918.

Memorandum for Col. Grove:

Will you please furnish the estimates branch for hearings, Army appropriations, fiscal year 1919, as per request of the committee, statements showing prices of beef at the various cantonments and contract price for beef at posts in Nebraska, Missouri, and Kansas.

CHAS. P. DALY,
Captain, M. S., Q. M. C.

[First indorsement.]

WASHINGTON, D. C., January 12, 1918.

To the Administrative Division:

1. Forwarded; instructions complied with.

By authority of Acting Quartermaster General:

WM. R. GROVE,
Lieutenant Colonel, Q. M. Corps.

JANUARY 12, 1918.

Memorandum for Col. Grove.

Attached herewith is a comparison of prices paid for beef (fresh) for four months beginning October, 1917, at the Army cantonments and Army posts in the Middle West, as per your request.

Complete figures for the cantonments are not available, but a definite idea of the prices being paid can be ascertained. Some of the prices which are not shown are the same as were paid the month previous, being covered by the same contract. Where there is no definite report to this effect such figures are omitted.

SEALE B. JOHNSON,
Lieutenant, Quartermaster Corps, N. A.

Mr. ANTHONY. You use a pretty high-grade animal?

Col. GROVE. It is a good grade animal.

Mr. ANTHONY. It must be grain fed?

Col. GROVE. Not alone.

Mr. ANTHONY. What weight, do you recall?

Col. GROVE. A minimum weight of 450 pounds.

Mr. ANTHONY. And the whole carcass?

Col. GROVE. And the whole carcass, yes, sir.

Mr. ANTHONY. I think I saw in the paper the other day that Swift & Co. had sold their supplies at 14 cents out there.

Col. GROVE. They might have done so.

Mr. ANTHONY. That would imply that you are paying more out there than they are selling their products for here.

Col. GROVE. But, on the other hand, we had a price in Massachusetts of 13 cents, and it would be very difficult to make a comparison without getting the facts together in regard to the same date; but that can be done, and we can put in the record those two prices.

Mr. ANTHONY. It would be very interesting to the cattle raisers in our part of the country to know what the Government pays.

Col. GROVE. I do not recall exactly what we are paying at those posts.

Mr. SHALLENBERGER. With reference to your answer to one of Mr. Anthony's questions, is it your understanding that the meat sold in Massachusetts has probably been produced and slaughtered in the West and shipped to Massachusetts?

Col. GROVE. Yes, sir.

Mr. ANTHONY. And yet we find that it is sold at a higher price in the meat country than on the Atlantic coast.

Col. GROVE. Yes, sir.

Gen. SHARPE. In reference to the point in regard to the price, we had several instances that have happened where we have had certain amounts of various canned products allocated to us from certain canneries, but they have declined to sell the goods to us at the figures named. We then took the proper authority from the Secretary of War to commandeer the goods, under the national defense act.

Mr. SHALLENBERGER. I suppose they then yielded to your price.

Gen. SHARPE. They had to, or go to jail.

Mr. ANTHONY. Are you buying any embalmed beef or canned beef?

Gen. SHARPE. We are not buying embalmed beef.

Mr. SHALLENBERGER. I was informed by the Secretary of War that in every case where they had encountered this disposition to refuse to give the better price, a threat to commandeer was sufficient.

Col. GROVE. I think after that conversation with the Secretary a few cases have arisen. There have been three or four cases, but as a rule, they give in.

Mr. QUIN. Does the Food Administration have any control over your department in this matter?

Col. GROVE. None whatever; it is simply a matter of cooperation.

Mr. FIELDS. What percentage of the meat products is canned?

Col. GROVE. I can just roughly state that for use in the United States it is not over 5 per cent. Abroad, it is heavier.

Mr. SHALLENBERGER. This committee put the provision in the law under which the Secretary acts. He has exercised that law apparently, or threatened to exercise it considerably. Have there been instances that have arisen where the power has been exercised and he has compelled these men to accept the price, where apparently nothing has been done to these men? Have they made complaint?

Col. GROVE. In the cases where we actually commandeered, we turned the case over to the Federal Trade Commission to investigate the costs, and it fixed a fair price over the cost of production. That is the rule we followed in those cases.

Gen. SHARPE. The law says that we shall take them, and price fixed shall be fair and just.

Mr. SHALLENBERGER. I understand that, but I wondered whether there had been a good deal of complaint by these men as to the price.

The CHAIRMAN. They have a right to go into the courts.

Col. GROVE. Some little difficulty has been had this year in reference to these articles. After the price has been fixed, the market has advanced very considerably in the commercial world, and the dealers handling the articles did not want to give up their percentage of the pack, and in some cases it was necessary to resort to a threat, and in one or two cases to actual commandeering. That was done more as a protection against the other packers, because we felt it was not fair to let some dealer who had said he would let us have a percentage of the pack to go out into the markets and sell those goods at higher prices.

Mr. MCKENZIE. I suppose they put their argument on patriotic grounds?

Col. GROVE. We have a great deal of that advanced, and a great deal of it was meritorious in the canning industry. They have done well by us.

Mr. KAHN. Is this canned beef similar to the bully beef of the English Army?

Col. GROVE. I presume it is similar.

Gen. SHARPE. I think the term "bully beef" comes from the word on the label on the can.

Mr. ANTHONY. Do you furnish the Army in France with American beef?

Gen. SHARPE. We are shipping beef to them from here.

Mr. ANTHONY. They can not get beef over there?

Gen. SHARPE. No.

Col. GROVE. They buy their vegetables over there in France and England, their fresh vegetables.

Mr. TILSON. Do you use much canned beef hash in the camps?

Col. GROVE. No, sir.

Mr. TILSON. It is too bulky, is it?

Col. GROVE. Yes, sir. It is not necessary. The troops have been making so much hash themselves, in order to use up the different parts of the beef, that they do not want any hash in cans, and only use it when traveling.

Mr. GARRETT. Do you know anything about the process by which this committee you referred to arrives at a price which is just and fair? Do you know what investigation they make in order to arrive at that, and how they get at it, and what kind of a profit they arrive at as being just and fair?

Col. GROVE. The committee arrives at that by having the Federal Trade Commission in advance ascertain the costs of production in various parts of the United States, and then the committee gets together with a representative of the industry concerned, and agree as to what shall be considered a fair price for that particular product. That price must vary, on account of the article produced. For instance, where a canner packs but one item in a year, he only has the use of his canning factory for one month, he naturally must get a little higher price than the man who continues to pack some other line of goods the year round, because he has capital invested all the year, and he must get something out of it. There is no fixed rule for overing that.

Mr. GARRETT. Let us take the beef proposition. For instance, suppose we take a packer in Chicago and one in Fort Worth, Tex.;

do they estimate, in considering the cost of production, that that cost is the cost of the beef to the packing house in its pen, the cost on foot.

Col. GROVE. We have not had any investigation made of those costs, and that is one of the things that is developing in the matter of making a fixed price on beef.

Mr. GARRETT. I would make the suggestion that in estimating that cost, when they fix the price that they consider the price that the packing house pays for the beef and the freight, then I would like them to go into the further deductions to be taken into consideration, that the people should make in arriving at the net cost of the whole carcass, by what they get for the hides and the tallow and all of those things. There is nothing lost in the carcass nowadays, and you should take that into consideration in order to arrive at what credit should be given to these beef people and then find out what would be a reasonable profit on that, when you buy it and take it away.

Col. GROVE. That brings out one of the great difficulties you have. When you kill a pig out there, you can not possibly state by any process of analysis known to man, through the various processes he goes through in the packing house so that any estimate made on that must be in the rough.

Mr. GARRETT. What I meant was this: For instance, you are taking an average?

Col. GROVE. Yes.

Mr. GARRETT. You say the variation in beef is from 450 to 600 pounds. You know about how many 450-pound and how many 600-pound beeves you use. It is easy for your committee to ascertain what the packers are paying for the cattle on the market at that place, because they go to the pens and buy them, and they pay so much a pound for this beef that weighs 450 pounds, and so on up. They pay a different price, and you can get those prices and then when the deductions come they are practically the same on a 450-pound beef as they are on a 600-pound beef. He gets almost as much off of a 450-pound beef as off of a 600-pound beef.

Mr. ANTHONY. To continue Mr. Garrett's question further, all of which should bring your committee to further look into the fact that the western cattle producer has no competitive market in which to sell his products, and that the price at the western packing centers is fixed by the packers, and if there is an oversupply of cattle the price goes down, and if the farmers do not let go of their animals there is a scarcity, and the price goes up.

Mr. GARRETT. A very large cattle grower in Texas told me last fall that there had not been for a long while absolutely any competition anywhere among packing people, because if he shipped a carload of 1,200-pound steers to Fort Worth and they offered him a certain price for them, and he did not feel he would be justified in taking that price and ordered those steers shipped to Chicago, he would be offered in Chicago just a little bit less than he was offered in Fort Worth, or such a price plus the freight that he would lose just enough to make him wish he had sold them in Fort Worth. In arriving at a reasonable and fair price for the beef for the soldiers, if there is a monopoly in there, you want to find out what it is.

Col. GROVE. Perhaps that can be ascertained. The Federal Trade Commission is the body to go into those details.

Mr. GREENE. Is not exactly the same economic problem associated with the so-called investigation of the beef prices in the supply of beef for civil life?

Col. GROVE. Yes, sir.

Mr. GREENE. This is no new problem.

Col. GROVE. No. At any other time except one like this we would not be able to proceed on such a basis except by direct authority of Congress.

Mr. ANTHONY. Is it true that the Navy is buying its supplies in the open market, and not through the Food Administration?

Col. GROVE. They are buying exactly as we are buying.

Mr. HARRISON. I was told they bought by advertising, by advertising for bids, and that they did not buy through the purchasing board.

Col. GROVE. The Army does in most of their purchases buy in the same way. It is only in the case of articles of which there has been a great scarcity in the market that the Food Administration has entered into the calculation at all. But in every case where the Army handles a product through the Food Administration, the Navy does also.

Mr. HARRISON. I understood that this purchasing board was a part of the Food Administration.

Col. GROVE. They have a board composed of one member of the Food Administration, a representative of the Federal Trade Commission, and representatives of the Army and the Navy.

Mr. HARRISON. That is called a purchasing board?

Col. GROVE. A Food Purchasing Board.

Mr. HARRISON. Does that board purchase supplies for the Army?

Col. GROVE. It only acts as a sort of consulting board; it does not purchase anything directly. It only meets to consider questions concerning the allocation of those products and the fixing of a price on those products, and then the Army and the Navy each buy separately. I said we fixed what is considered a fair and a just price. We really fix a price beyond which we will not go, but if anybody has a product to offer at a price lower than the price which we fix, we are glad to receive it.

Mr. HARRISON. I have in mind an incident of this character: A canning concern was notified by this purchasing board that they wanted 18 per cent of their output for the Army, and they were forbidden to sell, and yet if their goods are not bought by the Government they have to hold them at their own risk. They were obliged to put them in some depository for safe-keeping. When I went to see about the matter I was told that the Navy Department did not buy in that way, and I went to the Navy Department to find out exactly how they do buy, I saw Paymaster Hancock, and he told me the Navy did not buy through that board.

Col. GROVE. The Navy has been handling it exactly as the rest of us have. I think there must have been some misunderstanding, because we all meet on the same board, and they have all been allotted in the same way since I have been here, for the last three months.

Mr. HARRISON. I was surprised to find out that the Navy had its own methods and the Army had its own methods.

Col. GROVE. There was some talk about that, but I am absolutely positive that it is being done and has been for a long time. There is no other way to do it.

The Navy can not buy cheaper; if anybody could buy them cheaper the Navy would, but you can not get an offer cheaper than the fixed price, so that the Navy has either to do that or pay a higher price, which they do not do.

Mr. HARRISON. How is the requisitioning done? They were notified that they were not to sell that product.

Col. GROVE. I do not understand that particular case.

Mr. HARRISON. I have seen statements in the press that 18 per cent of the output of these different concerns have been requisitioned, but at the same time the Army does not seem to buy.

Col. GROVE. Some of the allotments were slow in being made, and there was probably some difference of opinion between the Food Administration and the party concerned, and in some cases there have been a difference in the examination of samples. Some articles were sold according to samples, and the goods were inferior to what they had been represented to be. Then we had some reinspection, and we finally got satisfactory goods.

Mr. OLNEY. In other words, they did not want to do business with the Government?

Col. GROVE. Yes, sir.

Mr. HARRISON. The person I have reference to had actually sold the stuff at a much higher price than the Government paid, and had to hold the stuff in a depository.

Mr. ANTHONY. Is the Government paying its bills promptly for the purchase of supplies?

Col. GROVE. I think I can say we are improving greatly in that respect.

Mr. ANTHONY. I have had an instance called to my attention where the Government allows four months' coal bills at a military post to go unpaid. Why should there be such a situation?

Gen. SHARPE. There ought not to be such a situation, because the money is placed to the credit of the officer making the purchase.

Mr. KAHN. If you will allow me, it frequently happens that your appropriation runs out, and I know cases of merchants who have sold the Army goods and who have had to wait for months to get their money, and had to borrow money from the banks to do business while Congress was passing the appropriation bills.

Mr. ANTHONY. The case I referred to has been a chronic condition for the past year where the Government has allowed its bills to accumulate for three or four months. Complaint was made to me by the Carr Coal Co., of Fort Leavenworth.

Mr. KAHN. Is that a case where the money has already been appropriated?

Mr. ANTHONY. They stated they had to borrow money to pay their employees.

Mr. OLNEY. Is it not a fact that the soldiers are complaining about not getting pay which is due them and that they have not received their pay. I have seen individual complaints of soldiers who have not received the pay which is due them.

Col. GROVE. So far as that relates to food products, I would like to state that this board has had made the same rule that prevails in commercial life, that if the Army will pay its bills within 10 days they get

a reduction of 2 per cent on the cost, and that puts it right up to the officer to either lose 2 per cent for the Government, or get that discount with the payment, and we think if they will do that, with the approval of the Quartermaster General, that ought to help it along.

Mr. GARRETT. You mean by that if the paymaster at a particular place does not get his bills out on the 10th of the month he is charged up 2 per cent?

Col. GROVE. The individual officer is not charged, but that is the rule, that the Government does not get the reduction unless the bill is paid within the 10 days.

Mr. GARRETT. I thought you said the officer was penalized?

Col. GROVE. I do not think that has been the case.

Mr. ANTHONY. Otherwise the Government gets a price of 30 days net?

Col. GROVE. It does.

The CHAIRMAN. I notice one thing in connection with this item that needs some explanation, and that is that the total amount is over \$100,000,000 less than it was last year.

Gen. SHARPE. The estimates submitted last year were for 2,093,000 men. This estimate is for 1,612,245 men.

The CHAIRMAN. Did the Committee on Appropriations give you the full amount you estimated for for 2,000,000 men?

Capt. DALY. No, sir.

The CHAIRMAN. I am talking about the difference between what you actually got from the Committee on Appropriations and what you are asking for.

Capt. DALY. That is because that was based on a larger number of men.

The CHAIRMAN. Did you not get a deficiency of \$133,000,000 in June and one on October 6 for \$250,000,000?

Gen. SHARPE. Yes.

The CHAIRMAN. That makes the \$400,000,000 I am talking about. The total amount you got was over \$400,000,000 last year, and you are asking for over a hundred million dollars less this year.

Capt. DALY. The first deficiency estimate submitted was based on an army of 1,078,000 men. The second deficiency estimate was based on an army of 2,033,000 men. That is, the second deficiency estimate covered the difference between 1,078,000 and 2,033,000 men, under instructions from the War Department to submit such an estimate. This estimate, submitted under instructions from the War Department, covers an army of 1,612,245 men.

Mr. TILSON. You do not expect to have less men under arms in 1919 than you did in 1918?

Capt. DALY. No, sir. If we have to pay more than 1,612,245 men, we would have a deficiency.

Mr. TILSON. Will you not charge up a large surplus for 1918, if you get the hundred million more you are asking for for 1919?

Capt. DALY. No; because, with the purchases for 1918, we had to acquire a larger stock than we will have to acquire in 1919. Then we had a great many initial purchases in the way of clothing and equipment that will not obtain in 1919. It will just be replenishment in 1919 or maintenance.

The CHAIRMAN. That is what I am trying to get at. Of course, that would have to be explained on the floor of the House. Can you put into the record a statement showing these initial purchases

which you had to make last year, which you will not have to make this year?

Capt. DALY. Yes, sir.

Mr. GREENE. So that the figures, apparently based on 1,612,245 men, are really based on the necessities which faced you last year, rather than for a fixed number of men?

Mr. FIELDS. The explanation is that the bulk of your purchases for 1918 were initial purchases, while the bulk of purchases for 1919 will be replenishment purchases?

Capt. DALY. For some of the items. In 1918 there was the original equipment, plus maintenance. For 1919 it is practically all maintenance, unless the Army is increased to a larger number than 1,612,245. If that is done, the funds asked for in this estimate will not be sufficient.

Mr. TILSON. There is a considerable proportion of that reserve food that will be carried over from 1918 to 1919?

Gen. SHARPE. About four months' supply.

Mr. TILSON. You will want to carry over just as big a reserve stock in 1919, will you not?

Capt. DALY. It will be about four months' reserve stock, purchased out of the 1918 purchases that will be available for 1919.

The CHAIRMAN. Then this entire \$401,000,000 that Congress gave you at the last session will all be expended?

Capt. DALY. Yes, sir.

The CHAIRMAN. All of that will be necessary to be used?

Capt. DALY. Yes, sir.

Mr. SHALLENBERGER. Has it been expended for subsistence?

Capt. DALY. Yes, sir.

Mr. SHALLENBERGER. Is this item combined with any other item?

Capt. DALY. It is combined with regular supplies of the Army, transportation and incidental expenses, and water and sewers, but we keep our allotments for subsistence and our disbursements separate.

Mr. SHALLENBERGER. You have authority to do it, but you have not authority to use it for any other purpose?

Capt. DALY. It is accounted for by the officer in the field, who reports the expenditures as one fund.

Mr. SHALLENBERGER. I want to know whether you did really use it for any other purpose.

Capt. DALY. No, sir. It is confined to subsistence.

Gen. SHARPE. There is still a balance of \$112,700,000.

Mr. SHALLENBERGER. Unexpended?

Gen. SHARPE. Unexpended; yes, sir.

Mr. KAHN. At the outbreak of this war, had you any reserves of any kind in your department?

Gen. SHARPE. Practically none.

Mr. KAHN. They had been used up during the Mexican trouble?

Gen. SHARPE. Yes, sir.

Mr. ANTHONY. Were you referring to food supplies?

Mr. KAHN. All kinds of quartermaster's supplies.

Capt. DALY. We had some reserves in equipment other than clothing. We had sufficient of what is known as equipment C, other than clothing, wagons, and harness.

Mr. KAHN. Of what does that consist?

Capt. DALY. That consists of axes, picks, rakes, shovels, stationery, typewriters—all of that class of supplies.

Mr. TILSON. Mostly commercial articles?

Capt. DALY. Yes, sir.

Gen. SHARPE. We bought, in June, 1916, when the Mexican mobilization was started, supplies amounting to \$4,100,000, for 48 divisions.

Capt. DALY. We bought reserve stock for 48 divisions, in addition to the stock at the depots already carried. We purchased supplies for 48 divisions—this equipment C—all articles other than clothing, harness, and wagons.

Gen. SHARPE. Those were in the depots, but when the National Army was called out, and the shipments were made—

Mr. ANTHONY. If my memory is correct, before the outbreak of the European war, the general staff officers asked this committee for reserve equipment for an initial army of approximately 500,000 men. I think this committee has always made appropriations with the idea of providing a reserve stock of equipment for an army of 500,000 men. Was that equipment created, and did it exist?

Gen. SHARPE. No, sir; we never got appropriations for it.

Mr. KAHN. If you will remember, the committee never gave the amounts that they asked for reserve.

Mr. ANTHONY. I remember the committee did give the amounts specifically in regard to equipment. I know we gave it, because we had Gen. Aleshire's statement that he was permitted to purchase 4,000,000 yards of uniform cloth, in addition to what he had asked for, and we gave him that authority, and I suppose in doing that we were providing 500,000 surplus uniforms. Did we ever get the uniforms?

Gen. SHARPE. We never got the appropriation.

Mr. ANTHONY. How were those uniforms used; by recruits on the Mexican border?

Capt. DALY. We did not get the appropriation.

REGULAR SUPPLIES, QUARTERMASTER CORPS.

The CHAIRMAN. The next item is, "Regular supplies, Quartermaster Corps," and you are asking for \$203,031,311. You had \$240,250,114.23, and since this estimate was made you have put in a supplemental estimate of \$28,722,244.54, making the total you are asking for \$231,754,055.54.

Capt. DALY. That supplemental estimate is to procure the stock which will take longer than six months to procure for an army of 3,000,000 men, and this regular estimate is for an army of 1,612,245 men.

The CHAIRMAN. You say the original estimate is for an army of 1,612,245 men, and the supplemental estimate of \$28,222,244.54 is to take care of supplies that will take longer than six months to procure, in the event the Army should be increased to 3,000,000 men?

Capt. DALY. It is to procure supplies that it will take longer than six months to procure, for an army of 3,000,000 men.

The CHAIRMAN. Then that makes the item a little less than it was last year?

Capt. DALY. The same explanation applies to this estimate, only to a larger extent, as applied to the estimate for subsistence.

Mr. TILSON. In general, what class of articles would it require more than six months to procure?

Capt. DALY. Field ranges, field bakeries, and rolling kitchens and bake ovens. This estimate for \$28,722,244.54 is based on that, and it also includes ice machines for France and laundries for France.

Mr. SHALLENBERGER. You must have a reserve supply from this appropriation for several months, the same as in the other?

Capt. DALY. Yes, sir; we have about a three months' supply under this.

Mr. KAHN. General, in the Army and Navy Register of the 5th of this month, there is an article which calls attention to the fact that all the tents over near Camp Mills, which were occupied by the National Guard Division, comprising the Rainbow Division, have been ruined because when that division was sent to France the tents were left there without caretakers, and without anybody to look after them, and that they are now in shreds, and that they constitute a loss to the Government of about \$300,000. Do you know anything about that?

Gen. SHARPE. I know of a communication being received to that effect in the office, Mr. Kahn, not stating the loss, but asking, in the first place, that steps be taken at once to conserve the property, and asking in the second place for an investigation as to who was responsible for the defective Government property. I do not know whether anything has been received back.

Mr. KAHN. Does that not come before your department for investigation?

Gen. GOETHALS. The Department Commander of the East has taken over the property, and the Inspector General told me he would get his report in my hands to-morrow morning.

Mr. KAHN. According to the article in the Army and Navy Register there seems to have been a serious case of neglect.

Gen. GOETHALS. There is no question about it.

Gen. SHARPE. It was scandalous. There was an old article of war that covered such cases, which said that any officer who suffers any Government property to be lost or destroyed should make good the loss and be dismissed from the service.

Mr. KAHN. Will you bring to this committee a copy of the Inspector General's report so that the committee may be advised on the subject?

Gen. GOETHALS. Yes, sir.

The CHAIRMAN. Will you put in the record, in connection with this item, a statement showing how much money you have expended, and how much you have contracted for under this item, to date, out of the amount appropriated last year?

Gen. SHARPE. Yes, sir. I have here, Mr. Chairman, a table to submit, with the notes.

The CHAIRMAN. We would be glad to have that in the record.

(The statement referred to and the details of the estimate are as follows:)

Estimate appropriation "Regular supplies, Quartermaster Corps," fiscal year 1919.

Deficiency act June 15, 1917.....	\$101,800,114.23
Deficiency act Oct. 6, 1917.....	125,000,000.00
Total.....	226,800,114.23

Regular supplies, Quartermaster Corps: * * * for furnishing heat and light for the authorized allowance of quarters for officers, including members of the Officers' Reserve Corps when ordered to active duty, and enlisted men, including enlisted men of the Regular Army Reserve and retired enlisted men when ordered to active duty; contract surgeons when stationed at and occupying public quarters at military posts; for officers of the National Guard attending service and garrison schools, and for recruits, guards, hospitals, storehouses, offices, the buildings erected at private cost, in the operation of the act approved May thirty-first, nineteen hundred and two; and buildings constructed under the authority of the Secretary of War by any organization for the promotion of the social, physical, intellectual, and military development of the troops in camp and in the field * * *.

RECAPITULATION.

Estimate fiscal year 1919—(Appropriation: "Regular Supplies.")

UNITED STATES AND PHILIPPINE ISLANDS.

Item No.	Purpose.	Appropriation fiscal year 1918.	Estimate for fiscal year 1919.			Estimate per capita 1,712,245 officers and men.
			Current requirements.	New construction.	Total.	
111	Care and protection	\$125,250.40	\$8,745,336.00	\$33,785.00	\$8,779,121.00	\$5.1273
112	Stoves	6,234.89	200,000.00		200,000.00	.1169
113	Heating apparatus	443,478.50		857,567.00	857,567.00	.3008
114	Ranges	29,919.00	760,000.00		760,000.00	.4438
115	Cooking stoves	750.00	10,000.00		10,000.00	.0058
116	Coffee roasters		10,000.00		10,000.00	.0058
117	Appliances	68,340.00	1,712,000.00		1,712,000.00	.9940
118	Repairs and maintenance	146,859.00	1,206,855.00		1,206,855.00	.7047
119	Candles	14,650.00	786,000.00		786,000.00	.4590
120	Matches	8,126.40	628,000.00		628,000.00	.3667
121	Heat	2,875,821.81	55,784,067.00		55,784,067.00	32.5794
122	Light	1,531,349.50	9,640,676.00	384,355.00	10,025,031.00	5.8549
123	Fuel for modern batteries	155,600.00	200,000.00		200,000.00	.1169
124	Engine supplies	22,290.00	50,000.00		50,000.00	.0292
125	Post bakeries	19,772.00	41,907.00	11,250.00	53,157.00	.0310
126	Bake ovens	87,231.00	697,067.00		697,067.00	.4071
127	Ice machines	6,300.00		1,485,761.00	1,485,761.00	.8677
128	Ice machines, maintenance of	94,479.00	525,783.00		525,783.00	.3070
129	Cold storage	82,696.00	259,784.00		259,784.00	.1517
130	Ice for organizations	87,800.00	6,760,000.00		6,760,000.00	3.9480
131	Ice for issue to office	9,200.00	140,000.00		140,000.00	.0817

Item R. S. 111.—Care and protection of regular supplies of the Quartermaster Corps.

For the purpose of cost keeping, this item is subdivided. The subitems and amounts estimated for under each item are as follows:

No.	Item.	United States.	Philippine Islands.	Total.
111	Miscellaneous supplies and services.....	\$8,705,890	\$10,110	\$8,716,000
11a	Reservation fences, construction of.....	27,885	5,900	33,785
11b	Reservation fences, repair of.....	28,928	410	29,338
	Total.....	8,762,701	16,420	8,779,121

The detailed explanation of necessity for the above items will be found in the notes.

No.	Item.	Cost fiscal year 1917.	Appropriation fiscal year 1918.	Estimate fiscal year 1919.
111	Miscellaneous supplies and services.....	\$470,155.88	\$80,644.90	\$8,716,000.00
111a	Reservation fences, construction of.....	5,169.53	39,305.50	33,785.00
111b	Reservation fences, repair of.....	1,577.20	5,300.00	29,336.00
	Total.....	476,902.61	125,250.40	8,779,121.00

Item R. S. 111.—Care and protection of regular supplies of the Quartermaster Corps.

[Estimate, fiscal year 1919, \$8,716,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$8,705,890.00	\$8,705,890.00	\$10,110.00	\$10,110.00	\$8,716,000.00
Appropriated fiscal year 1918.....	64,344.90	64,344.90	16,300.00	16,300.00	80,644.90
Expended fiscal year 1917.....	460,045.88	460,045.88	10,110.00	10,110.00	470,155.88

REMARKS.

The supplies purchased under this item consist of such articles and materials as dunnage, paulins, cargo covers, lime, boxes, lumber, nails for temporary shelter; platform, counter, and wagon scales; weights, measures, utensils, paper bags, tools, buckets, and such other supplies as may be required.

The services to be procured under this item consist of the hire of such nonpersonal services as may be required.

The amount estimated for the fiscal year 1919 is based upon the per capita cost for the fiscal year 1917, and will be required, due to the large increase in the Army.

Item R. S. 111a.—Reservation fences, construction of.

[Estimate fiscal year 1919, \$33,785.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$27,885.00	\$27,885.00		\$5,900.00	\$5,900.00	\$33,785.00
Appropriated fiscal year 1918.....		39,305.50	39,305.50				39,305.50
Expended fiscal year 1917.....		5,169.53	5,169.53				5,169.53

REMARKS.

The services to be procured under this item consist of such job and contract services as may be required for the construction of fences for the protection of the reservations upon which the posts are located.

United States.—Estimate is submitted \$27,885 for services required in the construction of reservation fences as follows:

Walter Reed General Hospital, 4,000 feet woven-wire fence, along Georgia Avenue.....	\$20,250
Fort Heath, Mass., construction of galvanized iron picket fence.....	7,635
Total.....	27,885

Philippine Islands.—The following projects for new constructions are estimated for the Philippine Islands under this item:

Augur Barracks: For the construction of reservation fences, supplies, \$2,000; services, \$1,000. Local conditions at Jolo make it desirable to fence the reservation of Augur Barracks, and of the subpost of Asterias. The garrison consists of the First and Thirteenth Battalions, Philippine Scouts.

Camp John Hay: For providing a fence on a portion of the reservation that pertains to the water supply and the hydroelectric plant. Supplies, \$900; services, \$500. The garrison at this post consists of Company M, Twenty-seventh Infantry, and Second Battalion, Philippine Scouts.

General: Required to continue the present practice of placing "No trespass" signs on military reservations that would be too expensive to inclose with fences. Supplies, \$1,000; services, \$500.

Item R. S. 111b.—Reservation fences, repair of.

[Estimate fiscal year 1919, \$29,336.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$28,926.00	\$28,926.00	\$410.00	\$410.00	\$29,336.00
Appropriated fiscal year 1918.....	5,000.00	5,000.00	300.00	300.00	5,300.00
Expended fiscal year 1917....	1,277.20	1,277.20	300.00	300.00	1,577.20

REMARKS.

Services.—The services under this item consist of such job services as may be required for the repair of reservation fences.

United States.—Estimate is submitted for \$28,926 and is for services required for the repair of reservation fences to meet current requirements. This service is called for on the annual inspection reports of March 1 of each year.

Of the above amount for the United States, it is estimated that \$5,000 will be required at permanent posts, which is based upon the apportionment for the fiscal year 1918. The amount estimated for cantonment requirements, various camps, etc., is \$23,926.

Philippine Islands.—Amount called for \$410 (supplies, \$210 and services \$200) is for current repairs at the various posts in the Philippine Department, covering reservation fences.

Item R. S. 112.—Stoves (heating), purchase of—required for heating offices, hospitals, barracks, and quarters, recruiting stations, and United States Disciplinary Barracks.

[Estimate, fiscal year 1919, \$200,000.]

	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$199,900.00	\$199,900.00	\$100.00	\$100.00	\$200,000.00
Appropriated fiscal year 1918.....	6,234.89	6,234.89	6,234.89
Expended fiscal year 1917....	31,816.28	31,816.28	31,816.28

REMARKS.

Under this item various kinds of heating and laundry stoves are procured.

There are approximately 9,500 heating and 1,670 laundry stoves in use at the various posts and recruiting stations in the United States. The life of these stoves is about 18 to 20 years.

The amount required for the fiscal year 1919, based upon the per capita cost for the fiscal year 1917, would be approximately \$600,000, but it is believed that the amount estimated for will be sufficient, due to the fact that most of the troops will be in the field and will not require stoves for heating under this item.

Item R. S. 113.—Heating apparatus required for heating offices, hospitals, barracks and quarters, recruiting stations, and United States military prisons.

[Estimate fiscal year 1919, \$857,557.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$857,557.00	\$857,557.00				\$857,557.00
Appropriated fiscal year 1918.....		443,478.50	443,478.50				443,478.50
Expended fiscal year 1917.....		82,278.40	82,278.40				82,278.40

REMARKS.

Supplies.—The supplies to be purchased under this item consist of such articles as brick, cement, stovepipe, heating boilers, etc., required in the installation of heating systems by the purchase of material and hire of necessary labor.

Services.—The services to be procured under this item consist of job and contract services required to install heating apparatus in buildings estimated for under the appropriation "Barracks and quarters" and the appropriation "Construction and repair of hospitals"; also for heating apparatus in buildings already constructed and for central heating plant.

United States.—The following is a statement of the purposes for which the above amount will be required:

For new construction:

For heating new buildings estimated for under "Barracks and quarters" appropriation (see appropriation "Barracks and quarters, 1919")..... \$902

For heating new hospitals and hospital stewards' quarters (see appropriation "Construction and repair of hospitals, 1919")..... 99,098

Total..... 100,000

To provide for projects (installation of heating in buildings already constructed)..... 157,557

Total..... 257,557

All of the amount estimated for the United States will be required for new construction.

During the fiscal year 1917, installation of heating plants were authorized as follows:

Jay, N. Y., heating apartment house, four sets officers quarters.....	\$1,500
Jay, N. Y., double set officers quarters.....	1,300
Jeffersonville Depot, Ind., heating buildings 46 and 47.....	600
Jefferson Barracks, Mo., replacing boiler in disinfecting plant.....	676
New York depot, heating warehouse No. 2.....	2,525.00
Sam Houston, Tex., central heating plant.....	14,945.00
Standish, Mass., boiler in bakery.....	856.38

Calls have been received for the following projects, for which the amount \$157,557 is estimated above:

Adams, Fort, R. I., heating system in building No. 93.....	\$1,125.00
Brady, Fort, Mich., new heating boilers for building No. 14, quartermaster storehouse.....	825.00
Columbus Barracks, Ohio:	
New steam heating boiler in commissioned officers' quarters.....	375.00
New steam heating boiler in barracks.....	1,800.00
D. A. Russell, Wyo., new boiler, etc., for heating plant in building No. 210 (Infantry headquarters).....	1,800.00
Governors Island, N. Y., heating system in warehouse, building No. 2, New York depot.....	3,675.00
Greble, Fort, R. I., heating system in 6 noncommissioned officers' quarters.....	4,575.00
Hamilton, Fort, N. Y., alterations in heating plant in barrack building No. 28.....	1,050.00

Leavenworth, Fort, Kans.:

Mechanical equipment for hot-water heating system for hospital buildings and change of system in Hospital Corps barracks from steam to hot water..... \$18,750.00

New boilers in school heating plant..... 9,000.00

Madison Barracks, N. Y.:

Replacing steam heating plant in Dodge Hall, building No. 63..... 3,300.00

Replacing 18 hot-water system in quarters Nos. 1 to 18, inclusive.. 17,871.00

McPherson, Fort, Ga., heating system in 8 double barracks..... 24,000.00

Revere, Fort, Mass., heating system in building No. 12..... 1,200.00

Stevens, Fort, Oreg., heating plant, etc., in barracks and quarters..... 31,050.00

Disciplinary Barracks, Leavenworth, Fort, Kans., tunnel and pipe lines to new power plant..... 6,270.00

Flagler, Fort, Wash., changing heating system from stoves to hot-water system..... 1,776.00

Revere, Fort, Mass., material for installing 4 heating apparatuses, 1 in each noncommissioned officers' quarters..... 1,500.00

Slocum, Fort, N. Y., installing new century return tubular boiler (steam) No. 28..... 1,215.00

Washington Barracks, D. C., installation of individual boilers for heating the various buildings..... 24,000.00

Sheridan, Ill.:

Steam heating in hospital sergeants' quarters (building 52 A and B).. 1,050.00

Replacing heating boiler in guardhouse..... 1,950.00

Total..... 157,557.00

Of the above amount estimated for the United States, \$257,557 is to provide for projects at permanent posts and stations and \$600,000 for cantonment requirements and various camps.

Philippine Islands.—No estimate is submitted for the fiscal year 1919.

Item R. S. 114.—Ranges.

[Estimate, fiscal year 1919, \$260,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$254,530.00	\$254,530.00	\$5,470.00	\$5,470.00	\$260,000.00
Appropriated fiscal year 1918.....	11,500.00	11,500.00	5,560.00	5,560.00	17,060.00
Expanded fiscal year 1917.....	40,680.88	40,680.88	5,470.00	5,470.00	46,150.88

REMARKS.

Under this item are purchased ranges and cook stoves for cooking and serving food. There are approximately 7,800 ranges and cook stoves on hand at the present time at posts and stations in the United States, and about 1,200 ranges in the Philippine Islands. The average life of ranges has been estimated at between 12 and 15 years, but no time can be definitely fixed at which their usefulness ceases, as it depends upon the service they are put to, the care they receive, and climatic conditions.

The prices at which ranges are issued are as follows:

Army range No. 3.....	\$48.60	Army range No. 4a.....	\$170.00
Army range No. 3a.....	39.40	Army range No. 5.....	88.10

There were purchased during the fiscal year 1917:

Army range No. 3.....	3,520	Army range No. 5.....	3,265
Army range No. 3a.....	0		
Army range No. 4a.....	50	Total.....	6,835

The cost of Army ranges purchased during the past five years was as follows:

	Fiscal year.				
	1913	1914	1915	1916	1917
Army range No. 3.....	\$28.60	\$31.40	\$31.56	\$31.76	\$43.00
Army range No. 3a.....	27.90	31.88	32.92		
Army range No. 4a.....					170.00
Army range No. 5.....		43.79	43.43		88.10

Based upon the per capita cost for the fiscal year 1917 the amount required for the fiscal year 1919 would be approximately \$850,000, but it is believed that the amount estimated for will be sufficient, due to the fact that most of the troops for which estimate is made will be in the field and will use field ranges, under item 114a.

Corrected statement, field ranges, fiscal year 1919, original estimate:

Total officers and men.....	1,712,245
90 per cent to use field range No. 1.....	1,541,020
10 per cent to use field range No. 2.....	171,225
	1,712,245

No. 1 range.—Cooking capacity, 150 men.

Required for 1,541,020 men.....	10,274
Life of range, 3 months (4 per year).....	4
	41,096

Life of equipment, 6 months.

Required:	
20,548 complete with equipment, at \$45.52.....	\$935,344.96
20,548 without equipment, at \$27.76.....	570,412.48
	1,505,757.44

No. 2 range.—Cooking capacity, 55 men.

Required for 171,225 men.....	3,108
Life of range, 3 months (4 per year).....	4

Number required for 1 year..... 12,432

Life of equipment, 6 months.

Required:	
6,216 complete with equipment, at \$23.84.....	\$148,189.44
6,216 without equipment, at \$18.70.....	116,239.20
	264,428.64

RECAPITULATION.

41,096 field ranges, No. 1.....	\$1,505,757.44
12,432 field ranges, No. 2.....	264,428.64
Total.....	1,770,186.08

Item R. S. 114a.—Field ranges, purchase of.

[Estimate, fiscal year 1919, \$500,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$495,000.00		\$495,000.00	\$5,000.00		\$5,000.00	\$500,000.00
Appropriated, fiscal year 1918.....	12,859.00		12,859.00				12,859.00
Expended, fiscal year 1917.....	101,332.84		101,332.84	10,000.00		10,000.00	111,332.84

REMARKS.

The supplies to be purchased under this item consist of the necessary field ranges required for the equipment of troops in the field in accordance with the allowance fixed in Tables of Organization 1917, as follows:

Unit.	Field range No. 1.	Field range No. 2.
Infantry division:		
Division headquarters.....	1	1
3 Infantry brigade headquarters.....		6
1 Artillery brigade headquarters.....		2
9 regiments Infantry (3 brigades).....	252	45
1 regiment Cavalry.....	28	5
2 regiments Field Artillery, light.....	56	10
1 battalion Engineers, pioneer.....	8	1
1 battalion Signal troops, field.....	8	1
1 pack-train company.....	1	
103 wagon companies.....	11	
4 ambulance companies.....	4	
4 field hospitals.....	4	
Train headquarters—		
1 ambulance company.....		1
1 sanitary train.....		
1 supply train.....		1
Total.....	373	73

There are two sizes of field ranges supplied, the No. 1 having capacity for 150 men and the No. 2 having capacity for 55 men. The life of these ranges is from one to five years. The cost of field ranges, complete, is \$28.36 for the No. 1 and \$15.21 for the No. 2. The cost of field ranges, without equipment, purchased during the past five years, was as follows:

	Fiscal year—				
	1913	1914	1915	1916	1917
Field range:					
No. 1.....		\$9.72	\$9.67	\$10.94	\$12.98
No. 2.....		6.60	6.58	6.55	10.58

Contents of field range No. 1 and field range No. 2 are listed in General Orders No. 39, 1915, page 562, and consist of the following articles:

Range, field, No. 1:

- 1 field range (1 body No. 41 and 1 boiling plate No. 42).
- 1 Alamo attachment (2 pieces, 42a and 42b).
- 6 boilers, Nos. 48, 49, 50, 51, 53, and 54.
- 1 cleaver, 6-inch.
- 1 dipper, one-half gallon, No. 55.
- 1 dipper, quart, No. 56.
- 2 forks, small.
- 1 grinder, meat.
- 1 guard, tent, 6½ inches.
- 3 knives, butcher, 8-inch.
- 2 pans, bake, No. 52.
- 1 pipe, smoke, elbow, No. 47.
- 4 pipe, smoke, joints, Nos. 43, 44, 45, and 46.
- 4 rests, pan, No. 57.
- 1 saw, meat, 15-inch blade.
- 1 skimmer, large.
- 2 spoons, large.
- 1 steel, butcher's, 10-inch.

Range, field, No. 2:

- 1 field range (1 body No. 61 and 1 boiling plate No. 62).
- 2 boilers, Nos. 50 and 51.
- 1 dipper, one-half gallon, No. 55.
- 2 forks, meat, small.
- 1 guard, tent.
- 2 knives, butcher, 8-inch.
- 2 pans, bake, No. 52.

Range, field, No. 2—Continued.

- 1 pipe, smoke, elbow, No. 67.
- 4 pipe, smoke, joints, Nos. 63, 64, 65, and 66.
- 2 rests, pan, No. 57.
- 1 saw, meat, 15-inch blade.
- 1 skimmer, small.
- 2 spoons, small.
- 1 steel, butcher's, 10-inch.

The Alamo attachment consists of two parts, 42a and 42b (see circular 8, Office Quartermaster General, 1914), and is used only with field range No. 1. The Alamo attachment increases the capacity of the field range and lengthens its life.

It is estimated that approximately 16,000 field ranges No. 1 and 3,000 field ranges No. 2 will be purchased under this item during the fiscal year 1919.

Field bakeries, field ranges, and rolling kitchens.

JEFFERSONVILLE DEPOT.

Number of field bakeries complete, contracted for and purchased since Apr. 1, 1916.....	220

Eclipse, 3 articles, for 192 men.	

Item R. S. 115.—Stoves, cooking.

[Estimate fiscal year 1919, \$10,000.]

	United States.			Philippine Islands.			Grand total.
	Current require-ments.	New construc-tion.	Total.	Current require-ments.	New construc-tion.	Total.	
Estimate.....	\$9, 800. 00	\$9, 800. 00	\$200. 00	\$200. 00	\$10, 000. 00
Appropriated fiscal year 1918..	250. 00	250. 00	500. 00	500. 00	750. 00
Expended fiscal year 1917.....	6, 188. 24	6, 188. 24	200. 00	200. 00	6, 388. 24

REMARKS.

Under this item are provided cooking stoves for detachments, outposts, subposts, etc.

These stoves cost about \$15 each. They are not carried in stock, but are purchased as required. They are used at remount depots, where small detachments are stationed.

Based upon the per capita cost for the fiscal year 1917, the amount required for the fiscal year 1919 would be approximately \$120,000, but it is believed that the amount estimated for will be sufficient.

Item R. S. 116.—Coffee roasters.

[Estimate, fiscal year 1919, \$10,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$10,000.00	\$10,000.00	\$10,000.00
Expended fiscal year 1917.....	5,538.28	5,538.28	5,538.28

REMARKS.

Based upon the per capita cost for the fiscal year 1917, the amount required for the fiscal year 1919 would be approximately \$100,000, but it is believed that the amount estimated for will be sufficient, due to the fact that coffee is usually purchased already ground and roasted.

Item R. S. 117.—Appliances.

[Estimate, fiscal year 1919, \$1,712,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,708,000.00	\$1,708,000.00	\$4,000.00	\$4,000.00	\$1,712,000.00
Appropriated fiscal year 1918.....	60,000.00	60,000.00	8,340.00	8,340.00	68,340.00
Expended fiscal year 1917.....	87,384.78	87,384.78	4,000.00	4,000.00	91,384.78

REMARKS.

The supplies to be purchased under this item comprise boilers of various kinds, for cooking food, making coffee, etc., cookers, pot covers, bread cutters, kettles, steam roasting ovens, water, tea, and coffee urns, plate warmers, wrought-iron pan racks, meat choppers, trucks and bread racks for kitchens, butter cutters, dishwashers, potato peelers, baking pans, kitchen car outfits, portable gas cookers; cooking outfits for company messes, Philippine Scouts, and mountain artillery; rolling kitchens, and a miscellaneous lot of utensils known as "range furniture," and such other supplies as may be required.

Cooking outfits for company messes, better known as "march kits," are provided for under General Orders No. 35, War Department, 1914, to be transported with troops in the field. General Orders No. 35, War Department, 1914, has been amended by instructions of the Secretary of War of June 10, 1915, and General Order No. 13, 1916, to provide as follows:

For each company mess, one cake turner; 1 cleaver, meat; 2 cans, water, G. I., nested; 1 fork, meat, large; 1 knife, butcher; 1 dipper, large; 1 fire irons (or grates), set; 1 kett'e, camp, with cover, for every 25 men; 2 pans, bake, large, for every 50 men; 1 wall-tent fly.

The life of these outfits is estimated to be about two or three years.

The amount estimated for the fiscal year 1919 is based upon the per capita cost for the fiscal year 1917.

Item R. S. 118.—Repairs and maintenance (consolidated).

Items.	Cost, fiscal year 1917.	Appropriations, fiscal year 1918.	Estimate, fiscal year 1919.
Item 118a, repairs and maintenance of heating apparatus.....	\$54 335.20	\$79,559.00	\$467,355.00
Item 118b, repairs and maintenance of heating stoves.....	11,921.56	14,118.00	100,000.00
Item 118c, repairs and maintenance of ranges and cooking stoves...	30,087.72	36,301.00	150,000.00
Item 118e, repairs and maintenance of cooking appliances.....	1,707.28	4,880.00	31,500.00
Item 118f, repairs and maintenance of field ranges, including equipment to complete.....	24,715.52	12,000.00	458,000.00
Total.....	122,767.28	146,858.00	1,206,855.00

Item R. S. 118a.—Repair and maintenance, heating apparatus.

(Estimate, fiscal year 1919, \$467,355.)

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$466,830.00	\$466,830.00	\$525.00	\$525.00	\$467,355.00
Appropriated, fiscal year 1918.....	79,014.00	79,014.00	525.00	525.00	79,559.00
Expended, fiscal year 1917....	53,810.20	53,810.20	525.00	525.00	54,335.20

REMARKS.

Supplies.—The supplies to be procured under this item consist of such articles as asbestos, asphaltum, grates, spacing bars, cement, fire clay, cold chisels, drills, boiler compound, files, piping, gaskets, solder, steel valves, washers, and such other supplies as may be required to meet current requirements.

Services.—The services to be procured consist of job and contract services required for the maintenance and repair of heating apparatus.

United States.—Of the total amount estimated for the United States, \$466,830, the sum of \$366,830 is estimated as being required to meet current requirements for the purchase of supplies and \$100,000 for the procurement of services.

The increase of the estimate over the cost for fiscal year 1917 is due to the increase of the Army, and is for annual allotment for repairs to heating plants and on account of additional heating plants installed from time to time.

Of the above amount estimated for the United States, \$90,000 will be required at permanent posts and stations, which is based upon the apportionment for the fiscal year 1918 plus a small increase to allow for advance in the cost of material and labor. The amount estimated for cantonment requirements, various camps, etc., is \$376,830.

Philippine Islands.—The amount, \$525, is that called for by Philippine authorities for repair and maintenance of heating apparatus in the Philippines.

NOTE.—From information submitted on heating data sheets it is found that about 2,371 steam plants, 593 hot-water plants, and 340 hot-air plants have been installed up to date for heating purposes and for which repairs are necessary, and, in addition thereto, there are 12 central heating plants supplying heat to about 160 buildings, making the total number of plants, counting the buildings heated from central plants, 3,464.

Item R. S. 118b.—Repair and maintenance of heating stoves.

(Estimate, fiscal year 1919, \$100,000.)

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$99,220.00	\$99,220.00	\$780.00	\$780.00	\$100,000.00
Appropriated fiscal year 1918.....	13,338.00	13,338.00	780.00	780.00	14,118.00
Expended fiscal year 1917....	11,141.56	11,141.56	780.00	780.00	11,921.56

REMARKS.

The supplies to be purchased under this item consist of stove castings, and such articles enumerated under Item R. S. 118a, ante, as may be required for the repair of heating stoves.

The services to be procured consist of such job and contract services as may be necessary to properly repair heating stoves.

Based upon the per capita cost for the fiscal year 1917, the amount required for the fiscal year 1919 would be approximately \$220,000, but it is believed that the amount estimated for will be sufficient due to the fact that most of the troops will be in the field and will not require heating stoves.

Item R. S. 118c.—Repair and Maintenance of ranges and cooking stoves.

[Estimate, fiscal year 1919, \$150,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$145,500.00	\$145,500.00	\$4,500.00	\$4,500.00	\$150,000.00
Appropriated fiscal year 1918.....	31,627.00	31,627.00	4,674.00	4,674.00	36,301.00
Expended fiscal year 1917...	25,587.72	25,587.72	4,500.00	4,500.00	30,087.72

REMARKS.

The supplies to be purchased under this item consist of range castings, and such other articles enumerated under Item 118a, ante, as may be required for repair of ranges and cooking stoves.

The services to be procured consist of such job and contract services as may be necessary to properly repair ranges and cooking stoves.

The amount required for the fiscal year 1919, based upon the per capita cost for the fiscal year 1917 would be approximately \$550,000, but it is believed that the amount estimated for will be sufficient, due to the fact that field ranges will be used by troops in the field.

Item R. S. 118d.—Repair and maintenance of coffee roasters. (No estimate for 1919.)

Item R. S. 118e.—Repair and maintenance of cooking appliances.

[Estimate, fiscal year 1919, \$31,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$30,620.00	\$30,620.00	\$880.00	\$880.00	\$31,500.00
Appropriated, fiscal year 1918	4,000.00	4,000.00	880.00	880.00	4,880.00
Expended, fiscal year 1917...	807.28	807.28	900.00	900.00	1,707.28

REMARKS.

The supplies to be purchased under this item consist of such articles as tin, iron, aluminum, wire, bolts, steel, tinner's tools, and such other supplies as may be required to meet the current requirements for repair and maintenance of cooking appliances.

The services to be procured consist of such job services as may be necessary for repair and maintenance of cooking appliances.

The amount estimated for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 118f.—Repair and maintenance of field ranges, including equipment to complete field ranges.

[Estimate, fiscal year 1919, \$458,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$458,000.00	\$458,000.00	\$458,000.00
Appropriated, fiscal year 1918.....	12,000.00	12,000.00	12,000.00
Expended, fiscal year 1917.....	24,715.52	24,715.52	24,715.52

REMARKS.

The supplies to be purchased under this item consist of such articles as tin, wire, bolts, tinner's tools, utensils, bake pans, and such other supplies as may be necessary for repair and maintenance of field ranges.

The services to be procured consist of such job services as may be necessary for repair and maintenance of field ranges.

The amount estimated for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 119.—Candles, authorized issue of.

[Estimate, fiscal year 1919, \$786,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$783,350.00	\$783,350.00	\$2,650.00	\$2,650.00	\$786,000.00
Appropriated, fiscal year 1918.....	12,000.00	12,000.00	2,650.00	2,650.00	14,650.00
Expended, fiscal year 1917.....	39,790.20	39,790.20	2,650.00	2,650.00	42,440.20

REMARKS.

Candles are issued (when illuminants are not furnished) as follows:

To organizations of enlisted men: For each ration, except the Philippine ration, 0.24 ounces; in Alaska, 0.32; for each Philippine ration, 0.12 ounces; to headquarters in the field, or organizations larger than a company, to hospitals, bakeries, depots of supply, guards, and telegraph stations, in such quantities as the commanding officer may order as necessary. There are six candles to a pound and the cost is about 15 cents a pound.

Lantern candles are issued for use in lanterns furnished to the Army by the Government and used in the public service in such quantities as the commanding officer may order as necessary. There are 12 candles to a pound and they cost about 18 cents per pound. (See par. 1215, Army Regulations, 1913.)

The amount estimated for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 120.—Matches, authorized issue of.

[Estimate, fiscal year 1919, \$628,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$625,870.00	\$625,870.00	\$2,130.00	\$2,130.00	\$628,000.00
Appropriated, fiscal year 1918.....	5,976.00	5,976.00	2,160.40	2,160.40	8,136.40
Expended, fiscal year 1917.....	31,751.56	31,751.56	2,128.00	2,128.00	33,879.56

REMARKS.

Matches are issued for lighting fires and lights, for which fuel and the illuminating supplies are issued in such quantities as the commanding officer may order as necessary. (See par. 1215, Army Regulations, 1913.)

A package of 12 boxes of matches weighs 6 ounces and costs approximately one-half cent per box.

The amount estimated for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 121.—Heat (fuel in kind).

[Estimate, fiscal year 1919, \$54,790,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$54,682,000.00	\$54,682,000.00	\$108,000.00	\$108,000.00	\$54,790,000.00
Appropriated fiscal year 1918.....	2,659,530.81	2,659,530.81	107,800.00	107,800.00	2,767,330.81
Expended, fiscal year 1917.....	2,307,829.22	2,307,829.22	107,989.78	107,989.78	2,415,819.00

REMARKS.

The supplies to be purchased under this item consist of coal, wood, coke, fuel oil, mineral oil for heating purpose, charcoal, etc.

The services to be procured consist of the temporary hire of inspectors of fuel and laborers required in the preparation and handling of fuel.

The amount of the estimate for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

The following table shows the prices paid for coal for the fiscal years 1916, 1917, and 1918 at the Army posts named below:

Prices paid for coal per ton for the fiscal years 1916, 1917, and 1918.

Additional fuel will be required to heat buildings constructed during the fiscal year 1918. There is practically no permanent construction being done during the fiscal year 1918, but a large amount of temporary construction is being done at cantonments, camps, and posts for which heat will have to be supplied.

For issue of fuel at military posts, allowances are defined in General Orders No. 57, War Department, July 25, 1914, and General Orders, No. 63, November 15, 1915.

The allowances of fuel for officers and enlisted men are provided for by paragraphs 1036 and 1044, Army Regulations, 1913, corrected to April 15, 1917, which reads:

"Each officer or enlisted man entitled to and occupying public quarters will be furnished at the expense of the United States with the quantity of fuel required to

do the necessary heating, cooking, and heat the necessary water in the building to which assigned at a military post, in accordance with allowances published from time to time. The allowances are cumulative for the entire fiscal year, or such portion thereof as an officer or organization may serve at the same post or station. At the end of the fiscal year, or when officers or organizations change station, fuel accounts shall be closed and excess issues paid for. Savings on allowances are not transferable to another post or station."

Contracts for purchase of fuel for the fiscal year 1917 (exclusive of the Philippine Islands) for the appropriation, "Supplies, services, and transportation, Quartermaster Corps," under items 117, 121, 122, 123, 124, 128, and 134 were as follows:

213,202,725 pounds bituminous coal.....	\$590,761.65
229,359,698 pounds anthracite coal.....	805,843.06
213,131 cords wood.....	1,182,951.22
1,117,028 gallons mineral oil.....	118,232.18
493,509 gallons gasoline.....	103,367.70
1,225,030 gallons fuel oil.....	57,656.56
853,403 pounds coke.....	3,468.95
19,614,658 cubic feet fuel gas.....	3,733.68
Total.....	2,866,015.00

The average prices paid for coal procured under the above contracts, were \$0.3156 per hundredweight, and for wood \$5.55 per cord, an increase of \$0.0616 per hundredweight for coal and a decrease of \$0.21 per cord for wood, as compared with prices for the fiscal year 1916.

Based on the increase in prices for the fiscal year 1918 over prices for the fiscal year 1917, it is estimated that approximately \$10,000,000 will be required to cover the probable increase in prices for the fiscal year 1919, which amount has been included in this estimate.

For the current fiscal year coal required at posts and stations for which contracts have not been made is being procured through the United States Fuel Administration at prices fixed by the President, as indicated below, the prices being on f. o. b. mine basis for ton of 2,000 pounds for bituminous and 2,240 for anthracite, viz:

REMARKS.

The supplies to be purchased under this item consist of such articles as coal forks, shovels, screens, axes, saws, scoops, belting, valves, wood-sawing machines, gauges, lubricating oil, etc.

The services to be procured consist of the hire of labor for cutting wood, storing in bins, etc.

The amount estimated for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 121b.—Heat, purchase of.

[Estimate, fiscal year 1919, \$517,067.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$509, 067	\$509, 067	\$8, 000	\$8, 000	\$517, 067

Expended, fiscal year 1917.....	43, 665	43, 665	8, 000	8, 000	51, 665

REMARKS.

Services.—The services under this item consists of payments for purchase of heat required in rented buildings.

United States.—The amount estimated for under this item is required to meet current requirements for class 1 services. The amount estimated for above is required on account of the increase in the strength of the Army and is believed necessary. The purchase of heat is required for rented buildings, principally at recruiting stations, and for reimbursing the Ordnance Department for heat furnished at the various arsenals.

Of the above amount estimated for the United States, \$87,974 will be required at permanent posts and stations, which is based upon the estimate for fiscal year 1918. The amount estimated for cantonment requirements, various camps, etc., is \$421,093.

Philippine Islands.—The amount called for, \$8,000, is the same as that estimated for by department authorities.

Item R. S. 122.—Light.

No.	Items.	Cost, fiscal year 1917.	Appropriation, fiscal year 1918.	Estimate, fiscal year 1919.

122g	Repairs to lighting plants and systems (supplies and services)	633,011	11,000	643,011
122h	Fuel for operation of lighting plants (supplies)	490,000	10,000	500,000
	Total	9,804,831	220,200	10,025,031

Item R. S. 122.—Light (electric current), purchase of.

[Estimate fiscal year 1919, \$7,055,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate	\$7,000,000.00	\$7,000,000.00	\$55,000.00	\$55,000.00	\$7,055,000.00
Appropriated, fiscal year 1918 ..	481,370.00	481,370.00	55,000.00	55,000.00	536,370.00
Expended, fiscal year 1917	241,026.28	241,026.28	54,804.00	54,804.00	295,830.28

REMARKS.

United States.—The amount estimated for under this item is required to meet current requirements. The increase in amount of the estimate for the fiscal year 1919 is due to the increase in the strength of the Army, principally to light the various cantonments, and temporary buildings at camps and regular posts. It must also be borne in mind if the garrisons on the Canal Zone are to be increased to war strength, considerable extra current will be required there on account of peculiar conditions prevailing in the Canal Zone, where it was found necessary to increase the allowances for current 100 per cent to provide for the heating of dry rooms by means of electric lamps in such rooms for officers' and enlisted men's quarters and 50 per cent for barracks and storehouses at all posts in the Canal Zone to provide for necessary heat to preserve and care for the clothing and harness or leather. It has also been found necessary to increase light allowances for stables 100 per cent in order to keep harness room dry and furnish all-night light to protect animals from vampire bats, etc. This increase to be based on the allowances as prescribed in G. O. 33, W. D., 1915.

Garrisoned posts lighted by electricity.—There are 110 garrisoned posts lighted by electricity. Current is purchased at 83 posts and generated in Government plants at 27 posts:

Of the above amount estimated for the United States, \$500,000 will be required at permanent posts and stations, which is based upon the estimate for fiscal year 1918 plus a small increase to allow for advance in the cost of material and labor. The amount estimated for cantonment requirements, various camps, etc., is \$6,500,000.

Philippine Islands.—Estimate is made for \$55,000, the amount called for by department authorities.

ARMY APPROPRIATION BILL, 1919.

Item R. S. 122a.—Mineral oil, purchase of.

[Estimate, fiscal year 1919, \$940,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$840,000.00	\$840,000.00	\$100,000.00	\$100,000.00	\$940,000.00
Appropriated, fiscal year 1918.....	69,487.00	69,487.00	48,000.00	48,000.00	117,487.00
Expended, fiscal year 1917.....	27,300.72	27,300.72	63,000.00	63,000.00	90,300.72

REMARKS.

The supplies procured under this item consist of mineral oil, which is usually purchased under contract.

Mineral oil is used for lighting purposes at posts and stations not equipped for lighting by electricity, and also for use in lanterns.

Based on the per capita cost for the fiscal year 1917 the amount required for the fiscal year 1919 would be approximately \$1,600,000, but it is believed that the amount estimated for will be sufficient, due to the fact that barracks for troops at cantonment camps will be lighted by electricity.

Item R. S. 122b.—Other light, purchase of.

[Estimate, fiscal year 1919, \$27,729.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$27,729.00	\$27,729.00	\$27,729.00
Appropriated fiscal year 1918.....	4,000.00	4,000.00	4,000.00
Expended fiscal year 1917.....	23,917.08	23,917.08	23,917.08

REMARKS.

Services.—The services covered by this item consist of the purchase of gas for lighting purposes.

United States.—The total of the estimate \$27,729 is required for services. The amount estimated for is \$3,811.92 more than the cost for the fiscal year 1917 and is due to the increased strength of the Army. This service is used at present as follows: At Fort Wayne, Mich. gas is purchased at 45 cents to 75 cents per 1,000 cubic feet; at Fort Porter, N. Y., \$1 per 1,000 cubic feet; at Pittsburg Storage and Supply Depot, 16 to 27½ cents per thousand cubic feet.

Of the above amount estimated for the United States, \$5,000 will be required at permanent posts, which is based upon the estimate for fiscal year 1918 plus a small increase to allow for the advance in cost of material and labor. The amount estimated for cantonment requirements, various camps, etc., is \$22,729.

Philippine Islands.—No estimate is submitted.

Item R. S. 122c.—Illuminating supplies for oil lamps.

[Estimate, fiscal year 1919, \$120,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$115,000.00	\$115,000.00	\$5,000.00	\$5,000.00	\$120,000.00
Appropriated fiscal year 1918.....	12,500.00	12,500.00	5,500.00	5,500.00	18,000.00
Expended fiscal year 1917.....	5,952.92	5,952.92	5,200.00	5,200.00	11,152.92

REMARKS.

The supplies to be purchased under this item consist of lamps (other than electric and gas), lanterns, lamp posts, chimneys, wicks, etc.

Based on the per capita cost for the fiscal year 1917, the amount required for the fiscal year 1919 would be approximately \$206,000, but it is believed that the amount estimated for will be sufficient, due to the fact that barracks for troops at cantonment camps will be lighted by electricity.

Item R. S. 122d.—Illuminating supplies for electric and gas lighting.

[Estimate, fiscal year 1919, \$192,936.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$189,536.00		\$189,536.00	\$3,400.00		\$3,400.00	\$192,936.00
Appropriated, fiscal year 1918.....	31,221.00		31,221.00	3,400.00		3,400.00	34,621.00
Expended, fiscal year 1917.....	23,192.48		23,192.48	3,400.00		3,400.00	26,592.48

REMARKS.

Supplies.—The supplies purchased under this item consist of chandeliers, brackets, gas burners, lamp posts, watt meters, and various other lighting fixtures.

United States.—Estimate is made for \$189,536 for supplies to meet current requirements. This estimate is \$166,343.52 more than the cost for the fiscal year 1917, but the increase is necessary to provide for buildings not already equipped with fixtures and those which may be necessary to remodel to provide for the increase in the Army.

Of the above amount it is estimated for the United States that \$40,000 will be required at permanent posts and stations, which is based upon the estimate for fiscal year 1918, plus a small increase to allow for advance in the cost of material and labor. The amount estimated for cantonments, various camps, etc., is \$149,536.

Philippine Islands.—The estimate, \$3,400, is the amount asked for by the Department authorities.

Item R. S. 122e.—Incandescent lamps.

[Estimate, fiscal year 1919, \$162,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$160,000.00		\$160,000.00	\$2,000.00		\$2,000.00	\$162,000.00
Appropriated, fiscal year 1918.....	41,806.00		41,806.00	2,375.00		2,375.00	44,181.00
Expended, fiscal year 1917.....	24,616.04		24,616.04	2,000.00		2,000.00	26,616.04

REMARKS.

Supplies.—This estimate provides for the purchase of such incandescent lamps as may be required to meet current requirements at posts where electricity is used for lighting.

United States.—Estimate is submitted for \$160,000 for purchase of incandescent lamps during the fiscal year 1919. This is \$135,383.96 more than the cost for the fiscal year 1917, but is necessary owing to the greater number of buildings requiring lights due to the increase in the Army, particularly for cantonment buildings and various camps.

NOTE.—The per capita cost of incandescent lamps in the United States in the fiscal year 1917 was approximately \$0.3339, and the Philippine Islands \$0.0542 per annum.

Of the above amount it is estimated that \$42,000 will be required at permanent posts, which is based upon the estimate for fiscal year 1918 plus a small increase to allow for advance in cost of supplies. Amount estimated for cantonment requirements, various camps, etc., is \$118,000.

Philippine Islands.—Estimate is made for \$2,000, the amount called for by the department authorities.

Item R. S. 122f.—Installation and extension of lighting systems.

[Estimate fiscal year 1919, \$384,355.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$350,555.00	\$350,555.00		\$33,800.00	\$33,800.00	\$384,355.00
Appropriated, fiscal year 1918.....		478,974.50	478,974.50		66,000.00	66,000.00	544,974.50
Expended, fiscal year 1917.....		20,563.73	20,563.73		22,377.23	22,377.23	42,940.96

REMARKS.

Services.—The services to be procured under this item consist of such job and contract services as may be required for the construction and extension of electric lighting systems, wiring, etc., at the various Army posts enumerated.

United States.—Estimate is made for \$350,555 for services required as follows:

For lighting (wiring and fixtures) in new buildings estimated for under "Barracks and quarters," appropriation fiscal year 1919.....	\$1,291
For electric fixtures in new hospitals and hospital stewards' quarters (see appropriation "Construction and repair of hospitals, 1919").....	55,666
To provide for projects (installation of fixtures in buildings already constructed).....	293,598
Total.....	350,555

There are at present two garrisoned posts lighted by gas, Fort Porter, N. Y., and Wayne, Mich. Twenty-five permanent posts and stations are lighted by mineral oil. The following is a list of projects estimated for under this item:

Post.	Project.	Amount.
Fort Bayard, N. Mex.....	Enlargement of electrical plant.....	\$11,250.00
Fort Casey, Wash.....	Water purification system for power plant.....	5,400.00
Governors Island, N. Y.....	Changing lighting system from direct foalternating current.	12,000.00
Fort Hancock, N. J.....	Electric installation in central power plant.....	1,050.00
Fort Logan, Colo.....	Rewiring of buildings.....	15,000.00
Fort Michle, N. Y.....	Electric lighting system.....	3,603.00
Fort Monroe, Va.....	Electric lighting in main barracks No. 5.....	6,000.00
Fort Morgan, Ala.....	Installing rotary converters in central power plant for furnishing light and power to batteries.	4,500.00
Pittsburgh Storage Supply Depot, Pa....	Electric wiring and fixtures in buildings 2 and 3, 7 new street lamps, etc.	2,436.00
Reno Remount Depot, Okla.....	Electric pumps for lighting buildings.....	5,469.00
Schofield Barracks, Hawaii.....	Wiring for electric lighting in cantonments.....	62,520.00
Fort Sill, Okla.....	Street lights at ends of bridges.....	1,401.00
Fort Snelling, Minn.....	Changing present direct current distributing system to a proper alternating current system.	22,500.00
Army War College, Washington Barracks, D. C.....	9 boulevard lamp standards with necessary equipment.	2,100.00
Fort Dupont, Del.....	Extension of pumping plant to power plant for lighting and ice making purposes.	47,499.00
Fort Monroe, Va.....	Purchase and installation of a Diesel oil engine for making alterations and additions to the pipe lines, post and coast artillery school power plant.	39,264.00
Fort, Niagara, N. Y.....	Installation of electric lighting interior and exterior.	29,856.00
Fort Sill, Okla.....	New 84 by 10 inch triplex motor pump.....	14,250.00
Presidio of San Francisco, Cal.....	Changing of multiple street lighting system E and W cantonment to series tungsten system.	3,750.00
Fort Winfield Scott, Cal.....	Extension of street lighting system.....	3,750.00
Total.....		293,598.00

Philippine Islands.—The estimate from the Philippine Islands for construction under this item calls for \$33,000, and is to provide for the following work:

Augur Barracks.—For installation of an electric lighting system: Supplies, \$5,000; services, \$2,000. Garrison, First and Thirteenth Battalions, Philippine Scouts.

There has been a new power plant for ice, cold storage, and pumping installed at this post, and it is the intention to provide an electric lighting system in connection therewith for the lighting of both interior and exterior.

Camp Eldridge.—For the installation of a hydroelectric plant: Supplies, \$7,000; services, \$4,000. Garrison, First Battalion, Thirty-first Infantry. There is sufficient water and elevation for the development of a hydroelectric plant for light and power purposes available on the reservation. An intake has recently been constructed for the water system which will be used as a headwork for the penstock of the new hydroelectric system.

Camp John Hay.—For the extension of the present lighting system: Supplies, \$2,000; services, \$800. Garrison, M, Twenty-seventh Infantry, Second Battalion, Philippine Scouts. The hydroelectric plant has been in successful operation for several years, and only a few buildings are not supplied with current for light and power purposes from this system. It is desired to complete the project so that the hydroelectric plant current is utilized for all power, lighting, heating, and cooking purposes.

Fort Mills.—For the extension of underground transmission lines: Supplies, \$5,000; services, \$2,000. Garrison, A, Third Engineers, First Company Second Aero Squadron, Ninth Band, and 17 companies Coast Artillery Corps, Thirteenth Infantry, Fifth and Eleventh Battalions, Philippine Scouts. This is required to continue the main transmission lines, underground system so as to connect the several buildings with the post electric system, in addition to the funds that are allotted to the individual projects, and consist of the "feeder" system.

Pettit Barracks.—For the installation of an interior and exterior lighting system: Supplies, \$4,000; services, \$2,000. Garrison, Fourth Battalion, Philippine Scouts. The municipal authorities intend to construct in the near future an electric power plant for the city of Zamboanga, and they are providing sufficient capacity for the requirements of the garrison at Pettit Barracks. It is the intention to purchase current from this municipal plant at the reservation line, and the funds asked for are required to install the necessary interior and exterior lighting system within the reservation.

Item R. S. 122g.—Repairs to lighting plants and systems.

[Estimate fiscal year 1919, \$643,011.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$632,011.00	\$632,011.00	\$11,000.00	\$11,000.00	\$643,011.00
Appropriated fiscal year 1918.....	107,080.00	107,080.00	9,000.00	9,000.00	116,080.00
Expended fiscal year 1917.....	35,835.04	35,835.04	9,650.00	9,650.00	45,485.04

REMARKS.

United States.—Of the total of the estimate for the United States there will be required for services to meet current requirements incident to repairs to lighting plants and systems \$70,200, and \$561,811 for supplies, such as brushes, push buttons, oil cans, carbons, fuses, gas pipe, gaskets, tools, paint, packing, plugs, sheet lead and copper, parts for switches, tubes, wire, zinc, and other miscellaneous articles required for repairs and maintenance of lighting apparatus, etc. The amount estimated for is \$596,175.96 more than the cost for the fiscal year 1917, due to the increased strength of the Army.

Of the above amount it is estimated that \$120,000 will be required at permanent posts and stations, which is based upon the estimate for fiscal year 1918, plus a small increase to allow for advance in cost of material and labor. The amount estimated for cantonment requirements, various camps, etc., is \$512,011.

Philippine Islands.—For repairs to lighting plants and systems at all posts in the Philippine Department, having these facilities, \$11,000 is estimated. The increase of \$2,000 asked for over previous fiscal year is due to increased cost of material.

ARMY APPROPRIATION BILL, 1919.

Item R. S. 122h.—Fuel for operation of lighting plants.

[Estimate fiscal year 1919, \$500,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$490,000.00	\$490,000.00	\$10,000.00	\$10,000.00	\$500,000.00
Appropriated fiscal year 1918.....	112,036.00	112,036.00	3,600.00	3,600.00	115,636.00
Expended fiscal year 1917.....	60,291.52	60,291.52	7,500.00	7,500.00	67,791.52

REMARKS.

Under this item are purchased such quantities of coal, wood, fuel oil, etc., as may be required for the operation of the Government plants in which electricity for lighting is generated.

Based on the per capita cost for the fiscal year 1917 the amount required for the fiscal year 1919 would be approximately \$1,250,000, but it is believed that the amount estimated for will be sufficient.

Item R. S. 123.—Fuel required in the operation of modern batteries at established posts.

[Estimate, fiscal year 1919, \$200,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$169,400.00	\$169,400.00	\$30,600.00	\$30,600.00	\$200,000.00
Appropriated fiscal year 1918.....	100,000.00	100,000.00	55,600.00	55,600.00	155,600.00
Expended fiscal year 1917.....	12,981.08	12,981.08	30,600.00	30,600.00	43,581.08

REMARKS.

The supplies to be purchased under this item consist of such fuel as coal, wood, fuel oil, gasoline, etc., as may be required for the operation of modern batteries at Coast Artillery posts.

Ports at which electric plants for power and light (including searchlights) have been installed, and the total number of batteries at each:

	349

There have been four additional sets of gasoline-electric generating sets installed during the fiscal year 1917 for which fuel will be required, and it is contemplated to install a number of additional sets during the fiscal year 1918. On account of the irregular hours at which the engines of modern batteries are run, it is difficult to estimate the amount required for the purchase of fuel for this purpose, but it is believed the amount estimated for will be sufficient.

Orders have been placed for the purchase of three hundred and forty-nine 25-kilowatt generating sets for installation at the coast defenses of the United States, for emplacement and searchlight use, but on account of the demand for similar equipment for use abroad it is believed that of the equipment ordered not more than about 50 generating sets will be installed during the fiscal year 1918.

Item R. S. 124.—Engine supplies required in the operation of modern batteries at established posts.

[Estimate fiscal year 1919, \$50,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$45,000.00		\$45,000.00	\$5,000.00		\$5,000.00	\$50,000.00
Appropriated, fiscal year 1918.	17,280.00		17,280.00	5,000.00		5,000.00	22,280.00
Expended, fiscal year 1917....	12,096.48		12,096.48	4,950.00		4,950.00	16,046.48

REMARKS.

The supplies to be purchased under this item consist of waste, lubricating oils, oil lamps in battery plants, brooms, brushes, coal handling and firing tools and appliances, etc., necessary for the maintenance, operation, and preservation of electric plants at Coast Artillery posts, as provided in paragraph 8 of General Orders, No. 72. War Department, 1906, as follows:

GENERAL ORDERS, }
No. 72. }

WAR DEPARTMENT,
Washington, April 11, 1906.

The following regulations regarding the supplies to be furnished for the service of the seacoast fortifications and the various departments by which they are to be furnished are published for the information and guidance of all concerned:

FOR FORTIFICATIONS IN GENERAL.

8. The Quartermaster's Department will furnish all fuel and engine supplies such as waste, lubricating oils, oil lamps, brooms, brushes, coal handling and firing tools, and appliances, etc., necessary for the maintenance, operating, and preservation of

all electric plants. For central plants which furnish current to the post as well as to the fortifications, it will, in addition, furnish all material and funds necessary for their repair and preservation. (A. R. 1066). It will also furnish such materials as may be needed for the use of the battery mechanics, all grass-cutting tools, and all carpenters' tools. When under the provisions of paragraph 1535, Army Regulations, any seacoast post or any part of it has been turned over to and garrisoned by the Coast Artillery all repairs to the post buildings and to all plumbing, water-supply, and sewer systems, roads, walks, and ground will be made by the Quartermaster's Department, governed in this work by the provisions of paragraph 1534, Army Regulations.

By order of the Secretary of War.

J. C. BATES,
Lieutenant General, Chief of Staff.
F. C. AINSWORTH,
The Military Secretary.

Based on the per capita cost for the fiscal year 1917, the amount required for the fiscal year 1919 would be approximately \$300,000, but it is believed that the amount estimated for will be sufficient.

Item R. S. 125. —Post bakeries, construction of.

[Estimate fiscal year 1919, \$11,250.]

[Estimate fiscal year 1919, \$41,907.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$35,907.00		\$35,907.00	\$6,000.00		\$6,000.00	\$41,907.00
Appropriated, fiscal year 1918.....	6,272.00		6,272.00	5,000.00		5,000.00	11,272.00
Expended, fiscal year 1917.....	5,521.56		5,521.56	6,102.00		6,102.00	11,623.56

REMARKS.

United States.—The amount estimated for under this item is required for the construction of post bakeries as follows:

McKinley, Me., addition to post bakery..... \$5,250.00

Philippine Islands.—The amount called for by department authorities is \$6,000 and is for construction of extensions to post bakeries for several posts in the Philippine Department, made necessary by increases to garrisons. It is estimated that funds asked for will be sufficient for all posts during this fiscal year. This estimate is \$2,500 less than that called for in fiscal year 1918.

REMARKS.

Supplies.—The supplies to be purchased under this item consist of such building materials as are required for repairing buildings used at post bakeries.

Services.—The services to be procured consist of the hired labor required for repairs, post bakeries.

United States.—Of the total estimate for the United States there will be required \$19,907 to meet the current requirements for supplies and \$16,000 for services. The amount estimated for is \$30,385.44 greater than the cost for the fiscal year 1917, and \$29,635 more than the apportionment for the fiscal year 1918, due principally to the increased strength of the Army and the cantonments required therefor.

Of the above amount it is estimated that \$6,000 will be required at permanent posts, and for cantonment requirements, various posts, etc., \$29,907 will be required.

Philippine Islands.—The amount submitted by the department authorities under this item is \$6,000, which is to provide for current repairs to post bakeries at all posts in the Philippine Department. The increase over the estimate for the fiscal year 1918 is made necessary by the rapid deterioration of several of the wooden buildings, the funds allotted in the previous fiscal years having been insufficient to continue the repairs as they should be.

Item R. S. 126. Bake ovens, and apparatus pertaining thereto (purchase of, construction of).

[Estimate fiscal year 1919, \$183,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$180,000.00	\$180,000.00	\$3,000.00	\$3,000.00	\$183,000.00
Appropriated, fiscal year 1918.....	76,966.00	76,966.00	1,000.00	1,000.00	77,966.00
Expended, fiscal year 1917.....	65,832.72	65,832.72	1,160.00	1,160.00	66,992.72

REMARKS.

Supplies.—This item consists of the purchase of bake ovens required at permanent posts and cantonments to equip post bakeries being constructed and to replace such bake ovens as become unserviceable; also field bakeries for use with troops in the field.

What is known as the Marshall oven is now supplied in sizes as follows to meet the needs of posts: No. 30, capacity 480 rations, cost \$650; No. 40, capacity 576 rations, cost \$700; No. 50, capacity 780 rations, cost \$775; No. 60, capacity 1,008 rations, cost \$825. The life of these ovens is approximately five years.

Field bakeries are established for war service at the rate of one to each division and for peace service in such number within each territorial department as may be authorized from time to time by the Secretary of War. The cost of a field bakery complete is approximately \$9,600. As it is contemplated that all troops will be equipped with field bakeries during the current fiscal year, no amount is included in the estimate for this purpose.

United States.—The estimate submitted herewith is an increase of \$114,167.28 over the cost for the fiscal year 1917 and is due entirely to war conditions and the increased strength of the Army.

Of the above amount it is estimated that \$80,000 will be required at permanent posts and stations, which is based upon the estimate for the fiscal year 1918 plus a small increase to allow for advance in the cost of material and labor. The amount estimated for cantonment requirements, various camps, etc., is \$100,000.

Philippine Islands.—The estimate of \$3,000 is the amount submitted by department authorities and is to provide for purchase of the necessary bake ovens and appurtenances thereto for all posts in the Philippine department. This amount will be necessary to purchase new ovens to replace those that have been in service a number of years, more especially the obsolete type of Middleby oven, of which there are several in the department, as these are uneconomical and are being replaced as rapidly as possible. The increase in this item is \$2,000 over the amount called for fiscal year 1918.

Item R. S. 126a.—Bake ovens and apparatus, repair of.

[Estimate fiscal year 1919, \$514,067.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$510,567.00	\$510,567.00	\$3,500.00	\$3,500.00	\$514,067.00
Appropriated fiscal year 1918.....	6,265.00	6,265.00	3,000.00	3,000.00	9,265.00
Expended fiscal year 1917.....	27,881.40	27,881.40	3,420.00	3,420.00	31,301.40

REMARKS.

Supplies.—The supplies to be procured under this item consist of such articles as lime, tin, sheet iron, bricks, tools, utensils, etc., as are required for the repair of bake ovens and apparatus therefor; also for field bakeries. Bake ovens are installed at all of the Army posts and field bakeries for troops in camp and at cantonments.

United States.—The estimate is \$482,685.60 more than the cost for the fiscal year 1917 and is necessary on account of the increased strength of the Army necessitated by war conditions. Bake ovens and field bakeries in use at posts and camps deteriorate very rapidly.

Of the above amount it is estimated that \$4,500 will be required for use at permanent posts in the United States, and \$29,907 for use in cantonments, various camps, etc., for the repair of bake ovens and apparatus, and \$476,160 for the repair of field bakeries, assuming that there will be approximately 80 field bakeries to be repaired, at an estimated cost of upkeep of \$5,952 each, or 62 per cent of the initial cost.

Philippine Islands.—The amount called for by department authorities is \$3,500 and is to provide for current repairs to bake ovens and appurtenances thereto at all posts in the Philippine Department. This small increase over the estimate for fiscal year 1918 is made necessary by advance of cost in materials.

Item R. S. 127.—Ice machines, purchase and installation of.

[Estimate fiscal year 1919, \$1,485,761.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$1,474,861	\$1,474,861		\$10,900	\$10,900	\$1,485,761
Appropriated fiscal year 1918.....					6,300	6,300	6,300
Expended fiscal year 1917.....							

REMARKS.

United States.—Amounts submitted under this item are for construction and additions to ice and refrigerating plants as per the following list:

Fort Apache, Ariz., new ice and refrigerating machine.....	\$2,250
Walter Reed General Hospital, D. C., refrigerating machine.....	4,611
Dade, Fla., reconstruction of ice plant.....	8,000
United States Disciplinary Barracks, Fort Leavenworth, Kans., 40-ton ice-making plant.....	60,000
Total.....	74,861

Of the amount estimated for under this item \$74,861 will be required for installation of ice machines, etc., at permanent posts in the United States. It is estimated that \$1,400,000 will be required to provide for small ice and refrigerating plants for 20 cantonments in France, at an approximate cost of \$70,000 each or \$1,400,000 in addition

to the large ice plant now being installed there, which is to take care of approximately 1,000,000 men.

Philippine Islands.—Estimate is submitted for \$10,900 the amount called for by the department authorities. It is an increase of \$4,600 over the estimate for the fiscal year 1918 and is to provide for the following construction:

For purchase of the necessary ice machines for several posts in the Philippine Department, supplies, \$4,000; services, \$1,600. Several posts in this department are provided with ice machines that are 15 years old, and it is necessary to place in stock at depot and provide for the installation of machines to replace those that will be past repairs, it being the policy to install new machines when present ones are past economical repair, machines so replaced being utilized to repair machines at other posts.

Fort Mills.—For purchase of ammonia condenser, supplies, \$2,000; services, \$1,000. Garrison: A. Third Engineers, First Company Second Aero Squadron, Ninth Band, and 17 Companies Coast Artillery Corps, Thirteenth Infantry, Fifth and Eleventh Battalions Philippine Scouts. The present ammonia condenser in the bomb-proof power plant is past repair. A new one should be provided at once. A temporary condenser has been erected on the exterior of the building for use in emergency until a new one can be installed to replace the one on the mezzanine floor of the power plant.

Fort San Pedro (Iloilo).—For purchase of boilers, supplies, \$1,600; services, \$700. Garrison: Headquarters Tenth Battalion, Headquarters Company Thirty-eighth, Thirty-ninth, and Fortieth Companies, Philippine Scouts. The boilers used in conjunction with the power plant will have to be condemned during this year and new ones will have to be supplied.

DESCRIPTION OF ICE-MAKING AND REFRIGERATING PLANTS FURNISHED FOR USE OF TROOPS IN FRANCE
WITH CAPACITY AND COST OF INSTALLATION.

The ice and cold-storage plant being erected in France for the expeditionary army will have an ice-making capacity of 500 tons of ice per day and storage capacity for 5,000 tons of frozen beef and 600 tons of manufactured ice. Provision has also been made for using about one-fifth of the total storage space for provisions, vegetables, eggs, etc.

This plant will be a complete unit in itself, having installed 2,700 boiler horsepower, 1,575 tons refrigerating capacity, 13,000 gallons per minute water pumping and circulating capacity, and 300 K. V. A. electric generating capacity.

The plant will have complete trackage facilities for loading and unloading cars, also a complete layout for the icing of refrigerator cars. A laundry has also been provided, this being considered particularly desirable, as the working clothing of both the machinery operators and the meat handlers rapidly becomes dirty, and as it is especially desirable in the case of the men handling meat that they wear at all times clean frocks. There is also provided a machine shop, with machinery which will be required for the maintenance of the plant in operation.

This plant is to be operated by a military unit, Ice Plant Company No. 301, consisting of 15 officers and 335 enlisted men, and quarters for housing this unit are being provided.

The estimated cost and amount allotted for the plant was \$2,091,275, and allotments of this amount to the extent of \$1,115,707 have been made to date.

Item R. S. 128.—Maintenance, ice machines.

[Estimate fiscal year 1919, \$525,783.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$426,543.00		\$426,543.00	\$99,240.00		\$99,240.00	\$525,783.00
Appropriated fiscal year 1918	4,479.00		4,479.00	90,000.00		90,000.00	94,479.00
Expended fiscal year 1917	44,701.64		44,701.64	53,957.00		53,957.00	98,658.64

REMARKS.

Supplies.—The supplies to be purchased under this item consist of salt, ammonia, mineral oil, wood, etc., for the maintenance of ice plants and pipe and boiler fittings, packings, pumps, and numerous other supplies required for repairs.

Services.—The services consist of the hire of mechanics and laborers required to make repairs to ice machines and refrigerating plants.

United States.—Of the total amount estimated for the United States there will be required for current requirements \$284,343 for supplies and \$142,200 for services. The amount estimated for is \$381,841.36 greater than the cost for the fiscal year 1917, which is necessitated by the increased strength in the Army due to war conditions and also on account of the depreciation in present machines.

The ice plants in service in the United States are, with few exceptions, operated in connection with pumping or power plants, and the cost of operation is, therefore, reduced to a minimum, and in many cases a proportionate charge of cost of operation is not made, the production of ice being considered a by-product. The amount estimated, therefore, does not include fuel and labor, but is considered for the repair and maintenance of the apparatus itself.

The following is a list of ice plants in the United States:

Apache.....	1	Bayard.....	1
Dade.....	1	Screven.....	1
San Juan.....	1	Clarke.....	1
McIntosh.....	1	Presidio, San Francisco General Hos-	
Oglethorpe.....	1	pital.....	1
Sam Houston.....	1	Hot Springs.....	1
Caswell.....	1	Army and Navy General Hospital....	1
Huachuca.....	1	Bliss.....	1
Morgan.....	1		
Sill.....	1	Total.....	17

Philippine Islands.—The estimate as submitted by department authorities is \$99,240. It is \$9,240 more than the estimate for the fiscal year 1918, and is for the maintenance of ice machines at the various posts in the Philippine Department, of which there are now 35 in operation. (Supplies \$60,000, services \$36,000.) The increase over the estimate for 1918 is the actual sum required to cover the advanced cost of materials.

Camp Overton.—For the insulation of ice tanks: Supplies, \$950; services, \$670. Garrison consists of the Forty-eighth Company, Philippine Scouts. Insulation of the present ice tanks at this post has been badly eaten by white ants and will have to be entirely replaced during the fiscal year.

Pettit Barracks.—For insulation of ice tanks: Supplies, \$950; services, \$670. Garrison consists of the Fourth Battalion, Philippine Scouts. The ice tanks at Pettit Barracks are in exactly the same condition as those at Camp Overton. The large amount required by the Philippine Islands under this item includes fuel for operating the plants which is necessitated by the large number and capacity of the machines installed at nearly all of the posts in the islands in order to meet the requirements of the climate. The amount estimated for includes all supplies, fuel, and repairs as the ice plants in the Philippine Islands are in most cases operated alone as ice plants.

Ice machines are in operation in the Philippine Department at the following posts and stations:

Camp John Hay.....	2	Fort Wint.....	2
Camp Stotsenburg.....	2	Augur Barracks.....	3
Camp McGrath.....	2	Camp Overton.....	2
Fort Wm. McKinley.....	2	Pettit Barracks.....	3
Ludlow Barracks.....	2	Camp Kiethley.....	2
Regan Barracks.....	2	Fort Mills.....	2
Warrick Barracks.....	2	Fort San Pedro, Iliolo.....	1
Tientsin, China.....	2		
Camp Eldridge.....	2	Total.....	33

Item R. S. 129. —Cold storage.

[Estimate fiscal year 1919, \$259,784.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$145,284.00	\$145,284.00	\$114,500.00	\$114,500.00	\$259,784.00
Appropriated fiscal year 1918.	7,666.00	7,666.00	75,000.00	75,000.00	82,666.00
Expended fiscal year 1917.....	58,219.24	58,219.24	90,000.00	90,000.00	148,219.24

REMARKS.

Supplies. The supplies to be purchased under this item consist of meat hooks, racks, lumber, asbestos for covering pipes and such other supplies as may be required.

Services.—The services to be procured consist of mechanics and labor necessary in the operation and maintenance of cold-storage plants. Cold storage is usually furnished in connection with ice machines at post.

United States.—Of the total estimated for the United States there will be required for current requirements \$20,750 for supplies and \$124,534 for services. The amount estimated for is \$87,064.76 more than the cost for the fiscal year 1917, and is due to the increased strength of the Army caused by war conditions.

Of the amount estimated under this item \$8,200 will be required at permanent posts and stations, which is based upon the estimate for fiscal year 1918 plus a small increase to allow for advance in the cost of material and labor. The amount estimated for cantonment requirements, various camps, and for cold storage in connection with ice plants in France, is \$137,084.

Philippine Islands.—The amount called for by department authorities under this item is \$114,500, which is an increase of \$24,500 over the cost for the fiscal year 1917. Of this amount \$75,000 is for rental of cold-storage space in Manila, and supplies \$10,000, and services \$5,000 for posts throughout the department. The remainder is required as follows:

Fort Wm. McKinley.—For increasing the capacity of present cold storage: supplies, \$10,000; services, \$5,000. Garrison, F. H. No. 4, A. C. No. 4, barracks Third Engineers, barracks Third Field Battalion, Signal Corps, Fifteenth Cavalry, Eighth Infantry, Headquarters and Third Battalion Thirty-first Infantry, casals. The above amount is required to extend and increase the capacity of the present cold storage at this post, made necessary by the increase in garrison, it being the intention to increase the capacity so as to provide more storage space and possibly reduce the cold-storage area that is now rented in the city of Manila, it being the intention to make Fort Mills and Fort McKinley cold-storage facilities sufficient to take care of a two months supply for these stations, this reserve now being held in leased cold-storage rooms in Manila.

Regen Barracks.—For reconstructing cold storage, supplies, \$3,000; services \$2,000. Garrison, Seventh Battalion, Philippine Scouts. The present cold storage at this post was originally of frame construction and is past repair. It will be necessary to reconstruct it entirely during the fiscal year 1919.

Tientsin, China.—For increasing cold-storage facilities, supplies, \$3,000; services, \$1,500. Garrison, Fifteenth Infantry. The present cold-storage accommodations are entirely too small, and it is imperative that cold-storage facilities be provided ample in capacity to supply the garrison.

Item R. S. 130.—Ice for issue to organizations of enlisted men at such places as the Secretary of War may direct.

[Estimate fiscal year 1919, \$6,760,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$6,756,200.00		\$6,756,200.00	\$3,800.00		\$3,800.00	\$6,760,000.00
Appropriated fiscal year 1918.....	85,000.00		85,000.00	2,800.00		2,800.00	87,800.00
Expended fiscal year 1917.....	360,874.68		360,874.68	3,830.00		3,830.00	364,704.68

REMARKS.

This item covers the supply of ice to organizations of enlisted men of the Army. Issues are made when practicable, as follows:

For each ration, 4 pounds; the maximum allowance to any organization or detachment of less than 100 men to be 100 pounds per day, and to organizations of 100 men or more to be 1 pound per day for each man.

For troops stationed north of the thirty-seventh parallel of north latitude, and where from any cause it is impracticable to cut and store ice for their use, the allowance will be for seven months only, beginning April 1 and ending October 31, except in the States of Washington, Oregon, and Idaho where, during the remainder of the year one-half of such allowance may be issued, and in the State of California, where the full allowance may be issued for the entire year.

To troops stationed south of the thirty-seventh parallel of north latitude, the full allowance may be issued for the entire year.

At posts where it is practicable during the cold season to cut and store ice required, no issues of ice will be allowed from funds of the Quartermaster Corps as long as such stored ice is available.

Ice is issued to all enlisted men, and Army Regulations regarding same are embodied in section 10, paragraph 1215. The price of ice purchased for issue to troops in the United States averages about 30 cents per hundred pounds, ranging from 10 cents per hundred pounds at northern posts, to 75 cents per hundred pounds at southern posts. In the Philippine Islands ice costs about 24 cents per hundred pounds.

When ice plants are operated by the Quartermaster Corps the issues of ice are made upon requisitions approved by the commanding officer.

Estimate for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917

Item R. S. 131.—Ice for issue to offices, at such places as the Secretary of War may direct.

[Estimate fiscal year 1919, \$140,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$137,800.00		\$137,800.00	\$2,200.00		\$2,200.00	\$140,000.00
Appropriated, fiscal year 1918.....	7,000.00		7,000.00	2,200.00		2,200.00	9,200.00
Expended, fiscal year 1917.....	5,377.96		5,377.96	2,200.00		2,200.00	7,577.96

REMARKS.

This item covers the purchase of ice for issue to officers at headquarters of departments, brigades, posts, depots, arsenals, etc.

Estimate for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

ARMY APPROPRIATION BILL, 1919.

R. S. 132.—Ice for preservation of stores.

[Estimate fiscal year 1919, \$400,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$455,000.00		\$455,000.00	\$5,000.00		\$5,000.00	\$460,000.00
Appropriated fiscal year 1918.....	18,000.00		18,000.00	5,000.00		5,000.00	23,000.00
Expended fiscal year 1917.....	19,815.04		19,815.04	5,000.00		5,000.00	24,815.04

REMARKS.

This item covers the procurement of ice for the preservation of subsistence stores of a perishable nature. Issues are authorized for this purpose in such quantities as the commanding officer may order as necessary, and the quantities required depend upon the necessities of the service.

Estimate for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 133.—Laundries, construction of.

[Estimate fiscal year 1919, \$6,062,250.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$6,047,250.00		\$6,047,250.00	\$15,000.00		\$15,000.00	\$6,062,250.00
Appropriated fiscal year 1918.....							
Expended fiscal year 1917.....		9,066.32	9,066.32		58,319.00	58,319.00	67,385.32

REMARKS.

United States.—The amount estimated under this item is to provide for a laundry at Fort Slocum, N. Y., at a cost of \$47,250.

On the basis of 20 cantonments to each 1,000,000 men in France, it is estimated that one laundry plant complete at a cost of \$200,000 will be required for each cantonment, and estimating that 1,500,000 men will be in France, there will be required 30 laundry plants, at a total cost of \$6,000,000.

Philippine Islands.—The amount estimated by the department authorities is \$15,000 and is to provide for the following work.

Fort Mills: For the construction of laundry (supplies, \$10,000; services, \$5,000). The garrison consists of Company A, Third Engineers, and First Company, Second Aero Squadron, Ninth Band, and 17 companies of Coast Artillery; Thirteenth Infantry, Fifth and Eleventh Battalion Philippine Scouts. The present garrison has been increased in the last three years to such an extent as to require the construction of this plant, it being imperative to provide modern laundry facilities at this garrison in order to economize on the water used for all laundering purposes.

Item R. S. 133a.—Laundries, repair of.

[Estimate fiscal year 1919, \$617,017.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$613,517.00		\$613,517.00	\$3,500.00		\$3,500.00	\$617,017.00
Appropriated, fiscal year 1918.....	2,200.00		2,200.00	3,000.00		3,000.00	5,200.00
Expended, fiscal year 1917.....	2,795.36		2,795.36	3,200.00		3,200.00	5,995.36

REMARKS.

Supplies.—The supplies required under this item consist of lumber, bricks, nails, etc., required to make necessary repairs to post steam laundries.

United States.—Of the estimated amount, \$409,517 is required for supplies and \$204,000 for job and contract services necessary to make repairs. This is \$610,721.64 greater than the cost for the fiscal year 1917, due to conditions arising on account of the war.

Of the amount estimated under this item there will be required for permanent posts and stations \$2,750, which is based upon the estimate for the fiscal year 1918, plus a small increase, to allow for advance in the cost of material and labor. For repairs to laundries in France, on the basis of 30 cantonments, it is estimated that 10 per cent will be required for their repair, or a total of \$610,767.

Philippine Islands.—The amount estimated under this item by department authorities is \$3,500, which is \$500 in excess of the estimate for the fiscal year 1918. This amount will provide for current repairs to all laundries that are in operation in the Philippine Islands. The increase asked for above the estimate for 1918 is required to cover the advance in cost of supplies.

Item R. S. 134.—Laundries, operation and maintenance of.

[Estimate fiscal year 1919, \$639,922.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$636,922.00	\$636,922.00	\$3,000.00	\$3,000.00	\$639,922.00
Appropriated, fiscal year 1918.....	5,141.00	5,141.00	3,000.00	3,000.00	8,141.00
Expended, fiscal year 1917.....	231,560.52	231,560.52	3,000.00	3,000.00	234,560.52

REMARKS.

Supplies.—The supplies to be procured under this item consist of coal, soap, starch, wrapping paper and twine, marking tags, and such other supplies as may be required in the operation and maintenance of post steam laundries.

Services.—The services to be procured consist of the hiring of foreman, engineers, markers, washmen, starchers, mangle girls, and such other labor as may be necessary in the conduct of a post laundry plant.

NOTE.—The law provides that the proceeds of laundry work shall be used to defray the expense of operating the laundries; but it is necessary to have available a sum of money to begin the operation at the commencement of the laundries and to carry them on until such time as proceeds become available, otherwise there would be difficulty in procuring the supplies necessary and in paying the wages of employees. All laundries are practically self-supporting.

United States.—Of the total amount estimated for the United States there will be required \$336,922 for supplies and \$300,000 for services.

Laundries have been established at the following posts in the United States: United States Disciplinary Barracks, Alcatraz Island, Cal.; Army General Hospital, Fort Bayard, N. Mex.; Recruit Depot, Jefferson Barracks, Mo.; Columbus Barracks, Ohio, Recruit Depot; D. A. Russell, Wyo.; United States Disciplinary Barracks, Fort Leavenworth, Kans.; Recruit Depot, Fort Logan, Colo.; Fort Riley, Kans.; Fort Sam Houston, Tex.; Schofield Barracks, Hawaii; Fort Huachuca, Ariz.

Of the amount estimated under this item for the United States there will be required at permanent posts and stations \$6,922, which is based upon the estimate for the fiscal year 1918, plus a small increase to allow for advance in the cost of material and labor: \$630,000 is estimated to be required for the maintenance and operation, including all supplies, etc., on the basis of 30 cantonments, with one laundry plant to each cantonment in France and for various camps in the United States.

Philippine Islands.—The amount estimated under this item by department authorities is \$3,000, which is the same as the preceding fiscal year, and is to provide for the operation and maintenance of laundries in the Philippine Islands.

Laundry machinery for the equipment of a laundry plant in France, of a capacity to do the laundry work for 22,000 men, was purchased by the depot quartermaster, New York City, at a total cost of \$80,084.36.

Following is a list of the machinery and the cost of the different items:

1 disinfecter.....	\$5,025.36
22 extractors, \$396.10 each.....	8,714.20
8 tumblers, \$1,596 each.....	12,768.00
8 soap tanks, \$40 each.....	320.00
60 garment presses, 38-inch, \$236.50 each.....	14,190.00
50 truck tubs, \$35.50 each.....	1,775.00
10 earthen jars, \$5.95 each.....	59.50
Extra parts:	
50 sets rubbers for extractors, \$3.25 each.....	162.50
6 sets hinges and latches for tumbler cylinders, \$20 each.....	120.00
16 washers, \$484.30 each.....	7,748.80
10 marking machines, \$312.50 each.....	3,125.00
1 set bearing shells, \$35.....	35.00
200 pounds babbitt metal, \$0.28 per pound.....	56.00
20 sets hinges and latches for washer cylinders, \$18.75 each.....	375.00
10 outlet valves for washers, \$10.25 each.....	102.50
4 sets rawhide main driving gears for flat-work machines, \$19 each.....	76.00
2 sets type for marking machine, \$12.50 each.....	25.00
8 tampering tanks and connections, \$260 each.....	2,080.00
4 flat-work ironers.....	15,560.00
Extra cost for covering the above with wool blanketing, \$44 each.....	176.00
30 sets of padding for rolls on flat-work ironer.....	2,310.00
Extra cost for furnishing wool padding for rolls of flat-work ironer, instead of knitted padding for the above 30 sets.....	1,350.00
30 sets outside canvas covering for rolls on flat-work ironer.....	930.00
30 sets inside and outside canvas aprons for flat-work ironer.....	1,572.00
30 sets ribbons on feed of flat-work ironer.....	628.50
200 sets of replacement coverings for Universal press.....	800.00

Although this plant was designed for a capacity of 22,000 men, it is considered that the same can probably handle the work for at least 30,000 men.

In addition to the above machinery the depot quartermaster, New York City, has also been authorized to purchase the following material to provide a power plant for this equipment: Three steam boilers, 2 steam engines, 1 combined water heater and storage tank, complete, 2 steam boiler feed pumps, 2 boiler feed traps, 2 condensation receiving tanks, 78 steam traps, a quantity of millwright material, steam piping, valves, traps, fittings, plumbing fixtures, electrical material, etc.

The material for the installation of the power plant will cost approximately \$175,000, which, added to the cost of the machinery, gives a total cost of approximately \$225,084.36.

The award for the power plant material has not yet been made, therefore it is not known what the exact cost will be.

Item R. S. 135.—Laundry materials, issue of, for use of general prisoners confined at military posts without pay or allowances.

[Estimate fiscal year 1919, \$32,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$31,500.00	\$31,500.00	\$500.00	\$500.00	\$32,000.00
Appropriated, fiscal year 1918.....	9,375.00	9,375.00	500.00	500.00	9,875.00
Expended, fiscal year 1917..	1,237.00	1,237.00	497.60	497.60	1,734.60

REMARKS.

The supplies purchased under this item consist of such articles as soap, starch, washtubs, boards, etc., as may be required for issue to prisoners. The estimated number of general prisoners to be provided for during the fiscal year 1919 is 41,806.

Estimate for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 136.—Laundry materials, issue of, for applicants for enlistment held under observation.

[Estimate fiscal year 1919, \$3,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New constructions.	Total.	
Estimate.....	\$3,500.00		\$3,500.00				\$3,500.00
Appropriated, fiscal year 1918.....	1,550.00		1,550.00				1,550.00
Expended, fiscal year 1917.....	202.32		202.32				202.32

REMARKS.

Under this item are purchased laundry materials, such as soaps, towels, starch, scrubbing boards, washtubs, etc., for issue to applicants for enlistments in the United States.

Estimate for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 137.—Soap, authorized issue of.

[Estimate fiscal year 1919, \$3,900,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$3,890,000.00		\$3,890,000.00	\$10,000.00		\$10,000.00	\$3,900,000.00
Appropriated fiscal year 1918.....	62,586.00		62,586.00	10,000.00		10,000.00	72,586.00
Expended fiscal year 1917.....	201,582.92		201,582.92	10,330.00		10,330.00	211,882.92

REMARKS.

The supplies purchased under this item consist of such soap as may be required for issue to the Army, as provided for in paragraph 1215, Army Regulations, 1913, as corrected to April 15, 1917.

Issues are authorized to organizations of enlisted men as follows:

For each ration, 0.64 ounce.

Under this item soap is also used for washing the laundry of enlisted men and in kitchens. A special allowance is usually authorized for guardhouse and military prisons; such amounts as are requested are authorized by the commanding officer.

Estimate for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 138.—Hire of employees.

[Estimate fiscal year 1919, \$350,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$280,000.00		\$280,000.00	\$70,000.00		\$70,000.00	\$350,000.00
Appropriated, fiscal year 1918.....	138,552.00		138,552.00	70,000.00		70,000.00	208,552.00
Expended, fiscal year 1917.....	163,653.64		163,653.64	70,000.00		70,000.00	233,653.64

REMARKS.

This item covers the hire of clerks, engineers, electricians, dynamo tenders, plumbers and steamfitters, watchmen, coal passers, and other employees.

The increase in the amount estimated for the fiscal year 1919 over the amount appropriated for the fiscal year 1918 will be required due to the great increase in the strength of the Army.

Item R. S. 139.—Furniture for post schools and libraries.

[Estimate fiscal year 1919, \$1,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$500.00	\$500.00	\$500.00	\$500.00	\$1,000.00
Appropriated, fiscal year 1918....	1,212.00	1,212.00	500.00	500.00	1,712.00
Expended, fiscal year 1917.....	202.24	202.24	600.00	600.00	802.24

REMARKS.

Under this item are purchased such articles as school desks and chairs, blackboards, tables, bookcases, and such other articles of furniture as may be required for post schools and libraries.

Estimate for the fiscal year 1919 is approximately the same as the cost for the fiscal year 1917.

Item R. S. 140.—Textbooks for post schools and libraries.

[Estimate fiscal year 1919, \$2,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,500.00	\$1,500.00	\$500.00	\$500.00	\$2,000.00
Appropriated, fiscal year 1918....	1,685.00	1,685.00	500.00	500.00	2,185.00
Expended, fiscal year 1917.....	1,130.12	1,130.12	468.00	468.00	1,598.12

REMARKS.

Under this item are purchased the necessary textbooks required for post schools and libraries at military posts.

Estimate for the fiscal year 1919 is approximately the same as the cost for the fiscal year 1917.

Item R. S. 141.—Paper for post schools and libraries.

[Estimate fiscal year 1919, \$300.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$200.00	\$200.00	\$100.00	\$100.00	\$300.00
Appropriated, fiscal year 1918....	285.00	285.00	100.00	100.00	385.00
Expended, fiscal year 1917.....	75.24	75.24	100.00	100.00	175.24

REMARKS.

Under this item are purchased paper, writing pads, etc., required for post schools and libraries at military posts.

Estimate for the fiscal year 1919 is approximately the same as the cost for the fiscal year 1917.

Item R. S. 142.—Equipment for post schools and libraries.

[Estimate fiscal year 1919, \$45,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$44,000.00		\$44,000.00	\$1,000.00		\$1,000.00	\$45,000.00
Appropriated, fiscal year 1918.....	11,061.00		11,061.00	1,000.00		1,000.00	12,061.00
Expended, fiscal year 1917.....	199.84		199.84	1,021.00		1,021.00	1,220.84

REMARKS.

The supplies to be purchased under this item consist of erasers, crayons, pointers, maps, terrestrial globes, periodical holders, linoleum, and such other supplies as may be required for post schools and libraries at military posts.

The services to be procured are subscriptions to newspapers and periodicals, which are supplied to troops on the basis of \$90 per regiment.

Item R. S. 143.—Instruments, purchase and issue of, for the use of officers' schools at the several military posts.

[Estimate fiscal year 1919, \$1,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$500.00		\$500.00	\$500.00		\$500.00	\$1,000.00
Appropriated, fiscal year 1918.....							
Expended, fiscal year 1917.....	7.47		7.47	500.00		500.00	507.47

REMARKS.

The supplies purchased under this item consist of sketching cases, compasses, protractors, clinometers, notebooks (field), pads, sets of drawing instruments, metallic tape, chains, etc., which are purchased by the Engineer Department and paid for from an allotment made them from this appropriation by the Secretary of War. (See General Orders, No. 89, The Adjutant General's Office, June 22, 1903, modified by General Orders, No. 24, War Department, Feb. 14, 1905.)

The life or period of usefulness of the instruments is approximately 10 to 15 years for the transits and levels and 5 to 6 years for the smaller items.

The increase in amount estimated for the fiscal year 1919 over the cost for the fiscal year 1917 will be required, due to the increase in the strength of the Army. No amount was appropriated under this item for the fiscal year 1918.

Item R. S. 144.—Office furniture, purchase and issue of, for the use of officers' schools at the several military posts.

[Estimate, fiscal year 1919, \$2,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,500.00		\$1,500.00	\$500.00		\$500.00	\$2,000.00
Appropriated, fiscal year 1918....							
Expended, fiscal year 1917.....	1,509.76		1,509.76	500.00		500.00	2,009.76

REMARKS.

The supplies purchased under this item consist of tables, chairs, cases, trestles and boards, and such other articles of office furniture as may be required.

The amount estimated for the fiscal year 1919 is approximately the same as the cost for the fiscal year 1917.

Item R. S. 145.—Stationery, purchase and issue of, for the use of officers' schools at the several military posts.

[No estimate for the fiscal year 1919.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....							
Appropriated, fiscal year 1918....							
Expended, fiscal year 1917.....	\$627.80		\$627.80				\$627.80

REMARKS.

No estimate is submitted, as requirements under this item are included under Item R. S. 160—Stationery.

Item R. S. 146.—Other authorized articles for the use of officers' schools at the several military posts.

[Estimate fiscal year 1919, \$300.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$200.00		\$200.00	\$100.00		\$100.00	\$300.00
Appropriated, fiscal year 1918....							
Expended, fiscal year 1917.....	175.64		175.64	100.00		100.00	275.64

REMARKS.

The supplies purchased under this item consist of military maps, textbooks, and such articles not included under Items R. S. 143, 144, and 145, as may be required to meet current requirements.

The amount estimated for the fiscal year 1919 is approximately the same as the cost for the fiscal year 1917.

Item R. S. 147.—Commercial newspapers, subscriptions.

[Estimate fiscal year 1919, \$20,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$20,000.00	\$20,000.00	\$20,000.00
Appropriated, fiscal year 1918.....	500.00	500.00	500.00
Expended, fiscal year, 1917.....	8,405.28	8,405.28	8,405.28

REMARKS.

The services required under this item consist of subscriptions to commercial newspapers, required in connection with the purchase of subsistence and other supplies. Such commercial newspapers as are required are procured at depots, such as New York, Chicago, St. Louis, San Francisco, etc., for use in connection with the purchase of subsistence supplies and other stores.

The increase in amount estimated for fiscal year 1919 over that appropriated for the fiscal year 1918 is due to the large increase in the Army, necessitating large purchases of all classes of supplies, and these papers are required in order that the various purchasing officers may be advised of market conditions at all times, thereby enabling them to purchase to the best advantage.

Item R. S. 148.—Market reports, etc., subscriptions.

[Estimate fiscal year 1919, \$1,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,000.00	\$1,000.00	\$1,000.00
Appropriated, fiscal year 1918.....	500.00	500.00	500.00
Expended, fiscal year 1917.....	303.36	303.36	303.36

REMARKS.

The services required under this item consist of subscriptions to market reports, etc., required in connection with the purchase of subsistence supplies and other stores.

Such market reports, etc., as are required are procured at depots such as New York, Chicago, St. Louis, San Francisco, etc., for use in connection with the purchase of subsistence supplies and other stores.

The increase in this item over the fiscal year 1918 is due to the large increase in the Army, thereby necessitating the purchase of enormous quantities of supplies.

Item R. S. 149.—Tableware for kitchens and mess halls, each and all for enlisted men, including recruits.

[Estimate fiscal year 1919, \$1,560,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,561,000.00	\$1,561,000.00	\$9,000.00	\$9,000.00	\$1,560,000.00
Appropriated, fiscal year 1918.....	35,752.00	35,752.00	4,800.00	4,800.00	40,552.00
Expended, fiscal year 1917.....	75,354.72	75,354.72	9,000.00	9,000.00	84,354.72

REMARKS.

The supplies to be purchased under this item consist of articles of tableware, such as gravy boats, bowls, vinegar cruets, dishes, pitchers, saltcellars, etc. (See Special Regulations, No. 40, War Department, 1917, following this item.)

The amount estimated for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Quarterly allowance per man08		.08		.08		.08
Quarterly allowance per man for tor- pedo planters16		.16		.16		.16

Interpolations.—For any number of men not given in the foregoing tables, calculate the allowance by simple proportion, taking the allowance of 100 men as a basis. When such proportion results in the fraction of an article, one-half or less is disregarded, more than one-half is regarded as one, except that a final one-half is counted as one in cases where only one article is allowed 30 or 60 men, i. e., skimmers, meat saws, meat choppers or cutters, carving sets, clevers, sieves, and graters.

Item R. S. 150.—Mess furniture for kitchens and mess halls, each and all, for enlisted men, including recruits.

[Estimate fiscal year 1919, \$3000,000.]

	United States.			Philippine Islands.			Grand total.
	Current re- quirements.	New con- struction.	Total.	Current re- quirements.	New con- struction.	Total.	
Estimate	\$295,000.00		\$295,000.00	\$5,000.00		\$5,000.00	\$300,000.00
Appropriated, fiscal year 1918	15,800.00		15,800.00	2,900.00		2,900.00	18,700.00
Expended, fiscal year 1917	13,548.48		13,548.48	3,011.48		3,011.60	16,560.08

REMARKS.

The supplies to be purchased under this item consist of mess tables and stools, kitchen tables, kitchen utensils of all kinds, and such other supplies as may be required.

The cost of mess tables and stools for the past three years was as follows:

	Fiscal year—		
	1915	1916	1917
Mess tables	\$8.05	\$8.78	\$11.57
Mess stools35	.534	.56

The amount estimated for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Corrected statement, estimate, fiscal year 1919, R. S. 151, forage:

Allowance of animals for 1 division.

Horses, riding:	
Division headquarters, including headquarters troops.....	114

Item R. S. 151.—Forage.

[Estimate fiscal year 1919, \$79,010,000.]

	United States.			Philippine Islands.			Grand total.
	Current re- quirements.	New con- struction.	Total.	Current re- quirements.	New con- struction.	Total.	
Estimate.....	\$78,510,000.00		\$78,510,000.00	\$500,000.00		\$500,000.00	\$79,010,000.00
Appropriated fis- cal year 1918.....	6,171,358.29		6,171,358.29	538,641.71		538,641.71	6,710,000.00
Expended fiscal year 1917.....	9,639,429.64		9,639,429.64	501,373.79		501,373.79	10,140,803.43

REMARKS.

The average cost of forage for the fiscal year 1917 was \$0.6809 per hundredweight for hay and \$1.7303 per hundredweight for oats, which is approximately \$0.0322 per hundredweight less for hay and \$0.1001 per hundredweight less for oats than the prices paid during the fiscal year 1916.

Based upon prices being paid under 1918 contracts at 21 Army posts in the United States the average cost is approximately \$2.71 per hundredweight for oats and \$0.99 per hundredweight for hay.

The average cost at prices quoted above for the fiscal year 1918 will make the forage required for the authorized allowance of animals in the Army, other than the Philippine Islands, at the strength estimated for the fiscal year 1919, cost approximately as shown below:

(In the United States the allowance of forage per day is 14 pounds of hay per animal, 12 pounds of oats for horses, and 9 pounds of oats for mules). (Par. 1077. A. R.)

Horses:

Cavalry.....	37, 100
Artillery.....	162, 135
Riding.....	43, 920
Draft.....	18, 810
Private.....	20, 520
Remounts.....	3, 000

Total..... 285, 485

Mules:

Draft.....	140, 400
Pack.....	3, 735
Riding.....	4, 050

Total..... 148, 185

Grand total..... 433, 670

Pounds.

Hay, 433,670 by 14 by 365..... 2, 216, 053, 700

Oats:

285,485 by 12 by 365.....	1, 250, 424, 300
148,185 by 9 by 365.....	467, 787, 725
	1, 718, 212, 025

Hay, 2,216,053,700 by \$0.99 per hundredweight..... \$21, 938, 931. 66

Oats, 1,718,212,025 by \$2.71 per hundredweight..... 46, 563, 545. 87

Total..... 68, 502, 477. 53

Dog food..... 8, 000. 00

Total..... 68, 510, 477. 53

The average cost of forage per animal per day, taking the average prices under contracts for the fiscal year 1918, is \$0.429.

The sum of \$8,000 has been added to this item to cover cost of dog food for dogs used in Alaska. This is \$250 less than amount appropriated for this purpose fiscal year 1918, but is approximately the cost for the fiscal year 1917. There are 147 dogs used on the trails in Alaska, making the cost of dog food per dog \$54.42 per annum.

Philippine Islands: The following are the average prices per hundredweight paid for forage for the Philippine Islands under contracts for the fiscal year 1917:

Oats.....	\$1. 6061
Hay.....	. 901

The total cost of forage purchased for the Philippine Islands for the fiscal year 1917, was \$451,300. This does not include native grass which is purchased in the Philippine Islands.

All shipments of forage to the Philippine Islands are made from the Pacific coast.

Forage required for the Philippine Islands during the first quarter, fiscal year 1918, has been contracted for. The prices paid under these awards were \$1.32 per hundredweight for hay, \$2.745 per hundredweight for oats and \$2.15 per hundredweight for bran. These prices are \$1.1389 for oats and \$0.419 for hay more than was paid during the fiscal year 1917. As these prices are the latest available they have been used as the basis for this estimate.

The cost of supplying forage for the Philippine Islands from the United States during the fiscal year 1919, based on these prices, will be as follows:

	Pounds.
Hay, 5,605 animals by 9½ by 365.....	19,094,245
Oats:	
3,162 horses by 12 by 365.....	13,849,560
2,443 mules by 9 by 365.....	8,025,255
Total.....	21,874,815
Hay, 19,094,245 by \$1.32.....	\$252,044.03
Oats, 21,874,815 by \$2.745.....	600,463.67
Native grass.....	68,000.00
Total.....	920,507.70

Estimate is made for but \$500,000 under this item, which is the amount called for in estimate submitted by the department authorities, Philippine department.

Increase of animals—United States.

	1918	1919	Increase.	Decrease.
Horses:				
Cavalry.....	14,810	37,100	22,290	
Artillery.....	4,994	162,135	157,141	
Riding.....	3,446	43,920	40,474	
Draft.....	267	18,510	18,543	
Private.....	2,000	20,520	18,520	
Remounts.....	2,200	3,000	800	
Total.....	27,717	285,485	257,768	
Mules:				
Draft.....	9,502	140,400	130,898	
Pack.....	3,188	3,735	547	
Riding.....	808	4,050	3,242	
Total.....	13,498	148,185	134,687	
Grand total.....	41,215	433,670	392,455	

Increase is due to the fact that the allowance of animals for fiscal year 1919 is based on a strength of 100,000 commissioned officers and 1,612,245 enlisted men, or substantially 45 Infantry divisions, whereas figures for fiscal year 1918 were based on a strength of 168,999 officers and men.

Based on the increase in prices for the fiscal year 1918 over prices for the fiscal year 1917, it is estimated that approximately \$10,000,000 will be required to cover the probable increase in prices for the fiscal year 1919, which amount has been included in the estimate under this item.

Corrected statement, estimate 1919, item R. S. 152, salt for public animals: Total number animals, 782,290. (See statement under item 151, forage.)

Allowance, 0.8 ounce per day for each animal.

$$782,290 \times 0.8 \div 16 = 39,114 \text{ pounds.}$$

$$39,114 \times 365 = 14,276,610 \text{ pounds.}$$

$$14,276,610 \times \$0.01 \text{ per pound} = \$142,766.10.$$

Item R. S. 152.—Salt.

[Estimate fiscal year 1919, \$78,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$76,725.00		\$76,725.00	\$1,275.00		\$1,275.00	\$78,000.00
Appropriated, fiscal year 1918.....	5,553.50		5,553.50	1,316.00		1,316.00	6,869.50
Expended, fiscal year 1917.....	3,744.37		3,744.37	1,283.00		1,283.00	5,027.37

REMARKS.

This item covers the purchase of salt for animals, necessary to meet current requirements. The allowance of rock salt for each animal per day is 0.8 ounce. (See par. 1215 A. R.)

Estimate for the fiscal year 1919 is based on the following: 433,670 animals \times 0.8 ounce per day \times 365 days \times \$0.01 per pound, \$78,869.20.

Corrected statement, estimate 1919, item 153, vinegar for public animals: Total number animals, 782,290. (See statement under item 151, forage.)

Allowance 0.1 gill per day for each animal. (A. R. 1215.)

$782,290 \times 0.1 \times 365 = 28,553,585$ gills.

$28,553,585 \div 32$ (gills in 1 gallon) = 892,300 gallons.

$892,300 \times 20$ cents (price per gallon) = \$178,460.

Item R. S. 153. — Vinegar.

[Estimate fiscal year 1919, \$98,915.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$97,815.00	\$97,815.00	\$1,100.00	\$1,100.00	\$98,915.00
Appropriated fiscal year 1918.....	3,285.00	3,285.00	1,100.00	1,100.00	4,385.00
Expended fiscal year 1917.....	744.87	744.87	1,089.75	1,089.75	1,834.62

REMARKS.

This item covers the purchase of vinegar for animals, necessary to meet current requirements. The allowance of vinegar for each animal per day is 0.1 gill. (See par. 1215, A. R.)

Estimate for the fiscal year 1919 is based on the following: 433,670 animals \times 0.1 gill per day \times 365 days \times \$0.20 per gallon, \$98,915.

Corrected statement, estimate fiscal year 1919, item R. S. 154, bedding for animals: Total number of animals, 782,290. (See statement under item 151, forage.)

Allowance, 1,200 pounds per annum.

$782,290 \times 1,200 = 938,748,000$.

$938,748,000 \div 60$ cents per hundredweight = \$5,632,488.

Item R. S. 154. — Bedding.

[Estimate fiscal year 1919, \$3,122,424.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$3,105,424.00	\$3,105,424.00	\$17,000.00	\$17,000.00	\$3,122,424.00
Appropriated fiscal year 1918.....	190,000.00	190,000.00	18,100.00	18,100.00	208,100.00
Expended fiscal year 1917.....	170,827.77	170,827.77	17,365.00	17,365.00	188,192.77

REMARKS.

Under this item is purchased bedding for animals. The regulation allowance of bedding (see par. 1085, A. R.) is 1,200 pounds per animal per annum.

The cost of bedding for the number of animals estimated for the fiscal year 1919 would be as follows: 433,670 animals \times 1,200 pounds per annum \times \$0.60 per hundredweight, \$3,122,424.

Item R. S. 155. Seeds required for the raising of forage at remount depots and on military reservations in the Hawaiian and Philippine Islands.

[Estimate fiscal year 1919, \$5,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,000.00		\$5,000.00				\$5,000.00
Appropriated fiscal year 1918.....	1,000.00		1,000.00				1,000.00
Expended fiscal year 1917.....	2,301.44		2,301.44				2,301.44

REMARKS.

The supplies to be purchased under this item consist of such seeds as may be required for raising forage at the various remount depots.

The following are the present established remount depots: Fort Reno, Okla., Fort Keogh, Mont., Front Royal, Va.

The increase in the amount estimated for the fiscal year 1919 over the cost for the fiscal year 1917, it is believed will be required due to the establishment of a number of auxiliary remount depots.

The total of the items R. S. 155, 156, 157, and 158, of this estimate, covering amounts required for the raising of forage at remount depots, is \$24,000.

The estimated value of forage produced at the remount depots for the fiscal year 1917 was as follows:

	Quantity.	Estimated value.
Fort Keogh, Mont.:		
Oats.....	pounds..... 460,000	\$10,000.00
Hay (alfalfa).....	do..... 1,000,000	10,000.00
Hay (timothy).....	do..... 150,000	1,650.00
Straw.....	do..... 400,000	2,000.00
Front Royal, Va.:		
Oats.....	do..... 80,000	800.00
Hay (alfalfa).....	do..... 40,000	400.00
Hay (other hay, including clover, orchard, and blue grass).....	do..... 30,000	225.00
Corn.....	barrels..... 295	1,475.00
Corn fodder.....	bundles..... 3,000	180.00
Fort Reno, Okla.:		
Hay (alfalfa).....	tons..... 1,000	18,000.00
Hay (prairie).....	do..... 150	1,500.00
Hay (Sudan).....	do..... 40	400.00
Hay (baled).....	do..... 62	930.00
Oats.....	bushels..... 1,000	700.00
Seed (alfalfa).....	do..... 250	2,500.00
Seed (Feterita).....	do..... 95	14.50
Seed (Sudan).....	pounds..... 1,200	490.00
Feterita.....	tons..... 600	10,800.00
Total estimated value.....		62,182.50

Item R. S. 156.- Implements required for the raising of forage at remount depots and on military reservations in the Hawaiian and Philippine Islands.

[Estimate fiscal year 1919, \$10,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$9,725.00		\$9,725.00	\$275.00		\$275.00	\$10,000.00
Appropriated, fiscal year 1918.....	5,000.00		5,000.00	200.00		200.00	5,200.00
Expended, fiscal year 1917.....	4,235.72		4,235.72	603.00		603.00	4,838.72

REMARKS.

The supplies to be purchased under this item consist of plows, harrows, threshing machines, rakes, hoes, and other farming implements required for raising forage at remount depots, and in the Hawaiian and Philippine Islands.

The increase in the amount estimated for the fiscal year 1919 over the cost for the fiscal year 1917, it is believed will be required, due to the establishment of a number of auxiliary remount depots.

Item R. S. 157.—Labor required for the raising of forage at remount depots and on military reservations in the Hawaiian and Philippine Islands.

[Estimate fiscal year 1919, \$5,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,000.00	\$5,000.00	\$5,000.00
Appropriated fiscal year 1918.....	500.00	500.00	500.00
Expended fiscal year 1917..	4,438.88	4,438.88	4,438.88

REMARKS.

The services required under this item consist of the hire of such labor as may be required in addition to the regular authorized labor at remount depots for raising forage.

The amount estimated for the fiscal year 1919 is approximately the same as the cost for the fiscal year 1917.

Item R. S. 158.—Expenses incident (other expenses) required for the raising of forage at remount depots and on military reservations in the Hawaiian and Philippine Islands.

[Estimate fiscal year 1919, \$4,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$4,000.00	\$4,000.00	\$4,000.00
Appropriated fiscal year 1918.....	750.00	750.00	750.00
Expended fiscal year 1917..	3,759.40	3,759.40	3,759.40

REMARKS.

Expenditures under this item consist of purchase of supplies or engagement of services in connection with the raising of forage at remount depots, not included under items 155, 156, and 157, ante.

The amount estimated for the fiscal year 1919 is approximately the same as the cost for the fiscal year 1917.

ARMY APPROPRIATION BILL, 1919.

Item R. S. 159.—Straw for soldiers' bedding.

[Estimate fiscal year 1919, \$3,482,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$3,481,500.00	\$3,481,500.00	\$500.00	\$500.00	\$3,482,000.00
Appropriated, fiscal year 1918.....	7,000.00	7,000.00	500.00	500.00	7,500.00
Expended, fiscal year 1917.....	10,510.44	10,510.44	500.00	500.00	11,010.44

REMARKS.

Under this item is purchased straw for soldiers' bedding. The issue of straw for this purpose is authorized by paragraph 1084, Army Regulations, as follows:

"Except for troops serving in the Tropics, when mattresses are not supplied, a bed sack and 30 pounds of straw a month for bedding will be furnished to each enlisted man in barracks or in a permanent or a maneuver camp, and to each prisoner in a guardhouse; and a bed sack and such quantity of straw as the chief medical officer may certify to be necessary to each enlisted man in a field hospital. In the field, in cases not covered above, such quantity of straw or hay for the bedding of troops is authorized as the commanding officer, after advising with the medical officer of the command, may deem necessary to preserve the health of the troops. So far as practicable, an iron bunk will be furnished to each prisoner in a post guardhouse and prison room."

Based upon the number of troops estimated for the fiscal year 1919, the amount required will be as follows: 1,612,245 men \times 30 pounds per month \times 12 months \times \$0.60 per hundred pounds = \$3,482,449.20.

Item R. S. 160.—Stationery.

[Estimate fiscal year 1919, \$8,782,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$8,782,000.00	\$8,782,000.00	\$20,000.00	\$20,000.00	\$8,782,000.00
Appropriated, fiscal year 1918.....	100,230.00	100,230.00	20,000.00	20,000.00	120,230.00
Expended, fiscal year 1917.....	452,932.52	452,932.52	20,789.00	20,789.00	473,701.52

REMARKS.

The supplies to be purchased under this item consist of paper, pencils, penholders, pens, ink, desk baskets, shears, inkstands, blotters, rulers, and such other supplies as may be required. The principal organizations for which stationery is supplied by the Quartermaster Corps, including The Adjutant General's Department in the field, are department headquarters, artillery district headquarters, post headquarters, recruit depots, quartermaster depots and offices, constructing quartermasters, company orderly rooms, quartermaster sergeants, as well as courts, board, special reports, military attachés, officers, retired officers, etc.

The amount estimated for the fiscal year 1919 is based on the per capita cost for the fiscal year 1917.

Item R. S. 161.—Typewriters, purchase and exchange of.

[Estimate fiscal year 1919, \$3,000,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$2,986,050.00	\$2,986,050.00	\$3,950.00	\$3,950.00	\$3,000,000.00
Appropriated, fiscal year 1918.....	18,000.00	18,000.00	3,960.00	3,960.00	21,960.00
Expended, fiscal year 1917.....	296,758.80	296,758.80	3,950.00	3,950.00	300,708.80

REMARKS.

Under this item are purchased typewriting machines and parts for repair of such machines. The department is authorized by law to exchange old machines as part payment for new ones. This method has been found to result in considerable saving in the purchase of machines.

During the fiscal year 1917, 4,438 typewriting machines of all kinds and sizes were purchased. The average cost of these machines was \$69.25 each; the average allowance of old machines exchanged as part payment for new machines was \$15.83.

The unusually large number of machines purchased during the fiscal year 1917 was due to the great increase in clerical work at department headquarters, depots, and posts, and for equipment of additional troops.

The amount required for the fiscal year 1919, based on the per capita cost for the fiscal year 1917, would be approximately \$6,000,000, but it is believed that the amount estimated for will be sufficient.

Item R. S. 161a.—Typewriters, repair of.

[Estimate fiscal year 1919, \$62,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$61,430.00	\$61,430.00	\$570.00	\$570.00	\$62,000.00
Appropriated, fiscal year 1918.....	2,000.00	2,000.00	570.00	570.00	2,570.00
Expended, fiscal year 1917.....	2,806.08	2,806.08	570.00	570.00	3,376.08

REMARKS.

The amount estimated for is based on the per capita cost for the fiscal year 1917.

Item R. S.—Blank books for the Quartermaster Corps.

[Estimate fiscal year 1919, \$10,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$9,200.00	\$9,200.00	\$800.00	\$800.00	\$10,000.00
Appropriated, fiscal year 1918.....	100.00	100.00	800.00	800.00	900.00
Expended, fiscal year 1917.....	1,285.20	1,285.20	800.00	800.00	2,085.20

REMARKS.

Under this item are purchased such blank books as may be necessary for use of the Quartermaster Corps.

The amount required for the fiscal year 1919, based on the per capita cost for the fiscal year 1917, would be approximately \$38,000, but it is believed that the amount estimated for will be sufficient.

Item R. S. 163.—Blank forms for the Quartermaster Corps.

[Estimate fiscal year 1919, \$250,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$247,500.00	\$247,500.00	\$2,500.00	\$2,500.00	\$250,000.00
Appropriated fiscal year 1918.....	29,600.00	29,600.00	2,900.00	2,900.00	32,500.00
Expended fiscal year 1917.....	1,216.07	1,216.07	2,510.00	2,510.00	3,726.07

REMARKS.

The services to be procured under this item consist of the printing of such blank forms as are required for the Quartermaster Corps.

The large increase in amount estimated for the fiscal year 1919 over the amount appropriated for the fiscal year 1918 will be required, due to the large increase in the Army, thereby necessitating a great increase in the number of forms to be supplied.

Item R. S. 164.—Certificates for discharged soldiers.

[Estimate fiscal year 1919, \$10,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$9,900.00	\$9,900.00	\$100.00	\$100.00	\$10,000.00
Appropriated fiscal year 1918.....	1,000.00	1,000.00	100.00	100.00	1,100.00
Expended fiscal year 1917.....	86.99	86.99	100.00	100.00	186.99

REMARKS.

The services to be procured under this item consist of the printing of certificates of discharged soldiers.

The increase in amount estimated for the fiscal year 1919 over the amount appropriated for the fiscal year 1918 will be required due to the large increase in the strength of the Army.

Item R. S. 165.—Printing department orders and reports.

[Estimate fiscal year 1919, \$175,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$150,000.00	\$150,000.00	\$25,000.00	\$25,000.00	\$175,000.00
Appropriated fiscal year 1918.....	78,500.00	78,500.00	26,500.00	26,500.00	105,000.00
Expended fiscal year 1917.....	33,009.73	33,009.73	25,100.00	25,100.00	58,109.73

REMARKS.

The supplies purchased under this item consist of such printing materials as presses, type, rollers, etc., as may be required for use at headquarters, posts, and depots where printing presses are operated.

The services consist of the hire of such labor as may be required in addition to the services of enlisted men detailed for this purpose.

The amount required for the fiscal year 1919, based on the per capita cost for the fiscal year 1917, would be approximately \$1,000,000, but it is believed that the amount estimated for will be sufficient.

NOTE.—The law requires that printing be done at the Government Printing Office or by contract after due notice and competition, except in such cases where it is impracticable to have the necessary printing done by contract, the same is done, with the approval of the Secretary of War, by purchase of material and hire of necessary labor for the purpose.

The period of contracts does not extend beyond the end of the fiscal year in which made.

REGULAR SUPPLIES, QUARTERMASTER CORPS.

(Supplemental estimate.)

Original estimate.....	\$203, 031, 811. 00
Supplemental estimate.....	29, 058, 914. 54

Fiscal year 1919.—Appropriation: "Regular supplies."

ITEM 114A.—FIELD RANGES.

No. 1 field ranges.

3,000,000 men÷3,600 men per regiment=833 regiments.

833 regiments×12 organizations=2 No. 1 ranges per organization.

833 regiments×3 organizations=1 No. 1 range per organization.

Total number ranges per regiment=27.

833 regiments×27 No. 1 ranges per regiment, 22,491.

Estimated life of range 4 months=3 per year each organization.

Total number ranges for 1 year, 67,473.

Average price complete, \$34.70.

Average price without equipment, \$26.365.

Estimated equipment lasts 1 year; range 4 months.

Therefore one range complete is required at \$34.70 and two ranges without equipment at \$26.365.

22,491 ranges complete, at \$34.70.....	\$780, 437. 70
44,982 ranges without equipment, at \$26.37.....	1, 186, 175. 34

23,252 field ranges No. 2.....	494,570.04

3,308,668.60

Item 117.—Appliances.

For purchase of rolling kitchens.

No amount was included in the original estimate for purchase of rolling kitchens, as it was believed that the number provided during the current fiscal year would be sufficient for equipment of 1,612,000 men.

Due to the fact, however, that all rolling kitchens provided during the current fiscal year will require replacement during the fiscal year 1919, and as it requires six months or more to procure, estimate is submitted below for the full number required for equipment of 3,000,000 men.

Average capacity of rolling kitchens, 200 men.

3,000,000 divided by 200 equals 15,000 rolling kitchens.

Average cost of kitchens, \$1,000 each.

Amount of estimates, 15,000 multiplied by \$1,000 equals \$15,000,000.

Item 126.—Bake ovens.

For purchase of field bakeries.

3,000,000 men divided by 25,000 men—average strength of divisions 120 companies.

104 companies, to which should be added one-third for upkeep, total 35,160 companies.

120 companies multiplied by 15 ovens per company to be replaced, total ovens, 1,800.

Average price per bakery, \$13,026.

Average price per oven, \$264.20.

160 companies, at \$13,026.....	\$2,084,160
1,800 ovens, at \$264.20.....	475,560

Total required for field bakeries..... 2,559,720

No amount was included in the original estimate for purchase of field bakeries, as it was believed that the number provided during the current fiscal year would be sufficient for equipment of 1,612,000 men.

Due to the fact, however, that all field bakeries provided during the current fiscal year will probably require replacement during the fiscal year 1919, and as it requires six months or more to procure, estimate is submitted herewith for the full number required for equipment of 3,000,000 men. Amount of estimate, \$2,559,720.

Item 127.—Ice machines.

For the purchase and installation of machinery for ice and refrigerating plants for 40 cantonments in France, at an approximate cost of \$70,000 each; total.....

\$2,800,000

For the purchase and installation of one additional large ice and refrigerating plant similar to the one now being installed in France, which will take care of approximately 1,000,000 men.....

2,000,000

Total..... 4,800,000

Deduct for 1,612,000 men already estimated for.....

1,400,000

Amount required..... 3,400,000

Item 133.—Laundries.

For the purchase of machinery and equipment for laundry plants; estimated as required for 3,000,000 men. 60 laundry plants, at a cost of \$200,000 each: total.....	\$12,000,000
Deduct for 1,612,000 men already estimated for.....	6,000,000
Total required.....	6,000,000

Recapitulation.

Item 114a. field ranges.....	\$2,099,194.54
Item 117, appliances (rolling kitchens).....	15,000,000.00
Item 126, bake ovens (field bakeries).....	2,559,720.00
Item 127, ice machines.....	3,400,000.00
Item 133. laundries.....	6,000,000.00
Total.....	29,058,914.54

Capt. DALY. There is an item there about which I would like to make a statement. In the item of forage, under this appropriation, there is an error of \$29,276,000. We have asked that that estimate as submitted be increased by \$29,276,000. There was an error of that amount, and that is due this—

The CHAIRMAN. That ought to be added?

Capt. DALY. Yes, sir: \$29,276,000. That is item 151, under regular supplies.

That is due to the fact that when the estimate was prepared in the division charged with its preparation, for a basis upon which to submit a tentative estimate to the Secretary of War for his consideration, they did not include the proper number of animals. After the detailed notes were made up, which we now have, reached the estimate division, we checked over that and found that there was an error in the amount for forage, but it was too late to add it to the estimate.

The CHAIRMAN. That is because they did not figure on a sufficient number of animals?

Capt. DALY. The number of animals they figured on was less than the number of animals they are going to have.

The CHAIRMAN. What was the difference in the number of animals?

Capt. DALY. About 300,000.

The CHAIRMAN. How did that happen?

Capt. DALY. It is a clerical error, I imagine, sir.

The CHAIRMAN. What is the annual rate you pay for animals, for forage—the base rate?

Capt. DALY. We base the estimate on the average cost of grain and hay, based on the latest contracts that are available.

Mr. GREENE. About what figures does that range between from year to year?

Capt. DALY. We can get those figures and put that in the record.

Mr. SHALLENBERGER. The price of forage is enormously higher than ever before—fully 100 per cent higher. Have you taken that into consideration in making the estimates for next year?

Capt. DALY. It is based on a per capita cost per animal per day, and that has jumped from 26 to 42 cents a day. The per capita cost prior to this recent disturbance ran along about 26 or 28 cents.

Mr. GREENE. Per day?

Capt. DALY. Per day. Now it is 42.9 cents per animal per day.

Mr. SHALLENBERGER. This discrepancy might have occurred in failing to take that into consideration.

Capt. DALY. It is due to the fact that the people who figured the estimate did not include the proper number of animals, I think, through an oversight, rather than a lack of knowledge.

Mr. SHALLENBERGER. Does the forage item include the grain for the horses?

Capt. DALY. It includes the grain, the hay, and the straw.

Mr. SHALLENBERGER. Everything the horse eats?

Capt. DALY. Yes, sir.

Mr. KAHN. I understand the provisos following the amounts are the law now.

Gen. SHARPE. Yes, sir.

Capt. DALY. The last proviso on page 34, "*And provided further, That the Secretary of War is hereby authorized to use the appropriations of the Quartermaster Corps to reimburse the Apache Indian prisoners of war in the sum of \$4,590 for fence constructed by them around the Fort Sill Military Reservation.*" is a new item.

Mr. KAHN. We had that up before, however. Suppose you explain that provision.

Gen. SHARPE. I have a note on that submitted by the General Staff, through the Chief of Staff.

The CHAIRMAN. Do I understand that this appropriation is to reimburse the Indian prisoners of war confined there for some labor they were purported to have done?

Gen. SHARPE. For building a fence, and for the material provided in the building of the fence.

The CHAIRMAN. The Indian prisoners of war furnished the labor and material?

Gen. SHARPE. It was furnished out of their funds.

Mr. SHALLENBERGER. Who is going to get this money?

Capt. DALY. The Indian prisoners of war.

Mr. SHALLENBERGER. Somebody who has an assignment of the claim of the Indian prisoners of war?

The CHAIRMAN. I want to know what is the basis of the claim. If they were prisoners of war and they were made to work there. I do not see why they should be paid.

Mr. ANTHONY. Did the Government furnish the material?

Capt. DALY. It was furnished, apparently, out of a fund appropriated by the Government for the Apache Indian prisoners of war.

Mr. GREENE. Does this relate to the fort?

Gen. SHARPE. It relates to the reservation there now, and it did relate to that when they built it.

Mr. SHALLENBERGER. What was the purpose of the fence, for pasture?

Gen. SHARPE. Yes, sir.

Mr. SHALLENBERGER. That was used by range men to range cattle upon, was it?

Capt. DALY. We have had a remount station there.

Mr. SHALLENBERGER. When it was first built what was it built for?

Capt. DALY. I do not know.

Mr. KAHN. Does that fence entirely encompass the reservation?

Gen. SHARPE. Yes, sir.

ARMY APPROPRIATION BILL, 1919.

Enclosure No. 2.

June, 1914.	Novem-ber, 1917.	Article.
\$2.30	\$2.15	Blackskin gloves.....
1.63	1.15	Leggings.....
1.68	2.10	Gray flannel shirt.....
2.00	1.50	Gymnasium shoes.....
4.17	1.50	Uniform calf shoes.....
2.25	1.30	Comfortable.....
10.00	12.00	Mattress.....
2.45	1.90	Pillow.....
.17	.24	Pillowcase.....
.45	.60	Sheet.....
13.25	14.75	Drawing instruments.....

All articles except uniforms will be higher when the market is up and down.

The main point of difference was that they were allowed 30 cents per week by law and that was in the Military Academy bill at that time.

When the ration got over 18 cents at that time. Then it was raised when the ration got over 20 cents. Now the ration is 21 cents and therefore they say there is a necessity.

When the ration was 18 cents and therefore they say there is a necessity.

When the ration was 18 cents and therefore they say there is a necessity.

When the ration was 18 cents and therefore they say there is a necessity.

When the ration was 18 cents and therefore they say there is a necessity.

When the ration was 18 cents and therefore they say there is a necessity.

When the ration was 18 cents and therefore they say there is a necessity.

When the ration was 18 cents and therefore they say there is a necessity.

When the ration was 18 cents and therefore they say there is a necessity.

When the ration was 18 cents and therefore they say there is a necessity.

INCIDENTAL EXPENSES.

The CHAIRMAN. The next item is, "Incidental expenses, Quartermaster Corps," and the amount of the estimate is \$10,457,814.59. You got under that item \$19,000,000 at the last session of Congress, and under that item this year you are asking for \$10,000,000. Is that decrease accounted for largely on account of the initial cost of the articles, which you will not have to buy next year?

Capt. DALY. That is one of the reasons. The additional reason is that for this fiscal year, during the early part of the fiscal year, and up to now, we have had to hire a great many civilians. Those are now being replaced by enlisted men and that reduces the appropriation.

The CHAIRMAN. For what purpose are they employed?

Capt. DALY. As laborers and mechanics. It is also due to the fact that we were required to purchase an initial stock of various supplies, and the appropriation asked for the fiscal year 1919, contemplates merely replenishment.

Gen. SHARPE. I will submit a table showing the amounts under the various items.

The CHAIRMAN. Under each item?

Gen. Sharpe. It gives an explanation of each item.

The CHAIRMAN. I also would like to have you put in the record a statement showing how much you have spent of this appropriation last year, and what you have contracted for up to date. Is there anything special in the item you submit, other than the detailed statement?

Gen. SHARPE. No, sir; the statement shows it all, with the explanation under each item.

Mr. McKENZIE. You buy all the supplies for the Army, both at home and abroad, as I understand it, through your department?

Gen. SHARPE. Yes, sir.

Mr. McKENZIE. In the purchase of articles, have you been purchasing sawmills for use in France.

Gen. SHARPE. Those have been all bought by the Engineer Department.

Mr. McKENZIE. Does it go through your office at all?

Gen. SHARPE. No, sir. It is entirely under the Engineer Department and comes out of the engineer funds. The regulations provided that the Quartermaster Corps should provide for all construction work, and the operation of roads and construction and operation of steamboats, but they say further that in the zone of advance the Engineer Department will have charge of all of those activities. That would make a complication and might lead to a duplication of work, and so Gen. Black and I talked the matter over, and I wrote a letter to the Secretary of War saying that I thought all of France should be considered as the zone of the advance, so that we would not be duplicating any purchases or personnel, so that they now have all construction work and the operation of the roads, and the repair of all roads in France.

Mr. McKENZIE. We can get that information from Gen. Black?

Gen. SHARPE. Yes, sir; he will have that as a part of his appropriation.

Mr. TILSON. Does that include ports of debarkation?

Mr. KAHN. You have soldier prisoners at various places in the country, and they are put to work doing things for the Government. Do you pay them?

Capt. DALY. No, sir. We are not interested in this item. We can not justify it, except that we put it in by orders. We were ordered to put it in the same as it has been put in for years.

(Thereupon, the committee adjourned to meet to-morrow, Thursday, January 10, 1918, at 10.30 o'clock, a. m.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Thursday, January 10, 1918.

The committee met at 10.30 o'clock a. m.. Hon. S. Hubert Dent, jr. (chairman) presiding.

STATEMENT OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, ACCOMPANIED BY BRIG. GEN. I. W. LITTELL, BRIG. GEN. CHAUNCEY BAKER, COL. C. B. DRAKE, MAJ. C. O. ZOLLERS, AND MAJ. L. HARDEMAN, QUARTERMASTER CORPS.

Gen. SHARPE. Mr. Chairman, may I go back to the appropriation for subsistence, on page 29 of the bill, the second line, in reference to commutation of rations, for the cadets at West Point, at 40 cents per ration?

When we got back to the department yesterday this paper was in the office. We had not received it before. It is a communication from the treasurer of the Military Academy, requesting that the amount allowed for commutation of ration should be increased from 40 to 68 cents. The latter explains the reason for that advance in the cost of the ration, and I would like to ask that that increase be made in the bill, on line 4, page 29. I will submit the papers in the case for the record.

(The papers referred to are as follows:)

[Third indorsement.]

WAR DEPARTMENT,
ADJUTANT GENERAL'S OFFICE,
January 7, 1918.

To the Quartermaster General for preparation of the necessary papers with the view of having the change made and increase made available upon passage of the Army appropriation bill during the present session of Congress.

By order of the Secretary of War:

J. B. WILSON, *Adjutant General.*

OFFICE OF THE TREASURER,
UNITED STATES MILITARY ACADEMY,
West Point, N. Y., December 22, 1917.

From: The Treasurer, United States Military Academy.

To: The Superintendent, United States Military Academy.

Subject: Necessity for increase in cadet ration allowance.

1. The following data showing the necessity for an increase in the cadet ration allowance, in view of recent increases in price of foodstuffs, is presented for consideration with request that if deemed advisable the necessary steps be taken to have Congress grant an emergency increase during the present session.

2. (a) Inclosure No. 1 shows gradual and continuous increase in price of foodstuffs since February, 1916, which has caused an advance in price of cadet board from \$19.01 per month (65.8 cents per day) to \$29.01 per month (93.2 cents per day) during the same period. The present ration allowance for cadets of 40 cents per day will cover only 41 per cent of the cost of board.

(b) The subsistence allowance for cadets is analogous to the same allowance for the enlisted men, United States Army. The enlisted man, however, is subjected to no charge for the preparation and service of his food, whereas the cadet at present pays from his salary the expenses of wages of all employees of the cadet mess, for the supply and upkeep of china, linen, tableware, silverware, for cleaning material and for laundry of mess linen, as well as freight, express and all delivery expenses connected with the food and other supplies for the mess. When the commutation of rations for the cadets was fixed at 30 cents in 1902 the value of the enlisted ration was 18 cents. In 1915 when the enlisted ration was 23.5 cents, a proportionate increase to 40 cents in the cadet ration was asked for and granted to become effective July 1, 1916. The enlisted ration now being 41.7 cents, the cadet ration, according to the same proportionate increase, should be 68 cents plus.

3. Inclosure No. 2 shows a list of necessary cadet store articles used by cadets and is submitted to show added drain on the cadet's pay due to increase in prices now over those before the war.

B. A. DIXON, *Captain United States Army.*

[First Indorsement.]

UNITED STATES MILITARY ACADEMY,
West Point, N. Y., December 24, 1917.

TO THE ADJUTANT GENERAL OF THE ARMY,
War Department, Washington, D. C.

1. Forwarded, recommending that the item in the Army appropriation bill for the fiscal year 1918, subsistence of the Army, "For payments of commutation of rations of the cadets of the United States Military Academy in lieu of the regular established ration, at the rate of 40 cents per ration," be changed for fiscal year 1919 to make it "68 cents per ration," and that Congress be urged to make this change during the present session for the reasons stated in the body of this letter.

2. If practicable this increase should be made available upon passage of the Army appropriation bill during present session of Congress.

S. E. TILLMAN,
Colonel, United States Army, Superintendent.

[Second Indorsement.]

ADJUTANT GENERAL'S OFFICE,
December 29, 1917.

All articles except uniforms will be higher when the market is entered again.

The main point of difference was that they were allowed 30 cents per ration by law, and that was in the Military Academy bill at that time.

Our rations cost about 18 cents at that time. Then it was raised to 40 cents, when the ration got over 20 cents. Now the rations will probably cost over 40 cents and therefore they say there is a necessity for increase to 68 cents.

Mr. GORDON. Why is it that the appropriation they ask for is higher than the ration?

Capt. DALY. The amount asked for, on an estimated per capita cost of 68 cents, is \$46,000.

Mr. TILSON. Mr. Gordon's question was why the increase is made to 68 cents.

Gen. SHARPE. That covers the cost of the ration.

Mr. GORDON. If the ration only costs 40 cents, why should you estimate it at 68 cents?

Gen. SHARPE. There is always an allowance over the actual cost of the ration to pay for waiters and mess attendants, and cooks, and that all comes out of the part they pay for commutation. It is based upon that amount. When they originally got 30 cents, the ration was only costing about 18 cents. Last year you allowed them 40 cents per ration, and the ration was costing less than that, the difference always being to cover the cost for mess attendants and cooks.

Mr. GORDON. Is there not an estimate made for the cost of the attendants and cooks?

Gen. SHARPE. No, sir; that is paid out of this amount.

Mr. GREENE. Is that true of all parts of the service?

Gen. SHARPE. It is true only at West Point.

Mr. GARRETT. You mean, when you say the cost of the ration is 68 cents, that that is the cost of three meals a day?

Gen. SHARPE. That is for the whole day; yes, sir.

Capt. DALY. In connection with this item, if this amount asked for is allowed, the amount of the item will be increased from \$146,000 to \$248,000, under that particular item.

The CHAIRMAN. What is the increase?

Capt. DALY. The actual increase is \$102,200.

Gen. SHARPE. That would make the total amounts under subsistence \$298,505,855.57.

INCIDENTAL EXPENSES.

The CHAIRMAN. The next item is, "Incidental expenses, Quartermaster Corps," and the amount of the estimate is \$10,457,814.59. You got under that item \$19,000,000 at the last session of Congress, and under that item this year you are asking for \$10,000,000. Is that decrease accounted for largely, on account of the initial cost of the articles, which you will not have to buy next year?

Capt. DALY. That is one of the reasons. The additional reason is that for this fiscal year, during the early part of the fiscal year, and up to now, we have had to hire a great many civilians. Those are now being replaced by enlisted men and that reduces the appropriation.

The CHAIRMAN. For what purpose are they employed?

Capt. DALY. As laborers and mechanics. It is also due to the fact that we were required to purchase an initial stock of various supplies, and the appropriation asked for the fiscal year 1919, contemplates merely replenishment.

Gen. SHARPE. I will submit a table showing the amounts under the various items.

The CHAIRMAN. Under each item?

Gen. Sharpe. It gives an explanation of each item.

The CHAIRMAN. I also would like to have you put in the record a statement showing how much you have spent of this appropriation last year, and what you have contracted for up to date. Is there anything special in the item you submit, other than the detailed statement?

Gen. SHARPE. No, sir: the statement shows it all, with the explanation under each item.

Mr. McKENZIE. You buy all the supplies for the Army, both at home and abroad, as I understand it, through your department?

Gen. SHARPE. Yes, sir.

Mr. McKENZIE. In the purchase of articles, have you been purchasing sawmills for use in France.

Gen. SHARPE. Those have been all bought by the Engineer Department.

Mr. McKENZIE. Does it go through your office at all?

Gen. SHARPE. No, sir. It is entirely under the Engineer Department and comes out of the engineer funds. The regulations provided that the Quartermaster Corps should provide for all construction work, and the operation of roads and construction and operation of steamboats, but they say further that in the zone of advance the Engineer Department will have charge of all of those activities. That would make a complication and might lead to a duplication of work, and so Gen. Black and I talked the matter over, and I wrote a letter to the Secretary of War saying that I thought all of France should be considered as the zone of the advance, so that we would not be duplicating any purchases or personnel, so that they now have all construction work and the operation of the roads, and the repair of all roads in France.

Mr. McKENZIE. We can get that information from Gen. Black?

Gen. SHARPE. Yes, sir: he will have that as a part of his appropriation.

Mr. TILSON. Does that include ports of debarkation?

Gen. SHARPE. It includes ports of debarkation; yes, sir.

Mr. TILSON. Do the engineers have entire charge of the wharves etc.?

Gen. SHARPE. Not entirely, at ports of debarkation. We did contemplate having the loading of the ships by the stevedore regiments, and with some of the machinery on the docks that we provided. Gen. Littell can give you that data more complete. We have not provided for the construction of any buildings on the other side, except the construction of motor repair shops. We build those buildings here and send them to France, with the approval of the Chief of Engineers, and also for the construction of ice plants.

Mr. TILSON. This is what I am trying to get at. We all know that lack of facilities at ports of debarkation is one of the crying needs in this war. One of our great troubles is lack of facilities at the ports of debarkation. - We need construction, and we need a great many things there; and I was trying to locate where the responsibility finally rests, whether it would rest upon your department or the Engineering Department.

Gen. SHARPE. I do not understand that we are going to do any construction except that which I have mentioned; but Gen. Littell can give you the data about that.

Gen. LITTELL. The Quartermaster Corps has done nothing at all in the way of construction, for the reasons stated by the Quartermaster General, except the purchasing and shipment of these units of some portable buildings for the repair units, and we are building a large ice house there, and there is the possibility of building some small ones. We are actually building the ice plant now. All other construction work has been done by the Corps of Engineers.

Mr. KAHN. Will you employ the labor over there?

Gen. SHARPE. No, sir; we have to send the labor over.

Mr. KAHN. You have to send it from this side?

Gen. SHARPE. Yes, sir.

Mr. KAHN. Is it civilian labor?

Gen. SHARPE. We have had civilian labor on some of the ice-plant work, but they do not want civilian labor sent over, if they can possibly avoid it.

Mr. KAHN. Are all the men who are putting up these buildings you have on the other side enlisted men?

Gen. SHARPE. I think not. The only buildings we are putting up are the ice plants and the knockdown buildings. I think they are merely men employed temporarily, and when they get through with this they will come home.

Gen. LITTELL. In reference to these ice plants, there has been a unit formed for assisting in the construction of it, to put up the machinery, and also for the running of the plant after it is finished. It is an organization with a major and several captains and some lieutenants, and the other men are enlisted for that purpose. They will run the plant and aid on the construction work which Gen. Pershing wants done. He insisted that a certain number of men be sent over there, of a certain class, to do some of the construction work. I presume they will be on their way in a few days, and some of them have gone. When they have completed their work, unless Gen. Pershing desires their services longer, they will return. They are all civilians.

Mr. KAHN. These stevedore troops are quartermaster's troops. are they not?

Gen. SHARPE. Yes, sir.

Mr. KAHN. Colored?

Gen. SHARPE. Colored; yes, sir.

Mr. KAHN. How are they officered?

Gen. SHARPE. By white men.

The CHAIRMAN. Taken from the officers already in the Army?

Gen. SHARPE. They were specially selected as men who are supposed to have had stevedore experience and were selected on that account.

(The details of the estimate are as follows:)

ESTIMATE INCIDENTAL EXPENSES, QUARTERMASTER CORPS.

Deficiency act, June 15, 1917.....	\$8,000,000
Deficiency act, Oct. 6, 1917.....	9,000,000

Item 166.—Postage.

[Estimate fiscal year 1919, \$75,688.48.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$75,288.48	\$75,288.48	\$400.00	\$400.00	\$75,688.48
Appropriated, fiscal year 1918.....	3,836.37	3,836.37	400.00	400.00	4,236.37
Expended, fiscal year 1917.....	9,355.88	9,355.88	770.59	770.59	10,126.47

REMARKS.

The amount appropriated for the fiscal year 1918 was \$5,890.10 less than the cost, fiscal year 1917.

The increase of \$71,452.11 in this item over the appropriation, fiscal year 1918, is due to the increased strength of the Army.

Item 167.—Telegrams.

[Estimate fiscal year 1919, \$2,200,722.71.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$2,195,722.71	\$2,195,722.71	\$5,000.00	\$5,000.00	\$2,200,722.71
Appropriated, fiscal year 1918.....	105,561.21	105,561.21	21,000.00	21,000.00	126,561.21
Expended, fiscal year 1917.....	115,987.08	115,987.08	12,149.92	12,149.92	128,137.00

REMARKS.

The estimate under this item shows an increase of \$2,074,161.50 over the amount appropriated for the fiscal year 1918.

The amount appropriated for the fiscal year 1918 is \$2,575.79 less than the cost for the fiscal year 1917.

The increase is based on per capita cost.

In view of the greatly increased activities incident to the movement of troops and the maintenance of armies in the field, it is estimated that the cost under this item, for the fiscal year 1919, will materially exceed the appropriation for the fiscal year 1918.

Item 171.—Extra-duty pay to soldiers of the United States Disciplinary Barracks Guard

[Estimate fiscal year 1919, \$54,366.75.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$54,366.75	\$54,366.75	\$54,366.75
Appropriated fiscal year 1919.....	51,957.75	51,957.75	51,957.75
Expended fiscal year 1917.....	51,957.75	51,957.75	51,957.75

Increase of \$2,409 is due to increased strength of the United States Disciplinary Barracks Guards, as follows:

Item 171.—Extra-duty pay to soldiers of the United States Disciplinary Barracks Guard.

Combined strength, First and Second companies, Fort Leavenworth, Kans.:

First sergeants.....	2
Mess sergeants.....	2
Supply sergeants.....	2
Sergeants.....	16
Corporals.....	34
Cooks.....	6
Buglers.....	4
Mechanics.....	4
Privates, first class.....	56
Privates.....	174

Total..... 300

Combined strength, Third and Fourth companies, Alcatraz, Cal., is the same as that indicated above..... 300

Authorized strength, Fifth Company, Fort Jay, N. Y.:

First sergeants.....	1
Supply sergeants.....	1
Sergeants.....	4
Corporals.....	6
Cooks.....	2
Buglers.....	2
Mechanics.....	1
Privates, first class.....	12
Privates.....	36
Total.....	65

One guard at each barracks has the rank, pay, and allowance of a battalion sergeant major..... 3

Grand total..... 668

Item 177.—Office furniture authorized.

[Estimate fiscal year 1919, \$119,576.95.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$116,576.95		\$116,576.95	\$3,000.00		\$3,000.00	\$119,576.95

21 depots, etc.....	21	211			
Total.....	1,168	3,755			

The above statement does not include officers' quarters at National Guard and National Army Cantonments in the United States and in France.

Item 178.—Towels, issue of.

[Estimate fiscal year 1919, \$29,665.39.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$29,315.39	\$29,315.39	\$350.00	\$350.00	\$29,665.39
Appropriated fiscal year 1918.....	4,105.42	4,105.42	350.00	350.00	4,455.42
Expended fiscal year 1917.....	71,279.29	71,279.29	4,924.84	4,924.84	76,204.13

REMARKS.

The estimated amount is based on per capita cost.

The following extract from Army Regulations, 1913, paragraph 1215, as amended by C. A. R. 17, governs the issue of towels:

"9. Towels, huck: For use in the offices of regimental headquarters, when adjuncts of post headquarters, and in the offices of post and coast defense staff officers, in bakeries, and in offices of department and depot quartermasters when the necessity for the issue is certified to by the commanding officer: For each person whose employment therein is authorized, not to exceed two towels a year."

Item 179.—Laborers, hire of, in the Quartermaster Corps.

[Estimates fiscal year 1919, \$213,207.73.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$205,207.73	\$205,207.73	\$8,000.00	\$8,000.00	\$213,207.73
Appropriated fiscal year 1918.....	83,225.00	83,225.00	7,500.00	7,500.00	90,725.00
Expended fiscal year 1917.....	1,126,567.72	1,126,567.72	37,474.25	37,474.25	1,166,041.97

REMARKS.

This amount covers the hire of laborers at salaries ranging from \$120 to \$1,200 per annum. (For list of laborers see Book of Estimates, 1919.)

Item 180.—Interpreters.

[Estimates fiscal year 1919, \$116,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$109,000.00	\$109,000.00	\$7,000.00	\$7,000.00	\$116,000.00
Appropriated fiscal year 1918.....	20,600.00	20,600.00	8,000.00	8,000.00	28,600.00
Expended fiscal year 1917.....	11,235.35	11,235.35	7,696.43	7,696.43	18,931.78

REMARKS.

For list of interpreters see Book of Estimates, 1919.

Item 181.—Spies, hire of, for the Army.

[Estimate fiscal year 1919, \$81,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$81,000.00		\$81,000.00				\$81,000.00
Appropriated, fiscal year 1918.....							
Expended, fiscal year 1917.....	38,345.93		38,345.93				38,345.93

REMARKS.

For hire of spies for duty with the expeditionary forces. (For list of spies see Book of Estimates, 1919.)

Item 182.—Guides, hire of, for the Army.

[Estimate fiscal year 1919, \$15,807.73.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$15,207.73		\$15,207.73	\$600.00		\$600.00	\$15,807.73
Appropriated, fiscal year 1918.....	714.35		714.35	500.00		500.00	1,214.35
Expended, fiscal year 1917.....	32,593.55		32,593.55	240.00		240.00	32,833.55

REMARKS.

For hire of guides as their services may be required for duty abroad. (For list of guides see Book of Estimates, 1919.)

Item 183.—Clerks, compensation of, to officers of the Quartermaster Corps.

[Estimate fiscal year 1919, \$1,433,186.84.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,315,186.84		\$1,315,186.84	\$118,000.00		\$118,000.00	\$1,433,186.84
Appropriated, fiscal year 1918.....	663,000.00		663,000.00	118,000.00		118,000.00	781,000.00
Expended, fiscal year 1917.....	1,294,477.57		1,294,477.57	76,202.96		76,202.96	1,370,680.53

REMARKS.

Increase of \$652,186.84 is based on a per capita cost.

Under this item are paid such employees as chief clerks, clerks employed in keeping accounts of money and property, preparing vouchers, contracts, etc.; records and correspondence clerks; stenographers and typewriters, and similar clerical assistance.

This amount covers the hire of clerks at salaries ranging from \$360 to \$2,500 per annum. (For list of employees see Book of Estimates, 1919.)

Item 184.—Other employees, compensation of, to the officers of the Quartermaster Corps.

[Estimate fiscal year 1919, \$487,230.85.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$449,730.85		\$449,730.85	\$37,500.00		\$37,500.00	\$487,230.85
Appropriated fiscal year 1918.....	278,062.50		278,062.50	37,500.00		37,500.00	315,562.50
Expended fiscal year 1917.....	706,124.61		706,124.61	70,768.43		70,768.43	776,893.04

Item 184.—Other employees, compensation of, to the officers of the Quartermaster Corps.

Increase of \$171,668.35 is based on a per capita cost.

Under this item are paid such employees as civil engineers, superintendents of construction, inspectors of construction, electrical and mechanical engineers, draftsmen, rodmen, custodians, caretakers, storekeepers, watchmen, gardeners, messengers, janitors, scrubbers, horseshoers and farriers, elevator conductors, foremen, foresters, inspectors, packers, superintendents, telephone operators, etc. It covers the hire of employees at salaries ranging from \$12 to \$2,500 per annum in the United States and possessions. (For list of employees see Book of Estimates, 1919.)

Item 185.—Clerks, United States Disciplinary Barracks.

[Estimate fiscal year 1919, \$7,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$7,000.00		\$7,000.00				\$7,000.00
Appropriated, fiscal year 1918.....	8,800.00		8,800.00				8,800.00
Expended, fiscal year 1917.....	9,950.35		9,950.35				9,950.35

REMARKS.

Under this item are employed four clerks for the United States Disciplinary Barracks at Fort Leavenworth, Kans., and one clerk for the Pacific branch, of Alcatraz Island, Cal.

Item 186.—Foreman, United States Disciplinary Barracks.

[Estimate fiscal year 1919, \$3,600.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$3,600.00		\$3,600.00				\$3,600.00
Appropriated, fiscal year 1918.....	5,300.00		5,300.00				5,300.00
Expended, fiscal year 1917.....	5,550.00		5,550.00				5,550.00

REMARKS.

Under this item are employed three foremen for the United States disciplinary barracks at Fort Leavenworth, Kans., at \$1,200 per annum.

Item 187, watchmen, United States disciplinary barracks.—No estimate for the fiscal year 1919. The two watchmen at the United States disciplinary barracks, Fort Leavenworth, Kans., have been replaced by enlisted men.

Item 188.—Organist, United States disciplinary barracks.

[Estimate fiscal year 1919, \$104.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$104.00	\$104.00	\$104.00
Appropriated fiscal year 1918.....	104.00	104.00	104.00
Expended fiscal year 1919.....	104.00	104.00	104.00

REMARKS.

This item represents payment to organist at the United States disciplinary barracks at Fort Leavenworth, Kans., for 52 Sundays, at \$2 per Sunday.

Item 189.—Recruiting, incidental expenses of.

[Estimate fiscal year 1919, \$734,084.75.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$732,884.75	\$732,884.75	\$1,200.00	\$1,200.00	\$734,084.75
Appropriated fiscal year 1918.....	291,461.96	45,361.96	1,000.00	1,000.00	292,561.96
Expended fiscal year 1917.....	150,356.83	150,356.83	1,000.00	1,000.00	151,356.83

REMARKS.

Item 189.—Recruiting.

Increase of \$441,552.79 is based on a per capita cost.

Supplies.—The supplies to be purchased under this item are such articles as chairs, desks, recruiting scales, signs, linoleum, water coolers, multigraphs, sweeping compound, tape measures, bookcases for blanks, etc.

Services.—The services to be procured are painting signs, erection of flagstaffs, repairs to furniture, and such other services as may be required from time to time.

This item also covers the cost of recruiting baths, bill posting, advertising, drayage, ice, laundry, telephone service, removal of garbage, drinking water, and printing.

Items 190 and 191.—Deserters and escaped military prisoners, apprehension of, etc.

[Estimate fiscal year 1919, \$588,307.80.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$586,307.80	\$586,307.80	\$2,000.00	\$2,000.00	\$588,307.80
Appropriated fiscal year 1918.....	118,000.00	118,000.00	2,000.00	2,000.00	120,000.00
Expended fiscal year 1917.....	155,711.54	155,711.54	1,576.37	1,576.37	157,287.91

REMARKS.

The amount appropriated, fiscal year 1918, was \$37,287.91 less than the cost, fiscal year 1917.

Increase of \$468,307.80 is based on the increased strength of the Army.

For the apprehension, securing, and delivering of and the expenses incident to the pursuit of deserters and escaped military prisoners, and no greater sum than \$50 for each deserter or escaped military prisoner shall, in the discretion of the Secretary of War, be paid to any civil officer or citizen for such service and expenses. (Q. M. G. O., Circular 10, Mar. 29, 1915.)

ADJUTANT GENERAL'S OFFICE, July 26, 1917.

The QUARTERMASTER GENERAL OF THE ARMY:

* * * However, the number of apprehensions as compared with the strength of the Army during the fiscal year 1917 was in round numbers 1 in every 100. * * *

By order of the Secretary of War.

EDWARD T. DONNELLY, *Adjutant General.*

Item 192.—Donation of \$5 to discharged prisoners.

[Estimate fiscal year 1919, \$147,076.95.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$146,576.95		\$146,576.95	\$500.00		\$500.00	\$147,076.95
Appropriated, fiscal year 1918.....	18,000.00		18,000.00	500.00		500.00	18,500.00
Expended, fiscal year 1917.....	14,402.67		14,402.67	113.33		113.33	14,516.00

REMARKS.

Increase of \$128,576.95 based on a per capita cost.

This item covers the payment of \$5 to each dishonorably discharged prisoner upon his release from confinement under court-martial sentence involving dishonorable discharge.

Item 195.—Picket ropes.

[Estimate fiscal year 1919 \$26,883.85.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$26,383.85		\$26,383.85	\$500.00		\$500.00	\$26,883.85
Appropriated, fiscal year 1918.....	716.66		716.66	750.00		750.00	1,466.66
Expended, fiscal year 1917.....	66,382.56		66,382.56	249.33		249.33	66,631.89

Item 195—Picket ropes.—Increase of \$25,417.19 is based on per capita cost. This item covers supply of manila rope in field service, and wire rope, posts, and erection of permanent picket lines in connection with Artillery stables. The cost of the picket rope for each battery of Field Artillery is over \$15, at 4 cents per foot. In addition there is chargeable to this item the erection of cedar or other posts for the support of permanent picket lines at Light Artillery posts. Estimate is therefore based on the following: One picket rope for each battery costs, approximately, \$15. (See also General Orders, No. 78, War Department, Oct. 17, 1914.)

Item 196.—Blacksmith's tools and materials.

[Estimate fiscal year 1919, \$297,153.90.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$293,153.90		\$293,153.90	\$4,000.00		\$4,000.00	\$297,153.90
Appropriated fiscal year 1918.....	26,758.82		26,758.82	4,000.00		4,000.00	30,758.82
Expended fiscal year 1917.....	113,698.57		113,698.57	2,178.79		2,178.79	115,877.36

REMARKS.

Item 196—Blacksmith's tools and materials.—Increase of \$226,395.08 is based on a per capita cost. This item covers supply of anvils, leather aprons, chisels, cinch cutters, dividers, files, hammers, hardies, nippers, rasps, stock and dies, tongs, vises, wrenches, etc., for blacksmith shops, and smithing coal. Blacksmiths' tools, including forges for the Cavalry, Field Artillery regiments, and machine-gun platoons required for field service are furnished by the Ordnance Department.

Item 197.—Horseshoes.

[Estimate fiscal year 1919, \$1,305,740.24.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,295,740.24		\$1,295,740.24	\$10,000.00		\$10,000.00	\$1,305,740.24
Appropriated, fiscal year 1918.....	64,828.80		64,828.80	10,000.00		10,000.00	74,828.80
Expended, fiscal year 1917.....	168,699.97		168,699.97	136.33		136.33	168,836.30

REMARKS.

The amount appropriated, fiscal year 1918, was \$94,007.50 less than the cost for the fiscal year 1917.

The increase of \$1,230,911.44 is based on a per capita cost.

This item covers the cost of horseshoes, nails, calks, etc., for approximately 403,061 animals.

Item 199.—Shoeing horses and mules.

[Estimate, fiscal year 1919, \$111,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$100,000.00		\$100,000.00	\$11,000.00		\$11,000.00	\$111,000.00
Appropriated, fiscal year 1918.....	37,006.10		37,006.10	11,000.00		11,000.00	48,006.10
Expended, fiscal year 1917.....	23,027.13		23,027.13	201.29		201.29	23,228.42

REMARKS.

Increase of \$62,993.90 is based on a per capita cost. This item covers the cost of shoeing of approximately 403,061 animals.

Item 200. —Chests and issue outfits.

[Estimate fiscal year 1919, \$146,576.95.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$146,576.95		\$146,576.95				\$146,576.95
Appropriated fiscal year 1918.....	10,586.93		10,586.93				10,586.93
Expended fiscal year 1917.....	15,038.01		15,038.01	778.56		778.56	15,116.57

Item 200—Chests and issue outfits.—Increase of \$135,990.02 is based on a per capita cost.

Issuance of commissary chests is provided for by General Orders No. 105, War Department, 1911, amending paragraph 343, Manual for the Subsistence Department, making an allowance of four commissary chests to each division headquarters.

Commissary chests are described in paragraph 268, Manual for the Subsistence Department; they contain among other articles the following: One ax; one bag, canvas, for nails; bags, cotton and gunny; blades, meat saw; scoops; screw drivers; candlesticks; cleaver; clothesline; faucets; hatchet; twine; lanterns, folding; nails; opener, box; pencils; lumber; saws; scales.

Item 201.—Additional expenditures not expressly assigned to any other department.

[Estimate fiscal year 1919, \$2,263,832.72.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$2,233,832.72		\$2,233,832.72	\$30,000.00		\$30,000.00	\$2,263,832.72
Appropriated fiscal year 1918.....	103,804.78		103,804.78	25,000.00		25,000.00	128,804.78
Expended fiscal year 1917.....	806,765.00		806,765.00	58,563.11		58,563.11	865,328.20

Item 201.—Additional expenditures not expressly assigned to any other department.—The increase of \$2,135,027.94 is based on a per capita cost.

Purchases under this item comprise such supplies as crude oil, acids, etc., for the destruction of mosquitoes and other vermin, disinfectants, soaps, lye, polishes, dictionaries, books, maps, mail boxes, ladders, paints, oils, brushes, mops, numbering machines, coffins, adding machines, flagstuffs, drafting and surveying instruments and materials and repairs for the instruments, office signs, door numbers, sentry boxes, etc.

Services are procured for the care and maintenance of post cemeteries, erection and repair of flagstuffs, repair of surveying and drafting instruments, preparation of reservation maps, setting boundary stones, recording deeds, and other necessary expenses authorized by law and not otherwise provided for.

(Thereupon the committee adjourned until tomorrow, Friday, January 11, 1918, at 10.30 o'clock a. m.)

ARMY APPROPRIATION BILL, 1919.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Friday, January 11, 1918.

The committee met at 10.30 o'clock a. m., Hon. S. Hubert Dent (chairman) presiding.

STATEMENTS OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, AND MAJ. GEN. GEORGE W. GOETHALS, ACTING QUARTERMASTER GENERAL, ACCOMPANIED BY BRIG. GEN. CHAUNCEY BAKER, BRIG. GEN. I. W. LITTELL, COL. C. B. DRAKE, COL. J. S. FAIR, MAJ. L. HARDEMANN, AND CAPT. C. P. DALY, QUARTERMASTER CORPS.

The CHAIRMAN. Gen. Goethals desires to make a statement to the committee before we proceed further with the items in the bill.

Gen. GOETHALS. Mr. Chairman, Mr. Kahn called attention on Wednesday to a statement which appeared in the Army and Navy Register concerning the condition of tent equipment at Camp Mills. I said at that time that the Inspector General had been asked to look into the matter, and Mr. Kahn asked me to get the report and submit it to this committee, and I would like to present it to the committee at this time. The communication that caused this investigation was made to the Secretary of War and was accompanied by photographs taken at Camp Mills.

The following telegram was received on Wednesday:

GOVERNORS ISLAND, N. Y., *January 9, 1918.*
QUARTERMASTER GENERAL OF THE ARMY,
Washington.

Re telegram to-day signed Goethals; report of action taken reference wire of 2d relative to abandonment of property at Camp Mills was made to Adjutant General-January 2, prior detachment of 73 Quartermaster Corps men, 45 from Madison Barracks, under 6 quartermaster officers, on duty at Camp Mills. Now engaged in packing and shipping property to depots as ordered. Forty-first division left tents standing soaked from rain; weather changed and tents are frozen to ground and buried in snow. Attempts to dig out tents proved greater damage would result than from allowing them to stand. When thaw permits tents will be taken down and shipped—serviceable to New York and others warranting repair to Philadelphia depot as directed. Col. George D. Moore, from Inspector General's office, Washington, inspected camp January 2 and can give details.

KNOWLTON.

The following is the report:

JANUARY 9, 1918.

From: Col. George D. Moore, inspector General.

To: The Inspector General of the Army.

Subject: Report of investigation of conditions at Camp Albert L. Mills, N. Y.

1. This investigation was made January 3-4, 1918, pursuant to instructions of the Secretary of War.

2. It was alleged in a communication to the Secretary of War, appended hereto, that Camp Mills had apparently been abandoned, large quantities of tentage being left without guard and exposed to destruction by the weather. Inclosed with the communication were four small photographs, said to be actual view of the camp, showing wrecked tentage.

3. Interviews were had with Lieut. Col. J. C. Johnson, inspector general Eastern Department; Maj. C. H. Smith, New York National Guard, camp quartermaster,

Camp Mills, N. Y. (Maj. F. H. Adams, Quartermaster Corps, having been relieved previous to the inspection); and several of the commissioned and noncommissioned personnel of the camp quartermaster's office at Camp Mills. I personally inspected the entire camp and the storehouse of the camp quartermaster.

4. The photographs accompanying the communication to the Secretary of War were evidently authentic as samples of the general conditions in the camp. Several hundred tents of all kinds were frozen tightly into the ground; some were standing, others partly or wholly down, and in many cases frozen into a solid mass of ice and snow. Careful inspection indicates that a considerable portion of the tentage is still in good condition and that at least 50 per cent can be repaired for further use. Considerable canvas that has been torn by the wind can be used for repairs. It will be impossible to move any of this canvas until the ground is softened enough to permit of digging out the tents without tearing them.

The facts as to the "abandonment" of the camp are as follows:

Pursuant to telegram of instructions (A. G. O. 652, Camp A. L. Mills (Miscellaneous Division), organizations of the Forty-first Division were moved on various dates from Camp Mills to Tenafly, N. J., by the commanding general, port of embarkation. In this connection, attention is invited to the inclosed copies of correspondence relative to the abandonment of Camp Mills. It appears that arrangements were made October 17, 1917, for the removal of troops of the Forty-first Division arriving at that place to Tenafly, N. J., by the commanding general, port of embarkation, Hoboken, N. J. This removal was made as accommodations were available at Tenafly. The movement began November 25, 1917, and continued until December 14, 1917. As each organization moved, details were made from those remaining in camp to take down and pack tentage and property left by those leaving. Before December 11 nearly 14,000 men had been moved. On the night of December 10-11 a violent rain and snow storm came on, continuing for a day or two. Arrangements had been made for moving over 8,000 men on December 11, and they were moved on that date. It was impossible to take down the tents in their wet condition, and many blew down and were frozen into the ground during the storm. The weather has been intensely cold ever since and other tents have been weighted down with snow. Many tents have only the skirts frozen into the ground, these having been banked with earth by the occupants to keep out the cold wind, no floors being provided.

The camp quartermaster has been working with all available force to collect and ship all property. He has also made efforts to salvage tents, but it has been found impossible to remove these without destroying them. A guard has been on duty continuously. It was stated that a few persons had been arrested for attempting to steal property.

The property collected from the camp had been mostly shipped away at the time of this inspection, the storehouse being still full of miscellaneous articles. The greater part of the property gathered up had to be stored on the platform and on the ground near the railway tracks and protected as well as practicable by paulins; however, much of it was unavoidably exposed, and some deterioration resulted.

5. CONCLUSIONS.

(a) That unforeseen weather conditions are responsible for the state of the tentage remaining at Camp Mills, N. Y.

(b) That due diligence has been maintained in the protection of Government property in the camp.

(c) That lack of storage facilities caused some damage to property, this condition being a result of the contemplated disuse of the camp during the winter months.

(d) That it will be necessary to maintain a storehouse and guard at Camp Mills until thawing of the ground permits of the removal of the tents with the least damage possible.

6. RECOMMENDATION.

That provision be made for guarding the tentage at Camp Mills, N. Y., until such time as it is practicable to undertake its salvage.

GEO. D. MOORE.

It is not due to the negligence of anybody in the Army.

Mr. TILSON. There is only one possible condition where there might have been neglect, and that is whether they were taken down as quickly as possible after their use by this contingent.

Gen. GOETHALS. That is what the inspector states, "as each organization moved, details were made composed from those remaining in camp at take down and pack tentage and property left by those leaving."

Mr. KAHN. Did they do that?

Gen. GOETHALS. They did.

Mr. KAHN. And there was no place to store it?

Gen. GOETHALS. No place to store it, except along the track.

Mr. TILSON. And they did not take it down because of the weather conditions?

Gen. GOETHALS. The weather conditions, subsequent.

Mr. TILSON. The weather conditions that happened before they could have taken it down?

Gen. GOETHALS. Yes.

Mr. KAHN. And the weather conditions have continued very bad ever since. The article I read indicated that the property had all been left there without anybody to look after it, and that it was left at the camp in that condition.

Gen. GOETHALS. A guard was left at the camp, and the Quartermaster's men put there to take charge of the property, and they are still there.

There is another statement I would like to make, Mr. Chairman, and that is in regard to the matter of clothing. I noticed a clipping in the Washington Post of yesterday relative to the testimony given by Admiral McGowan before the Senate investigation committee which, by comparison, reflects on the Quartermaster Corps unjustly. The newspaper article states that Admiral McGowan "declared, emphatically too, that the Navy has not found it necessary to resort to shoddy in Navy garments and denies that shortage in the wool made the use of shoddy necessary." Then it goes on to say, later on, "every man on the fighting ships of the Nation and at the training stations has two all-wool blankets, McGowan said, and there is a reserve supply at the various navy yards to provide two more for each man."

A man formerly connected with Admiral McGowan's office in the purchase of blankets and uniforms has been commissioned as an officer in the Quartermaster Corps, and he told me that the statement which appeared in yesterday's Post is not correct, and so I wrote Admiral McGowan and asked him whether the statement was a correct statement of his testimony, or whether he had been misquoted. I got a letter from him yesterday afternoon, in which he says:

THE PAYMASTER GENERAL OF THE NAVY.

Washington. January 10, 1918.

Gen. GEORGE W. GOETHALS. United States Army.

Acting Quartermaster General of the Army.

MY DEAR GENERAL: Referring to your personal note of his afternoon and in pursuance of my offer, made a little later to you by telephone, it gives me a great deal of pleasure to inclose herewith copy of letter I have sent to the chairman of the Senate Military Committee, correcting the error in my testimony yesterday in regard to the question of all-wool garments for the enlisted men in the Navy.

Yours, sincerely,

S. M. MCGOWAN,
Paymaster General of the Navy.

The letter to Senator Chamberlain, referred to in Admiral McGowan's letter to me, is as follows:

NAVY DEPARTMENT.
BUREAU OF SUPPLIES AND ACCOUNTS,
Washington, D. C., January 10, 1918.

The Hon. GEORGE E. CHAMBERLAIN.

Chairman Senate Committee on Military Affairs, Washington, D. C.

MY DEAR SIR: While I was testifying yesterday before your committee I was asked whether the specifications for woolen garments for the enlisted men of the Navy had been recently amended so as to permit of the use of any shoddy. my answer being in the unqualified negative.

Since the completion of my testimony, an officer attached to the Bureau of Supplies and Accounts has called my attention to the fact that the specifications on the one item of overcoat cloth opened July 30, 1917, while adhering to the established prewar all-wool standard, contained the following alternate clause—under which alternate clause awards were made for overcoat cloth now being manufactured for the Navy (no offers being made at that time on the standard prewar specifications):

ALTERNATE BIDS.

"Bid A to be a composition of 65 per cent new wool, one-half blood noils or reworked wool. To be stock dyed. To be a Melton finish."

Subject to tensile strength requirements as follows:

"Cloth constructed of alternate material shall be capable of sustaining a strain of not less than 55 pounds to the inch of warp and 50 pounds to the inch of filling."

My purpose in sending this letter is, of course, that your committee may be in possession of all the facts known to me, further particulars in detail being gladly furnished either by letter or in person should you so desire.

Very respectfully,

S. M. MCGOWAN,
Paymaster General of the Navy.

As far as the wool blankets are concerned, I should like to state that the blanket specifications provide: Size, 58 by 84; color, white; warp, cotton; weight, 3½ pounds; filling, from 50 to 75 per cent wool, balance cotton, reworked wool, or shoddy. I wanted that in the record, Mr. Chairman, because of the unjust comparison between the Navy Department and the Army.

Mr. CALDWELL. Under whose jurisdiction in the War Department would the laying of the water pipes at Camp Mills come?

Gen. GOETHALS. That comes under the cantonment division of the Quartermaster Corps.

Mr. CALDWELL. Do you know how far under the ground they put the water pipes at Camp Mills?

Gen. GOETHALS. I have not any idea.

Mr. CALDWELL. Do you know whether or not those pipes are frozen?

Gen. GOETHALS. I presume they did freeze; I do not know.

TRANSPORTATION OF THE ARMY AND ITS SUPPLIES.

The CHAIRMAN. The next item is "Transportation of the Army and its supplies," and the amount you are asking for is \$809,532,025.72, and then you have a supplemental estimate for \$144,647,990, making the total you are asking for \$954,180,015.72.

Gen. SHARPE. Mr. Chairman, the total amount asked for in this bill is \$809,532,025.72. Then in a supplemental estimate we are asking for \$144,647,990, or a total of \$954,180,015.72.

There was appropriated for last year, under the act of May 12, 1917, \$16,000,000, and under the deficiency act of June 15, \$249,672,454,

and under the deficiency act of October 6, \$375,000,000, making the total appropriated for this year \$612,963,745.42.

I would like to submit, Mr. Chairman, a table showing an analysis of the various items of the appropriations made for last year, and I would also like to submit the notes explanatory of those items.

The CHAIRMAN. Have you the figures to show how much of the appropriation made last year has been spent up to date?

Gen. SHARPE. We have not got that, recently. I sent for those figures but they have not been able to complete them in the Finance and Accounting Division. I will have that inserted in the record also, showing the amount expended in 1917 and making a comparison with the expenditures of previous years.

The CHAIRMAN. How do you account for the supplemental estimate of \$144,647,990?

Gen. SHARPE. The estimate was made for an army of 1,612,245 men and 100,000 officers, making a total of 1,712,245 men and officers, and then the supplemental estimate was to bring that up—

The CHAIRMAN. You say 1,712,245?

Gen. SHARPE. Yes, sir; that includes both officers and men. Then a supplemental estimate was made to cover the increases that would be involved for an army of 3,000,000 men, for all such items as would take six months or more to supply.

The CHAIRMAN. That would include what under this item?

Gen. SHARPE. That is for motor trucks, harness, carts, wagons, and pack rigging.

The CHAIRMAN. I have been told that in the transportation of motor trucks to France shipments have been made of parts and other parts have been left behind, so that it was weeks afterwards before the complete outfit was there. Is there anything in that?

Gen. SHARPE. Gen. Baker can tell you about that.

The CHAIRMAN. What was the reason for that?

Gen. BAKER. I only know of one instance, early in the procedure, in which a supply of trucks was sent over, and the bodies were sent from another port, practically at the same time. The ships arrived separately and in separate convoys. Motor trucks, however, go over complete, right along, and their parts accompany the trucks.

The CHAIRMAN. There was one instance of that kind which occurred, due to the fact that the different parts were shipped from different points?

Gen. BAKER. Yes, sir.

Mr. GARRETT. But you are not making that kind of shipments any more?

Gen. BAKER. No; that was were early in the procedure, and it happened at a time—I only know of it incidentally. I was not in the country at the time; I was in France, myself.

Mr. KAHN. Have you standardized your motor truck?

Gen. SHARPE. Yes, sir. I would like to say in reference to that that is a work that has been going on in the department for five years. It is a work which I feel particularly proud of, because it has been undertaken by the Quartermaster's Department.

I am glad to have an opportunity to make a statement in reference to it, and I can speak very frankly about this, because there is nothing egotistical about the matter. The English say it is the biggest piece of work that has been done in this war. It has resulted in the

standardization of all the motor parts, so that they are now interchangeable, and it does not require an enormous number of spare parts to be carried on hand for each of the different makes of motor trucks that you may have. The work has been accomplished in a marvelous way.

The very best and ablest motor engineers have come to Washington and have volunteered their services. In many cases they represent firms who control very valuable patents, which are their stock in trade. These patents have been placed at the disposal of the Government.

Mr. KAHN. Are you paying anything for the use of those patents?

Gen. SHARPE. No, sir.

Mr. KAHN. They were given voluntarily to the Government?

Gen. SHARPE. Yes, sir. The patents were placed at the disposal of the Government, and men representing the different firms controlling these patents, which comprise their trade secrets, and which are of the highest value to them, commercially, talked with other men, who are competitors of theirs, along practically the same line, and we have evolved various parts, combining the best features of those patents, and in some cases making up entirely new things.

What has been done is more important than anything which has ever been done in the motor business heretofore.

I speak of this frankly, because there is nothing personal about it. Credit for that work is due to Gen. Baker, to Col. Drake, to Maj. Orton, and to Capt. Brittain, and to Mr. Christian Girl, who is down here, and who is recognized to be the highest authority in the country on production, and who has the most wonderful detailed information with regard to the manufacture of all the different parts of the motor truck business. Col. Frailey also assisted in the matter.

These officers have really developed it, with the encouragement and assistance of all the civilians.

Through Mr. Christian Girl we got in touch with a great many of the people interested in the business, and through Maj. Orton, who is dean of the scientific department of the Ohio State University, we were able to get these various expert men, than whom there are no better in this country, to come on here and give their services to the Government, working all day, and almost all night, until 2 o'clock at night, night after night.

As an illustration of what that work is, I want to state that in the development of type B truck, which is a 3-ton truck, there were 10,000 drawings prepared. They had to be modified and corrected. Each type of truck represents, as I understand it, about 4,000 drawings, and so you see what had to be done in the original development of this type of truck.

We had to produce more than were necessary, and they had to discuss it, and then finally they had a complete set for each type of truck.

There must be an accurate list kept of every one of those we have prepared, and of the parties to whom these drawings have been sent with the absolute knowledge that they very latest approved drawing has been sent to them. That, itself, is a considerable piece of work.

I can give you that general statement in regard to it, and I would like you to call on either Gen. Baker or Col. Drake for the more detailed information about it. I can state, however, that after

having gotten this approved by the Secretary of War, we found that there was opposition from some of the part makers who did not care to go into this standardization, and I asked the Secretary to favor the continuance of the development of that truck, which he said he would do, and he backed us up in the matter, so that the opposition which had been made was not possible to divert it, or to hinder the perfection of the plan. The people who opposed it said we could not get the parts made, and we could not get them delivered. In refutation of that, we had a standardized truck here on October 10.

Mr. KAHN. How many sizes have you of those motor trucks?

Gen. SHARPE. There are three sizes, A, B, and AA. The A truck, a ton and a half-truck, and the AA truck is a $\frac{3}{4}$ -ton truck, and the B is a 3-ton truck, which really runs up to almost 5 tons, I believe.

Mr. KAHN. How many trucks are there in a truck company?

Gen. SHARPE. There are 33 in a section.

Mr. KAHN. How many of these companies have you organized, so far?

Gen. SHARPE. Those trucks were delivered on October 10. They were tried out thoroughly here with road tests of all sorts. Those were sample trucks made by hand only. Then we commenced on the development of the manufacture of the parts, and they have delivered a number of trucks which have been run overland down from Detroit to Baltimore, to demonstrate the capacity of the truck. Every one of those trucks arrived except one, which was run into by a railroad train.

There have been practically no defects found in any of them, although there was in one case a little defect found in the differential, and that was due to the fact that the differential had not been opened and not been properly packed with grease. Gen. Baker or Col. Drake can give you all the details in reference to those motor trucks.

Mr. TILSON. How nearly has the standardized truck been reduced to machine production? You say those that were made were hand finished.

Gen. SHARPE. The first five were reported running yesterday.

Mr. TILSON. Machine made?

Gen. BAKER. Machine made, and with the tools.

Mr. TILSON. There is one other question I would like to ask, as to how far in the selection of the different parts of the machine you have based that selection on actual experience or experiments in the field? In Arizona, in 1916, we had a number of companies there, and I know that we had next to my own camp different companies with different kinds of trucks. They were run under the same conditions, doing exactly the same kind of work. Did you utilize such experience as that as a basis for figuring on the relative merits of the different trucks and the different parts which you put into the standardized truck?

Gen. BAKER. Absolutely so. Every engineer who was associated with us worked on the standardized truck, and that is the experience that produced the standardized truck.

The great confusion in obtaining spare parts there, and the great confusion that exists now all throughout the western front, not only

with us, but with the people we are opposing, is what led to this standardization.

I can say, very briefly, that the beginning of this standardization occurred five years ago, when Gen. Aleshire was Quartermaster General. He was very pronounced in his desire to procure a standard truck for the military service. It was a very difficult matter to make the manufacturers or engineers or parts makers believe in that sort of enterprise at that time, because the total number of trucks we were buying in those days amounted to only ten or a dozen a year. Finally, when we got to a point where the Government owned as many as 30 trucks, we were very proud of ourselves. They were more or less of different varieties, and they had the tests, such as Col. Tilson just spoke of, and we tried out the various kinds of trucks.

This work went on, and gradually we induced the manufacturers to standardize certain things, like the tires. When we started, all the parts, the wheels, the tires, and the tread, and other features of the machines were utterly different. Eventually, we got the size of the wheels the same, and the size of the tires the same, and the tread the same, and then we got the same number of speeds and the same place for the chauffeur to sit, with his hand coming to the same gears in the same place. Those things were not easy to attain, because each manufacturer was pursuing his own course, and naturally did not like to change, because it cost him in each instance many thousands of dollars, and he thought he had the best thing procurable, and, at any rate, he had something that was very salable.

As I say, there was a gradual evolution until in the spring of 1916. we had what we considered a pretty fair set of specifications, and we had consulted the manufacturers and the engineers who were members of the Society of Automobile Engineers, and they were very generous in their consultation, but naturally each man desired to introduce the features of his own truck.

Finally, when war came, then everything came with a rush, and they were willing and very anxious and very much in earnest about having the Government produce a standard truck.

They came on to Washington, most of them serving without pay, engineers of the highest type in the country came down to contribute their services and their advice, and the conclusion of the matter was this series of trucks, which we call class B, a 3-ton truck, which is a heavy duty cargo truck, class A, which is a lighter truck, a 1½-ton truck, and very serviceable for lighter work. With that truck we proposed to put in two axles, so that it can be a slow-going machine for heavier service, and a fast-traveling machine for the lighter work, such as is required by the Signal Corps.

There is a little compromise in that. The AA truck is of a similar character, except it is still lighter, and was finally adopted after full consultation, not only with the various bureaus of the War Department that use trucks, but with the Navy Department and the Marine Corps and the Post Office Department, which will ultimately no doubt have large uses for just such a truck.

The plans for the heavy designed truck were completed on the 10th of September. In other words, in about 90 days that work was commenced and accomplished. Usually it takes 3 years in private enterprise to arrive at a conclusion like that in the matter of pro-

ducing a new type or model. Thirty days after that the first trucks were delivered, and delivered under their own power, and they have been run every day since, under close observation by the engineering section on the work, which has given them every test that they can think of giving to a truck, and they have stood them all.

Mr. QUIN. You say 30 days after that the first trucks were delivered: what date was that?

Gen. BAKER. That was on the 10th day of October. The Secretary of War and the President of the United States did the department the honor to receive those trucks.

Mr. ANTHONY. How many of those standardized trucks have you now?

Gen. BAKER. There are five that came through production yesterday.

Mr. ANTHONY. As a matter of fact, the Army is not now supplied with the standardized trucks?

Gen. BAKER. Those that are now supplied are not this standardized type; they are a modified standard type of machine which I endeavored to describe to you at the beginning. That is, they are not a hodgepodge of trucks, and they have certain standard features.

Mr. ANTHONY. How many different varieties of trucks have you sent to France?

Gen. BAKER. Four.

Mr. KAHN. I suppose you will replace them gradually by the standardized trucks?

Gen. BAKER. The plan is, that just as fast as these trucks come through they will be sent to France and placed in the trains there. Those that are in the trains and are not entirely satisfactory will be withdrawn and put on the line of communication and about the depots, and at places where the repairs can be easily made, and where they can be most easily repaired.

Mr. KAHN. How many factories will be turning out the standardized truck?

Gen. BAKER. For all the parts and assemblies, and everything there is in connection with the truck, at least 125 factories are engaged on that now.

Mr. KAHN. The reason I asked that question is because you said it will be six months before you can get them in any quantity.

Gen. SHARPE. Oh, no.

Mr. KAHN. I understood Gen. Sharpe to say it would require six months to supply the trucks. Did I misunderstand you? I think you said the motor trucks, carts, wagons, harness, and pack rigging would take six months to supply.

Gen. SHARPE. Those are the articles which I said would take time to deliver, which would take approximately six months or longer to deliver. They authorized us to increase our estimates for those items up to the requirements of 3,000,000 men. I did not say would take us that length of time to get the trucks.

Gen. BAKER. I think what Gen. Sharpe had in mind was that to start afresh production of articles of that character and let new contracts, after the appropriations become available would require six months to get the production through. But these trucks are now in production, and the contracts have all been let.

Gen. SHARPE. We must place the orders to allow them to continue.

Mr. KAHN. I have received letters myself, and I have seen letters to others that show that conditions in France are very bad, and we have got to speed up in every direction, and what I wanted to find out was whether the entire productive capacity of this country was already at work on these very items that you will need.

Gen. SHARPE. Yes, sir; it is at work, and it is to continue at work to get those deliveries.

Mr. KAHN. You want that appropriation in order to get these deliveries on time?

Gen. SHARPE. Yes, sir.

Mr. KAHN. Have you a standardized engine, too?

Gen. BAKER. Every item is standardized.

Mr. KAHN. Is the engine on the lines of the Liberty motor, something like that?

Gen. BAKER. It is quite a different motor. The Liberty motor is an extremely high-power motor, and of very light weight. There was no necessity for getting light weight in this motor, but those who are authorized to speak are very highly pleased with the motor of this truck.

Mr. KAHN. Your testimony would indicate that not only the War Department and the Navy Department are going to have these trucks, but also the Post Office Department.

Gen. BAKER. That is the lighter truck.

Mr. KAHN. It is one of these standardized types?

Gen. BAKER. Yes, sir.

Mr. KAHN. In view of that fact, do you not think that if it were possible to get other people into the business of producing or making them for the Government, it would be a good thing for us in order to hurry up this matter?

Gen. SHARPE. As I understand it, Mr. Kahn, all the parts makers practically that can be secured are engaged in making these parts. It is simply then a question of assembling, and we can get any number of people to assemble. We had an offer from some people out in Detroit who wanted to start an enormous factory there for the purpose of practically assembling all the trucks we could get, but we did not accept that because we do not care to limit the possible output by depending upon one corporation, no matter how large it is.

Mr. KAHN. What I have in mind is this: When the war broke out and the English found what great quantities of material it would require in every direction, they immediately made a survey of the manufacturing plants in Great Britain. They found that plants that were manufacturing a certain commodity which was used in peace times could be equipped without much cost or delay for the purpose of manufacturing war material of various kinds. Now, I think we can do the same thing in this country.

Gen. SHARPE. That is the work which Mr. Christian Gilr has undertaken in this connection.

Mr. KAHN. You think he now has all the activities in the manufacture of motor trucks and parts of motor trucks in this country that could be pressed into the service of making those things under operation?

Gen. SHARPE. So I understand, sir.

Gen. BAKER. It might be possible to reach out and get others, Mr. KAHN, but, as a matter of fact, there has been such a falling off in the light motor car trade that all of those people are coming to our production department constantly and asking to be allowed to make certain things in connection with that work.

Mr. KAHN. Are you taking advantage of those offers so far as you can?

Gen. BAKER. Very generally. It is shown by the fact that 125 concerns are engaged in that production.

Mr. TILSON. Have you taken any steps to go further and try to standardize the private users of trucks, realizing that there may come a time when we will need a great deal more trucks than we have or can immediately make; and on the other hand that this war might end soon, and that we might be glad to have our trucks used either by the Post Office Department or by private individuals—that is, the great surplus number of trucks? Have any steps been taken toward getting standardization, as far as possible of the private users of this kind of a truck.

Gen. BAKER. The engineers who were engaged in the designing of this truck and the manufacturers who were engaged in the production of it expressed to me the view that these trucks will be of very general use after the conclusion of the war, and, in fact, to such an extent that certain very high class manufacturers of trucks are rather anxious lest their particular products may meet with a degree of competition that will be embarrassing, and they are all very anxious to produce, and they are all engaged, practically every one of them, in the production of this truck, complete, or parts of it.

Mr. KAHN. In case our engineers in France do not build the railroad systems that we will have to build in order to get our troops rapidly, would it be practicable to carry troops in those trucks? The roads over there are supposed to be among the best in the world.

Gen. SHARPE. There are 600 miles of double-tracked railroad.

Mr. KAHN. That we have now?

Gen. SHARPE. That we have to construct.

Mr. KAHN. That is what I was asking, whether possibly by having relays of trucks along the road, it would be possible to transport the men to the front in that way.

One of the officers spoke to me when I was on the Mexican border a year ago, one of the general officers, and told me that in his opinion it was entirely feasible to transport troops in the trucks, and I would like to have your opinion in regard to that.

Gen. SHARPE. That is what saved Paris, the sending out of troops in omnibuses and trucks, all of them that they could collect.

Mr. KAHN. They sent them in everything they could get their hands on. Do you think it would be practicable for our Army to transport the troops for some considerable distance toward the front in these trucks?

Gen. GOETHALS. It would be a question of the trucks and the roads. While the roads were previously good, they have not had any maintenance in the last three years. I think it would be easier to march the men over the 600 miles than to carry them in motor trucks.

Mr. CALDWELL. Another difficulty would be, it seems to me, that they are in so many different factories that the breaking down of one would delay all the others.

Gen. BAKER. I hope we will have little of that breaking down.

Mr. CALDWELL. You do not think you have made an unbreakable one?

Gen. BAKER. No; but we have made a good truck, unless our engineers are all wrong, and I do not believe they are.

Mr. GARRETT. I understood you to say you have 125 factories making these various parts.

Gen. BAKER. Yes, sir.

Mr. GARRETT. Each part is a vital part, I take it, or a necessary part.

Gen. BAKER. Every part is a necessary part.

Mr. GARRETT. With that many concerns making the different parts, suppose one of that number of 125 factories, any number of them from one to any other given number should fail to come up with their part, what position would you find yourself in?

Gen. BAKER. That is why we have the large number of those factories. Of those making springs, there will probably be three or four. The engine is being made in four different factories, and the axle in three different factories. In fact, we could only find three factories that could make the axle. They are all specialists.

Mr. GARRETT. There is more than one factory making each part?

Gen. BAKER. That is one of the first elements we considered. We would not give any one factory a contract to make all the various parts, in order to avoid strikes and fires, and all those incidental things that suggest themselves to your mind now. We have avoided that. It has been very skillfully done by our production people. It has been put in their hands, and they are people who have been engaged in this business all their lives.

Mr. GARRETT. It is almost beyond the range of human probability, or even possibility, that there will be a tie-up in this work because of a want of parts?

Gen. BAKER. I can not conceive of it, not even on account of any difficulties with the railroads, because we are running the trucks overland.

Mr. CALDWELL. How many do you calculate you can make in a year, or in six months, complete, set up and running?

Gen. BAKER. We expect in the month of March to make anywhere from 3,000, up. This month we are just coming into production, and we will make a minimum number. Next month there will be a larger number produced, and in the month of March from 3,000, up.

Mr. CALDWELL. What do you think will be the maximum production which you will require?

Gen. BAKER. That we will require?

Mr. CALDWELL. For an army of 3,000,000 men.

Gen. BAKER. For an army of 3,000,000 men we would require 60,000 trucks.

Mr. CALDWELL. How long will it take you to get those 60,000 trucks?

Gen. BAKER. I should say six months from the time we start the production. In fact, we would get the trucks under the new conditions much faster than we would get the army.

Mr. KAHN. I would like to ask you some questions in reference to the subject of transports. How many vessels has the Quartermaster Department at this time operating as transports?

Gen. BAKER. One hundred and seven; that is, in the trans-Atlantic service. That is in addition to those operating on the Pacific.

Mr. KAHN. There are very few operating over there?

Gen. BAKER. Yes.

Mr. KAHN. How many have you there?

Gen. BAKER. Nine all told, and those operating in the Philippines, six, and that includes one between New York and Panama.

Mr. KAHN. Of course, the question of the necessary number of ships is a very serious one.

Gen. BAKER. It is a very serious one.

Mr. KAHN. Have you taken over all the merchant vessels in the Pacific for the transportation of troops?

Gen. BAKER. That is a matter that we present to the Shipping Board. They are the people who control the merchant ships, and it is their duty, under the law, to requisition such vessels, and we have done that.

Mr. KAHN. You have been working in entire harmony with the Shipping Board?

Gen. BAKER. In daily association with the Shipping Board.

Gen. SHARPE. You asked a question a moment ago about the number of motor trucks being delivered. There will be 21,008, and that includes 10,000 of the standardized B type trucks, which have been ordered for delivery, and they will be completed by June 30.

Mr. CALDWELL. That would be approximately enough trucks for an Army of about 1,000,000?

Gen. BAKER. Yes, sir.

Mr. CALDWELL. How are you sending these trucks over? Are you sending them over all set up ready for work, or are they sent over in boxes knocked down, and assembled over there?

Gen. BAKER. There has been some difference of opinion as to how they should go over, whether or not they should be knocked down and boxed, or sent over standing. The ports from which they are sent were canvassed, and Col. Wilkus, who has recently returned from France, was interviewed with regard to the method of doing that, and the universal opinion of all those who expressed an opinion was that more space was saved by leaving the trucks standing and putting in forage in that part of the space around the trucks than by knocking them down and crating them or boxing them, and leaving considerable space there unoccupied.

Mr. CALDWELL. Then you have the advantage of saving the labor of that many more workers.

Gen. BAKER. You do not have to knock them down on this side at an expense for labor, and you do not have to put them up again on the other side at a further expense for labor.

Gen. SHARPE. It might be well to identify Col. Wilkus. He used to be the chief engineer of the New York Central Railroad, and he is now associated with Gen. Atterbury, on the line of communications in France, and is familiar with the conditions over there.

Mr. CALDWELL. This same standard truck you have adopted has not been adopted in all the other branches of the Army, has it?

Gen. BAKER. Only for cargo purposes. It is purely a cargo truck.

Mr. CALDWELL. Do they use exactly the same kind of cargo trucks in the Medical Department, and in the Aviation Section, and in the Ordnance Department?

Gen. BAKER. They will, as soon as we can supply them.

Mr. CALDWELL. The Ordnance Department has a different truck, have they not?

Gen. BAKER. For ammunition and tractor purposes.

Mr. CALDWELL. Was there any special reason why they should have a different kind of truck from the one you have for those two purposes?

Gen. BAKER. They had a four-wheel drive truck. A four-wheel drive truck is one to which the power can be applied on any one of the four wheels, and the result of it is that for certain parts of the machinery there are four times as many parts to get out of order. But they will be able to work out of a bad situation when this truck we have adopted begins to come through in production.

Mr. CALDWELL. The ammunition truck has to go to places that your truck does not have to go?

Gen. BAKER. Presumably so.

Mr. CALDWELL. Are they using a different kind of machine for the ambulances than the light truck you have?

Gen. BAKER. What we call our AA is the one which the Medical Corps is very anxious to get hold of for their ambulances, and as soon as we get them in production all of their ambulance chassis will be of that type, and they will construct on those chassis their own body, because they know what kind of an ambulance body should be used, but they consulted with our engineers, who give them all the aid they want.

Mr. CALDWELL. In the beginning they used various types of trucks, but that was because they had to have as many as they could get?

Gen. BAKER. They had to have as many as they could get, immediately. When I was in France on one of the fronts one of the officers connected with the mechanical transport branch of the English Army told me that one factory in Great Britain was producing 17 different makes of trucks in the beginning. Of course, that worked out in a little while, so that it was reduced. That shows the extent to which they were limited in the matter of standardization.

Mr. CALDWELL. We will overcome all those mistakes?

Gen. BAKER. I hope so.

Mr. CALDWELL. How many different ports of embarkation have we from which we send our material and men?

Gen. BAKER. We have what we call two major ports. Altogether we have used 15, and we will continue to use them in the future, probably more extensively than in the past if we get the ships.

Mr. CALDWELL. At each of these major ports you have under construction great storage houses, or places of embarkation?

Gen. BAKER. Yes.

Mr. CALDWELL. There is one of those great storage places at one of the ports of embarkation. What board located that port?

Gen. BAKER. A board known as the storage board, of which Mr. Morris L. Cook, of the Council of National Defense, is the chairman.

Mr. CALDWELL. Was the Quartermaster Department represented on that board at all?

Gen. BAKER. No.

Mr. CALDWELL. How deep is the water running up to that storage place?

Gen. BAKER. It is not very deep.

Mr. CALDWELL. You can not transport stuff from this storage place with anything like the degree of facility with which it should be transported?

Gen. BAKER. Ships can not put in there.

Mr. CALDWELL. What are they going to do with that storage place?

Gen. BAKER. I have heard Gen. Goethals say he contemplates using it for interior distribution.

Mr. CALDWELL. Do you know what that storage plant cost?

Gen. BAKER. No; I do not.

Mr. CALDWELL. How big is it?

Gen. BAKER. Approximately 125 acres.

Mr. CALDWELL. The buildings are over the whole of it?

Gen. BAKER. A very large part of it; a portion of it will be known as open storage.

Mr. CALDWELL. Have you any figures that would show how long it would take to pump out the channel leading to those buildings, so that big ships or big cargoes could go up there?

Gen. BAKER. No. The cantonment division has charge of all those matters of construction, and they would have all that information regarding the cost and everything of that kind.

Mr. CALDWELL. Up to date have we been able to furnish Gen. Pershing with everything he has asked for without undue delay?

Gen. BAKER. Yes, we have. Of course, when we talk about undue delay, there has been some delay simply because we have not had the ships, and there have been enormous quantities of other things we have not been able to send all at once. But he gives an order of priority or preference, and that order is followed right along.

Mr. CALDWELL. General, I saw or heard a story to the effect that one of the ships leaving America was loaded with dressed beef, and that the ship was equipped with cold-storage facilities to take care of the beef, that it arrived safely in France, and then was not unloaded, but was returned to this country, and when it was returned to America on the way back they cut off the cold storage in order to save coal, and when the ship arrived home at an American port they found an enormous quantity of beef that never had been unloaded, and it was spoiled. That is a matter of common gossip, and I would like to have a record of what happened and the quantity of beef that was destroyed.

Gen. BAKER. My recollection is that there were 240 quarters, weighing approximately 150 pounds each, on one of the transports taken over from the German service and manned and operated by the Navy.

Capt. DALY. The value of that beef was about \$3,300. We can put the details into the hearings. We have the correspondence in reference to the matter.

Gen. SHARPE. It was not discovered until the vessel got back here at the American port. When the vessel arrived on the other side, it was supposed to have been unloaded. It was not unloaded, and they cut off the refrigeration in order to save coal, not knowing that the beef was in that compartment. When they arrived here they found that that quantity of beef was in there, and they got in com-

munication with the port of debarkation on the other side to find out why the beef was not unloaded. All we know is the fact that it did come back here and was spoiled.

Mr. CALDWELL. Was anyone punished for that?

Gen. SHARPE. I do not know. We are getting the reports now.

Gen. BAKER. I understand the Navy Department is investigating the matter.

Mr. CALDWELL. I also heard a story to the effect that certain pipe or rails sent from this side arrived on the other side, and that they claimed over there that it was not wanted, and then it was brought back, and was unloaded on the dock and stayed there two months, Gen. Pershing in the meantime sending cablegrams over here asking where it was, and the reply from this side being that it was in France. Do you remember any such incident as that?

Gen. BAKER. I do not know of any such incident that you recite. I do know of an instance where steel billets——

Mr. CALDWELL (interposing). That is it.

Gen. BAKER (continuing). Intended for the French Government were sent over and returned to this side in order to avoid the delay of taking out the French billets and putting in sand ballast on the other side, which, as Gen. Pershing explained, would have caused that particular ship to have missed the convoy back, and would have delayed that process to that extent. In that case it was necessary for Gen. Pershing to choose between two evils, and he choose what he regarded as the lesser one.

Mr. CALDWELL. Are they using the ordinary liners that go in and out of our ports here for the purpose of transporting any of our men or materials?

Gen. BAKER. Those that go under convoy.

Mr. CALDWELL. Those that do not go under convoy are not being used?

Gen. BAKER. No.

Mr. CALDWELL. Are there large steerage facilities in those that go under convoy?

Gen. BAKER. Yes.

Mr. CALDWELL. The idea is to put in as many of the men as we can on those ships?

Gen. BAKER. Yes.

Mr. CALDWELL. There are some questions in reference to horses I would like to ask.

Gen. SHARPE. Col. Fair can tell you about the horses.

Mr. CALDWELL. What is the method you are now pursuing in the matter of the purchase of horses?

Col. FAIR. We have a method of open-market purchase, approved by the Secretary of War, whereby we use the services of the reputable horse dealers in the country and their organizations to help us to secure the delivery of the animals at concentration points where our boards can inspect and buy those horses that meet the specifications.

The details of the method are these: We have been authorized to purchase a certain number of animals, horses and mules, of different classes, and assign to the purchasing officer in charge of each one of the war zones the number of animals to buy that we think is in accordance with the number that are in the zone to be drawn from. There are four zones, the eastern zone, the central zone, with head-

quarters at Kansas City, the southern zone, with a purchasing officer at Fort Reno, and the northwestern zone, including California, with a purchasing officer at Fort Keough.

The purchasing officer calls on the various dealers who offer to furnish animals, and requires them to state at what place they will deliver them and at what price they will furnish the different classes of animals required, 20 per cent of the animals to be bought directly from the farms. When these animals come in we take the animals from the man who offers them at the lowest price. A maximum price has been established, and if a man offers to furnish them above that price, we say his price is too high, and we can not consider it. Then the dealers who have furnished a large per cent of the animals make us an offer. It is like conducting a private business. They tell us where they propose to deliver the animals and at what rate, and then the purchasing quartermaster arranges, through his inspection boards, of which each purchasing officer has 12, to send one of these boards to the place where the dealers want to deliver the animals, there to inspect them to see whether they comply with the regulations.

From this point the animals which are purchased are shipped to one of the 33 remount depots to be conditioned and cared for.

Purchasing from the farmers is a pretty difficult proposition. If we had a large trained personnel, it would be very desirable to go out and try to buy from the farmers direct, but in the United States of America we have only been able to get 50 men from civil life who are qualified to buy horses and mules, and our organization is not large enough to take in the whole country. It would require a thousand different buyers in a thousand places, but the best we can do at the present time is to buy horses simultaneously in 50 different places.

In connection with the Department of Agriculture we have endeavored to instruct the farmer as to what kind of horses the Army needs and wants. The farmers as a general rule do not know what kind of horses the Army wants.

If the county agents can get together and tell the farmers what kind of horses the Army wants, and if we can get a carload of those horses together, and they are the kind of horses the Army wants, we can buy them from the farmers at a price which would give the farmers a reasonable profit.

The farmers know what the dealers are getting for the horses and that proposition has not worked out very successfully, because many of the farmers thought it was a chance to get rid of horses that could not be worked on the farms, while, as a matter of fact, we have got to have the best animals in the country.

There has been more trouble in the Northwest, in Minnesota and North and South Dakota, than anywhere else. It seems they were very desirous of selling their horses, and a lot of the dealers in that section, when they advertised to buy horses for delivery to the Government, advertised themselves as Government officials. We stopped that and quit dealing with men who did that. They got the farmers to bring the animals in, and the farmers had heard about the dealers getting \$140 for horses, and the dealers would only give them \$100, and that caused a lot of correspondence between us and a number of Congressmen from that section of the country, and that has been

explained to them, and in the purchase of animals in the future we propose to buy 20 per cent direct from the farmers, if possible.

Out of 750,000 animals purchased we have only been able to get 45,000 from the farmers direct by honestly attempting to buy from them. That is due to the fact that they do not understand the kind of animals that we need.

In connection with the purchase of animals for the Army it was our desire to establish in the country the proper idea as to the needs of the Army, both in the matter of riding horses and draft horses. We tried to combine with our purchasing operations a campaign of education in order to teach the farmers what we did not want, and not to sell their horses to the dealers who go throughout the country gathering up the horses.

Under the present methods, as now approved, the dealers, when we announce we are going to buy from the farmers say it will not do for you to pay the farmers the same money you are paying us, because when we buy up the horses and ship them to a central point we have no assurance that we are going to sell them to the Government, and when we do sell we have nothing left but the rejects, and we have them left on our hands.

So we found that the average cost of delivering a horse to the Government at one of our inspection points was \$20 on the average, and the Secretary approved the method of buying the animals direct from the farmers in various places throughout the country, and giving them \$20 a head less for the animals we buy from them, and the dealers get \$20 more, or as much less as they are willing to offer the animals for at the larger points provided for the inspection and reception of the animals.

In addition to providing these plants for inspection of animals, the dealers have to keep them in good sanitary condition so that going to a large plant to inspect and select the animals is a different proposition than sending out to a little country station away off for the inspection of 50 or 60 animals, and getting only 8 or 10 acceptable ones out of that lot.

Mr. CALDWELL. The difference in the price is the difference between the maximum allowed to the dealer and that allowed to the farmer?

Col. FAIR. The difference between the maximum allowed to the dealer and to the farmer.

Mr. CALDWELL. So that it might be you did not pay the dealer any more than an adjoining farmer?

Col. FAIR. It might be, in some cases.

Mr. CALDWELL. What percentage of the present requirements have you obtained?

Col. FAIR. We have in the Army of the United States 340,000 animals. We have obtained a little over 80 per cent of the number we are required to buy.

Mr. CALDWELL. If the Army is increased to 3,000,000 men, from your experience in this business do you think you will have any trouble in getting deliveries of the number of animals that will be needed?

Col. FAIR. We will not have any trouble in getting the horses, but we will have trouble in getting the mules. There is an interesting recommendation which has just been made regarding mules,

a recommendation that comes from France, that we substitute mules in the hauling of the batteries over there.

Mr. CALDWELL. What is the price you are paying for mules?

Col. FAIR. The maximum price that we are paying for pack mules is \$190 for lead mules and for wheel mules \$235. We buy them for a little less than that sometimes.

There is no use in increasing the price for these animals, because the farmer or the planter who wants a mule will pay more than the Government will pay, no matter what the price may be.

Mr. CALDWELL. You think we can get as many for that price as for a higher price?

Col. FAIR. I think we can get as many for that price as for a higher price.

Mr. CALDWELL. Do you think the use of the traction engine on the farms has had any appreciable effect on the price of horses and the supply of horses?

Col. FAIR. I do not think it has. According to current statistics there are 26,000,000 horses in the United States and 10,000,000 mules.

Mr. MORIN. In that connection, will not the use of the motor trucks do away with the necessity of using a good many of the mules in the Army?

Col. FAIR. The motor truck has its own specific function to perform in this war, and so has the animal. The number of animals required for use in connection with our military operations amounts to 1 for every 4 men, according to statistics. France has in her army 1,200,000 animals, and Great Britain has in France 800,000 animals.

Mr. MORIN. How do we expect or intend to furnish the spare parts for making repairs to the motor trucks we will have?

Gen. BAKER. As the trucks come through production, the spare parts will come with them. They are sent over, and with each division of the Army there will be a certain number of machine shops on wheels, and trailers. Those are standardized types of trucks, and they all have exactly the same tools and the same kinds of benches for that class of work, and they go forward with the trucks located at the places where the truck companies will be in operation.

In addition to that, there will be large special shops employing as many as 1,100 or 1,200 men. In each section there will be very thoroughly equipped shops, all equipped exactly alike, with the same tools, so that a man going from one shop to another will find the tools that he was trained on in the new shop.

Mr. MORIN. Will the employees of those shops be men in the military service?

Gen. BAKER. They will be men in the military service.

Mr. MORIN. Organized for that service?

Gen. BAKER. All organized in this country for that purpose and sent over in a body to the other side to take up that work.

Mr. MORIN. They will be organized in connection with the motor-truck service?

Gen. BAKER. Yes, sir. They will be men who have been engaged all their lives, practically, in that class of work.

Capt. DALY. There will be 1,136 men and 54 officers in each unit. They are organized as units.

The CHAIRMAN. For my own information, I wish you would explain to me what is the distinction between this item that involves the question of horses and mules, animals under transportation, and the similar item on page 42, for "horses for Cavalry, Artillery, Engineers, etc.,"

Gen. SHARPE. They have always carried those appropriations separately.

The CHAIRMAN. What is the distinction between the two appropriations?

Mr. KAHN. What is the distinction between the two items?

Capt. DALY. The animals in the Army transportation appropriation are considered as transportation animals, while the horses for the Cavalry, Artillery, and Engineers are mounts.

The CHAIRMAN. Then the item for horses for the Cavalry, Artillery, and Engineers would also involve the question of the purchase of the animals?

Capt. DALY. Yes; but it does not involve the purchase of mules, draft animals, or pack animals.

The CHAIRMAN. They come under the item of animals for transportation.

Capt. DALY. Yes, sir; they are considered as parts of transportation, while the animals in the other items are mounts. That is the distinction.

Gen. SHARPE. In the proposition I submitted last year to change the appropriations, it was the intention to segregate the animals, no matter for what purpose they were to be used, and put them all under one appropriation for animals.

Col. FAIR. I think the distinction here is, Mr. Chairman, that the horses for Cavalry, Artillery, and Engineers are riding horses, and the other animals are carriers.

Mr. ANTHONY. If I remember correctly, last year you had an item of \$80,000,000 for horses. I think that passed the House, and it went to the Senate, and somebody from your department admitted in answer to a question by Senator Weeks, that you did not need that much money, and the amount was considerably cut down.

Capt. DALY. It was cut to \$25,000,000. The first deficiency estimate was for \$75,000,000, and the appropriation of June 15 was based on the estimate submitted prior to that date, which was for \$75,000,000.

Mr. ANTHONY. This committee gave you what you wanted, and then the Senate cut it down?

Capt. DALY. It was cut to \$25,000,000.

Mr. ANTHONY. Did you spend all the \$25,000,000?

Capt. DALY. Yes, sir.

Mr. ANTHONY. Did you find you needed more than that?

Capt. DALY. We asked for \$51,000,000 in the second deficiency estimate, on which the appropriation of October 6 was based, and the amount asked for in the estimate for October 6 added to the estimate of the appropriation made June 15 brought it to about the original estimate.

Mr. ANTHONY. So you really practically expended all you asked for originally?

Capt. DALY. It has not all been expended, but it all will be.

Mr. GREENE. Quite recently, in the plans for the transportation of the Army in the field, the theory was that motor-drawn vehicles would be used on the more distant lines of communication, but as the transportation proceeded into the interior lines horse-drawn vehicles would be substituted for motor-drawn vehicles. How has that worked out in the experience of the present war?

Gen. BAKER. That is the fashion in which it is operated at the present time.

Mr. GREENE. Has the proportion of the number of animal-drawn vehicles that would be employed, in their ratio to the motor-drawn vehicles, held up according to that theory?

Gen. BAKER. Very closely, except that there has been a considerably less number of motor vehicles placed on the lines of communication and in connection with the troops than was anticipated, because they find they can use those much more generously and save a lot of time, and make one body of troops do the work of two by the quick communication that is afforded in that way.

Mr. GREENE. The former theory was that with the heavier transportation which would be carried by the motor-drawn vehicles, they would necessarily have to resort to the highways, and when they once got into the terrain of action the lack of highways would necessitate the use of lighter horse-drawn vehicles.

Gen. BAKER. That is correct.

Mr. GREENE. Is that overcome in part by the laying of temporary tracks, with narrow-gauge carriers used as a means of conveyance?

Gen. BAKER. Only in a measure. The narrow-gauge railroad, the 40 and 60 centimeter roads are used in connection with the trenches, close up to the trenches, where they can be concealed from the enemy's fire or from his air guns. In fact they are used almost exclusively at night, and the lighter ones are used entirely as hand trucks, so that there will be no noise to attract the attention of the enemy at night. Even after that the animals are still required in practically the same numbers as before.

The motor trucks are utilized from the rail head into a point where they can connect up with the wagon, particularly back of the lines, where they can connect up immediately with the depots.

Mr. GREENE. So that after all, the general theory holds good, and the multiplication of more means of communication than was first contemplated has not destroyed the ratio at all.

Gen. BAKER. It is practically the same proportion. The fact of the matter is that the most essential need of the Army, in order to make it fairly available at any moment to the will of the commander is the means of transportation, and the more you multiply those means of transportation, the more active you make the Army, and the more effective you make it, and introducing one kind or type of truck does not mean that you can abandon some other type.

Mr. GREENE. So it comes back to the fact that you have not experienced any reason for decreasing the number of animals used because of the character and extension of the motor-drawn vehicles?

Gen. SHARPE. I think the necessity for the use of animals is increasing, due to the present method of warfare, because after a break is made forward from the trenches, the supplies have to go forward, and you can not possibly send motor trucks through that country, and you have to send the ammunition and supplies by pack mules. There

were some pictures in the papers recently showing mules in the mud almost up to their hips, trying to get out.

Mr. ANTHONY. You are practically duplicating your means of transportation?

Gen. SHARPE. Yes, sir.

Mr. ANTHONY. You have to utilize both motor and horse transportation?

Gen. SHARPE. Yes, sir.

Mr. ANTHONY. How are the ammunition trains equipped; both ways?

Gen. SHARPE. I think so.

Mr. ANTHONY. When you reach the scene of battle, the ammunition trains are of both horse and motor equipment?

Gen. SHARPE. I think so. Along the lines of communication—they are confining the motors mostly to the lines of communication. I would like to say in that connection that even when this war broke out they did not realize the extent to which motor transportation was going to be made use of.

Mr. ANTHONY. I would like to ask what percentage of the motor trucks which you bought at the commencement of the border campaign have gone into the junk pile, and what percentage are still in service.

Gen. BAKER. I do not believe—

Mr. ANTHONY (interposing). In other words, what is the life of the trucks you have been buying in the last three years?

Gen. BAKER. I do not believe that more than 2 per cent of those trucks have gone out of commission; not more than 3 or 4 per cent at the most.

Mr. ANTHONY. You find that the majority of the types you bought three years ago are serviceable now?

Gen. BAKER. Those were bought after a long period of experimentation, very slender experimentation, because we had only one or two trucks to buy, and before that we only had 30 trucks in the whole Army. Those were all of different makes, and we were constantly experimenting with those that we could get hold of.

Mr. ANTHONY. So you do not think there has been a waste in the money you have expended for the trucks you bought in the last three years?

Gen. BAKER. No. Those trucks are at work, and in the meantime the new trucks are being sent to France, so that none of the older trucks are going over there, and we expect every truck we send to France, unless it is hit by a shell, or something like that, to be running when the war ends.

Mr. McKENZIE. Mr. Chairman, I would like to ask Col. Fair one or two questions in reference to the horses. You buy all the horses for the Army?

Col. FAIR. Yes, sir.

Mr. McKENZIE. But for the Quartermaster's Department you simply buy heavy draft horses and mules?

Col. FAIR. Yes, sir.

Mr. McKENZIE. What is the maximum price you pay for horses?

Col. FAIR. For the heavy horses—that is, over 1,400 pounds, from 1,400 to 1,800 pounds—we pay \$230. For the draft horses, from 1,150

to 1,400 pounds, we pay \$190. For the Cavalry riding horses the maximum price is \$165.

Mr. MCKENZIE. Would it be possible for you to put in the record the number of horses purchased in each of the different classes, and a statement in reference to the maximum price and the average price paid, so that we may have that information as to what the horses are costing?

Col. FAIR. Yes, sir; I think I have the notes of that here.

Mr. MCKENZIE. You may put those in the record.

Mr. ANTHONY. I notice you bought some horses in France. From whom did you buy them?

Col. FAIR. They were bought from the French Government.

Mr. ANTHONY. Were they originally American horses, or were they native French horses?

Col. FAIR. They were partly horses sent from America, and partly French horses; mostly French horses.

Gen. SHARPE. I would like to explain about that. We sent with the first convoy the animals pertaining to that convoy and then Gen. Pershing stated that they could get their animals on the other side. That was the idea of economizing ship space. We attempted to buy them over there, and we found out later that we could not get them, and then there was a delay in the shipments from this country, and that also caused a delay in the equipping of some of the units later on, so that it was due to the change in the methods that the delay occurred.

The CHAIRMAN. I want to get this matter straight. As I understand it, under the item for transportation, the purchase of animals is involved only to the extent of pack animals.

Gen. SHARPE. Mules and pack animals.

Col. FAIR. And the heavy draft horses for sections of ammunition trains.

The CHAIRMAN. Then, under the separate item of horses for Cavalry, Field Artillery, and Engineers there is included the officers' mounts.

Gen. SHARPE. Yes, sir.

The CHAIRMAN. This first item is limited specifically to transportation of animals and draft animals?

Col. FAIR. Yes, sir.

Mr. GARRETT. But the general information you gave in regard to the animals applies to all the horses?

Col. FAIR. It applies to all.

Mr. SHALLENBERGER. Under which of these items are the most animals bought, Colonel, under the transportation item or under the item of horses for Cavalry, Field Artillery, and Engineers?

Col. FAIR. It will run about in the proportion of 60 to 40.

Gen. SHARPE. I had the tables separated.

Mr. SHALLENBERGER. I wanted to clear up a point you made as to the profit you allow the dealers, as compared to what the farmers get. You finally agreed that the dealer should have \$20 more than the farmers for the same horse, and you allow him that as a commission?

Col. FAIR. The maximum price that would be paid to the farmers when we go out to get the animals from the farmers direct is \$20 a head less than the maximum price we are permitted to pay the dealers

when they deliver them at their plants for inspection and the branding of the animals.

Mr. SHALLENBERGER. Does that price include transportation?

Col. FAIR. The dealer must pay for the transportation of the horses, and must pay his personnel for gathering up the horses and shipping them to a central point, and he is responsible for all the animals we get. That was arrived at after very careful consideration, and the county agents of the Department of Agriculture, who looked into it, were satisfied that that was a reasonable amount.

Mr. SHALLENBERGER. Is it not true that at one time you sent officers with the buyers, when the farmers brought the horses in, so that they could pass upon the horses before the dealers bought them?

Col. FAIR. The Bureau of Animal Industry of the Department of Agriculture agreed to send their men among the farmers to gather up the horses that they thought would meet our specifications, and after they had gotten them together and notified the central purchasing officer, who was a commissioned officer of the Quartermaster's Department, he went there with his veterinarians to inspect the horses they got together.

Mr. SHALLENBERGER. What I mean is this: Is it a fact that at one time you had officers who practically went with the buyers to certain places where the farmers brought the horses and the farmers sold the horses, and at the same time these men know that there were going to be no rejects?

Col. FAIR. That has not come to my notice.

Mr. SHALLENBERGER. I understand that that has been done, that after the farmer had sold his horse for \$100, later on the dealer received his full Government price for all the animals, and so the dealer took no chances whatever.

Col. FAIR. That is not contemplated in our system of purchasing.

Mr. SHALLENBERGER. I was told that it occurred, and that a great deal of money had been made by the dealers without their taking any risk whatever.

Col. FAIR. In what locality?

Mr. SHALLENBERGER. I was told that that occurred in North Dakota. If I have a carload of 20 horses, the price the Government would make to the dealer at Grand Island, where you have a purchasing agent, would be \$400 more than they would pay me for them at my home town.

Col. FAIR. If you had a carload of 20 horses, you would not know whether we would accept 20 or 5 of the carload.

Mr. SHALLENBERGER. Do you not send an inspector for every carload?

Col. FAIR. As a rule.

Mr. SHALLENBERGER. So that if my horses were inspected and passed, still I get \$20 less; is that true?

Col. FAIR. Yes.

Mr. SHALLENBERGER. If I ship cattle to Kansas City, which bring more money than horses, I am charged 50 cents commission for the selling of the steers, whereas you apparently allow the horse dealers \$20 commission for handling the horses.

Col. FAIR. It is a different proposition. When you ship steers to Kansas City on commission, those steers are not going to be rejected.

Mr. SHALLENBERGER. The steers go for some profit, the same as the horses. But I have a continuing price for the steers, do I not?

Col. FAIR. In the matter of purchasing horses, the man agrees to furnish 5,000 horses at a certain price, and also agrees to maintain at his own expense an inspection plant in proper sanitary condition. That is a big item of expense. We will stop inspecting those horses as soon as that plant is not in good condition. They must make arrangements to build the plant at their own expense, where they propose to show the animals to the Government agent, and it is not the same as buying cattle for shipment. They send buyers over the country to gather the horses in little lots, and finally they get them together into a central place, where they sell them to the Government. All that matter of expense in connection with that whole thing has been gone into, and it was thought that that was a reasonable profit to be allowed on that price.

Mr. SHALLENBERGER. I understood you to say you had been able to find only 50 men in the United States who could judge and buy these horses?

Col. FAIR. That is all we have commissioned for our service.

Mr. SHALLENBERGER. Does the average horsebuyer, who is buying horses have much difficulty in selecting a horse that will pass Government inspection? If a buyer goes out to buy 100 horses, he has the experience as to the kind of horses you are going to take. After he has had some experience, is it not true that most of the horses that he buys, because of his experience along that line, are going to be passed by the Government inspectors?

Col. FAIR. He learns, more or less, the kind of animals he can sell to the Government. But if a man goes out and buys animals from a farmer, he may have five or six horses. There may be two in the lot of five or six that the buyer knows will not be accepted, but the farmer says that he must take them all or none. Then he runs those up to see whether we are going to overlook the defects.

Of the horses accepted by the inspectors for the United States Army, I estimate that less than one-third have been accepted in the United States at the central stations.

Then there is the misunderstanding of the farmer as to what the Government requirements are. We wanted to try to teach him to raise horses that we could use in the Army. I have a list of the trips that were made by a board consisting of a captain of the Quartermaster Corps, a veterinary officer and three clerks, throughout the Northwest to try to get animals, and the number of trips made by those boards cost the Government thousands of dollars in attempting to deal with the farmers where they had no proper understanding of what was wanted. These boards had the task of securing the large number of animals needed in a short space of time.

Mr. SHALLENBERGER. There is a feeling that the Government has discouraged the purchase of horses from the farmers by allowing the dealers to concentrate large numbers of horses and sell them to the Government, and thereby make large amounts of money, because you have not wanted to go to the bother of having numerous collecting places, but preferred to buy them in large quantities.

Col. FAIR. That is not quite a fair statement of the case. We did not have an organization, and we had to utilize the organizations that the dealers had to get the animals together in large numbers.

Mr. GORDON. Did you not have facilities for keeping them?

Gen. SHARPE. The Government would have had to build plants to receive them.

Mr. MORIN. If the colonel will put in the record at this point a table showing the number of animals, the kind of animals, and the cost of the animals used in the transportation of the Army, and the maximum price paid for them, I think that will give us the information we desire.

Col. FAIR. I will do that.

Mr. SHALLENBERGER. The thing I had in mind was the way in which they buy the horses, and the way the dealer makes money out of this proposition.

Mr. GORDON. Gen. Sharpe, a recapitulation of the estimates for the fiscal year 1919 under the items entitled "Transportation of the Army and its supply," consists of 35 separate items, in which are enumerated all the different means of transportation by all conceivable means of conveyances. Among these items are two general items, one of a very general nature, Nos. 229 and 237, and for item No. 229 the appropriation last year was \$1,989,492, and the estimate under that item entitled "Other vehicles, purchase, hire, operation of, maintenance, and repair," is \$278,339,799.45.

Capt. DALY. The first figure you read was for the appropriation for the fiscal year 1918 in the Army appropriation act. The total amount we got under that item for the fiscal year 1918 was \$1,989,492.

The first table does not include the amounts appropriated under the same item in the acts of June 15 and October 6.

Mr. GORDON. What does it amount to, approximately?

Capt. DALY. Probably about \$183,000,000 or \$200,000,000. I do not recall exactly.

Mr. GORDON. Are not the figures available?

Capt. DALY. Yes, sir; I can put them in.

Mr. GORDON. The question I wish to ask concerning that item and also item 237, which is the item entitled "Charter of vessels," for which nothing appears to have been appropriated last year, and for which your estimate this year is \$341,435,000 is whether or not those items do not include a duplication of many of these other different items of transportation.

Gen. SHARPE. No, sir; they do not.

Capt. DALY. In these notes you have each of the items is explained, the purpose of each item.

Mr. GORDON. You have here a number of items for transportation of Signal Corps, of Engineering Corps, and of Medical Corps. Would not those items be duplicated in this \$341,000,000 for the charter of vessels.

Capt. DALY. No, sir; that is all Government transportation. The charter of vessels is for carrying the troops across the sea.

Mr. GORDON. How did you arrive at the item of \$331,000,000?

Capt. DALY. The number of vessels we contemplate using and the charter rate per ton.

Mr. GORDON. Is there any itemized statement of that?

Capt. DALY. Yes, sir; that is in the notes.

The CHAIRMAN. What is the charter rate per ton?

Capt. DALY. It is \$10 or \$12 a measured ton.

Mr. GORDON. How many troops do you figure for a ton?

Gen. BAKER. We figure $4\frac{1}{2}$ tons to a man as an approximate amount.

Mr. GORDON. That is for transportation once.

Gen. BAKER. Yes; for each trip.

Mr. GORDON. This item of \$217,339,797, item No. 229, for "Other vehicles, purchase, hire, operation, and maintenance of"——

Gen. SHARPE (interposing). If you will look up item No. 229 you will see how it is divided up. It is divided into subdivisions from 229A to 229P, and you will find given there the amount for each item, and what each item is for. Then each of the subitems is explained under the note.

Mr. CALDWELL. The allowance of \$341,420,000 for charter of vessels covers how many vessels, and at what tonnage?

Gen. BAKER. It covers 175 ships of approximately 6,800 gross tons. We will need more than that if we go into the program that is now laid down.

Mr. CALDWELL. So that, if we have 3,000,000 men, how many ships would you have to have of that tonnage?

Gen. BAKER. Not less than 280 ships, instead of 175 ships, at a cost of \$492,660,000 instead of \$341,420,000.

Mr. CALDWELL. So that the gross amount would be \$422,660,000.

Gen. BAKER. That is the gross amount.

Mr. CALDWELL. So that that, with the extra allowance, amounting to \$809,532,000 plus \$132,637,990 would be enough for those two items?

Gen. BAKER. That is my understanding.

Mr. CALDWELL. I want to ask about the moving of the vessels. Are you organizing a department of skilled, experienced men in the matter of loading vessels?

Gen. BAKER. We have had them from the beginning, and we have used the stevedore units at the ports for that purpose.

Mr. CALDWELL. Are you making any additional development of that organization now?

Gen. BAKER. We are extending that organization as far as it is possible to do it. That is one of the things you have to be very careful about, in order not to interfere with what labor regards as its rights.

The CHAIRMAN. General, how much of a deficiency have you this year in the appropriation of \$612,963,745.42?

Gen. SHARPE. We have a deficiency of \$252,000,000.

The CHAIRMAN. So that you are really asking for about \$100,000,000 more than you got in that appropriation and the deficiency put together?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. Have these provisos at the end of this item been carried all along?

Gen. SHARPE. The one commencing on page 40 reads:

And provided further, That hereafter, under such regulations as the Secretary of War may direct, the authorized horses of mounted officers ordered for duty over the seas or to Alaska may be transported at public expense to remount depots, or elsewhere in the United States for safe keeping during the absence of such officers.

I would like that legislation included in the bill for the reason that we found it utterly impossible to ship the officers' private mounts to

them. They got lost, and there is endless correspondence in reference to the matter, and we have authority to issue mounts to officers.

The CHAIRMAN. That is the only new item under that head?

Gen. SHARPE. Yes, sir.

Mr. DAVIDSON. I wanted to ask to what extent the four wheel drive trucks for the heavier work have been standardized, if at all?

Gen. BAKER. That is used by the Ordnance Department and the artillery now to a certain extent, for certain purposes, and more particularly for the purpose of tractor work. I understand those departments procure their own trucks. I understand they are using two types of the four wheel drive trucks.

Mr. DAVIDSON. Will you indicate about the cost of these different standardized trucks, if you can, class A, class B, and class AA, and put them in the record?

Gen. BAKER. I will put the cost in the record. The class A and class AA trucks are not yet in production. The contracts have not been let for them, so that we do not know what the cost will be.

Mr. KAHN. Can you approximate the cost of the others?

Gen. BAKER. Approximately \$3,334 apiece for the class B.

Mr. DAVIDSON. That is the heaviest truck?

Gen. BAKER. That is the heavy duty cargo truck. That is about a thousand dollars cheaper than the same truck is being produced for by high class makers now.

Mr. DAVIDSON. The lighter trucks would be less?

Gen. BAKER. Much less.

Mr. CALDWELL. How long do you think it will be before the lighter trucks are ready for delivery, or are in production?

Gen. BAKER. The samples that have been made are now being tested. It is undesirable to undertake to put those trucks in production until the engineers are completely satisfied with the tests, and I understand that in the class A tests they have proven satisfactory, and the Engineers are about to release the designs for production.

Mr. FIELDS. You make the different parts at different factories over the country?

Gen. BAKER. Yes.

Mr. FIELDS. Then you have one central plant, or one or more plants where you assemble the parts, and it is your plan to set up the trucks there, as I understand it, before you transport them?

Gen. BAKER. That is correct.

Mr. FIELDS. These parts come from the factory crated?

Gen. BAKER. Yes.

Mr. FIELDS. Would it not expedite the transportation of the trucks to assemble the different parts that go into the make up of the truck and ship them in crates to France and set the trucks up there? Would that not save a good deal?

Gen. BAKER. There would be a saving in transportation, but that matter was gone into very carefully by those in charge of the production, and the manufacturers have all advised against it.

It is a new product, and it is considered highly desirable to have it set up and put in operation, and tuned up. A truck, no matter how good it is, or how excellent it may be, will have to have its parts running before it can really be regarded as a truck in operation.

Mr. FIELDS. The reason for that, then, as I understand it, is that they want the truck inspected here before it goes abroad.

Gen. BAKER. Fully inspected, to make certain that absolutely every part is complete, and has been tuned up for operation.

Mr. FIELDS. With the thousands of parts being manufactured, if all those parts were shipped across the sea, and there was some part that did not operate correctly, could it not be replaced there as easily as here, and could not the general inspection plant be located there as well as here?

Gen. BAKER. The production section of the department advises strongly against that.

Mr. KAHN. I think the Quartermaster General's Department is following the same policy regarding the trucks that the Signal Corps is following out regarding aeroplanes. The parts are manufactured in different parts of the country and then sent to the Dayton field and put together there.

Mr. FIELDS. Have you only one place to assemble or inspect these trucks, or are there different places where you assemble the parts and set them up for inspection.

Gen. BAKER. There are 15 different manufacturers who are assembling the trucks.

Mr. FIELDS. And putting the trucks up complete?

Gen. BAKER. Putting the trucks up complete, so that we have 15 concerns who supply the complete truck.

Mr. FIELDS. That tends to expedite the deliveries of the trucks?

Gen. BAKER. It will do that, and will tend in the future to give us an opportunity for competition in the production.

Mr. McKENZIE. I would like to ask Gen. Sharpe a few more questions in regard to ocean transportation in this item of \$341,000,000.

How do you go about making your arrangements for ocean transportation? Do you make contracts with the steamship companies; and if so, about what proportion of the traffic is carried by privately owned vessels, and what proportion is carried by Government-owned transports?

Gen. SHARPE. There is none that is carried by Government-owned transports. We have no Government-owned transports between here and Europe. They are leased transports, and we get those through the Shipping Board, by payment of so much per ton in the charter.

Then, in addition to that, we have, or rather the Navy has, a number of vessels which they man, and which are operated for our service to carry the troops. That accounts for the vessels which are being used.

We take advantage of all possible opportunities to ship units over by the commercial liners, landing them in England. I do not recall any shipment of any troops going on a commercial liner to France.

Mr. McKENZIE. All that applies to supplies as well as men?

Gen. SHARPE. The supplies we have not shipped to England. We have shipped a limited quantity, but nothing to any great amount.

Mr. McKENZIE. Has the Government commandeered any vessels?

Gen. SHARPE. Yes, sir; the Shipping Board does that. We have no control over that. We get our vessels from the Shipping Board.

Mr. McKENZIE. In order to get full detailed information on that subject, we ought to have some of the members of the Shipping Board come before us.

Gen. SHARPE. Gen. Goethals, I think, can give you that information.

Mr. McKENZIE. What about the rates? Have the rates for ocean transportation gone up in the last two or three years, to any appreciable extent?

Gen. SHARPE. They have gone up considerably.

Mr. McKENZIE. Do you not make contracts for the payment of the freight? Does that not go through your office?

Gen. BAKER. The contract is drawn by the Shipping Board for their commandeered vessels, and the rate has been for a long time a matter of discussion between the owners of the vessels and the Shipping Board.

Only recently they have finally got their contract agreement, and that is the agreement that we have with all of those vessels that we procure by means of commandeering through the services of the Shipping Board.

There are a large number of vessels, as you know, German vessels that the Shipping Board took over, and some of them were remodeled.

Mr. McKENZIE. They are now operated by the Government?

Gen. BAKER. They are now operated by the Government, either by the Navy or by the Shipping Board crews. The Navy has taken over those as fast as they can arrange for the crews.

Mr. McKENZIE. Is there any competition between the steamship companies in competing for this business?

Gen. BAKER. There is no possible means of procuring anything of that character. The ships that carry our freight are all put in convoy, with naval gun crews on them, and sent over seas under the protection of naval ships. There are no commercial lines operating to the ports that we enter, except in one instance, and in that instance there are only occasional sailings of French steamers, and their cargo space is completely occupied by special cargos for the French Government. We can get no space on them. We can make no arrangements for any commercial shipments to go to France.

Mr. QUIN. I would like to know how the Quartermaster Department arrives at the price they pay for the several different parts of the trucks?

Gen. BAKER. That was done by a committee, after information gathered from as many sources as we could obtain it from, in which the manufacturers were asked to furnish us with estimates of the cost of that production.

For example, take the engine. All of the different features entering into the manufacture of the engine were listed by the production section of the Quartermaster Department and they were asked to make a computation as to what the cost of this production would be. Those desiring to make such an estimate did so.

After that, those figures were taken by a board which sat down and carefully scrutinized all of the estimates and worked them over and arrived at what might be appropriately called a composite price that was regarded as fair. This price was then offered to those people, to all who were in excess of the composite price, and it was left with the manufacturer to accept or decline. In some instances they declined to accept that price because they thought the composite price fixed by the board was lower than they could accomplish the work for with any profit, and because of the fact that it would

require them under the conditions named to operate at a loss. No bidder was given a price greater than that which he bid in his estimates.

Mr. QUIN. Then you feel that you are getting value received for every dollar you spend?

Gen. BAKER. We have had some very high compliments as to the manner in which we approached that subject. We had the best advice we knew how to get, and we determined the question after the most careful consideration of all features entering into it.

Mr. GORDON. General, when you get into this master production of the thousands of those machines, under the plan you have described, will not the cost of producing them be materially less than it is now?

Gen. BAKER. I anticipate that on every new lot of machines the price will be materially less.

Mr. GORDON. Will you enter into contract with these 125 different manufacturing establishments to manufacture these parts at so much per piece?

Gen. BAKER. That has been done for the first production. In future productions we will invite bids and then say to the successful bidder, "You will have to contract for so many trucks at such a price." He will then go to the different parts makers and procure the parts in the ordinary course of business. But in a new enterprise like this it would have been utterly impossible to have induced bidders, except for the most extravagant sums, to have gone into this production.

Mr. CRAGO. In the transportation of the Army to the border, and to these cantonments, there has been endless confusion, and lack in the train equipment that they had to use. Is your department working on any plan in the way of devising the construction of a standard type of car to make up a train which will be economically used in transporting the Army.

Gen. BAKER. No; not as you speak of it. That would be a very difficult undertaking. We have a standard kitchen car.

Mr. CRAGO. Are you developing that?

Gen. BAKER. And we have certain standards for hospital cars, and certain other standards of that character.

Mr. CRAGO. We will have to be using trains of these cars for a long time in moving men from the cantonments to the ports of embarkation and bringing them back.

Gen. BAKER. Yes.

Mr. CRAGO. In transporting the men to these different cantonments a great many of the trains were not provided with any means by which the men could get anything warm to eat. There was no proper provision made for that. Would it not be economical to work along the line of providing that equipment for the trains which will carry these men? That is going to be an immense job, and it seems to me it will be a practical thing if a type of car could be produced which would be properly suited for that service. Would it not be easy to devise a standard steel type of car for the men, which would be comfortable, with the same advantages that a Pullman car has, and then have a specially devised kitchen car and a baggage car that could be used for this purpose?

Gen. BAKER. That would be practical if we had the time in which to do it, and if the resources of the country were not already engaged to their utmost capacity in producing absolutely necessary equipment to move the traffic of the country.

Mr. CRAGO. Up to the present time all of the resources of the country have not been engaged. The railroads have not been buying equipment. If some such type of car as that could be worked out, I should think it would be well worth while to construct them.

Gen. SHARPE. I think it might be undertaken by the railroads. Take, for instance, the kitchen car which was developed. We wanted them to develop a kitchen car of the ordinary type of car, which was simply intended for the use of the kitchen. They would be willing to do that, if, in their opinion, there was a guaranteed justification for the expenditure. Now, it seems to me with the conditions as they now exist, with the general movement of troops, that they are in a position where they may be willing to undertake that construction.

Mr. CRAGO. That will be a continuous movement. There was one instance in which the men rigged up a sort of kitchen with an old-fashioned wood fire practically on the floor of the car, and that was the way they were doing their cooking in that car, and if they did not have wood enough to have that, they went two or three days without anything warm, except at places where they were met by some organization of women and given something warm by them. It seems to me that the health of the men and the care of the men going into the camps is as important a matter as anything we can consider.

Gen. SHARPE. It is, and all troop trains that are on the road during meal time are provided with kitchen cars.

Mr. CRAGO. I knew of numerous instances where the men were transported for several days without getting anything warm. It interferes with the operations of the railroads in their ordinary business to take their cars for that purpose, which they could use for other purposes.

Gen. BAKER. Your idea would be to have the Government build the cars and to be used for that purpose to save the other cars for the use of the railroad?

Mr. CRAGO. That would be my idea, if they can be developed, and I was wondering if there was any amount asked for in this bill that could be used for that purpose.

Gen. BAKER. There are no funds of that kind asked for in the bill.

Mr. CRAGO. Do you not think if that was worked out an item for that purpose in the bill would be approved?

Gen. BAKER. We have a plan for such a car, but that is a type of hospital car, and there are various uses that those cars may be applied to in the transportation of troops in the field.

(Whereupon the committee adjourned until Monday, January 14, 1918, at 10.30 o'clock a. m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON MILITARY AFFAIRS,
Monday, January 14, 1918.

The committee this day met, Hon. S. Hubert Dent (chairman) presiding.

STATEMENT OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, ACCOMPANIED BY BRIG. GEN. I. W. LITTELL, COL. H. J. HIRSCH, MAJ. L. HARDEMANN, MAJ. R. C. MARSHALL, JR., AND CAPT. C. P. DALY, QUARTERMASTER CORPS—Continued.

Mr. CALDWELL. General, in the item of transportation I notice, from items 202-A to 202-E, the estimate seems to be based on 700,000 officers and men. I would like you to explain that for the record.

Gen. SHARPE. That should be 1,700,000 men.

The details of the estimate are as follows:

Deficiency act June 15, 1917.....	\$221, 963, 745. 42
Deficiency act Oct. 6, 1917.....	375, 000, 000. 00
	596, 963, 745. 42

Recapitulation.

(Estimate, fiscal year 1919: Transportation of the Army and its supplies.)

PHILIPPINE ISLANDS AND THE UNITED STATES.

Item No.	Purpose.	Appropriation, fiscal year 1918.	Estimate for fiscal year 1919, Army at strength of 1,712,245 officers and men.		Total.	Estimate per capita, 1,712,245 officers and men.
			Current requirements.	New construction.		
202a-e	Transportation of troops and impedimenta.....	\$1, 723, 700. 00	\$60, 550, 000. 00	\$60, 550, 000. 00	\$35. 363
202f-g	Purchase, operation, maintenance, and repair of railroad equipment.....	25, 500. 000	429, 500. 00	429, 500. 00	. 251
202h	Reimbursement of travel expenses, cadets.....	10, 000. 00	10, 000. 00	10, 000. 00	. 006
203a	Transportation of signal stores.....	164, 000. 00	1, 020, 000. 00	1, 020, 000. 00	. 596
203b	Transportation of engineering stores.....	77, 000. 00	510, 000. 00	510, 000. 00	. 298
203c	Transportation of medical stores.....	59, 000. 00	170, 000. 00	170, 000. 00	. 099
204	Transportation of baggage.....	285, 000. 00	1, 900, 000. 00	1, 900, 000. 00	1. 109
205	Cost of packing and crating.....	135, 000. 00	287, 000. 00	287, 000. 00	. 167
206	Transportation of recruits.....	1, 223, 820. 00	1, 520, 000. 00	1, 520, 000. 00	. 888
207	Transportation of recruiting parties.....	33, 700. 00	60, 000. 00	60, 000. 00	. 035
208	Transportation of applicants for enlistment.....	342, 700. 00	420, 000. 00	420, 000. 00	. 245
209	Travel allowance to enlisted men on discharge.....	1, 600, 000. 00	3, 500, 000. 00	3, 500, 000. 00	2. 044
210	Transportation of persons (military prisoners).....	28, 000. 00	160, 000. 00	160, 000. 00	. 093
211	Transportation of supplies to the militia.....
212	Transportation of the necessary agents and other employees.....	50, 000. 00	120, 000. 00	120, 000. 00	. 070

Recapitulation—Continued.

PHILIPPINE ISLANDS AND THE UNITED STATES—Continued.

Item No.	Purpose.	Appropriation, fiscal year 1918.	Estimate for fiscal year 1919, Army at strength of 1,712,245 officers and men.		Total.	Estimate per capita, 1,712,245 officers and men.
			Current requirements.	New construction.		
213	Reimbursement of travel expenses, civilian employees.....	\$60,180.00	\$150,000.00	\$150,000.00	\$0.087
214	Transportation of clothing and equipage.....	300,000.00	1,360,000.00	1,360,000.00	.794
215	Transportation of other quartermaster's stores..	1,613,000.00	38,560,000.00	38,560,000.00	22.522
216	Transportation of horse equipment.....	15,700.00	95,000.00	95,000.00	.066
217	Transportation of ordnance ordnance stores, and small arms.....	810,000.00	26,000,000.00	26,000,000.00	15.185
218	Wharfage.....	57,100.00	58,500.00	58,500.00	.034
219	Tolls and ferriages.....	10,000.00	171,225.00	171,225.00	.100

AUGUST 21, 1917.

From: Quartermaster General.

To: The Surgeon General, United States Army.

Subject: Amount required for transportation of medical supplies, fiscal year 1919.

For the purpose of estimating the funds that will probably be required for transporting medical stores, fiscal year 1919, under item 202, appropriation "Transportation of the Army," it is requested that you please advise this office of the approximate amount of funds that will be required for the transportation of medical stores during said fiscal year. The per capita for this item, fiscal year 1917, under normal conditions was 0.349. The estimate should, it is thought, be based on the assumption that the country will be at war in the fiscal year 1919.

By authority of the Quartermaster General.

CHAS. P. DALY,
Captain, Military Storekeeper, Quartermaster Corps.

(First indorsement.)

WAR DEPARTMENT,
 SURGEON GENERAL'S OFFICE,
August 30, 1917.

The QUARTERMASTER GENERAL OF THE ARMY:

It is estimated that \$2,000,000 will be required for the transportation of medical supplies for the fiscal year 1919, this being based on the assumption that the country will be at war.

W. C. GORGAS,
Surgeon General, United States Army,
 By EDWIN P. WOLFE,
Lieutenant Colonel, Medical Corps.

AUGUST 21, 1917.

From: Quartermaster General.

To: Chief of Ordnance, United States Army.

Subject: Transportation, ordnance, ordnance stores, and small arms, fiscal year 1919.

For the purpose of estimating the funds that will be required during the fiscal year 1919 for "Transportation of ordnance, ordnance stores, and small arms," under item 217, appropriation "Transportation of the Army," it is requested that you please advise this office of the approximate amount that will be required for this purpose during said fiscal year.

The per capita cost under this item fiscal year 1917 was \$4.793.

The estimate should, it is thought, be based on the assumption that the country will be at war in the fiscal year 1919.

By authority of the Quartermaster General.

CHAS. P. DALY,
Captain, M. S., Quartermaster Corps.

[First Indorsement.]

ORDNANCE OFFICE, SUPPLY DIVISION,
August 29, 1917.

The QUARTERMASTER GENERAL.

1. This office estimates that the average movement of ordnance, ordnance stores, and small arms for the fiscal year 1918-19 will be 500,000 tons per month.

2. It is estimated that the average mileage of each movement will be 500 miles and that the cost per ton will be \$10.

3. Based on these figures, the cost for transportation of ordnance, ordnance stores, and small arms for the fiscal year 1918-19 will be \$60,000,000.

WILLIAM CROZIER,
Brigadier General, Chief of Ordnance.

[Second Indorsement.]

WAR DEPARTMENT,
QUARTERMASTER GENERAL'S OFFICE,
September 4, 1917.

To: The Transportation Division, for remark.

The amount submitted in the estimate for this purpose by the Transportation Division was \$2,690,555.

The prompt return of these papers is requested.

By authority of the Quartermaster General.

J. Q. A. BRETT,
First Lieutenant, United States Army.

SEPTEMBER 7, 1917.

Memorandum for the estimates branch:

Notation has been made of the report of the Chief of Ordnance in the first indorsement on these papers indicating that in the opinion of the Ordnance Department \$60,000,000 will be required for the transportation of ordnance, ordnance stores, and small arms during the fiscal year 1919. The estimate made by the transportation division was based on the same cost per mile, but the tonnage to be hauled is not placed at any such enormous figures as those now specified by the Ordnance Department.

It is understood, however, that adjustment has been made of the figures in the estimate before submitting the same to the Secretary of War, so as to provide for additional funds under this particular item.

C. B. DRAKE,
Major, Quartermaster Corps.

AUGUST 21, 1917.

111-1006-A-E.

Quartermaster General.

Chief of Engineers, United States Army.

Amount required for transporting engineer stores.

For the purpose of estimating the funds that will be required during the fiscal year 1919 for transporting "Engineer stores" under item 202, appropriation "Transportation of the Army" it is requested that you please advise this office of the approximate amount that will be required for this purpose during said fiscal year.

The per capita cost for this item, fiscal year 1917, under normal conditions was 0.456 cent.

The estimate should, it is thought, be based on the assumption that the country will be at war in the fiscal year 1919.

By authority of the Quartermaster General:

CHAS. P. DALY,
Captain M. S., Quartermaster Corps.

[First Indorsement.]

OFFICE, CHIEF OF ENGINEERS,
THE GENERAL ENGINEER DEPOT OFFICER,
Washington, D. C., August 23, 1917.

For remark.

By command of the Chief of Engineers:

W. S. GRANT, JR.,
Major, Corps of Engineers.

[Second Indorsement.]

GENERAL ENGINEER DEPOT,
1419 F STREET NW.,
Washington, D. C., August 31, 1917.

To the CHIEF OF ENGINEERS,
United States Army, Washington, D. C.

1. The following detailed estimate is given, based on the assumption that as an average condition during the fiscal year 1919, there will be 60 divisions in France and 60 divisions in the United States.

(a) Engineer equipment and supplies for one division, 300 tons. Assume that each division in France required 3 complete replacements per year, $3 \times 60 \times 100 = 18,000$ tons. Assume average rail haul in United States 750 miles, $750 \times 18,000 = 13,500,000$ ton miles, at \$0.01 per ton mile (machinery rate), \$135,000.

(b) Assume that each of 60 divisions in United States received one equipment per year, same rail haul. 6,000 tons, and 4,500,000 ton-miles, at \$0.01 per ton-mile (machinery rate), \$45,000.

(c) Lumber. Assume 30,000,000 board feet per month to be supplied from United States (see Maj. Barber's estimate of June 21, 1917, file 104059/47), 60 pounds per cubic foot, 300 miles average rail haul, 900,000 tons, and 270,000,000 ton-miles, at \$0.0072 per ton-mile, \$1,944,000.

(d) Railway material, equipment, and supplies. Assume 3,000 tons per day, 750 miles average rail haul, 1,095,000 tons, and 821,250,000 ton-miles, at \$0.01 per ton-mile (machinery rate), \$8,212,500.

(e) Miscellaneous material equipment and supplies for engineering operations in the field. Assume 6,000 tons per day, 750 miles average rail haul, 1,642,500 tons, 2,190,000 tons, and 1,642,500,000 ton-miles, at \$0.01 per ton-mile (machinery rate), \$16,425,000.

Grand totals, 4,209,000 tons; 2,741,750,000 ton-miles; \$26,761,500.

2. The above estimates are the best that can be furnished at this time on account of the great uncertainty as to what actual requirements will be. They should be interpreted as guesses only, with the understanding that even if the assumptions made as to the number of troops prove to be approximately correct, the estimates may not be correct without several hundred per cent. The estimates cover railroad transportation only from points of production to ports of embarkation in the United States. It is believed that with the details shown the Quartermaster General's office can estimate on water transportation better than this office.

W. H. ROSE,
Major, Corps of Engineers.

[Third Indorsement.]

OFFICE CHIEF OF ENGINEERS,
September 8, 1917.

To the QUARTERMASTER GENERAL.

Returned, inviting attention to the preceding indorsements.

W. M. BLACK,
Chief of Engineers, United States Army.
By J. H. EARLE,
Major, Corps of Engineers.

Finance and accounting division.

Statement required by estimates branch under date of October 19, to be furnished on December 1, 1917. 111-1006-A-E.

Total payments and obligations under the items of rail and water transportation. (Detailed statement herewith)—

July 1, 1916, to June 30, 1917.....	\$16,021,219.45
For month of July, 1917.....	2,594,487.77
Total payments travel allowance to enlisted men in discharge July 1, 1916, to June 30, 1917.....	1,224,424.93

Item 202 (consolidated)—Transportation of the Army.

[Estimate fiscal year 1919, \$60,989,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$60,957,600.00		\$60,957,600.00	\$31,900.00		\$31,900.00	\$60,989,500.00
Appropriated fiscal year, 1918.....	1,728,050.00	\$6,500.00	1,734,550.00	24,650.00		24,600.00	1,759,200.00
Expended fiscal year, 1917.....	4,080,280.23		4,080,280.23	19,200.00		19,200.00	4,099,480.23

REMARKS.

The estimate under this item provides for transportation of troops and their impedimenta and animals; purchase, operation, and maintenance of railroad equipment and reimbursement of travel expenses of cadets, as shown by subitems following:

Items.	Appropriation, 1918.	Estimate, 1919.
202a. Transportation of troops.....	\$1,414,700.00	\$50,257,038.00
202b. Transportation of impedimenta accompanying troops.....	153,000.00	6,014,860.00
202c. Public animals with troops changing station.....	85,000.00	3,329,823.00
202d. Horses of officers changing station.....	57,300.00	607,586.00
202e. Procurement of street-car tickets.....	10,200.00	302,693.00
202f. Purchase of railroad equipment.....	6,500.00	18,000.00
202g. Operation, etc., of railroad equipment.....	19,000.00	411,700.00
202h. Reimbursement travel expenses, cadets.....	10,000.00	10,000.00
Total.....	1,759,200.00	60,989,500.00

REMARKS.

United States.—The total of subitems 202a to 202e is based on approximately 700,000 officers and men at \$36.50 per capita.

Subitems 202f and 202g, amount \$429,500, is for purchase, operation, and maintenance of railroad equipment.

Subitem 202h, amount \$10,000, is the same as appropriated for 1918.

Philippine Islands.—The department authorities estimated \$31,900 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

ARMY APPROPRIATION BILL, 1919.

Item 202a.—Transportation of the Army, transportation of troops.

[Estimate fiscal year 1919, \$50,257,038.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$50,247,038.00	\$50,247,038.00	\$10,000.00	\$10,000.00	\$50,257,038.00
Appropriated fiscal year 1918.....	1,403,000.00	1,403,000.00	11,200.00	11,200.00	1,414,200.00
Expended fiscal year 1917.....	3,177,116.39	3,177,116.39	12,000.00	12,000.00	3,189,116.39

REMARKS.

The estimate under this item is for the cost of passenger transportation (including sleeping-car accommodations) for the Army, exclusive of civilian employees, which are estimated for under separate items of this estimate.

United States.—The total for this item, also items 202 b, c, d, and e, is based on approximately \$86.50 per capita for 700,000 officers and men.

Philippine Islands.—The department authorities estimated \$10,000 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 202b.—Transportation of the Army: Impedimenta and organization property accompanying troops changing station.

[Estimate fiscal year 1919, \$6,054,860.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$6,053,860.00	\$6,053,860.00	\$1,000.00	\$1,000.00	\$6,054,860.00
Appropriated fiscal year 1918.....	152,300.00	152,300.00	700.00	700.00	153,000.00
Expended fiscal year 1917.....	587,024.75	587,024.75	800.00	800.00	587,824.75

REMARKS.

United States.—The estimate under this item is for cost of transportation of impedimenta and organization property accompanying troops changing station. Under this head is included tentage, bedding, hardware, rope, lockers, mess chests, kitchen utensils, rations for use in transit and upon arrival, ranges, chainware, tableware, clothing, horse equipment, office records, small-arms ammunition, wagons and spare parts, harness, saddlery, tools, forage for use in transit and upon arrival at destination. The total of this item, also items 202a-c-d and e, is based on approximately \$86.50 per capita for 700,000 officers and men.

Philippine Islands.—The department authorities estimated \$1,000 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 202c.—Transportation of the Army: Public animals with troops changing station.

[Estimate fiscal year 1919, \$3,329,823.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$3,329,623.00	\$3,329,623.00	\$200.00	\$200.00	\$3,329,823.00
Appropriated fiscal year 1918.....	83,500.00	83,500.00	1,500.00	1,500.00	85,000.00
Expended fiscal year 1917.....	101,159.73	101,159.73	200.00	200.00	101,359.73

REMARKS.

United States.—This item covers cost of transportation of all public animals accompanying troops changing station. The cost of transportation of these animals from place of purchase is paid from items 215b and 215c.

The total of this item, also items 202a, b, d, and e, is based on approximately \$86.50 per capita for 700,000 officers and men.

Philippine Islands.—The department authorities estimated \$200 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 202d.—Transportation of the Army: Horses of officers changing station.

[Estimate fiscal year 1919, \$605,586.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$605,386.00	\$605,386.00	\$200.00	\$200.00	\$605,586.00
Appropriated fiscal year 1918.....	55,050.00	55,050.00	250.00	250.00	55,300.00
Expended fiscal year 1917.....	56,053.99	56,053.99	200.00	200.00	56,253.99

REMARKS.

United States.—This item covers cost of transportation of the horses of mounted officers on authorized changes of station of such officers.

The total of this item, also items 202a, b, c, and e, is based on approximately \$86.50 per capita for 700,000 officers and men.

Philippine Islands.—The department authorities estimated \$200 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 202e.—Transportation of the Army: Procurement of street car tickets.

[Estimate fiscal year 1919, \$302,693.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$302,693.00	\$302,693.00	\$302,693.00
Appropriated fiscal year 1918.....	14,200.00	14,200.00	\$2,000.00	\$2,000.00	16,200.00
Expended fiscal year 1917.....	72,507.13	72,507.13	72,507.13

REMARKS.

United States.—Under the provisions of paragraph 1127, Army Regulations, 1913, street car tickets are furnished for the transportation of officers, enlisted men, and civilian employees in the transaction of public business when this form of transportation is preferable in convenience and cost to the supply of other transportation. They are not furnished to an officer traveling under mileage orders or to officers or others for travel between their homes and offices. From this item is also paid the cost of street car transportation of funeral escorts, when the distance is considered too great for marching, and also of movements of troops between railroad depots and posts under similar conditions.

The total of this item, also items 202a, b, c, and d, is based on approximately \$86.50 per capita for 700,000 officers and men.

Philippine Islands.—No estimate submitted by the department authorities.

Item 202f.—Transportation of the Army; purchase of railroad equipment.

[Estimate fiscal year 1919, \$9,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....				\$9,000.00		\$9,000.00	\$9,000.00
Appropriated fiscal year 1918.....	\$6,500.00		\$6,500.00				6,500.00
Expended fiscal year 1917.....	75,848.50		75,848.50				75,848.50

REMARKS.

United States.—No estimate is submitted for the fiscal year 1919.

Philippine Islands.—The amount estimated in this item by the department authorities is \$9,000. Nothing was allowed for the fiscal year 1918. The above is the sum estimated that will be required for the purchase of railroad equipment for all posts in the Philippine Department provided with this utility, and will cover the increase in equipment required such as has to be replaced. Railroads are now being operated at Fort Mills, Manila, and Camp Overton by steam and electricity. Railroads operated by man and animal power are maintained at Augur Barracks, Ludlow Barracks, and Pettit Barracks.

Item 202g.—Transportation of the Army: Operation, maintenance and repair of railroad equipment.

[Estimate fiscal year 1919, \$420,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$409,000.00		\$409,000.00	\$11,500.00		\$11,500.00	\$420,500.00
Appropriated fiscal year 1918.....	10,000.00		10,000.00	9,000.00		9,000.00	19,000.00
Expended fiscal year 1917.....	4,577.00		4,577.00	6,000.00		6,000.00	10,577.00

REMARKS.

United States.—The amount estimated for is required for repairs to the equipment at United States Disciplinary Barracks, Fort Leavenworth, Fort Levitt, Fort Hancock, Fort Dupont, Fort Monroe, Fort Morgan, etc., including operation and maintenance of the Hoboken Shore Railroad. There were reported on page 301 in the hearing on the Army appropriation bill, 1918, 80 locomotives, flat cars, box cars, dump cars, etc., on hand at the various posts to be kept in repair. In addition to this, the equipment

to be purchased during the fiscal year 1918 will add to repairs. It is believed that all the funds estimated for will be required to keep the equipment in proper repair; also maintain and operate the Hoboken Shore Railroad.

Philippine Islands.—\$11,500 is called for under this item by the department authorities. This is \$2,500 more than the estimate for the fiscal year 1918. The increase asked for over the estimate for 1918 is required to cover the advance in cost of materials and the increase in repairs made necessary due to age of the equipment.

Item 202h.—*Transportation of the Army: Reimbursement of traveling expenses of newly appointed cadets to the United States Military Academy.*

[Estimate fiscal year 1919, \$10,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$10,000.00	\$10,000.00	\$10,000.00
Appropriated fiscal year 1918.....	10,000.00	10,000.00	10,000.00
Expended fiscal year 1917.....	5,992.74	5,992.74	5,992.74

REMARKS.

United States.—The estimate under this item is for reimbursement of cadets for traveling expenses from their homes to the United States Military Academy, West Point, N. Y., and includes railroad fares, sleeping-car accommodations, meals enroute, and transfer of baggage.

The estimate under this item is the same as the amount appropriated for 1918.

Philippine Islands.—No estimate submitted by the department authorities.

Item 203 (consolidated).—*And its (the Army's) supplies.*

[Estimate fiscal year 1919, \$1,700,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,698,200.00	\$1,698,200.00	\$1,800.00	\$1,800.00	\$1,700,000.00
Appropriated fiscal 1918.....	296,200.00	296,200.00	3,800.00	3,800.00	300,000.00
Expended fiscal 1917.....	521,129.32	521,129.32	1,200.00	1,200.00	522,329.32

REMARKS.

United States.—This item covers cost of transportation of signal, engineer, and medical stores for the Army, the cost of transportation of quartermaster stores being shown under items 214 and 215 and of ordnance stores under item 217.

The estimate under this item is based on approximately 169,820 tons, at \$10 per ton.

This item is subdivided under items 203 a, b, and c, as shown below:

No.	Item.	Appropriation, 1918.	Estimate, 1919.
203a	Transportation of signal stores.....	\$164,000.00	\$1,020,000.00
203b	Transportation of engineering stores.....	77,000.00	510,000.00
203c	Transportation of medical stores.....	59,000.00	170,000.00
	Total.....	300,000.00	1,700,000.00

Philippine Islands.—The department authorities estimated \$1,800 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 203a and its supplies.—Transportation of signal stores.

[Estimate fiscal year 1919, \$1,020,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,019,800.00	\$1,019,800.00	\$200.00	\$200.00	\$1,020,000.00
Appropriated fiscal year 1918.....	162,800.00	162,800.00	1,200.00	1,200.00	164,000.00
Expended fiscal year 1917.....	160,467.83	160,467.83	250.00	250.00	160,717.83

REMARKS.

United States.—From this item is paid the cost of transportation of all signal stores and supplies, including aeroplanes and other supplies for the Aviation Section.

Philippine Islands.—The department authorities estimated \$200 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 203b and its supplies.—Transportation of engineering stores.

[Estimate fiscal year 1919, \$510,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$509,900.00	\$509,900.00	\$100.00	\$100.00	\$510,000.00
Appropriated fiscal year 1918.....	76,400.00	76,400.00	600.00	600.00	77,000.00
Expended fiscal year 1917..	127,814.82	127,814.82	150.00	150.00	127,964.82

REMARKS.

United States.—From this item is paid the cost of transportation of engineer material, supplies, and stores for use in connection with the Army. It does not include cost of transportation of material and supplies used in connection with river and harbor work and other public improvements.

Philippine Islands.—The department authorities estimated \$100 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 203c and its supplies.—Transportation of medical stores.

[Estimate fiscal year 1919, \$170,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$168,500.00	\$168,500.00	\$1,500.00	\$1,500.00	\$170,000.00
Appropriated fiscal year 1918.....	57,000.00	57,000.00	2,000.00	2,000.00	59,000.00
Expended fiscal year 1917..	229,340.19	229,340.19	800.00	800.00	230,140.19

REMARKS.

United States.—From this item is paid the cost of transportation of medical stores and supplies, except certain express shipments which are paid direct by the Medical Department under authority of a clause carried in the annual Army appropriation acts under "Medical Department."

Philippine Islands.—The department authorities estimated \$1,500 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 204 (consolidated).—Transportation of baggage on change of station.

[Estimate fiscal year 1919, \$1,900,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,898,700.00	\$1,898,700.00	\$1,300.00	\$1,300.00	\$1,900,000.00
Appropriated fiscal year 1918.....	281,700.00	281,700.00	3,210.00	3,210.00	285,000.00
Expended fiscal year 1917.....	281,167.16	281,167.16	1,250.00	1,250.00	282,417.16

REMARKS.

United States.—This item is for the transportation of baggage and household goods of officers, noncommissioned officers, and civilian employees on change of station. The estimate under this item is based on approximately 1,700,000 officers and enlisted men for 1919.

United States and Philippine Islands.—This item is subdivided under items 204a to 204j, inclusive, as follows:

No.	Transportation of baggage.	Appropriation, 1918.	Estimate, 1919.
204a	Of officers.....	\$243,000.00	\$1,614,395.00
204b	Of enlisted men.....	33,500.00	209,357.00
204c	Of civilian employees, Adjutant General's Department.....	700.00	5,696.00
204d	Of civilian employees, Inspector General's Department.....	100.00	4,747.00
204e	Of civilian employees, Judge Advocate General's Department.....	100.00	4,747.90
204f	Of civilian employees, Quartermaster Corps.....	5,900.00	38,274.00
204g	Of civilian employees, Medical Department.....	800.00	7,595.00
204h	Of civilian employees, Engineers Department.....	350.00	4,747.00
204i	Of civilian employees, Ordnance Department.....	150.00	4,747.00
204j	Of civilian employees, Signal Corps.....	350.00	5,695.00
	Total.....	285,000.00	1,900,000.00

Philippine Islands.—The department authorities estimated \$1,300 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 204a.—Transportation of baggage of officers.

[Estimate fiscal year 1919, \$1,614,395.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,613,895.00	\$1,613,895.00	\$500.00	\$500.00	\$1,614,395.00
Appropriated fiscal year 1918.....	241,000.00	241,000.00	2,000.00	2,000.00	243,000.00
Expended fiscal year 1917.....	241,350.92	241,350.92	500.00	500.00	241,850.92

ARMY APPROPRIATION BILL, 1919.

REMARKS.

United States.—From this item is paid the cost of transportation of baggage and household effects of officers changing station under orders, the amount transported for each grade varying as shown under paragraph 1136, Army Regulations, 1913.

Philippine Islands.—The department authorities estimated \$500 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 204b.—Transportation of baggage of enlisted men.

[Estimate fiscal year 1919, \$209,357.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$208,857.00	\$208,857.00	\$500.00	\$500.00	\$209,357.00
Appropriated, fiscal year 1918.....	32,800.00	32,800.00	700.00	700.00	33,500.00
Expended, fiscal year 1917.....	29,154.40	29,154.40	500.00	500.00	29,654.40

REMARKS.

United States.—From this item is paid the cost of transportation of baggage and household effects of noncommissioned officers changing station and also the transportation charges on personal effects shipped for other enlisted men, weight of shipments being limited to 150 pounds per capita for enlisted men below grade 17.

Philippine Islands.—The department authorities estimated \$500 as being required for the fiscal year 1919. No detail was submitted as to the amount called for.

Item 204c.—Transportation of baggage of civilian employees—Adjutant General's Department.

[Estimate fiscal year 1919, \$5,696.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,696.00	\$5,696.00	\$5,696.00

Expended fiscal year 1917.....	263.15	263.15	263.15

REMARKS.

United States.—Civilian employees for whom transportation of baggage is provided under this item are clerks, foremen, and machinists of the Ordnance Department.

Philippine Islands.—No estimate submitted by the department authorities.

Item 204j.—Transportation of baggage of civilian employees—Signal Corps.

[Estimate fiscal year 1919, \$5,695.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,695.00	\$5,695.00	\$5,695.00
Appropriated fiscal year 1918...	320.00	320.00	\$30.00	\$30.00	350.00
Expended fiscal year 1917.....	419.53	419.53	419.53

REMARKS.

United States.—The civilian employees for whom transportation of baggage is provided under this item are clerks, electrical engineers, electricians, mechanics, and laborers of the Signal Corps.

Philippine Islands.—No estimate submitted by the department authorities.

Item 205.—Including the cost of packing and crating.

[Estimate fiscal year 1919, \$287,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$275,000.00	\$275,000.00	\$12,000.00	\$12,000.00	\$287,000.00
Appropriated fiscal year 1918.....	122,000.00	122,000.00	13,000.00	13,000.00	135,000.00
Expended fiscal year 1917.....	123,425.60	123,425.60	10,000.00	10,000.00	133,425.60

REMARKS.

This item covers cost of packing and crating supplies and baggage. The allowance for packing and crating baggage is based on 60 cents per hundred pounds, on the authorized weight of each grade as shown under paragraph 1136, Army Regulations, 1913.

The total amount shown, \$287,000, is subdivided under packing and crating supplies, \$95,700, and packing and crating baggage, \$191,300.

United States.—The estimate under this item for the cost of packing and crating is based on approximately 700,000 officers and enlisted men, at \$0.41 per capita.

Philippine Islands.—The department authorities estimated \$12,000 as being required for the fiscal year 1919. No details were submitted as to the expenditure of the amount called for.

Item 206.—Transportation of recruits.

[Estimate fiscal year 1919, \$1,520,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,519,000.00	\$1,519,000.00	\$1,000.00	\$1,000.00	\$1,520,000.00
Appropriated fiscal year 1918.....	1,222,820.00	1,222,820.00	1,000.00	1,000.00	1,223,820.00
Expended fiscal year 1917.....	3,118,665.08	3,118,665.08	1,000.00	1,000.00	3,119,665.08

REMARKS.

United States.—Applicants for enlistment accepted at recruiting stations are sent to recruit depots and depots posts for final physical examination and enlistment if found qualified.

The estimate under this item for the transportation of recruits is based on \$8 per capita for approximately 190,000 men.

Philippine Islands.—The department authorities estimated \$1,000 as being required for the fiscal year 1919. No details were submitted as to expenditure of amount called for.

ARMY APPROPRIATION BILL, 1919.

Item 207.—Transportation of recruiting parties.

[Estimate fiscal year 1919, \$60,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$59,500.00	\$59,500.00	\$500.00	\$500.00	\$60,000.00
Appropriated fiscal year 1918.....	33,300.00	33,300.00	400.00	400.00	33,700.00
Expended fiscal year 1917.....	101,808.15	101,808.15	500.00	500.00	102,308.15

REMARKS.

United States.—This item is for the cost of recruiting parties that are sent from the general recruiting stations to substations and other points for the purposes of securing recruits.

The estimate under this item for the transportation of recruiting parties is based on \$8 per capita for approximately 7,500 men.

Philippine Islands.—Department authorities estimated \$500 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 208.—Transportation of applicants for enlistment.

[Estimate fiscal year 1919, \$420,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$420,000.00	\$420,000.00	\$420,000.00
Appropriated fiscal year 1918.....	342,700.00	342,700.00	342,700.00
Expended fiscal year 1917.....	1,072,292.87	1,072,292.87	1,072,292.87

REMARKS.

United States.—This estimate is for the travel expenses of applicants for enlistment between recruiting stations and recruit depots and depot posts, and of rejected applicants from recruit depots and depot posts to place of enlistment.

The estimate under this item for the transportation of applicants for enlistment is based on \$8 per capita for approximately 52,500 men.

Philippine Islands.—No estimate submitted by the department authorities.

Item 209.—Travel allowance to enlisted men on discharge.

[Estimate fiscal year 1919, \$3,500,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$3,460,000.00	\$3,460,000.00	\$40,000.00	\$40,000.00	\$3,500,000.00
Appropriated fiscal year 1918.....	1,555,000.00	1,555,000.00	45,000.00	45,000.00	1,600,000.00
Expended fiscal year 1917.....	1,145,642.33	1,145,642.33	44,000.00	44,000.00	1,189,642.33

REMARKS.

From this item is paid the travel allowance to enlisted men on discharge.

United States.—The estimate under this item for travel allowance to enlisted men on discharge is based on approximately 700,000 officers and men at \$50 per capita.

Philippine Islands.—The department authorities estimated \$40,000 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 210.—Transportation of persons, on their discharge from the United States Disciplinary Barracks, or from any place in which they have been held on a sentence of dishonorable discharge and confinement for more than six months, or from the Government Hospital for the Insane, after transfer thereto from such barracks or place, to their homes (or elsewhere, as they may elect), provided the cost in each case shall not be greater than the place of last enlistment.

[Estimate fiscal year 1919, \$160,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$160,000.00	\$160,000.00	\$160,000.00
Appropriated fiscal year 1918.....	28,000.00	28,000.00	28,000.00
Expended fiscal year 1917..	22,682.85	22,682.85	22,682.85

REMARKS.

United States.—The tentative strength for 1919 (approximately 1,700,000 officers and men) being approximately 570 per cent greater than the strength for 1918 (approximately 300,000 officers and men), the estimate for 1919 was based to this extent over the appropriation for 1918.

Philippine Islands.—No estimate submitted by the department authorities.

Item 211.—Transportation of supplies furnished the militia for the permanent equipment thereof.

Expended fiscal year 1917 in the United States for current requirements \$7,607.84. No estimate for fiscal year 1919.

REMARKS.

No estimate was made for the fiscal year 1918, as such expenditures were paid from funds provided under the militia appropriations, and that estimate submitted by the Militia Bureau. It is presumed this situation still exists, and no estimate is made for the fiscal year 1919.

Item 212 (consolidated).—Transportation of the necessary agents and other employees.

[Estimate fiscal year 1919, \$120,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$118,485.00	\$118,485.00	\$1,515.00	\$1,515.00	\$120,000.00
Appropriated fiscal year 1918.....	48,000.00	48,000.00	2,000.00	2,000.00	50,000.00
Expended fiscal year 1917..	355,467.69	355,467.69	1,450.00	1,450.00	356,917.69

REMARKS.

From this item is paid the cost of transportation of civilian employees of the War Department when traveling on duty under competent orders. Included in this cost is railroad or steamer fare and sleeping car or parlor car accommodations.

This item is subdivided under items 212a to 212h, inclusive, showing each bureau of the War Department as follows:

Item.	Bureau.	Appropriation, 1918.	Estimate, 1919.
212a	Adjutant General's Department.....	\$1,600.00	\$3,705.00
212b	Inspector General's Department.....	700.00	1,285.00
212c	Judge Advocate General's Department.....	300.00	632.00
212d	Quartermaster Corps.....	38,500.00	92,233.00
212e	Medical Department.....	5,400.00	12,516.00
212f	Engineer Corps.....	300.00	648.00
212g	Ordnance Department.....	600.00	1,807.00
212h	Signal Corps.....	2,600.00	7,154.00
	Total.....	50,000.00	120,000.00

United States.—The estimate under this item for the transportation of the necessary agents and other employees is based on approximately 4,000 employees at \$30 per capita.

Philippine Islands.—The department authorities estimated \$1,450 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 212e.—Transportation of the necessary agents and other employees of The Adjutant General's Department.

[Estimate fiscal year 1919, \$3,705.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$3,555.00	\$3,555.00	\$150.00	\$150.00	\$3,705.00
Appropriated fiscal year 1918....	1,450.00	1,450.00	150.00	150.00	1,600.00
Expended fiscal year 1917.....	6,429.75	6,429.75	100.00	100.00	6,529.75

REMARKS.

The civilian employees for whom transportation is provided under this item are clerks, classified civil service.

Philippine Islands.—The department authorities estimated \$150 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 212b.—Transportation of the necessary agents and other employees of the Inspector General's Department.

[Estimate fiscal year 1919, \$1,285.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,185.00	\$1,185.00	\$100.00	\$100.00	\$1,285.00
Appropriated fiscal year 1918....	600.00	600.00	100.00	100.00	700.00
Expended fiscal year 1917.....	3,334.61	3,334.61	100.00	100.00	3,434.61

REMARKS.

The civilian employees for whom transportation is provided under this item are clerks, classified civil service.

Philippine Islands.—The department authorities estimated \$100 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 212c.—Transportation of the necessary agents and other employees of the Judge Advocate General's Department.

[Estimate fiscal year 1919, \$652.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$592.00	\$592.00	\$60.00	\$60.00	\$652.00
Appropriated fiscal year 1918.....	240.00	240.00	60.00	60.00	300.00
Expended fiscal year 1917.....	836.41	836.41	50.00	50.00	886.41

REMARKS.

The civilian employees for whom transportation is provided under this item are clerks, classified civil service.

Philippine Islands.—The department authorities estimated \$60 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 212d.—Transportation of the necessary agents and other employees of the Quartermaster Corps.

[Estimate fiscal year 1919, \$92,233.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$91,233.00	\$91,233.00	\$1,000.00	\$1,000.00	\$92,233.00
Appropriated fiscal year 1918.....	37,000.00	37,000.00	1,500.00	1,500.00	38,500.00
Expended fiscal year 1917.....	232,593.14	232,593.14	1,000.00	1,000.00	233,593.14

REMARKS.

The civilian employees for whom transportation is provided under this item are clerks, inspectors of clothing, supplies, etc., civil engineers, superintendents of construction, electrical and mechanical engineers, mechanics, and packers of the Quartermaster Corps.

Philippine Islands.—The department authorities estimated \$1,000 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 212e.—Transportation of the necessary agents and other employees of the Medical Department.

[Estimate fiscal year 1919, \$12,516.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$12,441.00	\$12,441.00	\$75.00	\$75.00	\$12,516.00
Appropriated fiscal year 1918.....	5,325.00	5,325.00	75.00	75.00	5,400.00
Expended fiscal year 1917.....	102,083.03	102,083.03	50.00	50.00	102,133.03

REMARKS.

The civilian employees, for whom transportation is provided under this item, are clerks, classified civil service, and Army nurses.

Philippine Islands.—The department authorities estimated \$175 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 212f.—Transportation of the necessary agents and other employees of the Corps of Engineers.

[Estimate fiscal year 1919, \$648.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$593.00	\$593.00	\$55.00	\$55.00	\$648.00
Appropriated fiscal year 1918....	250.00	250.00	50.00	50.00	300.00
Expended fiscal year 1917.....	1,604.14	1,604.14	50.00	50.00	1,654.14

REMARKS.

The civilian employees for whom transportation is provided under this item are clerks, surveyors, draftsmen, photographers, and master laborers of the Engineer Corps when traveling on duty for the Army.

The cost of transportation for employees of the Corps of Engineers engaged in river and harbor work or other public improvements is paid from the appropriations made for such projects.

Philippine Islands.—The department authorities estimated \$55 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 212g.—Transportation of the necessary agents and other employees of the Ordnance Department.

[Estimate fiscal year 1919, \$1,807.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,777.00	\$1,777.00	\$30.00	\$30.00	\$1,807.00
Appropriated fiscal year 1918....	580.00	580.00	20.00	20.00	600.00
Expended fiscal year 1917.....	2,513.48	2,513.48	50.00	50.00	2,563.48

REMARKS.

The civilian employees for whom transportation is provided under this item are clerks, foremen, and machinists of the Ordnance Department.

Philippine Islands.—The department authorities estimated \$30 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 212h.—Transportation of the necessary agents and other employees of the Signal Corps.

[Estimated fiscal year 1919, \$7,154.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$7,109.00	\$7,109.00	\$45.00	\$45.00	\$7,154.00
Appropriated fiscal year 1918....	2,555.00	2,555.00	45.00	45.00	2,600.00
Expended fiscal year 1917.....	6,073.13	6,073.13	50.00	50.00	6,123.13

REMARKS

The civilian employees for whom transportation is provided under this item are clerks, electrical engineers, electricians, mechanics, and laborers of the Signal Corps.

Philippine Islands.—The department authorities estimated \$45 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 213.—Reimbursement of travel expenses, civil employees, per diem allowances in lieu of subsistence not exceeding \$4 for those authorized to receive a per diem allowance.

[Estimate fiscal year 1919, \$150,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$147,500.00	\$147,500.00	\$2,500.00	\$2,500.00	\$150,000.00
Appropriated fiscal year 1918.....	59,200.00	59,200.00	980.00	980.00	60,180.00
Expended fiscal year 1917.....	102,444.12	102,444.12	2,500.00	2,500.00	104,944.12

REMARKS.

From this item is paid reimbursement of actual expenses incurred for meals, lodging bath, and laundry, not exceeding \$4.50 per day, while in transit or at temporary station for less than 30 days, or a flat per diem allowance of \$4 in lieu of subsistence. Reimbursement is limited to \$1 per day after the first 30 days at any one place.

United States.—The estimate under this item is based on \$1 per day for approximately 500 employees at 300 days each, or 150,000 days.

Philippine Islands.—The department authorities estimated \$2,500 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 214.—Transportation of clothing and equipage from Army depots, or places of purchase or delivery, to the several posts and Army depots, and from these depots to the troops in the field.

[Estimate fiscal year 1919, \$1,360,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,360,000.00	\$1,360,000.00	\$1,360,000.00
Appropriated fiscal year 1918.....	300,000.00	300,000.00	300,000.00
Expended fiscal year 1917.....	1,434,782.83	1,434,782.83	1,434,782.83

REMARKS.

From this item is paid the cost of transportation of clothing and also of camp and garrison equipage, such as barrack bags, barrack chairs, iron bedsteads, blankets, cost, flags, lockers, poles, tents, etc.

United States.—The estimate under this item is based on approximately 113,333 tons, at \$12 per ton.

Philippine Islands.—No estimate submitted by the department authorities.

Item 215 (consolidated).—Transportation of other quartermaster stores from Army depots, or places of purchase or delivery, to the several posts and Army depots, and from these depots to the troops in the field.

[Estimate fiscal year 1919, \$33,560,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$38,415,000.00	\$38,415,000.00	\$145,000.00	\$145,000.00	\$38,560,000.00
Appropriated fiscal year 1918....	1,453,000.00	1,453,000.00	160,000.00	160,000.00	1,613,000.00
Expended fiscal year 1917.....	4,101,628.26	4,101,628.26	120,000.00	120,000.00	4,221,628.26

REMARKS.

This item provides for cost of transportation of all supplies of the Quartermaster Corps, exclusive of clothing and equipage, shown under item 214, from places of purchase or delivery to the several Army posts and depots, and from these depots to posts or troops in the field. Transportation for supplies for other bureaus of the War Department is provided under items 203, 216, and 217.

This item is subdivided under items 215a to 215d, inclusive, as follows:

Item.	Quartermaster stores.	Appropriation, 1918.	Estimate, 1919.
215a	Transportation of subsistence stores.....	\$449,000	\$11,544,500
215b	Transportation of horses for Cavalry, Artillery, etc.....	74,200	1,152,450
215c	Transportation of draft and pack animals.....	22,100	708,300

	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$95,000.00	\$95,000.00	\$95,000.00
Appropriated fiscal year 1918.....	15,700.00	15,700.00	15,700.00
Expended fiscal year 1917.....	27,715.41	27,715.41	27,715.41

REMARKS.

From this item is paid the cost of transportation for horse equipment furnished by the Ordnance Department, such as saddles, saddle blankets, bridles, etc. The transportation of harness and pack rigging furnished by the Quartermaster Corps is paid from item 215d.

United States.—The estimate under this item for transportation of horse equipment is based on approximately 1,700,000 officers and men as against 300,000 officers and men for 1918.

Philippine Islands.—No estimate submitted by the department authorities.

Item 217.—Transportation of ordnance, ordnance stores, and small arms from the foundries and armories to the arsenals, fortifications, frontier posts, and Army depots.

[Estimate fiscal year 1919, \$26,000,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$25,995,000.00	\$25,995,000.00	\$5,000.00	\$5,000.00	\$26,000,000.00
Appropriated fiscal year 1918.....	802,500.00	802,500.00	7,500.00	7,500.00	810,000.00
Expended fiscal year 1917.....	1,028,666.86	1,028,666.86	5,000.00	5,000.00	1,033,666.86

REMARKS.

From this item is paid the cost of transportation of all ordnance, ordnance stores, and small arms, including guns and gun carriages.

United States.—The estimate under this item is based on 2,599,500 tons at \$10 per ton. The first estimate furnished by the Chief of Ordnance was for \$60,000,000, which was reduced by \$30,000,000, and subsequently reduced to figure shown.

Philippine Islands.—The department authorities estimated \$5,000 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

Item 218.—Wharfage, rental of.

[Estimate fiscal year 1919, \$58,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$57,700.00	\$57,700.00	\$800.00	\$800.00	\$58,500.00
Appropriated fiscal year 1918..	56,600.00	56,600.00	500.00	500.00	57,100.00
Expended fiscal year 1917.....	48,333.00	48,333.00	48,333.00

REMARKS.

United States.—This estimate is based upon the actual expenditures for the lease and hire of wharfage facilities during the fiscal year 1917. The present estimate is \$9,367 greater than the actual cost for the fiscal year 1917, but it will be necessary during the fiscal year 1919 to lease wharfage at Seattle at a cost of approximately \$9,000. The wharf at Seattle that was previously leased for use by vessels pertaining to the Quartermaster Corps was destroyed by fire on June 30, 1916, and as same could not be rebuilt during the fiscal year 1917 the best arrangements it was possible to make for the wharfage of vessels of the Quartermaster Corps (which caused considerable inconvenience) were taken advantage of. The remaining increase of \$367 is included for the purpose of meeting any emergency requirements which may arise due to the existence of war conditions.

Philippine Islands.—The estimate submitted by the department authorities under this item is \$300 greater than the estimate for this purpose for the fiscal year 1918, and no expenditures were reported for the fiscal year 1917. It is assumed that requirements in the Philippines for the fiscal year 1919 necessitate the inclusion of this amount, although no explanation in regard thereto is submitted.

Item 219.—Tolls and ferriages, payment of.

[Estimate fiscal year 1919, \$171,225.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$170,975.00	\$170,975.00	\$250.00	\$250.00	\$171,225.00
Appropriated fiscal year 1918.....	9,750.00	9,750.00	250.00	250.00	10,000.00
Expended fiscal year 1917..	8,912.26	8,912.26	300.00	300.00	9,212.26

REMARKS.

From this item is paid the cost of tolls across bridges and over turnpikes, where tolls are charged, incurred in the movement of troops on practice marches, maneuvers, etc., and also of ferry charges under similar conditions.

United States.—The estimate under this item for payment of tolls and ferriages is based on 10 cents per capita for approximately 1,712,245 officers and men.

Philippine Islands.—Department authorities estimated \$250 as being required for the fiscal year 1919. No details were submitted as to the amount called for.

ARMY APPROPRIATION BILL, 1910.

Item 220—Transportation of funds of the Army.

[Estimate, fiscal year 1919, \$120,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$118,500.00	\$118,500.00	\$1,500.00	\$1,500.00	\$120,000.00
Appropriated, fiscal year 1918.....	7,100.00	7,100.00	500.00	500.00	7,600.00
Expended, fiscal year 1917..	18,812.95	18,812.95	18,812.95

REMARKS.

From this item is paid the cost of transportation of moneys forwarded for use in payment of troops and other purposes. These funds are transported by express.

United States.—The estimate under this item for transportation of the funds of the Army is based on 7 cents per capita for 1,712,245 officers and men.

Philippine Islands.—Estimated \$1,500 as being required for the fiscal year 1919.

Item A. T. 221.—Draft animals (purchase and hire of).

[Estimate fiscal year 1919, \$17,457,455.]

For the purpose of cost keeping this item is subdivided. The items and amount estimated under each item are as follows:

Item.	Character.	Supplies.	Services.	Total.
A. T. 221-A.	Purchase of draft animals.....	\$14,469,050.00	\$14,469,050.00
A. T. 221-B.	Hire of draft animals.....	\$5,000.00	5,000.00
A. T. 221-C.	Supplies incident to care of draft and pack animals.....	2,983,405.00	2,983,405.00
	Total.....	17,452,455.00	5,000.00	17,457,455.00

SUMMARY.

	Supplies.	Services.	Total.
United States.....	\$17,428,455.00	\$5,000.00	\$17,433,455.00
Philippine Islands.....	24,000.00	24,000.00
Total.....	17,452,455.00	5,000.00	17,457,455.00

COMPARATIVE STATEMENT.

Item.	Character.	Cost fiscal year 1917.	Appropriation fiscal year 1918.	Estimate fiscal year 1919.
A. T. 221-A.	Purchase of draft animals.....	\$4,387,811.00	\$46,000.00	\$14,469,050.00
A. T. 221-B.	Hire of draft animals.....	32,649.00	2,000.00	5,000.00
A. T. 221-C.	Supplies incident to care of draft and pack animals.....	129,702.00	27,000.00	2,983,405.00
	Total.....	4,550,162.00	75,000.00	17,457,455.00

Item A. T. 221a.—Purchase of draft animals.

[Estimate, fiscal year 1919, \$14,469,050.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$14,449,050	14,449,050	\$20,000	\$20,000	\$14,469,050
Appropriated, fiscal year 1918.....	15,600	15,600	30,400	30,400	46,000
Expended, fiscal year 1917.....	4,372,811	4,372,811	15,000	15,000	4,387,811

REMARKS.

United States.—This estimate is based on an elisted strength of 45 infantry divisions, organized in accordance with Tables of Organization, Series A, August, 1917. These tables authorize 3,058 draft mules for one infantry division, or 137,610 for 45 infantry divisions. It is estimated that 50 per cent replenishment will be needed during the fiscal year 1919 if the present emergency continues, requiring 68,805 draft miles which, at an average price of \$210, will cost \$14,449,050.

Philippine Islands.—Estimate for \$20,000 is based on figures submitted by the department authorities Philippine Department, and is considered necessary to replace animals which may die or become unserviceable during the fiscal year 1919.

Item A. T. 221b.—Hire. draft animals.

[Estimate, fiscal year 1919, \$5,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,000	\$5,000	\$5,000
Appropriated, fiscal year 1918.....	2,000	2,000	2,000
Expended, fiscal year 1917.....	32,649	32,649	32,649

REMARKS.

United States.—The above amount is estimated to cover any emergency hire of transportation that may be necessary in connection with the movement of troops.

Philippine Islands.—No estimate submitted.

Item A. T. 221c.—Supplies incident to care of draft and pack animals.

[Estimate fiscal year, 1919, \$2,983,405.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$2,979,405	\$2,979,405	\$4,000	\$4,000	\$2,983,405
Appropriated fiscal year 1918.....	23,000	23,000	4,000	4,000	27,000
Expended fiscal year 1917.....	124,702	124,702	5,000	5,000	129,702

REMARKS.

United States.—The amount called for under this item is required for the purchase of such articles as horse blankets, brushes, curry combs, stable forks, buckets, lanterns, etc. The allowances are fixed by General Orders, No. 39, War Department, 1915.

The amount estimated for is required to replace such articles as may be worn out or expended in the service.

Philippine Islands.—This estimate is the same as that submitted by department authorities, Philippine Department.

Item A. T. 222.—Purchase of pack animals.

[Estimate fiscal year 1919, \$745,700.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$735,300	\$735,300	\$10,400	\$10,400	\$745,700
Appropriated fiscal year 1918....	10,080	10,080	20,320	20,320	30,400
Expended fiscal year 1917.....	704,684	704,684	20,000	20,000	724,684

REMARKS.

United States.—The amount estimated for is based on an enlisted strength of 45 infantry divisions, organized in accordance with Tables of Organization, Series A, August, 1917. These tables authorize 172 pack and riding mules for one infantry division, or 7,740 for 45 infantry divisions. It is estimated that 50 per cent replenishment will be needed during the fiscal year 1919 if the present emergency continues, requiring 3,870 pack and riding mules which at an average price of \$190 will cost \$735,300.

Philippine Islands.—The estimate for \$10,400 is based on figures submitted by the department authorities. Philippine Department, and is considered necessary to replace animals which may die or become unserviceable during the fiscal year 1919.

Item A. T. 222a.—Hire of pack animals. (No estimate for fiscal year 1919.)

REMARKS.

No estimate.

Item A. T. 222b.—Hire of horses, riding. (No estimate for fiscal year 1919.)

REMARKS.

No estimate.

Item A. T. 223.—Harness, purchase of.

[Estimate fiscal year 1919, \$4,723,433.]

For the purpose of cost keeping, this item is subdivided.

The subitems and amount estimated under each item are as follows:

Item.	Character.	Supplies.	Service.	Total.
223 A	Purchase of harness.....	\$3,348,540.00	\$3,348,540.00
223 B	Purchase of harness parts.....	692,318.00	692,318.00
223 C	Purchase of pack rigging.....	453,150.00	453,150.00
223 D	Purchase of pack-rigging pads.....	229,425.00	229,425.00
	Total.....	4,723,433.00	4,723,433.00

SUMMARY.

Expended fiscal year 1917..	31,868.00	31,868.00	1,700.00	1,700.00	33,568.00

REMARKS.

United States.—This estimate is based on 100 per cent replenishing of halters aparejos, saddles, etc., required for pack and riding mules pertaining to 45 divisions organized in accordance with Tables of Organization, series A, August, 1917. The equipment required for these animals, should the present emergency continue, will be as follows:

2,740 halters, at \$2.50.....	\$6,850
2,690 aparejos, at \$90.....	242,100
4,050 riding saddles, at \$45.....	182,250
4,050 riding bridles, at \$5.....	20,250
	451,450

Philippine Islands.—The amount called for in this estimate is the same as estimated for by Philippine authorities.

Item A. T. 223.—Purchase of pack-rigging parts.

[Estimate fiscal year 1919, \$229,425.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$225,725.00	\$225,725.00	\$3,700.00	\$3,700.00	\$229,425.00
Appropriated fiscal year 1918.....	20,559.12	20,559.12	3,700.00	3,700.00	24,259.12
Expended fiscal year 1917..	100,997.00	100,997.00	5,000.00	5,000.00	105,997.00

REMARKS

United States.—It is estimated that pack rigging parts amounting to 50 per cent of the value of the pack rigging will be needed during the fiscal year 1919, if the present emergency continues, amounting to \$225,725.

Philippine Islands.—The amount called for in this estimate is the same as estimated for by Philippine authorities.

Item A. T. 224.—Harness, repair of: For the purchase, hire, operation, and maintenance and repair of, as required for the transportation of troops and supplies, and for official, military, and garrison purposes.

[Estimate fiscal year 1919, \$265,915.75.]

For the purpose of cost keeping, this item is divided as follows:

Item No. 224A—Harness, repair of (by contract or agreement).

Item No. 224B—Harness, repair of (tools for repairs to pack rigging and harness).

Item No. 224C—Harness, repair of (materials for repairs to pack rigging and harness).

The subitems and amount estimated for under each item are as follows:

Item.	Character.	Supplies.	Services.	Total.
224A	By contract or agreement.....		\$20,549.00	\$20,549.00
224B	Tools for repairs to pack riggings and harness.....	\$105,400.00		105,400.00
224C	Materials for repairs to pack riggings and harness.....	139,966.75		139,966.75
	Total.....	245,366.75	20,549.00	265,915.75

SUMMARY.

	Supplies.	Services.	Total.
United States.....	\$237,366.75	\$20,549.00	\$257,915.75
Philippine Islands.....	8,000.00		8,000.00
Total.....	245,366.75	20,549.00	265,915.75

COMPARATIVE STATEMENT.

Item.	Character.	Cost, fiscal year 1917.	Appropriation, fiscal year 1918.	Estimate, fiscal year 1919.
224A	By contract or agreement.....	\$2,349.00	\$2,000.00	\$20,549.00
224B	Tools for repairs to pack rigging and harness.....	11,652.00	3,200.00	105,400.00
224C	Materials for repairs to pack rigging and harness.....	115,680.00	45,000.00	139,966.75
	Total.....	129,681.00	50,200.00	265,915.75

Item A. T. 224a.—Harness, repair of, by contract or agreement.

[Estimate fiscal year 1919, \$20,549.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$20,549.00	\$20,549.00	\$20,549.00
Appropriated fiscal year 1918.....	2,000.00	2,000.00	2,000.00
Expended fiscal year 1917..	2,349.00	2,349.00	2,349.00

REMARKS.

United States.—This estimate is based on a per capita cost of \$0.012, estimated requirements for fiscal year 1918, which will amount to \$20,549 for a force of 1,712,245 officers and men.

Philippine Islands.—No estimate submitted.

Item A. T. 224b.—Tools for repairs to pack rigging and harness.

[Estimate fiscal year 1919, \$105,400.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$104,400.00	\$104,400.00	\$1,000.00	\$1,000.00	\$105,400.00
Appropriated fiscal year 1918.....	2,200.00	2,200.00	1,000.00	1,000.00	3,200.00
Expended fiscal year 1917.....	10,152.00	10,152.00	1,500.00	1,500.00	11,652.00

REMARKS.

United States.—This estimate is based on 100 per cent replenishment of tools required for 45 Infantry divisions. Each Infantry division is allowed 116 sets of saddlers' tools, or 5,220 sets for 45 divisions, which at \$20 per set will cost \$104,400. This amount is considered necessary should the present emergency continue.

Philippine Islands.—Estimate for \$1,000 is based on figures submitted by the department authorities, Philippine Department.

Item A. T. 224c.—Materials for repairs to pack rigging and harness.

[Estimate fiscal year 1919, \$139,966.75.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$132,966.75	\$132,966.75	\$7,000.00	\$7,000.00	\$139,966.75
Appropriated fiscal year 1918.....	38,000.00	38,000.00	7,000.00	7,000.00	45,000.00
Expended fiscal year 1917.....	107,680.00	107,680.00	8,000.00	8,000.00	115,680.00

REMARKS.

United States.—This estimate is based on materials required for repairs of pack rigging and harness for 45 Infantry divisions. The following material will be needed to repair each 20 double sets of harness:

40 pounds leather, at 80 cents per pound.....	\$32.00
7 papers needles, at 10 cents.....	.70
4 pounds rivets and burrs, at 10 cents.....	.40
80-ounce thread, 5 pounds, at \$1.50 per pound.....	7.50
80-ounce wax, 5 pounds, at 5 cents per pound.....	.25

40.85

There will be a total of 65,115 double sets of harness in use with 45 Infantry divisions. The cost of repairing this harness at the rate indicated above will amount to \$132,966.75.

Philippine Islands.—Estimate for \$7,000 is based on figures submitted by the department authorities, Philippine Department.

ARMY APPROPRIATION BILL, 1919.

491

Item A. T. 225a.—Wagons, purchase of, complete.

[Estimate fiscal year 1919, \$5,765,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,755,500.00	\$5,755,500.00	\$10,000.00	\$10,000.00	\$5,765,500.00
Appropriated fiscal year 1918.....	106,858.00	\$50,000.00	156,858.00	26,192.00	26,192.00	183,050.00
Expended fiscal year 1917.....	371,585.00	371,585.00	8,000.00	8,000.00	379,585.00

REMARKS.

United States.—This estimate is based on 100 per cent replenishment of wagons required for 45 Infantry divisions, authorized in Tables of Organization, Series "A," August, 1917. The following number of wagons will be needed:

11,250 escort wagons, at \$190.....	\$2,137,500.00
6,030 combat wagons, at \$600.....	3,618,000.00
	5,755,500.00

Philippine Islands.—This estimate is the same as that submitted by department authorities, Philippine Department.

Item A. T. 225b.—Wagons, purchase of, wagon parts.

[Estimate fiscal year 1919, \$1,154,100.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,151,100.00	\$1,151,100.00	\$3,000.00	\$3,000.00	\$1,154,100.00
Appropriated fiscal year 1918.....	14,000.00	14,000.00	2,950.00	2,950.00	16,950.00
Expended fiscal year 1917.....	113,062.00	113,062.00	4,000.00	4,000.00	117,062.00

REMARKS.

United States.—It is estimated that wagon parts costing 20 per cent of the value of the wagons with 45 Infantry divisions will be required. These parts will cost \$1,151,100. See item 225a for value of wagons.

Philippine Islands.—\$3,000 is the amount estimated for by the department authorities, Philippine Department, to cover cost of wagon parts.

Expended, fiscal year 1917.....	4,676.00	4,676.00	3,000.00	3,000.00	7,676.00

REMARKS.

United States.—\$8,000 was estimated for in estimate fiscal year 1918, covering repairs to all wagons under contract for a force of 169,000 men. For a force of 1,712,245 men ten times that amount will be required, or \$80,000.

Philippine Islands.—Estimate for \$2,000 is based on figures submitted by the department authorities, Philippine Department.

Item A. T. 226b.—Tools for repair of wagons.

[Estimate fiscal year 1919, \$422,300.]

	United States.			Philippine Islands.			Grand Total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$420,300.00	\$420,300.00	\$2,000.00	\$2,000.00	\$422,300.00
Appropriated fiscal year 1918.....	8,000.00	8,000.00	2,000.00	2,000.00	8,000.00
Expended fiscal year 1917.....	19,115.00	19,115.00	2,000.00	2,000.00	21,115.00

REMARKS.

United States.—This estimate is based on 100 per cent replenishment of blacksmiths', wheelwrights', and carpenters' tools allowed for 45 Infantry divisions. It is estimated that 4,680 sets of blacksmiths' tools will be required for 45 divisions, which at \$53

per set will cost \$248,040, and 5,220 sets of wheelwrights' and carpenters' tools, which at \$33 per set will cost \$172,260, making a total of \$420,300.

The foregoing amount is considered necessary if the forces operate in the field during the fiscal year 1919.

Philippine Islands.—This estimate is the same as that submitted by department authorities, Philippine Department.

Item A. T. 226c.—Materials for repair of wagons.

[Estimate, fiscal year 1919, \$383,000.]

	United States.			Philippine Islands.			Grand Total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$380,000 00	\$380,000 00	\$3,000 00	\$3,000 00	\$383,000 00
Appropriated fiscal year 1918...	38,000 00	38,000 00	2,000 00	2,000 00	38,000 00
Expended fiscal year 1917.....	68,078.00	68,078.00	3,000.00	3,000.00	71,078.00

REMARKS.

United States.—The sum of \$38,000 was appropriated during the fiscal year 1918, for materials for repairs of wagons for a force of 169,000 men. Based on this allowance 10 times the foregoing amount will be needed for materials for repairing wagons with a force of 1,712,245 men, or \$380,000.

Philippine Islands.—Estimate for \$3,000 is based on figures submitted by the department authorities, Philippine Department.

Item A. T. 227.—Carts (purchase and repair of.)

[Estimate fiscal year 1919, \$3 316,500.]

For the purpose of cost keeping this item is subdivided. The subitems and amount estimated for under each item are as follows:

Item.	Character.	Supplies.	Services.	Total.
227A	Purchase of carts, complete.....	\$2,788,000.00	\$2,788,000.00
227B	Repair of carts.....	\$558,500.00	558,500.00
	Total.....	2,788,000.00	558,500.00	3,316,500.00

Summary.

Appropriated, fiscal year 1918.....	3,000.00	3,000.00	1,500.00	1,500.00	4,500.00
Expended, fiscal year 1917.....	13,151.50	13,151.50	500.00	500.00	13,651.50

REMARKS.

United States.—Should the present emergency continue, it is estimated that 100 per cent replenishment of the following carts with 45 Infantry divisions will be needed to replace carts that will become unserviceable due to field service:

5,040 ration carts, at \$150 each.....	\$756,000
4,950 water carts, at \$300 each.....	1,485,000
810 medical carts, at \$150 each.....	121,500

Total..... 2,362,800

Miscellaneous carts will also be needed to replace such as may become unserviceable, as follows:

1,000 trench carts, at \$25 each.....	\$25,000
1,000 sanitary carts, at \$250 each.....	250,000
1,000 hand carts, at \$25 each.....	25,000
1,000 dump carts, at \$125 each.....	125,000

Total..... 425,000

Philippine Islands.—Estimate for \$500 is based on figures submitted by the department authorities, Philippine Department.

Item A. T. 227b.—Repair of carts.

[Estimated fiscal year 1919, \$558,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$557,500.00	\$557,500.00	\$1,000.00	\$1,000.00	\$558,500.00

Philippine Islands.....	111,750.00	50,400.00	162,150.00
Total.....	77,348,625.00	200,991,172.45	278,339,797.45

Item A. T. 229a—Purchase of miscellaneous horse-drawn vehicles, complete.—United States (current requirements): Expended, fiscal year 1917, \$40,034. Estimate, fiscal year 1919, \$136,225.

REMARKS.

United States.—The amount of \$136,225 estimated for under this item is based on the same number of miscellaneous vehicles that have been purchased during the fiscal year 1918, namely:

500 spring mountain wagons, at \$226.05.....	\$113, 025
125 delivery wagons, at \$185.60.....	23, 200
Total.....	136, 225

Philippine Islands.—No estimate submitted.

Item A. T. 229b—Repair of miscellaneous horse-drawn vehicles.—United States (current requirements): Appropriated, fiscal year 1918, \$10,000; expended, fiscal year 1917, \$40,263. Estimate, fiscal year 1919, \$101,022.45.

REMARKS.

United States.—This estimate is based on figures for fiscal year 1918. Ten thousand dollars was appropriated during the fiscal year 1918 for a force of 169,000 men, or a per capita cost of \$0.059. Basing estimate for fiscal year 1919 on 45 divisions, or 1,712,245 men, the sum required for this purpose will amount to \$101,022.45.

Philippine Islands.—No estimate submitted.

Item 229c.—Other vehicles: Purchase of automobiles.

[Estimate fiscal year 1919, \$5,678,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,668,500.00	\$5,668,500.00	\$10,000.00	\$10,000.00	\$5,678,500.00
Appropriated fiscal year 1918.....	12,000.00	12,000.00	12,000.00
Expended fiscal year 1917.....	130,685.34	130,685.34	11,291.45	11,291.45	141,976.79

REMARKS.

United States.—There were in the service of the United States on June 30, 1917, 437 automobiles of all kinds, and funds for approximately 5,520 additional automobiles were provided for in the deficiency appropriations for the enlarged Army under war conditions, but it is not anticipated that more than 30 divisions will be equipped by June 30, 1918.

This estimate is based on the equipment of 45 divisions in the field, viz:

	7-passenger touring cars.	5-passenger touring cars.	Roadsters.
45 divisions, per table of allowances.....	315	1,215	450
Replacements (50 per cent).....	158	608	225
Army headquarters, corps headquarters, and general use (100 per cent)...	473	1,823	675
Total.....	946	3,646	1,350
Less 30 divisions equipped to June 30, 1918.....	210	710	300
	736	2,936	1,050

The cost of this number of automobiles is estimated as follows:

736 7-passenger touring cars, at \$2,500 each.....	\$1, 840, 000
2,936 5-passenger touring cars, at \$1,000 each.....	2, 936, 000
1,050 2-passenger roadsters, at \$850 each.....	892, 500
	5, 669, 500

	Purchased or contracted for.	Deliveries to Nov. 15, 1917.	Total cost.	Average cost.
Roadsters.....	187	187	\$157,629.70	\$842.94
5-passenger.....	1,612	1,612	1,139,933.88	707.15
7-passenger.....	174	174	418,739.00	2,406.55

Approximately 141 roadsters, 858 5-passenger, 115 7-passenger have been shipped or released for shipment abroad for use of American expeditionary forces up to November 15, 1917.

Philippine Islands.—The department authorities have estimated that the requirements of the service in this particular can be provided for with the sum indicated (\$10,000). The number and kind of automobiles to be procured has not been specified.

Item 229d.—Other vehicles; hire of automobiles.

[Estimate fiscal year 1919, \$10,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$10,000.00	\$10,000.00	\$10,000.00
Appropriated fiscal year 1918.....	500.00	500.00	500.00
Expended fiscal year 1917.....	23,812.16	23,812.16	23,812.16

REMARKS.

United States.—The amount of \$10,000 has been included in the estimate to cover infrequent requests from depots, encampments, and posts for motor transportation where special urgency may demand, and Government-owned vehicles are not available.

Philippine Islands.—No estimate submitted by the department authorities under this item.

Item 229e.—Other vehicles, repairs to automobiles.

[Estimate fiscal year 1919, \$7,401,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$7,396,000.00	\$7,396,000.00	\$5,000.00	\$5,000.00	\$7,401,000.00
Appropriated fiscal year 1918.....	43,500.00	43,500.00	4,000.00	4,000.00	47,500.00
Expended fiscal year 1917.....	176,866.18	176,866.18	3,200.00	3,200.00	180,066.18

REMARKS.

United States.—This estimate is based upon the repairs and maintenance of approximately 14,792 automobiles of all kinds pertaining to the Quartermaster Corps and other bureaus of the War Department, at the average cost of \$500 for each machine per annum under war conditions. This will provide the necessary spare parts for general overhauling at frequent intervals so as to keep the owned automobiles in condition to meet all military requirements abroad and at home.

Philippine Islands.—The sum of \$5,000 is considered necessary by the department authorities for this purpose.

Item 229f.—Operation and maintenance of automobiles.

[Estimate fiscal year 1919, \$10,364,400.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$10,354,400	\$10,354,400	\$10,000	\$10,000	\$10,364,400
Appropriated fiscal year 1918.....	90,000	90,000	7,000	7,000	97,000
Expended fiscal year 1917.....	68,877	68,877	8,000	8,000	76,877

REMARKS.

United States.—These figures are based upon the operation and maintenance under war conditions of 14,792 automobiles pertaining to the Quartermaster's Corps and all other Bureaus of the War Department at the average cost of \$700 per annum. This, it is estimated, will provide the necessary gasoline, lubricants, and accessories required for the official use of all Government-owned vehicles connected with the Army.

Philippine Islands.—The sum of \$10,000 is considered necessary by the department authorities for the operation of this class of motor vehicles on hand and to be procured.

Item 229g.—Other vehicles, purchase of motor trucks.

[Estimate fiscal year 1919, \$69,280,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$69,180,000.00	\$69,180,000.00	\$100,000.00	\$100,000.00	\$69,280,000.00
Appropriated fiscal year 1918.....	8,800.00	8,800.00	8,800.00
Expended fiscal year 1915.....	549,337.24	549,337.24	103,673.00	103,673.00	653,010.24

REMARKS.

United States.—This estimate is based on the procurement of the necessary motor trucks for the equipment of 45 divisions in the field under war conditions, as follows:

	Heavy (3-ton).	Light (repair).	Machine shops.
Required for 45 divisions under tables of allowances.....	10,125	270
Replacements (50 per cent).....	5,063	135
Army and corps line of communication and general use (100 per cent). {	15,188	405
	100	100	100
Repair-shop units.....	30,476	910	100
Provided for 30 divisions to June 30, 1918.....	13,500	460	80
	16,976	450	40

The estimated cost of this number of motor trucks is as follows:

16,976 motor trucks, 3-ton, at \$4,000.....	\$67,904,000
450 motor trucks, light, at \$2,000.....	900,000
40 machine-shop trucks, at \$9,400.....	376,000
	69,180,000

The number of trucks and similar equipment purchased, contracted, and actually delivered from April 1 to November 15, 1917, is as follows:

	Purchased or contracted for.	Deliveries to Nov. 15, 1917.	Total cost of trucks delivered.	Average cost.
4, 5, and 6 ton trucks.....	63	63	\$288,473.50	\$4,518.94
3-ton trucks.....	20,538	897	3,071,947.80	3,424.09
1½-ton trucks.....	4,723	2,316	6,890,398.97	2,975.12
1-ton trucks.....	709	709	508,664.61	717.43
Tractors, trailers, dock trucks, etc.....	1,285	1,285	931,785.00

Approximately 8 5-ton trucks, 728 3-ton trucks, 1,667 1½-ton trucks, 394 light trucks, 1,285 tractors, trailers, dock trucks, etc., have been shipped or released for shipment abroad for use of American expeditionary forces up to November 15, 1917.

Philippine Islands.—The department authorities estimate that \$100,000 will be required to provide the necessary new vehicles of this class required to meet existing conditions and to replace others worn out in the service.

Item 229h.—Other vehicles; hire of motor trucks.

[Estimate fiscal year 1919, \$100,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$100,000.00	\$100,000.00	\$100,000.00
Appropriated fiscal year 1918.....
Expended fiscal year 1917.....	44,689.08	44,689.03	44,689.03

REMARKS.

United States.—This amount is considered essential to meet special conditions at depots and encampments where the temporary hire of motor trucks will obviate the purchase of such vehicles which otherwise would be necessary.

Philippine Islands.—No estimate submitted by the department authorities upon this item.

Item 229i.—Other vehicles: Repair of motor trucks.

[Estimate fiscal year 1919, \$67,375,800.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$67,365,800.00	\$67,365,800.00	\$10,000.00	\$10,000.00	\$67,375,800.00
Appropriated fiscal year 1918.....	590,000.00	590,000.00	5,000.00	5,000.00	595,000.00
Expended fiscal year 1917.....	772,120.51	772,120.51	10,000.00	10,000.00	782,120.51

REMARKS.

United States.—This estimate is based upon the repair and maintenance under war conditions of 81,739 motor trucks and approximately 6,492 tractors owned and operated by the Quartermaster Corps and other bureaus of the War Department at an average annual cost of \$800 each truck and approximately \$300 for each tractor (spare parts thereof being furnished by the Ordnance Department). Frequent overhauling

will be necessary to keep such vehicles in active service. The spare parts, tools, and machinery to accomplish this work expeditiously will be obtained under this item.

The machinery, tools, and equipment for the base repair shops in France have been procured at an approximate cost of \$4,089,744.86. Repair parts and accessories for the use of these shops have been obtained and forwarded or released to destination at the following cost:

For trucks.....	\$7, 289, 186. 51
For automobiles.....	209, 824. 36
For motorcycles.....	320, 158. 98
For bicycles.....	8, 580. 00

Total..... 7, 827, 749. 85

The tires, inner tubes and castings for motor vehicles furnished for the same shops have cost as follows:

For trucks.....	\$2, 267, 162. 00
For automobiles.....	984, 098. 00
For motorcycles.....	130, 850. 00
For bicycles.....	31, 700. 00

Total..... 3, 413, 810. 00

Philippine Islands.—The funds asked for by the department authorities for the maintenance of this class of equipment is included in this estimate.

Item 229j.—Other vehicles: Operation and maintenance of motor trucks.

[Estimate fiscal year 1919, \$111,939,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$111, 915, 000	\$111, 915, 000	\$24, 000	\$24, 000	\$111, 939, 000
Appropriated fiscal year 1918.....	1, 115, 802	1 115, 802	8, 000	8, 000	1, 123, 802
Expended fiscal year 1917.....	428, 091	428, 091	15, 000	15, 000	443, 091

REMARKS.

United States.—The amount estimated for this purpose is based upon the operation and maintenance of 81739 motor trucks owned by the Quartermaster Corps and other bureaus of the War Department, at an average cost of \$1,200 each per annum, and for the operation and maintenance of approximately 6,492 tractors of various sizes for the Ordnance Department at an average cost of \$2,130 each per annum. This will provide for the necessary gasoline and lubricants required under war conditions.

Philippine Islands.—The department authorities have estimated the sum of \$24,000 will be required for the operation and maintenance of motor trucks. This exceeds the amount expended for this purpose during 1917 by \$9,000, which is due to the additional trucks to be maintained.

Item 229k.—Other vehicles: Purchase of motorcycles.

[Estimate fiscal year 1919, \$1,873,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1, 872, 500	\$1, 872, 500	\$1, 000	\$1, 000	\$1, 873, 500
Appropriated fiscal year 1918.....	6, 000	6, 000	6, 000
Expended fiscal year 1917.....	65, 203	65, 203	825	825	66, 028

REMARKS.

United States.—This estimate is based upon the procurement of 5,350 motorcycles for the equipment of the enlarged Army under war conditions at an average cost of \$350 each, including side car and necessary accessories. The basis of the calculations is as follows:

For equipment, 40 divisions, under Tables of Organization.....	4,050
For replacement (50 per cent).....	2,025
For Army and corps headquarters and for general use (100 per cent).....	6,075
For machine-shop units (4 each).....	400

Total.....	12,550
Provided for under the deficiency appropriation, 1918.....	7,200

Required to complete equipment..... 5,350

Purchased or contracted for, motorcycles, 6,640; side cars, 3,290. Deliveries to November 15, 1917, motorcycles, 5,672; side cars, 3,035. Total cost, motorcycles, \$1,634,784.74; side cars, \$210,380. Average cost, motorcycles, \$288.22; side cars, \$69.32.

Approximately 2,353 motorcycles and 2,353 side cars have been shipped or released for shipment abroad for use of American expeditionary forces up to November 15, 1917.

Philippine Islands.—The department authorities have submitted estimate that \$1,000 will be required for this purpose during the fiscal year 1919. Eight hundred and twenty-five dollars was expended under this subitem during 1917.

Item 229l.—Other vehicles; hire of motorcycles.

[Estimate fiscal year 1919, \$2,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$2,000	\$2,000	\$2,000
Appropriated fiscal year 1918.....
Expended fiscal year 1917.....

REMARKS.

United States.—The amount of \$2,000 has been included in the estimate for this purpose to provide for temporary messenger and other dispatch service during the fiscal year, where it would not be advantageous to purchase this class of equipment or where purchase could not be consummated in time to meet the existing exigency.

Philippine Islands.—No estimate.

Item 229m.—Other vehicles; repair of motorcycles.

[Estimate fiscal year 1919, \$892,700.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$892,500	\$892,500	\$200	\$200	\$892,700
Appropriated fiscal year 1918.....	5,425	5,425	5,425
Expended fiscal year 1917.....	20,163	20,163	200	200	20,363

REMARKS.

United States.—The figures submitted are based upon the repair of approximately 17,850 motorcycles on hand or to be procured during the period covered by the estimate, at an average cost of \$50 per annum for each machine.

Philippine Islands.—The department authorities have included this amount for the upkeep of motorcycles owned by the Government and in use in the islands.

Item 229n.—Other vehicles: Operation and maintenance of motorcycles.

[Estimate fiscal year 1919, \$2,578,500.]

	United States.			Philippine Islands.			Grand total.
	Current equipments.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate	\$2,677,500	\$2,677,500	\$1,000	\$1,000	\$2,678,500
Appropriated fiscal year 1918....	80,555	80,555	80,555
Expended fiscal year 1917.....	5,197	5,197	1,000	1,000	6,197

REMARKS.

United States.—The amount estimated for is based upon the operation and maintenance, under war conditions, of 17,850 motorcycles now owned or provided for in regular and deficiency appropriations at an average cost of \$150 per annum for each machine. This will provide the necessary gasoline, lubricants and other running supplies.

Philippine Islands.—The department authorities have estimated that the amount named will be required to operate the motorcycles connected with that department.

Item 229o.—Other vehicles: Purchase of bicycles.

[Estimate fiscal year 1919, \$380,400.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate	\$379,650	\$379,650	\$750	\$750	\$380,400
Appropriated fiscal year 1918....	1,560	1,560	750	750	2,310
Expended fiscal year 1917.....	1,612	1,612	200	200	1,812

REMARKS.

United States.—The estimate is based upon the procurement of 259 bicycles for the equipment of each of the 45 divisions in the field, as prescribed in the Tables of Organization, Series A, at an average cost of \$30 each, with the addition of 1 000 bicycles for messenger service at depots and posts. The bicycle is a new article of equipment for divisions, and no funds for this purpose have heretofore been asked for.

Purchased or contracted for, 10 230; deliveries to November 15, 1917, 3,467; total cost, \$104 614.28; average cost, \$30.17.

Approximately 3,343 bicycles have been shipped or leased for shipment abroad for use of American Expeditionary Forces.

Philippine Islands.—The department authorities submitted the amount estimated for as necessary to provide this class of equipment during the fiscal year.

Item 229p.—Other vehicles: Repair of bicycles.

[Estimate fiscal year 1919, \$126,750.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$126,550	\$126,550	\$200	\$200	\$126,750
Appropriated fiscal year 1918.....	400	400	200	200	600
Expended fiscal year 1917.....	892	892	300	300	1,192

REMARKS.

United States.—The estimate is based upon the proper upkeep of 12,655 bicycles provided for 45 divisions of the Army in the field at an average cost of \$10 each. This will provide the tires, spare parts and accessories incident to the severe service required under war conditions.

Philippine Islands.—The estimate of \$200 is made by the department authorities, which is \$100 less than the sum expended for this purpose during the fiscal year 1917.

Item 230 (consolidated).—Drayage, cartage, and hauling.

[Estimate fiscal year 1919, \$410,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$410,000.00	\$410,000.00	\$410,000.00
Appropriated fiscal year 1918.....	80,000.00	80,000.00	80,000.00
Expended fiscal year 1917.....	181,359.33	181,359.33	181,359.33

REMARKS.

From this item is paid the cost of drayage and hauling of all stores and supplies.

This item is subdivided under item 230a to 230d, inclusive, showing cost at posts, depots, etc., as follows:

Item.	Where furnished.	Appropriation, 1918.	Estimate, 1919.
230a	At posts.....	\$39,000.00	\$205,000.00
230b	At depots.....	28,000.00	143,500.00
230c	At arsenals and armories.....	8,000.00	41,000.00
230d	In the field.....	5,000.00	20,500.00
	Total.....	80,000.00	410,000.00

United States.—The estimate under this item is based on 1,712,245 officers and men at 24 cents per capita.

Philippine Islands.—No estimate submitted by the department authorities.

Item 230a.—Drayage, cartage, and hauling at posts.

[Estimate fiscal year 1919, \$205,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$205,000.00	\$205,000.00	\$205,000.00
Appropriated fiscal year 1918.....	39,000.00	39,000.00	39,000.00
Expended fiscal year 1917.....	45,272.85	45,272.85	45,272.85

REMARKS.

From this item is paid the cost of hauling and drayage of stores and supplies at Army posts.

Philippine Islands.—No estimate submitted by the department authorities.

Item 230b.—Drayage, cartage, and hauling at depots.

[Estimate fiscal year 1919, \$143,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$143,500.00	\$143,500.00	\$143,500.00
Appropriated fiscal year 1918.....	28,000.00	28,000.00	28,000.00
Expended fiscal year 1917.....	35,785.99	35,785.99	35,785.99

REMARKS.

From this item is paid the cost of drayage and cartage at the several supply depots where there are no owned means of transportation or where such transportation is insufficient.

Philippine Islands.—No estimate submitted by the department authorities.

Item 230c.—Drayage, cartage, and hauling at arsenals and armories.

[Estimate fiscal year 1919, \$41,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$41,000.00	\$41,000.00	\$41,000.00
Appropriated fiscal year 1918.....	5,000.00	5,000.00	5,000.00
Expended fiscal year 1917.....	17,130.64	17,130.64	17,130.64

REMARKS.

From this item is paid the cost of drayage, cartage, and hauling at the various arsenals and armories in connection with the transportation of ordnance, ordnance stores and supplies. About 50 per cent of this amount is used to reimburse the Ordnance Department for hauling performed by that department for the Quartermaster Corps.

Philippine Islands.—No estimate submitted by the department authorities.

ARMY APPROPRIATION BILL, 1919.

Item 230d.—Drayage, cartage, and hauling in the field.

[Estimate fiscal year 1919, \$20,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$20,500.00	\$20,500.00	\$20,500.00
Appropriated fiscal year 1918.....	5,000.00	5,000.00	5,000.00
Expended fiscal year 1917.....	83,169.85	86,169.85	83,169.85

REMARKS.

From this item is paid the cost of hauling for troops in the field in connection with the maneuvers, field, service, etc.

Philippine Islands.—No estimate submitted by the department authorities.

Item 231.—Teamsters.

[Estimate fiscal year 1919, \$216,940.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$116,940.00	\$116,940.00	\$100,000.00	\$100,000.00	\$216,940.00
Appropriated fiscal year 1918.....	131,100.00	131,100.00	117,420.00	117,420.00	248,520.00
Expended fiscal year 1917.....	114,540.01	114,540.01	100,000.00	100,000.00	214,540.01

REMARKS.

From this item is defrayed the cost of hire of civilian teamsters. The rate of compensation is shown in the Treasury Book of Estimates for 1919.

United States.—The estimate provides for the hire of 198 teamsters at rates varying from \$360 per annum to \$1,080 per annum. The amount asked for covers only employees of this class actually in service at the beginning of the fiscal year 1918 and does not include any additional employees that may be required incident to war conditions.

Philippine Islands.—The estimate covers the hire of 285 teamsters at rates varying from \$10 to \$50 per month, a decrease of 28 men from the number provided for 1918. These teamsters are largely natives of the Philippine Islands, and as a rule their services cost less than enlisted men, hence it is not the intention to replace them.

This item, as a whole, is \$31,580 less than provided for this purpose during the fiscal year 1918.

Item 232.—Other employees.

[Estimate fiscal year 1919, \$1,139,368.65.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$759,368.65	\$759,368.65	\$380,000.00	\$380,000.00	\$1,139,368.65
Appropriated fiscal year 1918.....	669,952.00	669,952.00	472,948.00	472,948.00	1,142,900.00
Expended fiscal year 1917.....	1,430,371.90	1,430,371.90	400,000.00	400,000.00	1,830,371.90

REMARKS.

This item covers the hire of blacksmiths, trainmasters, wagonmasters, packmasters, and other employees engaged in connection with the transportation of the Army. All of these employees are in the classified civil service except cargadores, cooks, draymen, herders, hostlers, scrubbers, stablemen, trainers, truckmen, assistant trainmasters, assistant wagonmasters and some laborers and packers. A complete list of the employees paid from this item for 1917 and those estimated for under this item for 1919 is shown in Treasury Book of Estimates for 1919.

United States.—The estimate for 1919 provides for 747 employees actually in the service at the beginning of the fiscal year 1918 at rates of compensation then authorized, and does not contemplate any increase or rates of pay due to special war conditions.

Philippine Islands.—The estimate as submitted by the department authorities is \$20,000 less than for 1918 and provides for approximately 1,023 employees instead of 1,095.

Item 233.—Ships, purchase of.

[Estimate fiscal year 1919, \$11,500,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New constructions.	Total.	Current requirements.	New constructions.	Total.	
Estimate.....		\$11,500,000.00	\$11,500,000.00				\$11,500,000.00
Appropriated fiscal year 1918.....							
Expended fiscal year 1917.....		6,500.00	6,500.00				6,500.00

REMARKS.

United States.—This item provides for the purchase or construction of three transports at a cost of approximately \$2,000 000 each; also for the purchase of two transports at a total cost of \$5,500,000. By reason of the fact that the Transport *Sumner* grounded off the coast of New Jersey in December, 1916, rendering this vessel unsuitable for further use as an Army transport; and the transfer in April, 1917, of the transports *Meade* and *McClellan* to the Shipping Board (additional tonnage of the character of these two vessels being urgently required by that board), the Army is operating at the present time three transports less than are actually required during normal times. The estimate of \$5,500,000 included in this item provides for the purchase of two additional transports which are urgently required in connection with the existing war. It is contemplated to procure for this sum two first-class troop transports of approximately 8,300 gross tons each, with a passenger-carrying capacity of approximately 2,100 officers and men.

Philippine Islands.—No estimate is submitted by the department authorities for the purchase of ships.

Item 234, consolidated—Sailing public transports.

[Estimate fiscal year 1919, \$2,785,765.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$2,341,865.00		\$2,341,865.00	\$443,900.00		\$443,900.00	\$2,785,765.00
Appropriated, fiscal year 1918.....	1,628,210.00		1,628,210.00	427,300.00		427,300.00	2,055,510.00
Expended, fiscal year 1917.....	1,882,036.96		1,882,036.96	486,200.00		486,200.00	2,368,236.96

REMARKS.

This estimate is a consolidation of items 234a to 234n, inclusive, and provides for the maintenance, operation, and upkeep of 11 ocean-going steamships and one ocean-going tug as per list following:

	Length.	Capacity.						Coal used.		Crew.
		First class.	Second class.	Troops.	Animals.	With troops.	Without troops.	At sea.	In port.	
Pacific Fleet:						<i>Tons.</i>	<i>Tons.</i>			
Burnside (cable ship).....	296	3								72
Dix.....	469	2		62	541			55	5	93
Logan.....	465	105	56	1,393		1,768	5,327	70	8	135
Sheridan.....	465	103	56	1,557		1,744	5,291	70	8	135
Sherman.....	465	106	56	1,399		1,810	5,227	75	8	135
Slocum (tug).....	185							10	5	14
Thomas.....	470	140	56	1,629		1,676	5,208	70	8	135
Atlantic Fleet:										
Buford.....	370	67	36	882		2,848	4,628	45	5	139
Kilpatrick.....	370	67	44	942	107	2,341	4,639	45	5	135
Philippine Fleet:										
Warren.....	373	48		324	32	2,909	3,889			
Merritt.....	300	40	15	353						
Liscum.....	248	24					1,191			

Also for the probable operation of two additional transports, funds for the purchase of which (\$3,500,000) are included in the estimate under item 233 (ships, purchase of).

This estimate contemplates increased use of vessels of the Army Transport Service during the fiscal year 1919, due to the prevalence of war conditions, and is \$417,523.04 greater than the expenditures for the fiscal year 1917.

United States.—This estimate is based on the assumption that the regular service will be maintained on the Pacific coast during the entire fiscal year, i. e., the operation of four trans-Pacific transports out of San Francisco; of a transport tug in San Francisco Harbor; the cable steamer *Burnside*, for the maintenance of the Washington-Alaska Cable Service; and a freight and animal transport (the *Dix*) out of Seattle. It is contemplated that two transports will be operated on the Atlantic coast on the New York-Panama run. If funds included in item 233 (ships, purchase of) are provided, it is the intention to operate two additional owned transports in the European service out of an Atlantic port.

The estimate for the United States is \$459,823.04 greater than the expenditures for the maintenance and operation of owned transports during the fiscal year 1917. Most of this increase is found in subitems 234a (fuel) and 234e (employees) and the reasons therefor are found in detail under the explanations of these subitems.

Philippine Islands.—The estimate of the Philippine authorities under this consolidated item provides for the maintenance, operation, and upkeep of three interisland transports for the full year (the *Warren*, *Liscum*, and *Merritt*), which vessels are engaged in the transportation of troops and supplies to the interisland ports and between Manila and China. It will be noted that the estimate for this purpose is \$42,300 less than the reported expenditures for the fiscal year 1917. Filipinos have been substituted for American employees as far as possible in connection with the maintenance and operation of the interisland transports, and for this reason, a material reduction for crew hire has been possible, enabling a total decrease in the estimate over the cost for the fiscal year 1917 of \$42,300.

[Estimate fiscal year 1919, \$675,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$583,000.00	\$583,000.00	\$125,000.00	\$125,000.00	\$675,000.00
Appropriated fiscal year 1918.....	363,000.00	363,000.00	125,000.00	125,000.00	488,000.00
Expended fiscal year 1917.....	440,123.52	440,123.52	120,000.00	120,000.00	560,123.52

REMARKS.

United States.—This item provides for the procurement of all fuel required for the operation of the owned Army Transport Service. The increase in this estimate over appropriation for the fiscal year 1918 is necessitated by the rapidly increasing cost of coal. By comparison of the appropriation for the fiscal year 1917 with the actual cost for that fiscal year, it will be noted that the present estimate is conservative.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is \$5,000 greater than the reported cost for the fiscal year 1917, but can be explained by reason of the fact that the price of fuel is increasing rapidly.

Item 234b-c-d—Deck engine, and steward's supplies.

(Estimate fiscal year 1919, \$258,000.)

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$225,000.00	\$225,000.00	\$33,000.00	\$33,000.00	\$258,000.00
Appropriated fiscal year 1918.....	200,000.00	200,000.00	33,000.00	33,000.00	233,000.00
Expended fiscal year 1917.....	215,919.17	215,919.17	30,000.00	30,000.00	245,919.17

REMARKS.

United States.—This item provides for the procurement of all deck, engine, and quartermaster steward supplies (except fuel and water), as well as equipment required for the proper maintenance and operation of vessels of the Army transport service. This estimate is a little greater than the cost for the fiscal year 1917, but the additional amount estimated is believed to be necessary by virtue of the fact that the purchase price of supplies is rapidly increasing.

Philippine Islands.—The estimate submitted by the Philippine department for this purpose is based upon the actual cost for the fiscal year 1917, with an additional amount of \$3,000, which it is assumed is included to cover the increased cost of supplies.

Item 234e.—Employees Army transport service.

(Estimate fiscal year 1919, \$1,200,240.)

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,060,240.00	\$1,060,240.00	\$150,000.00	\$150,000.00	\$1,200,240.00
Appropriated fiscal year 1918.....	695,210.00	695,210.00	140,000.00	140,000.00	835,210.00
Expended fiscal year 1917.....	718,973.75	718,973.75	200,000.00	200,000.00	918,973.75

REMARKS.

United States.—This item provides for payment of crews of four transports operating out of San Francisco and of the tug *Slocum* stationed thereat; of the crews of the transports *Dix* and *Burnside*, operating out of Seattle; and of the crews of two transports on the Atlantic coast. This item also provides for the payment of employees of the shore establishments and caretaking crew at San Francisco. The various grades of employees authorized and their rates of compensation are as shown in the following table. This estimate is \$331,266.25 greater than expenditures during the fiscal year 1917, but is, however, based on the actual amount required. Wages of crews of vessels of the owned transport service have recently been adjusted so that said crews

will receive as nearly as practicable the same wages that are being paid to crews of commercial vessels. The table below shows the rates paid to members of crews of Army Transport Service on June 30, 1917:

Employees on board transports:

3 agents, at \$1,500.....	\$4, 500
7 bakers, chief, at \$1,080..	7, 560
2 bakers, chief, at \$900...	1, 800
4 bakers, chief, at \$840...	3, 360
8 bakers, second, at \$750...	6, 000
6 bakers, third, at \$540...	3, 240
4 bakers, fourth, at \$480...	1, 920
4 barbers, at \$60.....	240

12 seamen, at \$420.....	5, 040
Total.....	91, 430

Philippine Islands.—The estimate submitted by the department authorities for this purpose is \$50,000 less than the reported cost for the fiscal year 1917. As was stated, in consolidated item No. 234, Filipinos have been substituted for American employees as far as possible in connection with the maintenance and operation of the interisland transports, and for this reason a material reduction for crew hire has been possible;

enabling this large decrease over the cost for the fiscal year 1917. The following table shows the various employees and their authorized rates of compensation under this item:

3 quartermaster agents, at \$1,500.	\$4, 500	1 steward, at \$840.....	\$840
3 freight clerks, at \$900.....	2, 700	2 stewards, at \$600.....	1, 200
3 checkers, at \$720.....	2, 160	1 steward, at \$420.....	420
3 masters, at \$3,000.....	9, 000	2 butchers, at \$720.....	1, 440
3 officers, at \$1,500.....	4, 500	1 butcher, at \$360.....	360
3 officers, at \$1,020.....	3, 060	1 butcher, at \$300.....	300
3 officers, at \$840.....	2, 520	2 cooks, at \$540.....	1, 080
3 officers, at \$720.....	2, 160	1 cook, at \$480.....	480
3 boatswains, at \$480.....	1, 440	3 cooks, at \$420.....	1, 260

18 oilers, at \$300.....	5, 400		
27 coal passers, at \$180.....	4, 860		
9 water tenders, at \$360.....	3, 240		
2 stewards, at \$1,350.....	2, 700		

Item 234f.—Water, Army transport service.

[Estimate fiscal year 1919, \$8,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,000.00	\$5,000.00	\$3,000.00	\$3,000.00	\$8,000.00
Appropriation fiscal year 1918...	5,000.00	5,000.00	3,000.30	3,000.00	8,000.30
Expended fiscal year 1917.....	4,457.71	4,457.71	3,000.00	3,000.00	7,457.71

REMARKS.

United States.—This item provides for the procurement of all fresh water required for boiler use and other purposes on board vessels of the Army transport service. This estimate is the same as that for the fiscal year 1918.

Philippine Islands.—The estimate submitted by the Philippine department for the procurement of fresh water for Army transports is the same as the reported cost under this item for the fiscal year 1917, and appropriation therefor for the fiscal year 1918.

Item 234g.—Laundry, Army transport service.

[Estimate fiscal year 1919, \$19,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$19,000.00	\$19,000.00	\$500.00	\$500.00	\$19,500.00
Appropriated, fiscal year 1918...	32,000.00	32,000.00	500.00	500.00	32,500.00
Expended, fiscal year 1917.....	18,028.27	18,028.27	500.00	500.00	18,528.27

REMARKS.

United States.—This item provides for the laundering of such equipment of vessels of the Army transport service as linen, bunk bottoms, etc. This estimate is based on the actual cost for the fiscal year 1917, being by \$974.73 greater. The decrease in cost for the fiscal year 1917 is due to the fact that a considerable amount of laundering work was done during that fiscal year at the Alcatraz Disciplinary Barracks, which was contracted for during previous fiscal years.

Philippine Islands.—The estimate submitted by the department authorities for this item is based on the actual cost for the fiscal year 1917.

Item 234-h.—Pilotage, Army Transport Service.

[Estimates fiscal year 1919, \$14,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$13,500.00	\$13,500.00	\$1,000.00	\$1,000.00	\$14,500.00
Appropriated fiscal year 1918...	14,000.00	14,000.00	500.00	500.00	14,500.00
Expended fiscal year 1917.....	12,928.57	12,928.57	1,000.00	1,000.00	13,928.57

REMARKS.

United States.—This estimate provides for pilotage of vessels of the Army transport service. Fixed rates are charged for this service by the various pilots' associations operating under rules and regulations fixed by State laws. The present estimate is the same as the appropriation for the fiscal year 1918.

Philippine Islands.—The estimate submitted by the department authorities is the same as the reported cost for the fiscal year 1917 and the appropriation for the fiscal year 1918.

Item 234i.—Stevedoring, Army transport service.

[Estimate fiscal year 1919, \$100,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$80,000.00	\$80,000.00	\$20,000.00	\$20,000.00	\$100,000.00
Appropriated fiscal year 1918...	72,000.00	72,000.00	17,000.00	17,000.00	89,000.00
Expended fiscal year 1917.....	79,890.70	79,890.70	20,000.00	20,000.00	99,890.70

REMARKS.

United States.—Stevedoring and longshoring service required in connection with the proper loading and stowing of cargoes aboard outgoing vessels and removal of like cargoes from incoming vessels of the Army transport service are paid from funds included in this item. It also includes payment for such services under contract. The estimate is based on the actual cost for the fiscal year 1917, being only \$109.30 more than said cost.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is the same as the reported cost for the fiscal year 1917.

Item 234j.—Removing ashes, Army transport service.

[Estimate fiscal year 1919, \$1,150.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$750.00	\$750.00	\$400.00	\$400.00	\$1,150.00
Appropriated, fiscal year 1918.....	1,000.00	1,000.00	300.00	300.00	1,300.00
Expended, fiscal year 1917.....	659.03	696.03	500.00	500.00	1,196.03

REMARKS.

United States.—Harbor regulations require that ships' ashes be disposed of outside of the harbor limits, and this item provides for such disposition from transports. The estimate is based on expenditures for the fiscal year 1917, being only \$54.97 more than said cost, which is included to provide for contingencies which may arise.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is \$100 less than the reported cost for the fiscal year 1917.

Item 234k.—Painting and cleaning, Army transport service.

[Estimate fiscal year 1919, \$16,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$13,000.00	\$13,000.00	\$3,000.00	\$3,000.00	\$16,000.00
Appropriated fiscal year 1918.....	10,000.00	10,000.00	3,000.00	3,000.00	13,000.00
Expended fiscal year 1917.....	12,307.49	12,307.49	3,000.00	3,000.00	15,307.49

REMARKS.

United States.—This item provides for the chipping, cleaning, and painting of the interior and exterior surfaces of vessels of the Army transport service to prevent deterioration to the greatest possible extent. This work is accomplished as these vessels arrive in port between trips from time to time. The present estimate is \$692.51 greater than the actual cost for the fiscal year 1917, and this additional amount is intended to meet contingencies which may arise.

Philippine Islands.—The estimate submitted by the department authorities under this item is the same as the reported cost for the fiscal year 1917.

Item 234-L.—Miscellaneous shore expenses, Army-transport service.

[Estimate fiscal year 1919, \$33,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate	\$25,000.00	\$25,000.00	\$3,000.00	\$3,000.00	\$33,000.00
Appropriated fiscal year 1918 ..	25,000.00	25,000.00	5,000.00	5,000.00	30,000.00
Expended fiscal year 1917.....	24,848.97	24,848.97	8,200.00	8,200.00	33,048.97

REMARKS.

United States.—This item provides for all miscellaneous expenses of the transport service, including the offices of the general superintendents and dock forces directly connected with operating the various transports and not specifically provided for in other items of this estimate, such as wharfage, rental of storehouses, lease of submarine signals, electric current, compressed air, handling lines and other such similar shore expenses. This estimate is based on the cost for the fiscal year 1917 with an additional amount of \$151.03 to provide for contingencies which may arise.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is \$200 less than the reported cost for the fiscal year 1917.

Item 234m.—Towage, Army Transport Service.—United States (current requirements): Appropriated fiscal year 1918, \$4,000; expended fiscal year 1917, \$2,333.51. Estimate fiscal year 1919, \$2,500.

REMARKS.

United States.—The hire of tug service from time to time for docking and undocking transports, when owned tugs are not available or are of insufficient power, is paid from funds included in this item. The present estimate is based on the actual cost for the fiscal year 1917, the additional amount of \$166.49 being included to provide for contingencies which may arise.

Philippine Islands.—The department authorities do not submit an estimate for this item, owned tugs being available to meet the needs of the service.

Item 234n.—Repairs, Army Transport Service.

[Estimate fiscal year 1919, \$457,875.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate	\$357,875.00	\$357,875.00	\$100,000.00	\$100,000.00	\$457,875.00
Appropriated fiscal year 1918 ..	210,000.00	210,000.00	100,000.00	100,000.00	310,000.00
Expended fiscal year 1917.....	351,533.27	351,533.27	100,000.00	100,000.00	451,533.27

REMARKS.

United States.—This item provides for ordinary repairs required for the proper maintenance of vessels comprising the owned Army transport service. This estimate is based on the cost for the fiscal year 1917, and the amount included herein is necessary in view of the increasing age of these vessels, which makes it requisite that more extensive repairs be accomplished to keep them in serviceable condition.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is the same as the reported cost for the fiscal year 1917.

Item 235.—Consolidated.

[Estimate fiscal year 1919, \$1,123,617.87.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$799,617.87	\$799,617.87	\$364,000.00	\$20,000.00	\$384,000.00	\$1,183,617.87
Appropriated fiscal year 1918.....	618,500.00	618,500.00	328,761.00	328,761.00	947,261.00
Expended fiscal year 1917.....	605,378.80	\$235,835.00	841,213.80	355,000.00	355,000.00	1,196,213.80

REMARKS.

This is a consolidation of the estimates submitted under items 235a to 234h,¹ inclusive, and provides for the maintenance and operation of the vessels listed below. These boats are engaged in the transportation of troops and supplies and for other garrison purposes between the posts located on the shores and islands of the various lakes, bays, rivers, and sounds, and the Pacific, Gulf, and Atlantic coasts and the Panama Canal.

United States.—This estimate is \$41,595.93 less than the cost for the fiscal year 1917. However, during the fiscal year 1917, \$235,835 was spent under subitem 235a (purchase or construction of harbor boats), for which no estimate is submitted. It will be noted, therefore, that the amount included in this estimate for the maintenance and operation of harbor boats is \$194,239.07 greater than the amount expended for that purpose during the fiscal year 1917. A considerable portion of this increase is accredited to subitem 235e (employees, harbor boats), the reason for this being given in the explanation of this item. By the passage of an act of Congress approved June 15, 1916, funds were provided to cover the purchase or construction of approximately the same number of vessels as are being operated by the Quartermaster Corps at the present time. Plans and specifications for the construction of these boats are being developed at the present time, and it is estimated that by the beginning of the fiscal year 1919 one-quarter of these vessels will be in service. It has, therefore, been necessary to estimate for the purchase of fuel, water, and supplies, the hire of crews, and the accomplishment of repairs required for their maintenance and operation, which estimate covers the remaining portion of this increase.

Philippine Islands.—The estimate submitted by the department authorities under this item is based on the reported cost for the fiscal year 1917.

Item 235a.—Purchase or construction, harbor boats.

[Estimate fiscal year 1919, \$20,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....					\$20,000.00	\$20,000.00	\$20,000.00
Appropriated fiscal year 1918.....							
Expended fiscal year 1917.....		\$235,835.00	\$235,835.00				235,835.00

REMARKS.

United States.—No estimate.

Philippine Islands.—The department authorities estimate that \$20,000 will be required for the construction of new harbor boats, although no explanation as to the contemplated construction is submitted.

Item 235b.—Repairs, harbor boats.

[Estimate fiscal year 1919, \$180,888.42.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$80,888.42	\$80,888.42	\$100,000.00	\$100,000.00	\$180,888.42
Appropriated fiscal year 1918.....	82,000.00	80,000.00	100,000.00	100,000.00	180,000.00
Expended fiscal year 1917.....	64,710.74	64,710.74	100,000.00	100,000.00	164,710.74

REMARKS.

United States.—This item provides for necessary repairs to harbor boats to maintain them in proper serviceable condition. The increase of \$16,177.68 in this estimate over the cost for the fiscal year 1917 is necessary, due to the fact that contracts will be entered into during the fiscal year 1918 for the supply of practically the same number of boats as are in the harbor boat service at the present time, a great many of which will be in service during the entire fiscal year 1919.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is the same as the reported cost for the fiscal year 1917.

Item 235c.—Fuel, harbor boats.

[Estimate fiscal year 1919, \$302,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$139,500.00	\$139,500.00	\$63,000.00	\$63,000.00	\$302,500.00
Appropriated fiscal year 1918.....	105,000.00	105,000.00	63,000.00	63,000.00	168,000.00
Expended fiscal year 1917.....	113,970.70	113,970.70	60,000.00	60,000.00	173,970.70

REMARKS.

United States.—This item provides for the purchase of coal, gasoline, cordwood, and fuel oil required for operation of vessels of the harbor boat service. The present estimate is approximately \$25,000 greater than the actual cost for the fiscal year 1917. Provision has previously been made for the doubling of the harbor boat service, and it is anticipated that one-fourth of these boats will be in service during the entire fiscal year 1919, making the additional amount herein called for necessary for the operation thereof.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is \$3,000 more than the reported cost for the fiscal year 1917; the same as the appropriation for the fiscal year 1918. It is assumed that the requirements of the Philippines Department make this increase over the reported cost for the fiscal year 1917 necessary.

Item 235d.—Supplies, harbor boats.

[Estimate fiscal year 1919, \$70,625.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$50,625.00	\$50,625.00	\$20,000.00	\$20,000.00	\$70,625.00
Appropriated fiscal year 1918.....	50,000.00	50,000.00	22,000.00	22,000.00	72,000.00
Expended fiscal year 1917.....	40,457.30	40,457.30	20,000.00	20,000.00	60,457.30

REMARKS.

United States.—Funds included in this item provide for the purchase of all deck and engine supplies (except fuel and water) and equipment required for the proper upkeep and operation of harbor boats. The present estimate contemplates an increase of \$10,167.70, which is necessary to provide for the purchase of supplies required for the additional vessels which will be in operation during the fiscal year 1919.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is the same as the reported cost for the fiscal year 1917.

Item 235e.—Employees, harbor boats.

[Estimate fiscal year 1919, \$614,152.50.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$472,152.50	\$472,152.50	\$142,000.00	\$142,000.00	\$614,152.50
Appropriated fiscal year 1918.....	355,000.00	355,000.00	141,936.00	141,936.00	496,936.00
Expended fiscal year 1917.....	341,360.01	341,360.01	140,000.00	140,000.00	481,360.01

REMARKS.

United States.—This item provides for the payment of crews and other employees of the harbor-boat service contained in the following list, which shows the number of such employees, their grades, and the rates allowed, as of July 1, 1917. This estimate is \$130,792.49 greater than the actual cost for the fiscal year 1917, but provides for the employment of crews on additional vessels of the harbor-boat service which will be in operation during the fiscal year 1919; also for the payment of crews of all vessels in this service at existing commercial rates on vessels of practically the same size and type, which rates will, in all probability, be greatly increased over the rates now in existence.

1 deckhand, at \$540.....	540.00
23 deckhands, at \$600.....	13,890.00
22 deckhands, at \$648.....	14,256.00
38 deckhands, at \$660.....	25,080.00
3 deckhands, at \$765.....	2,295.00
3 deckhands, at \$768.....	2,304.00
28 deckhands, at \$780.....	21,840.00
1 engineer, at \$150.....	150.00
2 engineers, chief, at \$1,800.....	3,600.00
8 engineers, chief, at \$1,780.....	14,240.00
2 engineers, chief, at \$1,740.....	3,480.00
5 engineers, chief, at \$1,680.....	8,400.00

Item 235f.—Water, harbor boats.

[Estimate fiscal year 1919, \$2,125.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$2,125.00	\$2,125.00	\$2,125.00
Appropriated fiscal year 1918....	2,500.00	2,500.00	\$825.00	\$825.00	3,325.00
Expended fiscal year 1917.....	1,710.49	1,710.49	1,710.49

REMARKS.

United States.—Fresh water required for boiler use on vessels of the harbor-boat service is provided from funds included in this item. This estimate is \$414.51 greater than the cost for the fiscal year 1917, but is required for purchase of fresh water which

will be used on the additional vessels of the harbor-boat service which will be in operation during the fiscal year 1919.

Philippine Islands.—No estimate is submitted by the department authorities under this item.

Item 235g.—Charter or hire, harbor boats.

[Estimate fiscal year 1919, \$36,250.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$36,250.00	\$36,250.00	\$36,250.00
Appropriated fiscal year 1918.....	16,000.00	16,000.00	16,000.00
Expended fiscal year 1917..	28,708.00	28,708.00	28,708.00

REMARKS.

United States.—This item provides for the hire or charter of commercial vessels to replace those temporarily out of commission while undergoing repairs; also for the hire of such vessels to supplement the owned service, same being insufficient to meet requirements at all times. This estimate is based on the cost for the fiscal year 1917, with an additional amount of \$7,542 being included in anticipation of added necessities due to the prevalence of war conditions.

Philippine Islands.—No estimate.

Item 235h.—Miscellaneous expenses, harbor boats.

[Estimate fiscal year 1919, \$57,076.95.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$18,076.95	\$18,076.95	\$39,000.00	\$39,000.00	\$57,076.95
Appropriated fiscal year 1918.....	10,000.00	10,000.00	1,000.00	1,000.00	11,000.00
Expended fiscal year 1917..	14,461.56	14,461.56	35,000.00	35,000.00	49,461.56

REMARKS.

United States.—Funds included in this item are required for payment of all miscellaneous expenses incurred on harbor boats, such as laundry, removal of ashes, storage charges for small boats during the winter season, hire of divers' services, etc.; also for reimbursement of the Ordnance Department for 40 per cent of the cost of operation of the steamer *Ordance* in providing additional boat service for the Quartermaster Corps. The increase of \$3,615.39 in this estimate over the cost for the fiscal year 1917 is necessary by reason of the fact that approximately one-quarter as many boats as are in operation at the present time will be added to the harbor boat service, and will be in operation during the entire fiscal year 1919.

Philippine Islands.—The estimate of the department authorities for this purpose is based on the actual cost for the fiscal year 1917, being \$4,000 greater than said cost, which it is assumed is necessary to meet additional requirements.

Item 236.—Consolidated.

[Estimate fiscal year 1919, \$1,019,408.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$953,908.00	\$953,908.00	\$65,500.00	\$65,500.00	\$1,019,408.00
Appropriated fiscal year 1918.....	633,666.00	633,666.00	73,998.00	73,998.00	707,664.00
Expended fiscal year 1917.....	691,358.17	\$498,866.40	1,190,224.00	80,500.00	80,500.00	1,250,724.67

REMARKS.

United States.—This is a consolidation of the estimates submitted under subitems 236a to 236h, inclusive, and provides for the maintenance, operation, and upkeep of the vessels of the Harbor Boat Service engaged principally in Coast Artillery work, such as planting mines, laying and repairing fire-control cable, towing targets, vessel tracking, searchlight drills, and the like, which boats are known as "other vessels." When they can be spared from the duties above mentioned, these vessels are also utilized for transportation purposes. Their names, class, length, and service in which engaged are shown in the list hereto appended. The decrease in this estimate of \$236,316.57 as compared with the expenditures for the fiscal year 1917 is caused by the fact that during that fiscal year expenditures totaling \$498,866.40 were made for the construction of new vessels, no expenditures in this connection being anticipated during this fiscal year. This indicates that for the maintenance and operation of "other vessels" there will be an increase of \$262,549.83 for this fiscal year over the expenditures for the fiscal year 1917. It is necessary to provide for supplies and services for new boats under construction which will be in service during the fiscal year, it being believed that these will number approximately one-quarter of the number in service at the close of the fiscal year 1917. A full explanation of this increase is shown under the various subitems of this estimate.

Other vessels, United States.

¹ Vessel performs some Quartermaster (transportation) work in addition to its Artillery duties.

From the list above it will be noted that there were at the close of the fiscal year 1917, 6 mine planters, 1 combined mine planter and cable steamer, 2 cable steamers, 21 steam tugs, 22 steam and gasoline launches, 27 distribution box boats, 38 motor mine yawls, and 69 oar-propelled mine yawls in this branch of the harbor-boat service.

Philippine Islands.—In the Philippine Islands there are 11 vessels engaged in work similar to that being performed by vessels operated in the United States listed above, and the estimate submitted by the department authorities covers the maintenance, operation, and upkeep of these vessels in proper condition. The consolidated estimate of the Philippines Department is \$5,000 greater than the reported cost for the fiscal year 1917. Explanations under the various subitems show why this increase is necessary. From the following list it will be noted that there were 2 mine planters, 1 steam tug (auxiliary mine planter), 1 steam launch, and 7 gasoline launches in the Artillery branch of the Philippine harbor-boat service at the close of the fiscal year 1917.

Other vessels, Philippine Islands.

Item 236a.—Purchase or construction of other vessels.

[No estimate for fiscal year 1919.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....							
Appropriated, fiscal year 1918.....							
Expended, fiscal year 1917.....		\$498,866.40	\$498,866.40				\$498,866.40

Item 236b.—Repairs, other vessels.

[Estimate, fiscal year 1919, \$113,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$103,000.00	\$103,000.00	\$10,000.00	\$10,000.00	\$113,000.00
Appropriated, fiscal year 1918.....	94,500.00	94,500.00	10,120.00	10,120.00	104,620.00
Expended, fiscal year 1917.....	83,945.07	83,945.07	8,000.00	8,000.00	91,945.07

REMARKS.

United States.—This item provides for the accomplishment of absolutely necessary repairs and alterations to the vessels engaged in Coast Artillery work to maintain them in proper serviceable condition. This estimate is \$19,054.93 greater than the cost for the fiscal year 1917, but is required by reason of the fact that approximately one-quarter as many additional vessels as are already engaged in artillery work, will be in service during the entire fiscal year 1919, upon which minor repairs, at least, will be required.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is based on the reported cost for the fiscal year 1917.

Item 236c.—Fuel, other vessels.

[Estimate fiscal year 1919, \$153,750.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$141,750.00	\$141,750.00	\$12,000.00	\$12,000.00	\$153,750.00
Appropriated fiscal year 1918.....	100,000.00	100,000.00	12,000.00	12,000.00	112,000.00
Expended fiscal year 1917.....	113,064.45	113,064.45	12,000.00	12,000.00	125,064.45

REMARKS.

United States.—Funds included in this item provide for the payment of accounts rendered for the supply of all fuel (coal, fuel oil, and gasoline) required for the operation of that portion of the harbor boat service engaged in artillery work. Fuel is obtained under annual contracts awarded as the result of competitive bidding. The increase

of \$28,885.53 in this estimate over the cost for the fiscal year 1917 is necessitated by reason of the fact that approximately one-quarter more vessels than are in service at the present time will be in service during the entire fiscal year 1919.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is the same as the reported cost for the fiscal year 1917.

Item 236d.—Supplies, other vessels.

[Estimate fiscal year 1919, \$78,750.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$68,750.00	\$68,750.00	\$10,000.00	\$10,000.00	\$78,750.00
Appropriated fiscal year 1918.....	55,000.00	55,000.00	13,000.00	13,000.00	68,000.00
Expended fiscal year 1917.....	57,247.88	57,247.88	7,000.00	7,000.00	64,247.88

REMARKS.

United States.—Funds included in this estimate are intended to provide for the purchase of all running supplies (except fuel and water) as well as equipment required for the maintenance and operation of such vessels of the harbor boat service as are engaged in artillery work. The increase of \$11,502.12 in this estimate over the cost for the fiscal year 1917 provides for the purchase of supplies for the maintenance and operation of approximately one-quarter more vessels than are in service at the present time, which vessels are now under construction.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is \$3,000 greater than the cost for the fiscal year 1917 and is assumed that this amount is included to take care of the constantly increasing cost of supplies.

Item 236e.—Employees, other vessels.

[Estimate fiscal year 1919, \$531,033.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$498,033.00	\$498,033.00	\$33,000.00	\$33,000.00	\$531,033.00
Appropriated fiscal year 1918.....	365,366.00	365,366.00	38,628.00	38,628.00	403,994.00
Expended fiscal year 1917.....	322,650.88	322,650.88	33,000.00	33,000.00	355,650.88

REMARKS.

United States.—This item provides for the payment of crews and other employees of vessels of the harbor-boat service engaged in artillery work. The number of these employees, with their grades and the rates allowed, as of July 1, 1917, is shown in the following table. The estimate is \$175,382.12 greater than the actual cost for the fiscal year 1917, but provides for the employment of crews on additional vessels which will be in operation during the fiscal year 1919; also, for the payment of the crews of all vessels in the service at existing commercial rates paid on vessels of practically the same size and type, which rates will, in all probability, be greatly increased over the rates now in existence.

EMPLOYEES, UNITED STATES, PAID FROM ITEM 236c.

	Rate.	Total.		Rate.	Total.

Expended fiscal year 1917.....	1,787.35	1,787.35	250.00	250.00	2,037.35

ARMY APPROPRIATION BILL, 1919.

REMARKS.

United States.—Fresh water for boiler and other uses for these vessels is purchased from funds included in this item. The increase of \$525.15 over the actual cost for the fiscal year 1917 is required for the procurement of fresh water for new vessels under construction.

Philippine Islands.—The estimate submitted by the department authorities is based on the reported cost for the fiscal year 1917.

Item 236g.—Charter or hire of other vessels.

[Estimate, fiscal year 1919, \$135,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$135,000.00	\$135,000.00	\$135,000.00
Appropriated, fiscal year 1918.....	13,600.00	13,600.00	13,600.00
Expended, fiscal year 1917.....	108,776.06	108,776.06	108,776.06

REMARKS.

United States.—This item provides for the charter or hire of commercial vessels in place of or supplemental to the owned vessels, for towing targets, vessel tracking, searchlight drills, and other such service for the Coast Artillery. The present estimate is \$26,223.94 greater than the actual cost for the fiscal year 1917, but is required by virtue of war conditions necessitating the hire of a great number of vessels to supplement the owned service.

Philippine Islands.—No estimate.

Item 236h.—Miscellaneous expenses, other vessels.

[Estimate, fiscal year 1919, \$5,312.50.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$5,062.50	\$5,062.50	\$250.00	\$250.00	\$5,312.50
Appropriated, fiscal year 1918.....	3,600.00	3,600.00	3,600.00
Expended, fiscal year 1917.....	3,886.48	3,886.48	250.00	250.00	4,136.48

REMARKS.

United States.—Miscellaneous services not provided for in other items, such as hire of divers, storage charges during the winter months for small boats (of which a greatly increased number will be in service), rental of submarine signal apparatus, laundry service, and the like are paid from funds included in this estimate. The additional amount of \$1,176.02 estimated over the cost for the fiscal year 1917 is required by reason of the fact that a large number of additional vessels will be in service during the fiscal year 1919.

Philippine Islands.—The estimate submitted by the department authorities for this purpose is based on the reported cost for the fiscal year 1917.

Item 237.—Charter of vessels (consolidated).

[Estimate fiscal year 1919, \$341,420,000.]

	United States.			Philippine Islands.			Grand total.
	Current require-ments.	New con-struction.	Total.	Current require-ments.	New con-struction.	Total.	
Estimate.....	\$341,420,000.00	\$341,420,000.00	\$341,420,000.00
Appropriated fiscal year 1918.....
Expended fiscal year 1917.....	1,986,921.74	1,986,921.74	1,986,921.74

REMARKS.

United States.—This is a new item included for the purpose of chartering, maintaining and operating continually during the fiscal year 175 ships of approximately 6,800 gross tons each, maintaining shore establishments at the various ports of embarkation, and reimbursing owners for possible losses due to submarining or otherwise destroying these vessels. It is anticipated to use these vessels for the movement of troops and supplies scheduled for transportation to overseas ports during the fiscal year, and the estimate is based upon the cost for the operation of vessels of the same class during the fiscal year 1917.

Philippine Islands.—No estimate.

Item 237a.—Charter.

[Estimated fiscal year 1919, \$147,600,000.]

	United States.			Philippine Islands.			Grand total.
	Current require-ments.	New con-struction.	Total.	Current require-ments.	New con-struction.	Total.	
Estimate.....	\$147,600,000.00	\$147,600,000.00	\$147,600,000.00
Appropriated fiscal year 1918.....
Expended fiscal year 1917.....	1,390,846.60	1,390,846.60	1,390,846.60

REMARKS.

United States.—This item is new and provides for the charter of 150 vessels of approximately 6,800 gross tons each for the movement of troops, animals therefor, and freight and equipment pertaining thereto scheduled for transportation during the fiscal year 1919. The estimate is based on charter rates which prevailed at the close of the fiscal year 1917—\$12 per gross registered ton per month for each vessel.

Philippine Islands.—No estimate.

Item 237b.—Maintenance and operation chartered transports.

[Estimate fiscal year 1919, \$113,600,000.]

	United States.			Philippine Islands.			Grand total.
	Current require-ments.	New con-struction.	Total.	Current require-ments.	New con-struction.	Total.	
Estimate.....	\$113,600,000.00	\$113,600,000.00	\$113,600,000.00
Appropriated, fiscal year 1918.....
Expended, fiscal year 1917.....	494,096.05	494,096.05	494,096.05

REMARKS.

United States.—This is a new item providing for the maintenance, operation, and upkeep of a fleet of approximately 150 chartered transports and 25 German interned ships during the entire fiscal year 1919 at a cost of approximately \$54,000 per month each. This amount was found by experience during the fiscal year 1917 to be the amount necessary to provide for the proper maintenance, upkeep and operation of these chartered ships. Subdivision for one vessel for one month being approximately as follows:

Fuel.....	\$12, 225
Supplies.....	7, 500
Employees.....	19, 300
Water.....	165
Laundry.....	420
Pilotage.....	315
Stevedoring.....	2, 280
Removal of ashes.....	30
Painting and cleaning.....	350
Miscellaneous.....	755
Towage.....	50
Repairs.....	10, 610

Philippine Islands.—No estimate.

Item 237c.—Reimbursement for losses of chartered transports.

[Estimate fiscal year 1919, \$76,500,000.]

	United States.			Philippine Islands.			Grand total.
	Current require-ments.	New con-struction.	Total.	Current require-ments.	New con-struction.	Total.	
Estimate.....	\$76, 500, 000. 00	\$76, 500, 000. 00	\$76, 500, 000. 00
Appropriated, fiscal year 1918.....
Expended, fiscal year 1917.....

REMARKS.

United States.—This is a new item provided for the purpose of reimbursing the owners of vessels chartered for the movement of troops and supplies to overseas stations in accordance with schedule for the loss or destruction of same by submarines or otherwise. The estimate is based on the assumption that probably one-third of the 150 chartered vessels engaged in this service will be destroyed. It is stipulated in the charter parties entered into for these ships that in case of loss, the owner will be reimbursed in the amount of \$225 per gross ton measurement, or for 6,800 gross ton ships, \$1,530,000 each.

Philippine Islands.—No estimate.

Item 237d.—Shore establishments.

[Estimate, fiscal year 1919, \$3,720,000.]

	United States.			Philippine Islands.			Grand total.
	Current require-ments.	New construction.	Total.	Current require-ments.	New construction.	Total.	
Estimate.....	\$3, 720, 000. 00	\$3, 720, 000. 00	\$3, 720, 000. 00
Appropriated, fiscal year 1918.....
Expended, fiscal year 1917.....	101, 979	101, 979	101, 979. 00

REMARKS.

United States.—This is a new item included to provide for the maintenance of shore establishments at the various ports of embarkation for the scheduled transportation of troops and impedimenta connected therewith. This estimate is based on the maintenance of the shore establishments listed below at estimated costs as indicated:

New York.....	\$720,000
Newport News.....	400,000
Philadelphia.....	400,000
Boston.....	400,000
Ports in France.....	1,000,000
Additional requirements, United States, 2 other ports, each \$400,000.....	800,000

It has not as yet been decided what ports in addition to the first four listed above will be established, but the scheduled transportation can not be effected entirely from New York, Newport News, Philadelphia, and Boston.

Philippine Islands.—No estimate.

WAR DEPARTMENT,
Washington, November —, 1917.

1. The urgent deficiency act, approved October 6, 1917, provides as follows:

"The Secretary of War is hereby authorized, under such regulations and in such manner as he may prescribe, to employ such portion of the appropriations made for transportation of the Army and its supplies as in his judgment may be necessary to defray the expenses of travel incurred by officers and enlisted men of foreign armies attached to the Army of the United States during the present emergency, and that those officers and enlisted men, who may have been performing duties in this connection, be reimbursed from this appropriation for the expenditures they have already been obliged to make."

2. Officers and enlisted men of foreign armies, attached to the Army of the United States during the present emergency, will be allowed, from and after November 1, 1917, a per diem in lieu of subsistence and lodgings, including baths, tips, and laundry work, commencing with the date of their departure from their foreign stations and terminating with the date of return thereto, both inclusive, as follows:

When living in towns or cities, or when traveling:	
Officers.....	\$10
Noncommissioned officers.....	6
Orderlies.....	2
When living in camps or cantonments:	
Officers.....	6
Noncommissioned officers.....	3
Orderlies.....	1

While actually traveling they will also be entitled to reimbursement of actual expenses, using the following as a basis of what is allowable:

(a) Fares upon railroads, steamers, or other usual modes of conveyance, including the actual cost of transportation of personal baggage whenever an extra charge is made therefor.

(b) Cost of seat in parlor car, one lower berth in sleeping car, or stateroom accommodations on steamer, where same are not included in the travel fare, and reasonable fees to porters or to stewards.

(c) Hire of special transportation, either by land or by water, where there are no regular means of conveyance. Ferriage, tolls, drivers' service, and horse keeping when transportation is hired.

(d) Transfer coach fare en route to and from depots and hotels, or when there are no such conveyances, moderate and necessary taxicab or hack hire not to exceed the authorized local rates, any cost of transfers of baggage, and reasonable fees to porters for handling baggage.

(e) All items of actual expenses authorized when traveling, are for travel by the shortest usually traveled routes, and expenses incurred by any deviation from the shortest usually traveled routes can not be considered as actual and necessary expenses.

3. In submitting accounts, War Department Form No. 330 or 330-a will be used, and when traveling expenses are claimed they will be itemized on the face of the voucher and a certified copy in duplicate of the letter or order directing or authorizing the travel attached to the voucher. In stating the voucher the printed columns thereon should be ignored, as should also the second printed certificate. The officer or enlisted man will certify on the voucher that the account is correct, and when traveling expenses are claimed that the amounts charged were actually paid by him.

Vouchers will be mailed by the officer to the department quartermaster of the territorial department in which he is located or to the depot quartermaster, Washington, D. C., for payment. Vouchers submitted by enlisted men will be approved by the proper commissioned officer of his army and disposed of by said officer in the same manner as he disposes of his own voucher.

4. Officers and enlisted men of foreign armies who have been attached to and performing duties with the Army of the United States for any period from the date of the declaration of war, April 6, 1917, to October 31, 1917, will submit on the voucher forms herein mentioned, using such additional attached sheets as may be necessary, a statement of their actual expenses, using the following as a basis of what is allowable:

When not traveling—

(a) The actual and necessary cost of meals, lodging, heat, light, baths, reasonable fees to waiters and bellboys, and the actual cost of laundry.

When traveling—

(b) Same items as set forth in subparagraphs a, b, c, and d, paragraph 2, adding thereto the actual cost of meals when not included in the charge for travel fare.

(c) The accounts for these past expenses will be sent to The Adjutant General of the Army for the consideration of the Secretary of War with a view to settlement by the depot quartermaster, Washington, D. C., of all items which may be approved by the Secretary of War. The accounts of enlisted men will be sent through the proper commissioned officer of their army, who will indorse thereon the amount which he considers properly allowable.

[336.4, A. G. O.]

By order of the Secretary of War:

JOHN BIDDLE,
Major General, Acting Chief of Staff.

Official:

H. P. MCCAIN,
The Adjutant General.

QUARTERMASTER BOATS (HIRE OF).

The list below gives the names of boats chartered in supplementing the present harbor-boat service or replacing those temporarily out of commission, the stations at which serving, their tonnage, the length of time they were in service, and the charter rate; these boats having been engaged in the performance of quartermaster duties.

In some cases, however, only general data in regard to hire has been received, and in these cases specific terms of hire can not be given.

The only report of loss of transports is that of the *Antilles* with registered gross tonnage of 6,878. Under the terms of the charter this vessel from the Southern Pacific Co., the owners, were to be compensated at the rate of \$275 per ton, if the vessel was 12 years old or under. The records show that the *Antilles* was constructed at Philadelphia in 1907 making her 10 years old when she was lost, October 17, 1917, and it is estimated that the following payment will be necessary in this case: 6,878 tons, at \$275 per ton, \$1,891,450, with interest from October 17, 1917, to November 17, 1917, one month, at 6 per cent, \$9,457.25. Total, \$1,900,907.25.

Statement showing wages paid (per month) masters and crews of chartered vessels.

SPARE PARTS AND ACCESSORIES CARRIED IN TOOL BOX OF ESCORT WAGON.

2 blocks, brake.	1 pickax and handle.
1 bolt, king.	150 feet rope, $\frac{1}{2}$ -inch.
6 bolts, tire, assorted.	1 wrench, monkey.
14 bolts, carriage, assorted.	1 twine, ball, pounds.
3 lin' s, open.	4 buckles, assorted.
2 nuts, axle.	2 clips, hame.
10 rivets, assorted.	1 hames, pairs.
1 singletree.	4 rings, harness, assorted.
1 ax and handle.	3 snaps, harness, assorted.
4 bags, nose.	3 straps, hame.
1 brush, horse.	$\frac{1}{2}$ gallon oil, neat's-foot.
1 comb, curry.	1 pound soap, harness.
4 grease, axle, pounds.	1 sponge.
4 halters and straps.	1 spool wire, stove.

SPARE PARTS NOT CARRIED IN TOOL BOX.

1 bucket, galvanized iron.	1 spade, short handled.
1 doubletree.	1 tongue, E. W.
1 lantern.	1 whip.
1 pole, coupling.	

NOVEMBER 23, 1917.

Memorandum for the Quartermaster General:

Subject: Narrative statement of the history of the standardization of military truck.

1. The Office of the Quartermaster General purchased two $\frac{1}{2}$ -ton trucks in January, 1912, with a view of testing them in order to determine whether a suitable truck could be obtained to meet the needs of the Army.

2. In the fall of the same year Lieut. Col. C. B. Baker began to prepare standard specifications for the purchase of military motor trucks. With that end in view he communicated with various manufacturers of motor trucks and secured their suggestions and recommendations on the preparation of such specifications.

3. On May 7, 1913, standard specifications for the purchase of 1½-ton military motor trucks were completed in the office of the Quartermaster General, and a few trucks were purchased on those specifications. A copy of specifications for standard motor trucks for military use, dated May 7, 1917, is inclosed herewith, marked Inclosure No. 1. The specifications were revised on March 31, 1915, a copy of which are inclosed herewith, marked Inclosure No. 2.

4. The specifications were again revised in June, 1916, and separate specifications prepared for the furnishing of 1½-ton trucks and 3-ton trucks. A copy of each of the specifications referred to are inclosed herewith, marked Inclosures No. 3 and No. 4.

5. The specifications above referred to were prepared with the assistance of and in cooperation with the Society of Automobile Engineers. These specifications were again revised in May, 1917, and published in printed form, a copy of which are inclosed herewith marked Inclosure No. 5.

6. These specifications were prepared in cooperation with the Truck Standards Division of the Society of Automotive Engineers, and also in accordance with recommendations of the War Department, Motor Transport Board, which was composed of representatives of the various divisions of the War Department.

7. On February 3, 1916, Capt. W. M. Britton, engineer in the Quartermaster Department, submitted a memorandum to the Quartermaster General on the subject of truck standardization. The standardization referred to in that memorandum involved the complete design of all the elements of which trucks are composed and included the assembly of those units into a thoroughly standardized, thoroughly interchangeable truck. A copy of that memorandum is inclosed herewith marked Inclosure No. 6.

8. On June 21, 1917, a letter was addressed to Mr. Coker F. Clarkson, general manager of the Society of Automotive Engineers, requesting that the society endeavor to completely standardize motor trucks for military use. A number of meetings were held by the society and tentative drawings were made showing the chassis layout of 1½-ton and 3-ton trucks. A copy of letter referred to is inclosed herewith marked Inclosure No. 7.

9. After a number of meetings had been held by the Society of Automotive Engineers it became apparent that it would be necessary for the War Department to lend material assistance in this work of standardization in order to complete the work at an early date. With this end in view a memorandum was presented to Maj. Drake on July 14, 1917, on the subject "Policy Regarding Purchase of Motor Trucks," by a committee composed of A. W. Zimmerschied, metallurgist and engineer of the General Motors Co., Coker F. Clarkson, general manager of the Society of Automotive Engineers, and Capt. W. M. Britton. A copy of that memorandum is inclosed herewith marked Inclosure No. 8.

10. A copy of reply from the Quartermaster General to the letter from the General Munitions Board is also inclosed herewith, marked "Inclosure No. 49."

11. Under date of July 16, 1917, the Quartermaster General submitted a memorandum to the Chief of Staff on the subject of standardization of motor trucks and called attention to the very urgent necessity of immediately standardizing motor trucks for military use to the fullest possible extent and recommending that a sum of \$175,000 be immediately made available for use in connection with that work. A copy of the memorandum referred to is inclosed herewith, marked "Inclosure No. 10."

12. On July 21, 1917, a meeting was held at Columbus, Ohio, under the auspices of the Society of Automotive Engineers. All of the truck manufacturers of the country were invited to attend that meeting and were requested to bring their engineers with them. It was stated that important announcements would be made at that meeting in reference to the policy of the War Department regarding the purchase of motor trucks. The Army representatives at the meeting were Maj. C. B. Drake and Capt. W. M. Britton. During the meeting of the society at Columbus a very wide diversity of opinion as to the wisdom of the War Department embarking upon a program of standardization was expressed. After hearing the War Department's side of the question, as set forth by Maj. Drake and Capt. Britton, opposition to the program rapidly decreased, was finally overcome, and the convention went on record officially as thoroughly in accord with the movement and rendered every assistance possible in the prosecution of the work. The names of a large number of engineers present at the meeting who expressed their willingness to work in carrying out this program were taken.

13. On July 30, 1917, a number of engineers arrived at Washington and the actual work of truck standardization was commenced. A great deal of difficulty was at first experienced because of the lack of quarters, and also because of the lack of proper facilities for carrying on the work. These difficulties were gradually eliminated however, and the work was soon progressing in a very rapid manner. The design

of all of the truck assemblies was progressing rapidly, as stated above, on September 1, 1917.

14. The committees of the Society of Automotive Engineers which were in charge of the design of the various elements of trucks were represented in most instances by the majority of their membership in the group of engineers who came to Washington July 30, 1917. The chairmen of these various committees were constituted into an organization known as the schedule committee. This schedule committee was in effect a general executive committee, and decided not only the dates and order of procedure, but also the policy on important matters of design and contested opinions coming up between the different committees. This committee was under the chairmanship of A. W. Copeland, of Dertoit, and Coker F. Clarkson, secretary.

15. The schedule committee at a meeting held on August 27, 1917, produced a schedule calling for the completion of the drawings for the Type "B," or 3-ton truck, by September 10, 1917. The completion of the parts according to the drawings was proposed for October 1, 1917. The assembly of two sample trucks was scheduled for October 10, 1917. It was understood that the Type "A," or 1½-ton truck, would follow behind the Type "B" truck by two weeks or more.

16. Portions of the larger units began to take definite form before September 1, and orders were sent to manufacturers to start production on some of the slower and more difficult portions at that time. By September 10 a considerable number of the larger parts were in process of preparation. On that date the committee in charge of the design of the engine, axles, transmission, steering gear, frame, springs, and chassis presented to Col. C. B. Baker at his office the drawings of those units showing the degree of completion which had been attained at that date. In all except the chassis design the work was shown to be upwards of 90 per cent complete September 10.

17. Between September 10 and October 1 the work of completing the drawings, checking them, combining them into the chassis design, and manufacture of the parts themselves went forward rapidly. September 20 sample parts began to be shipped from the various manufacturers to the two firms which had been selected to assemble the first two sample trucks. By October 1 practically all sample parts which had been promised by various manufacturers were completed and delivered to the assemblers, and the assemblers had completed the major portion of the small parts which had been assigned to them for manufacture in their own plants. The work of assembly proceeded rapidly and the first truck was actually assembled October 7, 1917, three days ahead of schedule. The second truck was finished about two days later.

18. The makers of the principal units which went into the first trucks were as follows:

Engines:

One from the Continental Motors Corporation, Detroit, Mich.

One from the Waukesha Motor Co., Waukesha, Wis.

Front and rear axles:

One set from the Timken-Detroit Axle Co., Detroit, Mich.

One set from the Sheldon Axle & Spring Co., Wilkes-Barre, Pa.

Transmissions, clutches, and controls:

Warner Gear Co., Muncie, Ind.

Covert Gear Co., Lockport, N. Y.

Wheels: Schwarz Wheel Co., Philadelphia, Pa.

Frame: A. O. Smith Corporation, Milwaukee, Wis.

Propeller shaft and universal joints: Spicer Manufacturing Co., South Plainfield, N. J.

Springs:

Standard Parts Co., Cleveland, Ohio.

William & Harvey Rowland (Inc.), Frankford, Pa.

Gasoline tanks: Gender, Paeschke & Frey Co., Milwaukee, Wis.

Seat: Edward Budd Manufacturing Co., Philadelphia, Pa.

Electrical equipment—generator, coil, distributor, and switch:

Dayton Engineering Laboratories Co., Dayton, Ohio.

Remy Electric Co., Detroit, Mich.

Kellogg Switchboard & Supply Co., Chicago, Ill.

Storage batteries:

Willard Storage Battery Co., Cleveland, Ohio.

Electric lamps:

Adams & Westlake Manufacturing Co., Chicago, Ill.

C. M. Hall Lamp Co., Kenosha, Wis.

Dash:

International Stamping Co., Detroit, Mich.

Hayes Manufacturing Co., Detroit, Mich.

19. The assembly of the two sample trucks was made by the Gramm-Bernstein Motor Truck Co., Lima, Ohio, and the Felden Motor Vehicle Co., Rochester, N. Y. The trucks, upon completion, were given short tests at the respective factories and were started for Washington overland. The truck produced by the Felden Motor Vehicle Co. reached Washington Sunday, October 13, 1917. The truck produced by the Gramm-Bernstein Motor Truck Co. reached Washington, Tuesday, October 16, having crossed the mountains in the first snowstorm of the season and encountering very bad weather. Neither truck had any breakdowns or mechanical difficulty other than slight running adjustments. Both trucks arrived in Washington in excellent condition.

20. The two sample trucks were formally presented to the Secretary of War for his inspection, on October 19, 1917, at which time a considerable gathering of Army officers and others who had been interested in the execution of this program were present, and addresses made by the Secretary of War and others.

21. A program of practical tests of the two sample trucks was begun October 21. During the first two weeks these tests were short runs in the vicinity of Washington, bringing the trucks in for frequent inspection, adjustment, and for study in connection with completion of production drawings. By November 10, these operations having been completed, the trucks went into a more vigorous testing schedule and the severity of which increased until about one hundred miles per day of heavy road work was exacted. These tests are still going on at this date. No serious weaknesses have been developed.

22. The production of the Class "B" or three-ton trucks on a commercial scale began with the letting of contracts for engines on October 11, 1917. Contracts for axles followed on October 12, 1917. Contracts for other parts of the trucks followed in rapid order so that by the middle of November all of the major units were under contract and some of them well along in the process of tool equipment. Contracts called for the production of the first parts by December 15 and the beginning of assembly on that date.

23. The Class "A," or $1\frac{1}{2}$ ton truck was originally intended to be carried on the same schedule as the Class "B" with a difference of two weeks in date of finish. This schedule proved impracticable. Also the idea of the Class "A" engine design was changed after a conference held at the office of Gen. C. B. Baker, on October 3, 1917. At this conference it was decided to limit the weight of the truck chassis to 5,250 pounds and to design all parts of the truck to bring it to that ultimate weight.

24. An organization for the designing of the Class "A" truck was completed October 10, new committees being appointed for the chassis and various smaller units. The committees were composed in the main of three individuals each, selected from the larger groups who had operated in the design of the Class "B" truck. Operating with the experience gained in connection with the Class "B" design and having before them the results, smaller committees were able to accomplish the work with more efficiency. The design of the Class "A" truck was completed as to all major units on November 10, or 30 days from the organization of the committee. During this time the engine had been not only designed but detailed, constructed, and tested. Various other portions of the parts were also well along in process of manufacture. The completion of the chassis design was reached November 20, and contracts for the assembly of three sample trucks were given prior to that date. This work is now in process and it is expected that the three sample trucks will be constructed and operating by December 10, or 60 days from the beginning of the design. This truck, while following the general principles of the Class "B" truck differs from it radically in some units. An internal geared rear axle was used instead of a worm drive. The size of other vital units differed so that relatively few parts actually used on one truck are available for the other. The chief assistance therefore, in the design of the Class "A" truck was the experience gained in the Class "B" rather than in actual use of the parts.

25. On or about October 25 the motor transport engineering section was ordered to proceed with the design of a three-quarter ton light express truck, with pneumatic tires, and capable of speed of at least 30 miles per hour, for use by the Medical Corps, Signal Corps, and other Army organizations, and with possible future use by the Post Office and other civil organizations. The organization of a new set of committees to deal with this problem without diverting the attention of the other committees having in charge the work of the class "A" and class "B" trucks was necessary. The first session of the organization occurred on November 3, 1917. The problem presented to this committee required solutions entirely separate from those attained by the two preceding committees. At the present time this committee has the design of its chassis well along toward completion, and it is expected that the design will be complete December 15. Meanwhile, as in the preceding cases, orders for

the heavy parts have been given prior to the completion of the chassis design, and engines, axles, transmissions, and wheels, with possibly some other units, will be in production for samples by December 1. Based upon the experience in the two preceding cases, it is expected that this truck can be assembled by January 15, 1918, or about two months from the date of the beginning of the design.

26. The methods adopted in the work of standardization has proceeded along two lines. The larger units were, some of them, such that as a whole no patent or proprietary design was possible. In this case the committee could proceed to design what was needed without other thought than to secure the best efficiency for the purpose. Such units as the engine, front axles, transmission, clutch control, frame, wooden wheels, springs, and some other parts represent the group. The bumpers, towing hooks, sprags, gas tank, dash, seat, and many other parts of the truck were covered by patents or proprietary designs, and freer use of any desired feature by the committee was not open without negotiation. In this case it was necessary to create new designs or to design around difficulties. In this group fell the rear axles, especially their differentials and driving mechanisms; the steering gear, the radiators, the electric generator and other electric parts, the storage batteries, the lamps, the universal joints, the carburetors, the magnetos, the mufflers, steel wheels (both cast and pressed), the antiskid chains, and numerous other parts and accessories. The method adopted in the design of such units has been to call together by letter or telegram representatives of the principal manufacturers engaged in the production of that part, and to place the problem before them of creating for the military truck a design which should not infringe upon the patents or proprietary construction of any manufacturer, and which should at the same time function efficiently for the desired purpose. Nearly every committee thus far called, when first confronted with this request, considered it impossible, but on making a serious effort and abandoning the ordinary precautions of competitive business and pooling their ideas and efforts, the most astonishing success has been reached in group after group. The spirit displayed by these American manufacturers in abandoning their commercial rivalry and giving up their vested rights, and without selfish thought producing what is needed, has been absolutely unique in American industrial history, and too great praise can not be given them for the manner in which they have accomplished their tasks.

27. In conclusion, at this time it may be said that the benefits of standardization in facilitating procurements, reducing the ton-mileage of spare parts to be transported to the battle fields of Europe, simplification of the maintenance problem, and simplification of the problem of instructing personnel, are so great as to justify in many fold the expense in money and energy which have been used in the work, and it is believed that this same standardization should be carried on not only in the motor-transport work of all divisions of the Army, but also in connection with all other war material.

[Inclosure No. 1.]

SPECIFICATIONS FOR STANDARD MOTOR TRUCK FOR MILITARY USE.

Capacity: 1½ tons. Safe overload, 20 per cent.

Drive: Either two or four wheel, at option of builder; shaft driven.

Axles: Axle to which power is applied to be semifloating or full-floating type, at option of builder.

Motor: 32 to 40 horsepower, at option of builder, especially designed for heavy duty and with four cylinders cast en bloc, of the L-head type. Cylinders to be water cooled and cast of high grade cylinder iron. Dual ignition by magneto and battery. Motor to be preferably mounted on three-point suspension and placed under removable bonnet forward of driver. Motor placed under driver's seat will not be accepted.

Clutch: Cone, leather-faced, or multiple-disk, at builder's option.

Transmission: Selective type, four speeds forward and a reverse. Gear shaft and brake levers to be center control.

Speed: From 1 to 14 miles per hour.

Wheels: Wood, Artillery type, 36 inches in diameter, with demountable rims. Mud guards for front and rear wheels attached to frame. No running board.

Tires: Solid rubber, S. A. E. standard demountable, 36 by 4 inches, single or double, at option of builder. Double preferred on rear wheels.

Thread: 56 inches.

Wheel base: 120 to 144 inches, at option of builder.

Steering: Irreversible wheel, located at left side. Extra heavy.

Brakes: Two sets, both attached to rear wheels; one set operated by pedal, other by lever (center control). Brakes to be nonsparking and easily adjusted; the adjustments to be securely locked without removing wheels or other parts.

Springs: Semielliptic; best grade, oil tempered, chrome silica-manganese spring steel.

Frame: Pressed channel steel, heat treated.

Body length, width and depth: 3 feet 4 inches wide, 1 foot 9 inches deep; 9 feet 6 inches long at bottom and 10 feet at the top.

Body material: White oak, reinforced with angle iron.

Top: Collapsible seat over driver's seat, with side curtains.

Height of body platform from ground: Not to exceed 45 inches.

Ground clearance: 11 inches or more.

Weight: Complete, with body, empty, not to exceed 5,000 pounds.

Equipment: One prestolite gas headlight, located on dash, with directing device; two mineral oil lights and one mineral oil tail light. Horn, tools, oilers, etc.

Gasoline capacity: Twenty-five gallons, and 5 gallons in reserve.

Oil capacity: Three gallons.

Material and workmanship: All parts of the truck and motor with respect to quality of material, workmanship and mountings, should be in accordance with the latest technical developments, and should be as serviceable in winter as in summer.

Tests: The trucks should be so built as to stand any reasonable test that the Government may require in its military service, and should be able to perform service in any situation that can be performed by the regulation 4-mule escort wagon.

Proposed test: All proposals should state what tests can be made with the truck; and any tests made, it should be understood, will be with the full load carried, including the assistant to the chauffeur.

Engine speed: The normal number of revolutions per minute of the motor in the fourth speed, which corresponds to the highest speed, should be stated.

Arrangement and control: All principal parts of the motor truck, such as motor, clutch, transmission, control, drive, and all other mechanical parts must be conveniently arranged and easily accessible.

Quietness: The running of the truck must be with as little noise as possible.

Chassis: The chassis, wheels, seats, and upper construction must be so constructed as to meet the requirements of the specifications, and with the object above indicated in view.

Seats: Seats should be provided for a personnel of three, including the chauffeur. These seats should be protected from the weather by curtains and covers.

Cooling apparatus: The cooling apparatus, with water pumps, should have a capacity equal to the radius of the truck under ordinary conditions.

Water: The water used for cooling must be kept below the boiling point, and ample provisions should be made to prevent waste or slopping.

Standardization: All parts must be standardized and interchangeable for any given model.

Weight: The net weight of the completed and fully equipped truck, including gasoline tank, oil tank, water cooler, accessories, etc., and spare parts, including non-skid chains, should be indicated in the proposals submitted.

Pressure on rear axle: The pressure on rear axle when fully loaded and equipped should be stated by the maker.

General: Bidders should mention all features or details of design of any truck proposed by them differing from the description in the above specifications. They should also state what parts of the trucks are made at other shops than their own.

[Inclosure No. 2.]

SPECIFICATION FOR STANDARD MOTOR TRUCKS FOR MILITARY USE.

1. *General.*—The normal load capacity of the truck shall be 3,000 pounds, in addition to the body and all equipment, as specified herein, and it must safely carry 20 per cent overload. The range of speed shall be from 1 to 14 miles per hour. Trucks shall be either shaft driven, with two or four wheel drive or chain driven. They must be arranged for left side drive with center control, and all parts shall be so located as to be readily accessible for adjustment and repair.

2. *Dimensions, etc.*—Tread, 56 inches. Wheel base, not less than 120 inches. Ground clearance, not less than 11 inches. Height of floor of body from ground shall not exceed 45 inches.

3. *Gasoline and oil capacity.*—Gasoline capacity shall be not less than 15 gallons in main tank and 5 gallons in reserve tank. Oil capacity, not less than 3 gallons, exclusive of crank-case contents.

4. *Bodies.*—Bodies are not to be furnished unless specifically called for. The chassis shall be so designed that the standard Army escort wagon body, shown on drawing No. 2-1268, herewith, can be placed thereon.

5. *Standardization, etc.*—All parts must be standardized and interchangeable for a given make of truck, and bidders shall state in their proposals the manufacturer of such parts as are not made in the shops of the truck maker.

6. *Data with proposals.*—The following information must be furnished with each proposal: Illustrations, catalogues, and specifications showing the construction of the truck bid upon should also be submitted. Failure to supply these data may be considered to render the proposal informal and result in its rejection.

Name of manufacturer of motor.....
 Bore.....inches. Stroke.....inches.
 Number of piston rings.....
 Crank-shaft bearings:
 Number..... Type.....
 Size of each.....
 Antifriction metal used.....
 Diameter of crank shaft.....inches.
 Speed of motor corresponding to truck speed of 14 miles per hour.....r. p. m.
 Manufacturer and type of governor.....
 Manufacturer and type of carbureter.....
 Type of water-circulating pump.....
 Method of lubrication of motor.....
 Manufacturer and type of magneto.....
 Type of clutch.....
 Manufacturer and type of transmission.....
 Gear reduction, crank shaft to rear wheels:
 First speed.....; second speed.....
 Third speed.....; fourth speed.....
 Reverse.....
 Type of drive. (Shaft of chain).....
 Manufacturer of and type of drive axle or jack shaft.....
 Number of sprocket teeth on jack shaft.....
 (On rear wheels.....
 Manufacturer of tires.....
 Wheel base.....inches.
 Maximum depth of frame.....inches.
 Thickness of frame stock.....inches.
 Manufacturer and type of steering gear.....
 Type of brakes.....
 Manufacturer and brand of brake lining used.....
 Diameter and type of wheels.....
 Minimum ground clearance.....inches.
 Ground clearance of rear sprocket wheels.....inches.
 Shipping weight of chassis, including all accessories and spare parts as specified herein.....pounds.

Bidders should mention also all features or details of design different from these specifications. Unless this is done, the Government reserves the right to require strict adherence to the provisions of the specification.

7. *Motor.*—The motor shall be of the 4-cylinder, en bloc, 4-cycle, water-cooled type, not less than 32 horsepower S. A. E. rating, and must be placed under a removable bonnet forward of the driver. All bearings shall be so designed as to be easily adjusted to take up wear and all wrist pins, valve stems, push rods, etc., shall be properly bushed. Lower half of crank case to be removable without disturbing bearings; 3 point suspension motor is considered desirable for military use.

8. *Governor.*—A motor speed limiting governor of approved make shall be provided and adjusted so as to prevent the truck from exceeding a speed of 14 miles per hour on high gear. The governor shall be adjustable and have provision for sealing with ordinary lead seals after adjustment.

9. *Cooling system.*—The cooling water must be pump circulated and under operating conditions shall be maintained below the boiling point. Suitable provision shall be made to prevent slopping and waste. The system is to be so designed that

it may be completely drained to prevent freezing and may be flushed out when necessary for cleaning. Thermo-syphon systems will not be acceptable.

10. *Ignition*.—Two sources of ignition current must be provided; as approved high-tension magneto and dry batteries. Connections may be made either by the dual system, or with independent distributor for the battery current.

11. *Transmission*.—Selective type, three of four speeds forward and a reverse. Gear shaft and brake levers to be center control.

12. *Clutch*.—Leather-faced cone, or multiple disc.

13. *Wheels*.—Wheels shall be 36 inches in diameter, front and rear. All rear drive trucks to be provided with dual rear wheels and all wheels to be equipped with demountable rims.

14. *Tires*.—Solid rubber S. A. E. standard demountable, 36 by 4 inches, double on rear wheels.

15. *Fenders*.—Truck will be provided with front fenders only, which must be of suitable design and rigid construction.

16. *Running boards*.—There shall be no running boards. A suitable step will be provided to enable the driver to reach his seat.

17. *Brakes*.—Two sets of brakes shall be provided, both acting on the rear wheels; one operated by pedal, the other by lever. Brakes to be lined with an approved nonsparking material and so constructed that adjustments may be made and securely locked without removing wheels or other parts. Either set of brakes shall be capable of holding the fully loaded truck stationary on a 25 per cent grade. Brake rods are to be sufficiently stiff to prevent whipping or rattling and must be bushed at all pin connections.

18. *Muffler*.—A muffler of substantial design and so constructed that it may readily be taken down for cleaning shall be installed. It shall be provided with a foot operated cut-out and the tail pipe must discharge the exhaust gases in a truly horizontal direction.

19. *Seats, top, etc.*—Seats shall be proper width, for three persons and shall be provided with removable cushion and stationary back rest upholstered with best grade black pantasote, or equal, properly tufted. Top to be of collapsible type.

20. *Equipment*.—The following-named equipment is to be furnished with each chassis:

Prestolite, or equal, gas headlight mounted on dash with directing device, complete with large size gas tank, copper tubing, etc.

Side and tail oil lamps.

Mechanical, hand operated, diaphragm horn.

Swivel towing hooks fastened to frame at front and rear, each having a coil spring take-up of 1½ inches under a pull of 1,200 pounds.

Steel bumper consisting of curved channel or other suitable section properly mounted on frame of truck and so placed as not to interfere with the starting crank. Front towing hook may be secured to this bumper if so desired and satisfactory attachment is made.

Tire chains, Weed or equal, complete for all four wheels, with two dozen extra cross chains for same.

Tool kit with all necessary wrenches, pliers, screwdrivers, hammer, oilers, screw-action grease gun, two extra spark plugs, and jack.

Steel tool box, with lock, to hold all tools, tire chains, and all other tools mounted on running board. If dry batteries are carried in this box, a separate compartment to hold and prevent them from shaking about must be provided.

Combined speedometer and odometer, indicating rate of speed, trip and total mileage with reset for trip mileage; to be equal to the Stewart-Warner magnetic type.

Instruction books, oiling diagrams, with instructions for a complete understanding of the operation of the truck.

21. *Tests*.—Trucks will be inspected and tested at the factory under the direction of a representative of the Quartermaster Corps; and notification shall be sent to the Quartermaster General of the Army when the machines are ready for such inspection. Trucks must be built to stand any reasonable test that the Government may require in its military service and satisfactory performance under test as to power, overheating, clutch, brake and governor action, quiet running, gasoline, oil and water consumption, will be required. Tests will be made with the truck under normal load, with allowance for weight of body, the driver and one other person, and all labor and materials necessary for the tests will be furnished by the contractor.

22. *Painting*.—Chassis are to be painted three coats of best lead and oil paint, olive drab color.

J. B. ALESHIRE,
Quartermaster General.

OFFICE QUARTERMASTER GENERAL, March 31, 1915.

(Inclosure No. 3.)

STANDARD SPECIFICATIONS FOR GASOLINE MOTOR TRUCKS, CAPACITY, 1½ TONS. PREPARED IN THE OFFICE OF THE QUARTERMASTER GENERAL, WASHINGTON, D. C., JUNE, 1916.

1. The number of trucks required will be stated in the "Instructions to bidders," issued by the purchasing quartermaster. The prices quoted will be f. o. b. factory, and the truck must be complete in every respect and in proper operating condition.

2. *Quality of materials.*—Except it be otherwise specified all materials are to be the best of their respective kinds, and all labor is to be done in the most thorough and workmanlike manner. In all cases where an article is mentioned in these specifications in connection with the words "best quality," "best make," "proper," or "suitable," the purchasing quartermaster or his authorized representative shall decide what is the best and most suitable to use.

3. *Award of contract.*—The trucks herein specified are to be used in the field service of the Quartermaster Corps, and in the selection of trucks and award of contract, the quality of material, design, workmanship, and suitability for use by the Quartermaster Corps in field service will be given due weight in determining which proposal shall be accepted.

4. *Manufacturers.*—Each bidder must submit a complete list of manufacturers and location of factories furnishing any part, either finished or unfinished, assembly, or accessory, which is used in the construction of the trucks, and not made in the factory where the trucks are constructed. This shall not be construed as including bar or sheet stock or structural material. If this information is not given, the proposal may be rejected, or in case the proposal is accepted, the Quartermaster Corps reserves the right to name the manufacturer and select the material, apparatus, parts, or accessories, and no others will be substituted for those named.

5. *Employment of convict labor.*—In the performance of work herein specified the contractor shall not, directly or indirectly, employ any person undergoing sentence of imprisonment at hard labor, which may have been imposed by a court of any State, Territory, or municipality having jurisdiction, nor permit such employment by any person furnishing labor or material to said contractor in fulfillment of this agreement.

6. *Patents.*—The contractor shall for all time secure to the Government the free and undisputed right to use any and all patented articles used in the work, and shall defend at his own expense any and all suits for infringement of any patent or patents, and in case of adverse claims under patents, the contractor shall pay all awards.

7. *Design.*—The truck must be of well balanced design, and the material and workmanship the highest standard employed in commercial practice. It must be constructed in the most substantial manner, and provided with a suitable spring suspension. All parts of truck must be so designed and constructed as to be readily accessible for adjustment or repair.

8. *Strength of parts.*—All parts of truck from motor to and including driving wheels must be of such size, material, design, and strength, as to readily transmit the full power of the motor at the different gear ratios, with a proper factor of safety, with a minimum wear on parts, and with maximum mechanical efficiency.

9. *Interchangeability of parts.*—All parts of trucks must be constructed to definite standard dimensions, and proper tolerances, so that any part of same may be replaced and properly fitted and adjusted without requiring additional tool work or machine work on the parts.

10. *Standard parts.*—It is desired that as many parts of the truck as practicable be constructed to standard sizes and design, which will be interchangeable with the same parts made by other manufacturers, or according to S. A. E. standards.

11. *Materials.*—A complete list of all materials used in the construction of the various parts of the truck must be given, together with the chemical composition and physical properties of same.

12. *Heat treatment.*—When necessary, all steel used in the construction of the truck must be heated to develop the best physical properties for the particular purpose for which the material is being used.

13. A complete description of the methods of heat treatment for various purposes and materials must be given, together with a description of the equipment for same.

14. All information in reference to the heat treatment will be considered confidential if so requested by the bidder.

15. *Drawings and data.*—Each bidder will be required to submit complete dimensioned detail and assembly drawings, showing the size and construction of every part of the truck. These drawings must show the shop limits on all parts, and a reference

number or letter referred to the list of materials, physical properties, and heat treatment, which list will also be submitted with the proposal. The drawings must be arranged in proper order for filing, and provided with a suitable index which will enable any individual drawing to be readily located. The drawings and data above referred to will not be opened publicly with the proposals, but will be considered confidential. The drawings and data may be submitted direct to the Quartermaster General, Washington, D. C., and should be referred to in each proposal which is submitted.

16. If the drawings and data herein required are on file in the Office of the Quartermaster General, they need not again be submitted with the proposal. If any major changes have been made in the construction of the truck, materials used, or methods of heat treatment since the drawings and data were submitted, details of those changes should be submitted with the proposal.

17. *Service stations.*—Complete information regarding the location of all service stations, the floor area of each station, and the number of men employed in each service station, should be submitted with the proposal.

18. *Departure from specification requirements.*—In case the vehicle on which proposal is submitted does not comply with these specifications, in every particular, the bidder must state definitely in what particular the vehicle which he proposes to furnish does not comply with specification requirements.

19. *Guarantee.*—Each bidder will be required to guarantee his vehicle or vehicles against defects in material or workmanship for a period of one year. This guarantee shall include the delivery of the defective part or parts to any point in the United States. After the installation of the new part, the defective part will be returned to the manufacturer if he so requests. The manufacturer will pay the transportation charges on all returned parts.

20. The above guarantee shall also apply to all parts and accessories which are not made by the bidder.

21. *Load capacity.*—The carrying capacity of trucks in pay load shall be their rating in tons, and they shall be of sufficient strength and provided with sufficient power to carry and propel a gross load of 5,100 pounds under the most severe service conditions, with a proper factor of safety.

22. *Road speed.*—The governor on engine shall be set so as to give a road speed of 14 miles per hour, with a maximum governed engine speed of 1,300 revolutions per minute.

23. *Location of control.*—The speed-change lever and steering wheel must be located in such a manner as to give either left-hand drive with center control, or right-hand drive with right hand control.

24. *Type of drive.*—The trucks may be provided with any suitable standard type of drive, such as internal gear, bevel gear, worm gear, or chain drive.

25. Preference will be given to that type of final drive which provides the greatest amount of ground clearance, in conjunction with provision for retaining grease or oil and excluding dirt.

26. Either two-wheel drive or four-wheel drive may be employed.

27. *Fenders.*—Truck will be provided with front fenders only, which must be of suitable design and rigid construction.

28. *Seat and top.*—Seat shall be of proper width for not less than three persons and shall be provided with removable cushion and stationary back rest, upholstered with best quality imitation or genuine leather. Top to be of collapsible type, with extra heavy bows and fastening irons, and covered with best quality 12-ounce water-proofed canvas.

29. *Bumper.*—A steel bumper consisting of curved channel or other suitable section, shall be properly bolted to frame of truck and so placed as not to interfere with the starting crank. Front towing hooks may be secured to this bumper if so desired, and satisfactory attachment is made. No part of the bumper extending in front of the radiator or hood of engine shall be integral with the chassis frame.

30. *Radiator protector.*—Each truck shall be provided with an effective radiator protector, which shall extend the full height and depth of the radiator. This radiator protector shall be constructed of heavy structural steel shapes or steel castings, and shall be firmly bolted to the chassis frame. It must be so installed as to not interfere with the starting crank. Complete detail drawings showing the construction of this protector must be submitted.

31. *Ground clearance.*—The ground clearance at all parts of truck, except at drive sprockets and hub brake drums, shall be not less than 11 inches.

32. *Turning circle.*—The truck shall be so designed as to turn in a circle of not more than 55 feet, measured from outside wheel tracks.

33. *Gauge.*—It is desirable that the gauge of front and rear wheels shall be 61½ inches measured from center to center of felloe bands in order that the trucks may track with three-ton trucks of the same gauge.

34. *Wheel base.*—The wheel base must be suitable for the use of a 10-foot body, and shall be not less than 124 inches or more than 150 inches.

35. *Engine.*—The engine must be of the four-cycle type, water cooled, having not less than four cylinders, and provided with poppet valves. It shall have a total piston displacement of not less than 275 cubic inches, but a larger engine is desirable. It must be under a removable hood forward of the driver. All bearings shall be so designed as to be easily adjusted to take up wear, and all piston pins, valve stems, and push rods, shall be properly brushed. If the crank case is of the split type, the lower half of case must be removable without disturbing bearings.

36. *Suspension.*—The engine must be mounted with a three-point suspension, or on a subframe having a suitable three-point suspension, which will effectively prevent the distortion of frame from straining any part of engine or transmission. The single flexible pin connection shall be hardened and ground, and provided with a phosphor-bronze bushing, or a hardened and ground steel bushing.

37. *Tractive effort.*—The vehicle shall have sufficient power to carry its gross load on high gear up a 4 per cent grade, and on low gear up a 25 per cent grade, both grades being on a hard road surface. It shall also be able to stop and start with its gross load on the 25 per cent grade.

38. *Governor.*—A centrifugal type motor speed limiting governor of approved make shall be provided and adjusted so as to prevent the truck from exceeding a speed of 14 miles per hour on high gear. The governor shall be adjustable and must have provision for sealing with ordinary lead seals after adjustment.

39. *Crank case.*—The crank case may be of the barrel type or divided in a horizontal plane, with all bearings in the upper section. It must be so designed as to be light in weight and also of proper strength, and must be provided with suitable ribbing in order to secure a strong case free from distortion or weakness and without excessive weight. It must also be so designed as to permit any piston to be removed from its cylinder and taken out of the case without removing the cylinder or crank shaft.

40. All oiling receptacles, pipes, and oil guides, except the constant level troughs for connecting rods, shall be either pressed or cast integral with the crank case, or the oil pipes may consist of external leads. If external leads are used, they shall be short and rigid or properly clipped to prevent vibration and chafing.

41. The crank case must be a smooth casting free from defects of material, design, or construction.

42. All joints or connections in crank case shall be made thoroughly oil tight.

43. The bearings for crank shaft shall be in the upper section if the case is made in two sections. The bearings shall consist of heavy split bronze bushings, and at least one set of these bushings shall be provided with side flanges to take end thrust. These bushings shall be faced with a suitable thickness of best quality bearing metal, and provided with proper oil grooves, or properly designed ball or roller bearings shall be provided. The bearing caps shall be of proper design, and made of material suitable for the purpose. These caps shall be held in place by means of alloy steel bolts of proper size provided with castellated nuts, with suitable cotter pins. Not less than three main bearings shall be provided in a four-cylinder engine.

44. The main crank shaft bearings and the connecting rod bearings shall be finished to an accurate bearing surface, unless the bearings are of the ball or roller type.

45. *Oil capacity.*—The oil reservoir of engine must be so designed as to hold sufficient lubricating oil to permit the truck to run fully loaded a distance of not less than 200 miles over ordinary solid roads without replenishing the supply of oil.

46. The oil filler tube on crank case shall be provided with a nonremovable, fine mesh, brass screen, and also another screen of same construction which is removable.

47. *Crank shaft.*—The crank shaft shall be forged from a single piece of chromium nickel, or 30–40 carbon steel of suitable quality for the purpose, and heat treated to develop the proper physical properties, and shall have not less than three main bearings for a four-cylinder engine.

48. The crank shaft shall be sufficiently large in section at all points to prevent objectionable torsional or lateral vibration at all practicable engine speeds and loads.

49. Both crank bearings and main bearings shall be large in area, in order to give low bearing pressures and long bearing life without replacement or adjustment.

50. The crank pins and main bearings of crank shaft must be ground to a high finish.

51. The crank shaft must be accurately balanced for static balance.

52. Suitable means must be provided for preventing cylinder oil from creeping out of the crank case at the end of bearings.

53. The flywheel flange must be forged integral with the crank shaft. This flange must be large in diameter and so designed as to insure an accurate centering of the flywheel on the flange. The bolts used in fastening the flywheel to crank shaft shall be of suitable diameter and material and properly heat treated. If the bolts take the driving strain, they shall be of large diameter and tightly fitted in reamed holes in both members.

54. *Cylinder.*—The cylinders shall be cast from best quality gray iron and must be free from sand holes, blow holes, cold shuts, or other imperfections. The bore of finished cylinders must be exactly circular and the same diameter from end to end, with limits of plus or minus 0.0005 inch.

55. The water jackets of cylinders must be tested under a hydrostatic pressure of 100 pounds per square inch, which test they must withstand without leaking.

56. The cylinders must be rigidly bolted to the crank case by means of a proper number of stud bolts in crank case, and double nuts, or single long type of tight fitting nuts. The stud bolts must accurately fit the holes in cylinder casting, and prevent the cylinders from getting out of alignment.

57. The water passages in jackets shall be of large area and volume, must extend entirely round the valve seats, and must offer as little obstruction as practicable to the flow of water. The water passages shall be so designed as to secure a uniform flow of water through all parts of the jacket. The water must circulate freely between the cylinders and the jackets must be free from air pockets or dead ends where the water is unable to circulate freely. The jacket space must be so designed that all water will drain completely from the jackets when the lower drain cock on radiator or water circulating system is opened.

58. The compression space in each cylinder must be accurately calibrated, and the cylinders selected so that the clearance volume of each cylinder is the same as that of any other for the same engine within $\frac{1}{4}$ cubic centimeter.

59. *Pistons.*—The pistons shall be designed and constructed in accordance with the best standard practice. They shall be light in weight, heavily ribbed to secure proper strength, and made of best quality gray cast iron, free from blowholes, sand holes, shifted cores, or other imperfections. They shall be properly annealed, machined with light cuts to avoid distortion, and ground to a high finish, proper tolerance and a suitable clearance in cylinders.

60. If the pistons are made of cast iron, the clearance between maximum diameter of piston and the diameter of cylinder bore shall not be less than 0.002 inch or more than 0.004 inch. They shall be properly tapered or relieved at the head end to provide for expansion, and shall have an internal stiffening flange at the open end.

61. The pistons shall be of such length as to give a low bearing pressure on the cylinder walls. The piston must also be so designed and constructed as to avoid slapping at all engine speeds and loads.

62. The pistons complete with rings and piston pins must be selected for weight, so that each piston will be the same in weight as that of any other piston for the same engine.

63. *Piston pins.*—The piston pins shall be hollow, with a wall of proper thickness. They shall be made of steel of suitable quality for the purpose, properly case hardened, and ground to a high finish and proper tolerance.

64. *Piston ring and grooves.*—The piston shall be provided with at least three ring grooves of proper width and depth, all located between the wrist pin and the head end of piston. These grooves shall be ground to a high finish at the sides. An oil groove shall also be provided which will carry oil to each end of the piston pin and furnish lubrication for same.

65. If the triple type of ring is used, having one internal ring and two external rings, two ring grooves may be used, each provided with a triple ring, or one groove may be provided with a triple ring and the other with the ordinary type of single ring.

66. The single rings shall be ground to a high finish and proper tolerance on the outside periphery and on the sides. The outside rings of triple rings must be ground all over, and the inside ring of triple ring must be ground on the outside and on the sides.

67. The rings must be of proper tension and installed with only sufficient opening between the ends as to provide for expansion of the rings under maximum temperature conditions.

68. Suitable means must be provided for preventing an excess of oil from working past the piston rings and into the combustion space, and at the same time securing proper lubrication of the piston and all bearings connected with the crank case.

69. *Connecting rods.*—The connecting rods shall be of I-beam section, drop forged from best quality steel, equal to 30-40 carbon, and properly heat treated.

70. The crank end of the connecting rods shall be provided with bronze bushings faced with a proper thickness of best quality bearing metal.

71. These bearings shall be scraped to a proper fit with the crank and shall be held in place with suitable dowel pins. The bearing metal shall be provided with proper grooves and oil holes for lubrication.

72. If the bearing on piston pin is in the connecting-rod end, a suitable solid phosphor-bronze bushing, pressed in, shall be used in connecting-rod end.

73. The bearing at each end of connecting-rod shall be large enough to withstand long periods of severe service without the necessity of replacement or adjustment.

74. The cap end of connecting rod shall be made of the same material as the connecting rod and shall be held to the rod and bearings by means of suitable bolts made of best quality $3\frac{1}{2}$ per cent nickel steel or equal, properly heat treated, provided with suitable castellated nuts and cotter pins. The connecting-rod cap shall be provided with a suitable scoop for picking up oil from the constant level oil receptacles and delivering same to the bearings, or shall be provided with suitable force-feed lubrication.

75. The complete connecting rods for each engine must be selected for weight so that each connecting rod shall be approximately of the same weight as that of any other connecting rod for the same engine. These connecting rods must have also their centers of gravity at approximately the same point on each rod.

76. *Valves.*—Both intake and exhaust valves must have ample lift, must be large in diameter in proportion to cylinder volume in order to insure complete filling of the cylinders when running at the maximum governed speed of engine.

77. The exhaust valves must be constructed of best quality 13 to 16 per cent tungsten steel.

78. The complete composition of the steel must be stated definitely and all valves must be heat treated to develop the proper physical properties.

79. The intake valves must be made of best quality 3.5 per cent nickel-steel or equal. If the intake valves and exhaust valves are interchangeable in size, then the intake must be made of the same material above specified for exhaust valves.

80. All valves must be properly machined and the stem and face of valves ground to a proper finish and tolerance.

81. The valves must be ground to a thoroughly gas-tight fit in the valve seat.

82. The valves must be constructed of one piece for both stem and head, must have a large radius fillet between the stem and head, and must be provided with 30 to 45 degree seats.

83. All parts of valve mechanism must be completely inclosed in order to prevent the entrance of dust or dirt. If the engine is of the L-head type, or T-head type, the valve springs, stems, and tappets must be inclosed by a suitable readily removable cover plate, and if the engine is of the valve-in-head type, the overhead valve mechanism must be completely inclosed with a suitable readily removable cover, or the bearings for rocker arms must be provided with suitable felt washers to prevent the entrance of dust or dirt.

84. *Valve springs.*—The springs for both intake and exhaust valves shall be made of best quality steel, of proper strength for the maximum speed of the engine, and designed so as to withstand a long period of service without sagging or breaking. These springs shall be heat treated to develop the proper physical properties.

85. *Valve lifters.*—The valve lifter must be made of the most suitable steel and of proper design, with properly hardened wearing surfaces. It must have a suitable adjustment for height, which is easily accessible, and which will retain the adjustment and not shake loose due to vibration. This adjusting device must be strong enough to withstand heavy strains with a wrench in adjusting without distorting or stripping of threads.

86. *Valve lifter guide.*—The engine shall be provided with suitable valve-lifter guides of proper material, which will be readily removable. These guides shall be installed in a proper relation to the valve stem and cam shaft, and so installed that they will not shake loose. They must be long in proportion to the diameter of the valve lifters, must be finished in the bore to a smooth cylindrical bearing surface, and must have a proper clearance in relation to the diameter of valve lifter, in order to insure easy working, perfect lubrication, and quiet operation.

87. *Valve-stem guides.*—The engine shall also be provided with suitable pressed-in cast-iron valve stem guides. These guides shall be made of best quality gray cast iron, free from sand holes or blow holes, and reamed to a proper tolerance and clearance in reference to the diameter of valve stem. The length of guide shall be as long as practicable in order to insure long life, quiet operation, and a proper alignment of the valve.

88. *Cam shaft.*—The cam shaft shall be constructed of carbon steel, of best quality for the purpose, and the cams properly casehardened, and both the cams and bearings ground to a proper finish and size.

89. The cams must be forged integral with the cam shaft, and the bearings shall be such size as to permit the shaft to be removed without removing the bearings or the bearings must be readily removable with the cam shaft. The gear connection for cam gear shall be a flange, which is forged integral with the cam shaft and provided with a central boss for centering the cam gear.

90. The cams shall be designed and ground to such shape as to secure quiet operation of the engine and maximum torque and shall have wide bearing faces in order to prevent undue wear of the cams or valve lifters.

91. *Cam-shaft bearings.*—The cam shaft shall be provided with not less than three bearings for a four-cylinder engine. The cam-shaft bearings shall be of the best quality phosphor bronze or equal bearing metal. They shall be provided with an effective means for securing a proper circulation of oil through the bearings from the crank case splash system, or by a pressure oiling system.

92. *Gears.*—The cam-shaft gear may be of cast iron but the smaller gears on crank shaft and on magneto, generator, and pump shaft must be of steel. These gears must be machine cut, and all gears accurately adjusted and ground to a quiet running fit under load. They must also have a sufficient width to insure long wearing life.

93. *Carburetor.*—The carburetor must be of such design and provided with such heating devices as will enable it to utilize gasoline having a specific gravity of 58 Baumé, or 0.7446 specific gravity at 60° F., and permit the engine to operate with satisfactory economy and regularity at all speeds and loads.

94. The carburetor must be adjustable and provided with means for readily enriching the mixture when starting in cold weather. A suitable drain cock must be provided at the bottom of the float chamber. The intake manifold must be provided with a suitable water jacket, and the carburetor must be installed in as high a position as practicable.

95. A suitable accelerator pedal must be provided, and also a hand throttle on steering wheel.

96. *Cooling system.*—The cooling water must be pump-circulated and the system shall be so designed that it may be completely drained to prevent freezing. Thermosiphon systems will not be acceptable.

97. The radiator must be of such design as to insure a uniform and free circulation of water, and mounted to withstand severe vibration or twisting without injury. It must be also readily repairable without special equipment.

98. All parts of radiator in contact with water shall be thoroughly tinned. Suitable baffle plates shall be provided in order to insure a uniform circulation of water through the entire radiator.

99. Ample area for the circulation of air through the radiator shall be provided and also proper outlet area shall be provided to permit the free passage of the heated air away from the rear of engine. Suitable louvres shall also be provided in each side of engine hood.

100. The radiator shall have a frontal area of not less than 1.3 square inches per cubic inch of piston displacement, and a total radiating surface in radiator of not less than 40 square inches per cubic inch of piston displacement.

101. *Fan.*—The engine shall be provided with a suitable fan which will cause a rapid circulation of air through all parts of the radiator, and insure proper cooling of the circulating water. This fan must be provided with suitable means for the ready adjustment of fan belt. The fan pulley and fan belt driving pulley must be so arranged as to permit of the ready replacement or removal of the belt. The fan belt and fan pulley must be constructed in accordance with S. A. E. standards.

102. *Spark plugs.*—The spark plugs shall be constructed in accordance with the latest recommendations of the Society of Automobile Engineers, and the large Hexagon type of shell provided with a single sparking point shall be used.

103. The plug must be provided with a porcelain of best make, packed with suitable copper gaskets and held in place with proper bushings and flexible cone.

104. The center electrode shall be made of a metal which will not readily corrode, warp, or be burned by the hot gases, and must be packed thoroughly gas-tight inside of the porcelain.

105. The ends of the high tension cable at spark plugs must be provided with suitable terminals properly secured to the cable and spark plug terminals.

106. The seat for spark plug gaskets shall be finished to a smooth and plain surface, and the seat shall be at right angles to the center line of spark plug.

107. *Lubricating system.*—The engine shall be lubricated by a constant level splash system or pressure system, or a combination of the two methods. The troughs for

splash lubrication shall be higher at the rear than at the front in order to give a greater depth of oil when ascending grades.

108. The oil pump must be provided with suitable screens, which are readily removable for cleaning, and which will prevent any solid foreign matter from passing through the screens. It is desirable that the oil pump and screens be so arranged as to make the screens self-cleaning by an intermittent reverse flow of oil.

109. *Muffler*.—The muffler must be of substantial construction, and so designed as to give the minimum back pressure and effectively muffle the exhaust. It must be so constructed and installed as to be readily taken apart for cleaning. The final exhaust not to be directed downward.

110. It is desired that the magneto, generator, coil, timer, battery, and muffler be kept as high as practicable.

111. *Starting motor*.—Suitable provision must be made either on the engine or elsewhere, for the installation of a starting motor, of proper size and design. The starting motor is not to be furnished, but the truck must be so arranged as to readily permit of its installation at any time if so desired.

112. *Electric lighting and ignition*.—The truck must also be provided with a suitable electric lighting system and dual ignition system. The electric lighting system shall consist of a generator driven from the power plant, a reverse current voltage cut-out, a 120-ampere hour, 6 volt, lead acid, or nickel-steel alkali battery, electric lights, fuses, wiring, and other necessary details. The ignition system shall consist of a high-tension magneto of best make and a battery and coil ignition system. One distributor and one set of spark plugs may be used in common with the two separate ignition systems. The current for battery ignition will be taken from the electric lighting battery. Both battery ignition and magneto must be readily controllable from the driver's seat, and the spark advance lever on steering wheel must control both ignition systems, and give a suitable degree of spark advance for all positions of the spark advance lever. The range of spark advance shall not be less than 30 degrees of crank angularity. The full retard position of the spark lever shall retard the battery spark at least 3 degrees after top center.

113. If the high tension magneto or generator is coupled to a drive shaft, two universal joints or a flexible coupling must be used in the driving connection, in order to prevent binding of bearings. The flexible coupling, if used, must provide for parallel and angular displacement.

114. *Generator*.—The generator shall be of the fully inclosed direct current, shunt, or compound-wound type, and must have a continuous capacity of 12 amperes. The voltage of the generator at all speeds above that at which cut-out closes, shall be suitable for charging a six-volt storage battery, and for supplying current to 6-8 volt tungsten lamps. It must be driven from the engine by means of suitable gears or silent chain drive. The gears or silent chain drive must be completely inclosed, thoroughly lubricated, and effectively protected from dust and dirt. If driven by means of silent chain drive, the chain must be readily adjustable. Definite data in reference to the material and construction of chain or gears must be given.

115. *Armature*.—The armature shall be of the laminated drum type, with the windings thoroughly insulated, and so installed in the slots as to effectively resist the action of centrifugal force at the maximum guaranteed speed of armature. After the coils are properly secured in the slots and the armature coil terminals are securely soldered into slots in the ends of commutator segments, the entire armature shall be treated with an insulating compound by a suitable impregnating process. The insulating compound shall have suitable insulating qualities, and shall not soften under a continuous temperature of 250° F. The armature shall also be of proper electrical magnetic and mechanical balance.

116. Suitable means must be provided for preventing oil from the bearings from collecting on the commutator or armature.

117. *Frame*.—The generator shall be constructed with a suitable frame having high magnetic permeability, and fitted with proper end frames.

118. Suitable bearings of best quality shall be fitted in each of the end frames. The bearings shall have proper means for ready lubrication, shall be a proper fit on the armature shaft, and shall not be so loose as to cause vibration of the armature at any practicable engine speed. The ratio of engine to generator speed must be given and also the maximum permissible speed of the generator. The generator must be run at a constant ratio of engine speed, and no friction drives or constant speed devices will be permitted. The speed of generator in any case must not be more than twice the engine speed. The generator drive connection must be made direct with the engine, or with some part of drive connection between the engine and clutch.

119. The brushes of generator must be the self-lubricating type, having a spring take up which will give a proper tension on the brush during its entire wearing life.

The brushes must be easily accessible and readily removed or replaced without removing or loosening other parts, and must have ample area of cross-section and area of contact to prevent excessive heating under continuous maximum permissible load. The brushes must be practically sparkless at all speeds, and at all loads from no load to maximum permissible load.

120. *Commutator*.—The commutator must be constructed of best quality hard forged copper of uniform density, and the segments properly insulated with sheet mica of suitable thickness and proper density to wear equally with the copper segments.

121. *Regulation*.—All voltage and current regulating devices must be contained in assembly with the generator. No separately mounted controlling devices will be permitted. The use of sliding contact devices for current or voltage regulation, and the use of permanent magnets in the construction of generator is also prohibited.

122. The generator shall be so constructed as to give a proper voltage and current when connected with the storage battery, at all speeds and current values up to maximum rated output, without moving controlling devices of any kind. The current and voltage shall be kept at proper values by the inherent regulation of the generator.

123. *Alternate*.—An alternate proposal is desired giving the amount either more or less than proposed price, for furnishing a generator the same as above specified; except that it shall be provided with an automatic voltage regulating device of the vibratory type having either platinum or silver contact points, and which will keep the voltage of generator practically the same at all loads and speeds above "cut-in" speed, without the necessity of connecting the generator to storage battery. The voltage regulator must be included in the generator assembly, and not mounted separately.

124. *Rate of charge*.—The current output of generator must not be greater than the maximum advisable rate of charge of the storage battery, at the normal engine speeds irrespective of the condition of battery charge.

125. *Charging speed*.—The generator shall begin to charge the battery at an engine speed of not more than 500 revolutions per minute and at the same time furnish the current necessary for ignition.

126. *Data regarding generator*.—The following data must be submitted in reference to the generator it is proposed to furnish:

(a) The voltage and speed of the generator when the cut-out opens, cutting off the current from generator to battery.

(b) The speed and voltage of generator when the cut-out closes permitting the current from generator to pass to battery.

(c) The weight of generator without gear or sprocket.

(d) The ratio of speed between engine and generator.

(e) The speed voltage curve, or tabulated data, and speed-current curve, or tabulated data, of generator when connected to battery.

(f) The speed voltage curve, or tabulated data, of generator when provided with a voltage regulator.

(g) The maximum allowable current output of generator, and the temperature guarantees at maximum output for stated periods.

(h) The power required to drive the generator at maximum rated power output and at a speed corresponding with an engine piston speed of 1,000 feet per minute.

127. *Waterproof covers*.—The high-tension magneto shall be provided with a suitable waterproof cover of proper construction and arranged so as to be securely fastened around magneto and readily removable.

128. *High tension magneto*.—A high tension magneto of best make must be installed on the engine and positively driven either by gears or by a silent chain drive. If driven by gears, the gears must run in oil, and if driven by silent chain drive, the chain must be readily adjustable. In either case the chain or gears must be completely inclosed, thoroughly lubricated, and effectively protected from dust, water, and dirt.

129. One distributor may be used in common for both battery ignition and for the magneto. The distributor must be of the weatherproof type and provided with a suitable safety gap.

130. The breaker points must be of platinum, and the breaker box and contacts must be easily accessible and readily adjustable. The breaker box must completely inclose the breaker mechanism and prevent the entrance of dust, water, or dirt.

131. The magneto must be provided with a suitable spark advance arrangement, which will enable the magneto to deliver an adequate strength of spark at all positions of the spark advance lever. The definite range of spark advance must be given in the proposal and must not be less than 35° of crank angularity.

132. The sector for spark advance lever must be plainly marked "start" and "run" for the most suitable starting and running positions.

133. With battery ignition, the strength of spark must be adequate for all engine speeds, and the spark lag must be as small as practicable. The definite amount of spark lag in degrees of crank angularity must be given for all engine speeds, with a fixed setting of the spark advance lever.

134. Complete details of the construction of the magneto, with drawings and illustrations, must be submitted with proposal.

135. The guaranty length of spark between needle points must be given with engine running at 100 revolutions per minute, and for both battery-ignition and high-tension magneto the lag of spark in degrees of crank angularity must be given for all practicable engine speeds.

136. *Fabric insulated primary cable.*—All primary cable shall be single flexible copper conductors, fabric insulated. This cable shall be constructed in accordance with the following table:

No.	Number of wires.	Diameter of wires.	Nominal size of wires.	Circular mils in cable.	Carrying capacity.	Diameter over wire.	Diameter over braid.	Layers of cambric.
					<i>Amperes.</i>			
14.....	41	0.0100	30	4,100	0.080	0.20	2
12.....	49	.0113	39	6,208102	.23	2
10.....	49	.0142	27	9,854128	.25	2
2.....	133	.0226	23	67,764	127	.340	.478	3
1.....	133	.0254	22	85,496	152	.380	.518	3
0.....	133	.0285	21	107,743	202	.427	.578	3
00.....	133	.0320	20	135,926	227	.480	.628	3

All dimensions in inches.

137. *Stranding.*—No. 14 to be bunched; Nos. 12 and 10 to be bunched or rope lay; Nos. 2, 1, 0, 00 to be rope lay.

138. The tinned and stranded copper conductors shall first be covered with a layer of closely wrapped cotton, varnished, the two or three layers of varnished cambric applied, and the whole covered with a heavy, closely woven cotton braid. The braid will then be saturated with an oil and moisture-proof varnish.

139. The completed cable shall be capable of withstanding for one minute a potential of 1,500 volts A. C., applied between the copper conductors and a metal foil wrapped around the outside of the cable. The frequency of the test current shall be in accordance with the standardization rules of the A. I. E. E.

140. *High-tension cable.*—All high-tension cable connecting with spark plugs, distributors, high tension magneto, or the secondary coils, shall be made up of either 26 or 37 copper conductors, thoroughly tinned, and 0.010 inch in diameter, and covered with three layers of rubber compound having a total thickness of not less than 0.100 or 0.125 inch. The cable shall be covered with two layers of heavy, closely woven glazed cotton braid, and the braid treated with two coats of an oil and water-proof varnish.

141. Both the primary and secondary cable shall be constructed and tested in accordance with the latest recommendations of the Society of Automobile Engineers.

142. *Tinning test.*—All copper wire must withstand the following tinning test: Samples will be properly selected to secure an average grade of tinning. The samples will have the insulation carefully removed, and the wires of the cable carefully separated and straightened. The wires will then be thoroughly cleaned by means of ether, benzine, gasoline, naphtha, caustic alkali solution, or hot water and soap, which ever may be found necessary to thoroughly clean the wires.

143. The wires shall then be rinsed in clear water and wiped dry with a soft cotton cloth. The wires will then be immersed for one minute in a solution of hydrochloric acid having a specific gravity of 1.038 at 70° F. and then rinsed in clear water and wiped dry as above specified. The wires shall then be immersed for 30 seconds in a solution of sodium polysulphide having an excess of sulphur, then rinsed in clear water and wiped dry.

144. The complete cycle of operations shall then be repeated, commencing with the immersion in hydrochloric acid and ending with the immersion in the sodium polysulphide solution.

145. Tests of tinning will be made on not less than 10 sets of samples of reasonable length. All wires must withstand one immersion in the hydrochloric acid without blackening in the sodium polysulphide solution, and 75 per cent of the wires must withstand three immersions in the hydrochloric acid without blackening in the

sodium polysulphide solution. All tests shall be conducted with the solutions at a temperature of 70° F.

146. *Electric lighting equipment.*—The truck shall be provided with the following electric lighting equipment:

One searchlight, with quick acting vertical and horizontal adjustment, silver plated brass or copper parabolic reflector, with 21-candlepower tungsten focusing lamp.

One instrument lamp, with 2 candlepower bulb, and one tail lamp with 2 candlepower bulb, connected in series.

One portable trouble lamp, 8-candlepower, with cord, and plug with separate socket.

One ammeter of best make, for indicating the charge and discharge of battery.

147. *Searchlight.*—The searchlight shall be not less than 10½ inches in diameter outside of front flange. The body of lamp shall be spun or pressed from one piece of heavy metal. In the design of the lamp, no parts shall be used which are liable to shake loose from vibration. The reflector shall be parabolic in form, spun or pressed from brass or copper of suitable thickness and heavily plated.

148. The searchlight shall be provided with a suitable handle and means for clamping the searchlight securely in any desired position. The searchlight shall be installed on the chassis in a location permitting it to be readily operated from the driver's seat, and also in such a position as to be unobstructed from the front.

149. This lamp shall be provided with a single point bayonet socket with two wire connections, and a suitable focusing device.

150. *Side lamps.*—The two side lamps shall be best quality combination oil and electric, of suitable design and construction, and fitted with standard S. A. E. single point, grounded return socket, and 15-candlepower 6-8-volt tungsten bulbs. The oil fonts shall be so designed that they can not rattle or drop out. These lamps shall be made of heavy gauge sheet steel or brass, thoroughly riveted and soldered, fully black enameled, and fitted with flat forged steel brackets or installed in dash. They shall have large glass semaphore front lens, and a side lens of green glass. The flat bracket shall be a snug fit in the lamp receptacle for same, and shall be held to lamp by means of a suitable bolt passing through lamp, receptacle, and bracket.

151. *Tail lamp.*—The tail lamp shall be the same as specified for side lamps, except that the large semaphore lens shall be of red glass colored in the glass composition, the side lens shall be of clear glass, and the bulb shall be 2 candlepower, 4-volt, connected in series with bulb of the same size and rating in instrument lamp. The tail lamp bracket shall be made of forged steel.

152. *Trouble lamp.*—The portable trouble lamp shall consist of a suitable hardwood handle through which the cord shall pass, and provided with an S. A. E. standard, single-contact socket, with two connections for wires, a lamp guard of proper design, and an 8-candlepower, 6-8 volt tungsten bulb. The other end of cord shall be provided with a suitable single-point combination plug for connection with a ground return socket. The cord shall be No. 14 B. & S. gauge, flexible, twin-conductor, rubber covered, double braided, packing house cord of best make. The portable trouble lamp shall be provided with an S. A. E. standard, single-point, flush type, flanged socket, installed in a readily accessible location, preferably on the dash, and connected with the lighting switch.

153. *Ammeter.*—Furnish and install in a suitable location a flush type ammeter of best make, having a double scale for indicating the charge and discharge current of battery. It shall be installed in such a location as will permit the same to be readily observed from the driver's seat, and properly illuminated by the instrument light.

154. This ammeter shall be connected in the circuit leading from the negative terminal of battery. The ammeter must be so designed as to not be affected by severe vibration. It must have a light moving system and be dead beat in action. It must be thoroughly insulated, and so designed as to avoid short circuits due to the loosening of parts.

155. *Extra lamp bulbs.*—The following extra lamp bulbs shall be provided, installed in a suitable metal case:

Two 15-candlepower, 6-8 volt tungsten bulbs of best make, with single-point Edison bases.

Two 8-candlepower, 6-8 volt tungsten bulbs of best make, with single-point Edison bases.

Two 2-candlepower, 4-volt tungsten bulbs of best make, with single-point Edison bases, and matched for series burning.

156. The bulb base shall be of heavy seamless steel, with a heavy seamless steel hinged cover with automatic spring catch. The bulbs shall be held securely in place by means of brass springs and a suitable locking device. The case must be of proper

size to hold the above lamps without the lamps touching each other or the sides, top, or bottom of the case. The case shall be thoroughly coated both inside and outside with best quality black enamel.

157. *Wiring*.—The truck shall be wired with the system of installation known as the ground-return system. In this system of wiring the chassis frame or bare metal is used as the return circuit.

158. *Conduit*.—Wherever practicable the wires shall be carried in either rigid or flexible metallic conduit. The flexible conduit is preferred. The conduit shall be securely fastened by means of galvanized straps and galvanized machine screws of proper size. The ends of the conduit must point downward so that the water will not run into the conduit.

159. *Cleats*.—Where wires are not protected with conduit they shall be securely cleated at intervals of not more than 10 inches. Such cleats shall be of galvanized steel of proper thickness and width and secured with suitable screws. Brass machine screws in tapped holes shall be used in all cases where the fastening is to be made on metal.

160. *Clearance*.—When conduit is omitted, no wire shall be nearer to the exhaust pipe than 2 inches.

161. Where conduit is used the minimum clearance between the exhaust pipe and the conduit shall be $1\frac{1}{2}$ inches.

162. A minimum clearance of $\frac{1}{4}$ inch shall be securely maintained between conduit and the nearest carburetor, gasoline pipe, gasoline tank, moving rod, or moving lever.

163. *Grounding*.—Wherever an insulated conductor is connected to "ground," the connection shall be installed so as to be readily accessible and removable on the completed truck. In all cases where the connection is made to an iron or steel part, the iron or steel shall be thoroughly tinned at the point where the connection is made, and the ground connection shall be firmly maintained by means of screws or bolts with suitable lock washers. Brass or copper lugs of proper size shall be used for all ground connections. The lugs shall be properly soldered to the ends of cables.

164. All cables shall be continuous from connection. The splicing of cables will not be permitted. All cables shall be provided with suitable lugs or terminals wherever practicable. Where the use of terminals is not practicable, the ends of cables shall be tightly twisted, formed into a solid loop, or proper size for the screw connection, and the loop thoroughly soldered.

165. *Extra fuses*.—Two complete sets of extra fuses shall be furnished with each truck.

166. Apparatus intentionally "grounded" in itself shall be so made that for inspection or test the ground can be opened without dismantling the apparatus.

167. *Connectors*.—All connectors shall be so made that when disconnected the section which is alive will have all live parts recessed one-sixteenth or more below the end of the shell connector.

168. *Protection against accidental short circuits*.—All connecting posts on fuse and junction blocks, or on instruments, generators, or switches, which must necessarily have exposed live parts, shall be so constructed, recessed, or installed that an accidental short circuit can not be effected with screw drivers, pliers, wrenches, or other tools used while making minor repairs or adjustments.

169. Where live parts might be liable to accidental short circuits to adjacent metal, they must be provided with suitable insulating caps or bushings, or surrounded with a suitable insulating barrier; or the adjacent bare metal liable to be accidentally connected to them through repair tools should be covered with insulating material.

Protective devices.—The current to all circuits shall be passed through protective devices.

171. Protective devices shall be made on the battery side of switches and junction boxes.

172. Fuses must be of the inclosed type, constructed so that inspection will show whether or not they have been melted.

173. Fuses must be marked with their rating.

174. Standard 10-ampere fuses shall be $1\frac{1}{4}$ inches long over all, with ferrules $\frac{1}{4}$ inch in diameter.

175. Fuses must be so constructed that with the surrounding atmosphere at a temperature of 75° F. (24° C.) they will carry indefinitely a current 10 per cent greater than that at which they are rated, and at a current 25 per cent greater than the rating open the circuit without reaching a temperature which will injure the fuse tube or terminals of the fuse block. With a current 50 per cent greater than the rating and at room temperature of 75° F. (24° C.) the fuses starting cold must blow within one minute.

176. The temperature of the exterior of the fuse inclosure must not rise more than 125° F. (70° C.) above that of the surrounding air when the fuse is carrying the current for which it is rated.

177. Fuse clips must be so made that fuses can not slip out accidentally. They must be fastened to a base so that they can not turn.

178. Clips should be so designed and protected that they can not be sprung together enough to take a permanent set interfering with the insertion of the fuse, or so that they can be sprung apart far enough to give them a permanent set sufficient to prevent their holding the fuse tightly.

179. *Bulb sockets.*—Bulb sockets must be so made that the continuity of the return path for current is not impaired when the lamp is subjected to vibration.

180. In lamps hinges, shall not be relied on to carry current between the bulb socket and the battery. The connections must be either permanent or so spring held that contact is maintained tight under vibration.

181. Bulb sockets and connector plugs shall be constructed in accordance with the latest recommendations of the Society of Automobile Engineers.

182. The instrument light socket shall be the single-point type with two terminals for wires. One terminal will connect with source of current directly, and the other will connect with a wire leading to the one-point grounded tail-light socket, thus putting the instrument light and tail light in series.

183. *Fuse box.*—A four-circuit fuse box of proper design shall be installed in a readily accessible location, and provided with fuse clips and fuses as follows:

184. One 30-ampere fuse for main connection between battery and junction fuse block. This fuse shall be the standard National Electric Code 30-ampere, 257-volt, indicating fuse, 1½ inches long and ¼ inch in diameter. One fuse clip from this fuse shall connect with the wire leading from negative terminal of storage battery, and the other fuse clip shall connect with one end of each of the other three fuses.

185. Three 10-ampere fuses for lighting and ignition circuits. These fuses and fuse clips for same shall be constructed as specified in paragraphs 172–178 inclusive, and paragraph 184. One of these fuses will connect with lighting switch, one with search-light switch, and the other with ignition switch.

186. The fuse box shall be of best make, and constructed of molded insulating material in both box and cover, or the box and cover may be of black enameled steel suitably lined with a proper insulating material. The wires shall all enter the fuse box from below and be a snug fit in the opening in box. If steel boxes are used, the holes in box where wires enter shall have suitable insulating bushings, and the fuse clips must be mounted on a heavy hardwood base, securely fastened to back of box by suitable brass screws. The heads of screws shall be deeply countersunk below the surface of the base.

187. *Extra fuses.*—One complete set of extra fuses will be provided and attached by means of suitable spring clips to the inside of fuse-box cover.

188. *Fuse clips.*—The fuse clips for all fuses shall be constructed as required by paragraphs 177 and 178 of these specifications.

189. *Switches.*—The ignition switch shall be triple-point switch of best make, with one point for battery ignition, one point for magneto ignition, and the other point for cutting out the high-tension magneto by grounding the high-tension coil.

190. The two lighting switches shall be the push type, of flash switch of best make, and mounted in a location readily reached from the driver's seat, and provided with a heavy brass two-gang switch plate in dead black finish.

191. *Insulation requirements of electrical apparatus and wiring after installation on truck.*—All electrical apparatus and wiring on truck shall be capable after installation of withstanding for one minute an alternating potential of 500 volts, the test being applied between the conducting circuit and frame or "ground." In making the test the ground connection shall be removed at such points as will permit the test being applied to all parts of the circuit which, in actual use, will be subjected to the working potential.

192. *Exception.*—Batteries will not be subjected to any insulation test above their working potential.

193. *Temperature test of insulating materials of electrical apparatus.*—All insulating material used in connection with plugs, sockets, and similar devices of electrical apparatus shall be capable of withstanding for 30 minutes a temperature of 300° F.

194. *Battery.*—Furnish and install on the truck a 6-volt 120-ampere-hour battery of best make, designed for lighting and ignition purposes only. This battery shall have a rated capacity of 120 ampere-hours, based on the method of rating given below, and may be either the lead-acid type or the Edison alkali-nickel-steel type.

195. The proposal must state the guaranteed life of the battery when properly cared for in accordance with the S. A. E. standard instructions.

196. Complete information regarding the details of the construction of the battery must be given, together with the guaranteed efficiency; that is, the ratio of watts output to watts input must be given, based on charging the battery to a potential of 2.6 volts per cell and discharging to a potential of 1.8 volts per cell at a 5-ampere discharging rate, the temperature being 80° F., at the beginning of charge and at the beginning of discharge.

197. *Dimensions of batteries.*—The over-all width of the battery measured from side to side of case, shall not exceed 7½ inches.

198. The over-all length of the battery measured from end to end of case, including handles, shall vary according to the capacity of the battery and its details of design. Handles shall, as standard, be placed at the ends of the battery. The space occupied by such handles and hold-down devices shall be in the direction of the length of the battery only and not in the direction of its width. The over-all height of the battery, measured from bottom of case to top of handles, shall not exceed 9½ inches.

199. *Rating of battery.*—The battery shall be rated at the capacity in ampere-hours of the battery when discharged continuously at a 5-ampere rate to a final voltage of 1.8 per cell, the temperature of the battery beginning each discharge being 80° F.

200. *Hydrometer.*—Furnish with each battery a battery hydrometer syringe of best make for measuring the specific gravity of the electrolyte. It must be so designed that the top or stem of hydrometer can not stick against the side of syringe when it is held in an approximately vertical position.

201. The hydrometer syringe glass shall be so constructed as to hold the hydrometer in a proper position, and shall be provided with rubber buffers in the ends to prevent the breaking of the hydrometer.

202. The lower end of syringe glass shall be provided with a suitable length of best quality rubber tubing.

203. The stem of hydrometer shall be marked in specific gravity, and also marked to indicate when battery is fully charged, when one-half charged, and when completely discharged.

204. *Battery jars.*—The battery jars, complete, including covers, vents, and terminal bushings, must be molded from best quality hard rubber-compound, properly vulcanized. The jars shall be not less than ¼ inch thick at all points, and shall be provided with suitable supports for plates at bottom of jar, and a large capacity under plates for the accumulation of sludge without touching plates.

205. The rubber compound must have a high tensile strength and sufficient elongation to prevent excessive brittleness, and must not materially increase in brittleness with age.

206. The entire rubber jar must be capable of withstanding an alternating potential of not less than 25,000 volts for one minute without puncture.

207. *Installation of battery.*—The battery must be installed in a readily accessible location, which will facilitate adding water to, or the testing of the solution, and which will permit the easy removal of the battery. The battery compartment must be well ventilated and drained, must keep out water, oil, and dirt, and must not afford opportunity for anything to be laid on top of the battery. The battery must have free-air space on all sides, must rest on cleats rather than on a solid bottom, and holding devices must grip the case or handle. A cover, cleat or bar pressing down on the cells or terminals must not be used.

208. The battery must be installed so that neither acid fumes nor overflow of water or electrolyte will cause serious leakage of current.

209. Battery hold-down bolts, if connected to handles or other metal parts at the level of the top of the jars, must be insulated at least one of their two ends.

210. *Cushion mounting.*—The battery shall also be provided with a suitable cushion mounting which will prevent it from being subjected to severe shock or vibration.

211. *Instructions for care of battery.*—Complete printed instructions for the proper care of battery shall be furnished. These instructions shall be in accordance with the latest recommendations of the Society of Automobile Engineers, together with such additional instructions as the manufacturer of battery may consider advisable.

212. These instructions shall be printed on heavy white cardboard of suitable quality, in large-sized type. This card shall be securely mounted under seat board, or in the most suitable location, and covered with two coats of best quality damar varnish.

213. *Transmission.*—The transmission shall be of the selective type and must have not less than four speeds forward and one reverse. It may be integral with the engine assembly forming a unit power plant, or it may be a separate unit, installed on the frame between the engine and differential. If the transmission is installed as a separate unit, two universal joints must be provided between the engine and transmission.

214. The high-speed gear shall be direct without gear reduction in the transmission.

215. The gears of transmission must be cut on suitable gear shapers or gear generating machine, from forged steel blanks of alloy steel of the best quality for the purpose and properly heat treated and accurately adjusted to a quiet running fit under load. These gears must have sufficient width of face and strength to transmit the full power of the engine at all gear ratios, with a proper factor of safety.

216. The splined driving shaft for sliding gears must be made of best quality alloy steel, properly heat treated.

217. It is desirable that the transmission shall be accessible from below the body for inspection, adjustment, or repair. The transmission shall be carried on the chassis frame or other part, which is provided with a suitable spring suspension. Transmission gears constructed as an integral part of the rear axle, or in any other manner which does not provide proper spring suspension, will not be acceptable.

218. *Differential.*—The differential shall consist of a forged-steel case, to which the large gear is attached by being bolted or riveted. In worm-drive rear axles this case shall also contain the necessary gears for producing the required differential action, and shall be provided with suitable steel roller or ball bearings of best make. The case shall be supported on its bearings independent of the drive-shaft ends, which shall be properly fitted into the two ends of the case and connect by means of suitable splines to the gears in differential case. The spline connection shall be made in accordance with S. A. E. standards.

219. If bevel driving gears are used, both gears shall be machine cut on suitable gear generators from forged-steel blanks of 3.25 to 3.75 per cent nickel and chromium steel of best quality and properly heat treated.

220. It is preferred that the small bevel drive gear be forged integral with its shaft. This shaft shall be made of 3.25 to 3.75 per cent nickel-chromium steel of best quality, properly heat treated and provided with two sets of taper roller or ball bearings of best make, and provided with suitable means for the ready adjustment of the small bevel gear in relation to the large bevel gear and vice versa. If ball bearings are used, they shall be provided with suitable means to take care of thrust loads.

221. The differential housing must be oil-tight and must have an inspection plate, giving ready access to the inside of housing. An oil-filler plug must be provided at a proper height to act as an overflow in filling. If the oil-filler plug is located in the inspection plate, the studs for holding the plate must be so arranged as to prevent the plate from being reversed. The differential complete must be readily removable after removing the full floating splined drive shafts.

222. *Rear axle.*—The trucks may be either internal-gear drive, chain drive, worm-gear drive, or bevel gear drive.

223. The design, material, and construction of the rear axle and final drive shall be in every respect in accordance with the best standard practice.

224. Provision must be made for the thorough lubrication of all bearings with the minimum attention necessary, and means must be provided for the protection of all bearings against water, dust, or dirt. If the rear axle is bevel, gear drive, or worm-gear drive, suitable truss rods with turnbuckles must be installed, unless the axle is provided with a pressed-steel axle housing which does not require truss rods.

225. *Internal-gear drive.*—If the final drive is an internal gear, provision must be made for entirely inclosing the driving gears and for retaining the lubricating oil or grease and for preventing same from getting onto the brake bands.

226. Both the small spur driving pinion and the large internal gear shall be machine cut from drop-forged steel blanks. The internal-gear ring may be made of carbon steel of best quality for the purpose, but the small driving gear must be made of best quality chromium-vanadium steel or other steel equally suitable. Both gears must have wide faces and must be so designed and constructed as to readily withstand the maximum power of the engine under the most severe service conditions with a proper factor of safety.

227. All gears connected with this drive must be heat treated in the most suitable manner. The internal gear must be pressed onto turned flange on the wheel hub and then firmly secured with suitable rivets.

228. The jack shafts shall be made of best quality chromium-nickel steel, must be properly splined at each end for connecting with driving gear and differential, and shall be provided at each end with steel roller bearings of best quality. These jack shafts shall be inclosed in steel tubing having flexible end connections in both the differential housing and the internal-gear case and these flexible connections shall be provided with suitable felt washers.

229. The complete differential with housing shall be firmly bolted with a proper number of bolts to the enlarged center of a drop-forged steel axle, having an I-beam section. This I-beam axle shall be forged from best quality carbon steel or equal, and properly heat treated. The wheel spindles shall be made of best quality chromium-vanadium steel, properly heat treated, and hot shrunk into the ends of the axle.

230. *Front axle.*—The front axle shall be of I-beam section, drop forged from a single piece of carbon steel or alloy steel. The steering knuckles, and the steering knuckle levers shall be drop forged from alloy steel of best quality for the purpose, and properly heat treated. The wheel spindles shall be provided with steel roller bearings of best quality, and provided with proper means of lubrication. The wheel hubs and bearings of both front and rear axles must be so designed as to prevent the entrance of water, dust, or dirt, and also must prevent the leakage of grease from the hubs.

231. *Brakes.*—Two independent sets of double-acting brakes shall be provided. The emergency brake must act directly on the rear wheels, and be operated by a hand lever with catch for holding the brakes in any position. Service brakes may act directly on the rear wheels or on the drive shaft, and must be operated by a pedal. Brakes must be lined with an approved friction material, and must be so constructed that they may be readily adjusted and securely locked in adjustment without removing the wheels or other parts.

232. Brake rods are to be sufficiently stiff to prevent whipping or rattling.

233. Brakes must be sufficiently powerful either to slip the wheels or stop the truck within a distance of not more than 20 feet, with either the service brakes or the emergency brakes, when the normally loaded truck is running on a level, hard, and dry macadam road at a speed of 14 miles per hour.

234. Both the service brakes and the emergency brakes must be readily adjustable for taking up wear, and must be provided with as large an amount of radiating surface as practicable. Provision must also be made for holding the braking surfaces on brake bands or brake shoes concentric with the brake drum surface. The brakes must be so designed as to release completely and not drag at any point when the brake lever or pedal is released. The brake drums must be exactly circular, and bolted to the wheels with suitable bolts, and located in such a manner as to be concentric with the center of wheel. Provision must also be made for preventing an accumulation of oil or grease on the brakes, or brake bands, which would destroy the effectiveness of the brakes.

235. All brakes must be mounted in such a manner that the braking strains will be taken by parts which are strong enough to withstand these strains under the most severe braking conditions.

236. The rear-wheel brakes shall be equally effective either with or without load.

237. *Frame.*—The frame shall be constructed of heat-treated pressed steel or standard rolled sections. The frame and suspension must be so designed as to prevent cramping of any part, due to distortion of frame because of uneven road conditions.

238. It must have sufficient depth, thickness of material, and width of flange to withstand all strains which may be put on same under the most severe service conditions, with a liberal factor of safety.

239. The frame shall be reinforced at proper intervals with suitable cross members thoroughly fastened to the frame with hot rivets or filled bolts riveted over. All holes in the frame shall be drilled, not punched. Suitable pigtail towing hooks shall be attached to the frame, two at the front and two at the rear. These towing hooks shall be bolted to the sides of frame.

240. A suitable towing hook shall also be installed in the center of the rear frame cross member and provided with suitable spiral spring. This towing hook shall have spiral springs to resist both tension and compression, and must have a shank not less than 1 inch in diameter, and provided with a hook which is designed in such a manner as to prevent the draw bar from pulling from the point of hook.

241. The frame shall be provided with two best quality, dressed oak sills, one bolted on top of each frame side member. These sills shall be the same width as the flange on frame, and shall be of proper depth to give not less than 6 inches clearance between the rear tires and the side sill of body as shown on drawing No. 3-1343C, Quartermaster General's Office, June, 1916. These sills shall be gained over all gusset plates or other irregularities on the frame, and shall be provided with not less than 10 $\frac{1}{2}$ -inch saddle bolts, two angle plates with bolts as shown on drawing of body, and bolts of property length for fastening body bolsters to sills. The sills shall be painted with three coats of paint of the composition given on drawing.

242. *Drive shaft.*—The propeller shaft connecting the transmission with the rear axle and differential must be of suitable size and strength to properly transmit the full power of the engine at all gear ratios, under the most severe service conditions. It must also be of such design and must be supported in such a manner as to prevent whipping or excessive vibration at all reasonable coasting speeds. The slip joint shall be fitted with an S. A. E. standard or similar spline connection.

243. Two universal joints must be provided between the transmission and differential. These universal joints must be so designed as to contain a proper quantity of

lubricating grease, and must each be provided with a tight leather boot made of best quality, first-cut leather.

244. These leather boots must be provided irrespective of the type of universal joint which is employed, and must be provided at each end of boot with suitable screw clamps.

245. *Clutch.*—The clutch may be either of leather-faced cone type, multiple disk, or single disk type. The multiple disk type of clutch is preferred. It must have sufficient strength to transmit full power of the engine at all speeds, must be easily accessible for repair or replacement of parts, and must be provided with a suitable arrangement for permitting easy engagement which will not require frequent adjustment or renewal of leather or friction material. The clutch must be capable of withstanding the severe service required when hauling trailers carrying loads at least equal to the road carried on truck.

246. It is desirable that the clutch be readily adjustable or provided with a spring which will give uniform action of clutch during the wearing life of the friction material.

247. The clutch must be readily removable without disturbing the transmission, steering gear, motor, or other important parts, except in the case of a unit power plant, and must be provided with an efficient brake in order to stop the spinning of clutch. The action of the clutch must not be affected by changes in atmospheric conditions, and the clutch must engage without grabbing at all engine speeds.

248. *Steering gear and wheel.*—The steering gear may be either the worm-and-wheel type or the screw-and-nut type, and means shall be provided for its thorough lubrication. Adjustments must be possible without removing the steering assembly from the frame.

249. A notched grip steering wheel of best quality shall be provided, having an outside diameter of not less than 12 inches. The steering post must be rigidly mounted to prevent vibration, and must be provided with both spark advance and throttle levers. The lever sector for spark lever must be plainly marked "Start" and "Run," for the most suitable starting and running positions of the spark advance lever.

250. The gear reduction and length of levers on steering gear must be such as to give easy turning action with the fully loaded truck, but the gear reduction must not be so slow as to prevent sufficiently quick turning of the wheels in steering.

251. The steering cross road must be located back of the front axle in order that the front axle may protect it against damage from obstructions, and it must be above the bottom edge of the axle at all points. Specify protection of fore and aft connections.

252. All steering connecting-rod joints shall be hardened steel sockets, held by springs in close contact with hardened steel balls. The steering cross-rod joints may be of the ball-and-socket or clevis type.

253. *Wheels.*—The wheels shall be of suitable size for the use of 36-inch S. A. E. demountable solid tires, and shall be either best quality wooden or cast-steel wheels, of proper design, strength, and construction, and made in accordance with the best standard practice.

254. If the wheels are made of wood the spokes must be made of best quality selected, straight-grain hickory, and thoroughly seasoned, and the wheels provided with S. A. E. felloe bands. The felloes shall be constructed of best quality ash, thoroughly seasoned, and free from defects. The wheels shall be of suitable size and design for use of 36 by 4 inch single, solid demountable rubber tires, on front wheels and 36 by 4 inch dual, or 36 by 7 inch single, solid, demountable tires on rear wheels. All wheels shall be of proper strength to resist the vertical and lateral loads in the most severe service and with the maximum loads and speed for which the truck was constructed.

255. The ends of all spokes must rest on the inside of the felloe.

256. The hubs of wheels shall be made of best quality cast or forged steel, free from blow holes which will impair the strength or finish of finished hub, and must be provided with best quality hardened and ground roller bearings of proper size.

257. Complete detail and assembly drawings, showing the construction, material, and dimensions of all parts of the wheels must be submitted.

258. *Hub odometer.*—A hub odometer of best make, and of suitable design and construction for most satisfactory use on motor trucks, shall be provided and installed on one of the front wheels. This odometer shall have not less than five figures in the dial, and provision shall be made to prevent leakage of grease into mechanism.

259. *Tires.*—On two-wheel drive trucks the tires shall be 36 by 4 inch dual, or 36 by 7 inch single tires, on rear wheels, and 36 by 4 inch single tires on front wheels, both front and rear tires demountable.

260. On four-wheel drive trucks the tires shall be 36 by 6 inches, single, demountable, both front and rear.

261. All tires shall be best quality solid rubber tires on hard rubber base, with S. A. E. steel rims. A sample section of the rubber tire and rim must be submitted with each proposal.

262. The following data must be submitted in reference to the tires which it is proposed to furnish:

- (a) Diameter and width of front tires.
- (b) Diameter and width of rear tires and whether single or dual.
- (c) Total area of rubber, both soft and hard, in tire section.
- (d) Area of rubber above top of channel.
- (e) Specific gravity of soft rubber.
- (f) Tensile strength in pounds per square inch at given temperature.
- (g) Stretch and set of 2-inch lengths of rubber in small strips, at given temperature.
- (h) Per cent by volume of fine Para rubber in tires.
- (i) Per cent by volume of other rubbers in tires.
- (j) Guaranteed mileage of tires if mileage is run in one year.
- (k) Guaranteed mileage of tires if mileage is run in two years.
- (l) Trade name of tire.
- (m) Name of manufacturer of tire.

263. All tires furnished with the entire lot of trucks must be the same type and size and must be made by the same tire manufacturer, unless the tires of other manufacturers will fit the same demountable rim.

264. *Gasoline tank.*—A suitable drawn-steel gasoline tank shall be provided, having a capacity of not less than 30 gallons. This tank shall be thoroughly tinned both inside and outside.

265. A metal partition shall be installed in the inside of tank of such height as to give a capacity of 6 gallons on each side of the partition. Suitable baffle plates shall be installed on each side of partition in order to prevent excessive splashing. The connection from tank to carburetor shall be made from the bottom of each compartment, through a three-way cock, thus giving a positive reserve supply of 6 gallons.

266. If a vacuum system or a pressure system is provided, the three-way cock may be installed at the top of tank with the supply pipes extending from same to the bottom of each compartment in tank.

267. A suitable gasoline strainer with drain cock shall be installed in a readily accessible location, and in the gasoline line between the tank and carburetor, or between the gasoline tank and vacuum feed tank. The gasoline pipe line shall consist of brass or copper tubing, not smaller than five-sixteenths of an inch outside diameter, and arranged so as to completely drain through either the tank, carburetor, or strainer.

268. Suitable means must be provided for draining the gasoline from a flooding carburetor on to the ground without permitting any gasoline to get into the engine pan or to accumulate on any part of the chassis.

269. The gasoline tank must be installed high enough to permit the gasoline to flow to the carburetor when the truck is climbing the maximum grade which it is capable of negotiating under the most favorable road conditions, and with the minimum amount of gasoline in the tank. If necessary, a pressure feed system may be employed.

270. *Springs.*—The chassis spring suspension must be of such design and construction as to relieve the body and chassis above springs of excessive vibration when the vehicle is traveling empty or partially loaded over rough surfaces at maximum speed.

271. Springs must be made of alloy steel properly heat treated, not lower in quality than required to develop the following physical properties:

Minimum elastic limit.....	pounds per square inch..	170,000
Tensile strength.....	do.....	210,000
Elongation.....	per cent..	6
Brinnell hardness.....		390-410
Schlerescope.....		53-56

272. Spring eyes must be provided with phosphor bronze or soft steel bushings, pressed in and reamed in position to the S. A. E. limits of tolerance for such bushings. Bushings must have suitable lubricating channels, and conform to S. A. E. standard of wall thickness. If phosphor bronze is used, it must be equal to S. A. E. specification No. 26.

273. Spring eyebolts must be hardened and not smaller in diameter than the size mentioned in the table in paragraph 283. Eyebolts must be securely anchored to prevent turning in the spring shackle and be provided with suitable means for lubrication.

274. Spring shackle bolts or crossbars must be properly hardened on bearing surface and be so designed as to provide at least equal projected bearing area to that provided by the eyebolts. Where shackle bolts are used in connection with bar shackles, they must be provided with suitable means of lubrication and be securely anchored to prevent turning in the shackle.

275. Spring shackles must be made of a material equal to S. A. E. specification No. 12-35 for steel castings, and heat treated. They must have a center to center distance not less than the spring width and may be of two types—bar shackles formed of two plates with a connecting bar formed integral with them, or yoke shackles, having one end open and the other end connected and adapted to receive the shackle pin or bar. Where yoke shackles are used they must be bushed at the shackle pin or bar end with a material equal to S. A. E. specification No. 26 or soft steel, bushing to have one-eighth inch walls, lubricating channels, and suitable means of lubrication. Yoke shackles must be so designed as to provide projected bearing area at the closed end at least equal to that of the spring eyes. Rear spring shackles must be in tension.

276. Shackle hangers, when used in connection with bar shackles, must be bushed with a material equal to S. A. E. specification No. 26 or soft steel, said bushings to have one-eighth inch walls and be provided with suitable lubricating channels and means of lubrication.

277.—*Shackle position.*—In the design of springs and the assembly of same on chassis, the spring shackles must stand in approximately a vertical position when the spring is under full load, except on chain-driven vehicles, where shackles must stand at an angle sufficient to allow chain adjustment without cramping the spring main plates.

278. Spring leaves must be held against longitudinal movement by means of an alloy steel center bolt of proper size, by an indentation in the center of each leaf, or by a combination of those methods. If center bolts are used, the heads shall conform to S. A. E. standard and be provided with snug-fitting S. A. E. standard center bolt nuts and means provided for locking the nuts in position. Springs with shrunk on center bands will not be acceptable because of the difficulty of making repairs in field service. Center fastening must be shown in detail on the drawing mentioned in paragraph 293.

279. Spring clips must be made of alloy steel, properly heat treated, of a suitable quality to develop physical properties equal to the following:

- Elastic limit, 100,000 pounds per square inch.
- Tensile strength, 130,000 pounds per square inch.
- Elongation in 2 inches, 20 per cent.
- Reduction of area, 60 per cent.
- Brinnell hardness, 295.
- Schleroscope, 35.

These spring clips must not be smaller in diameter than the size mentioned in the table in paragraph 237.

Spring clips must have S. A. E. standard threads and be provided with snug-fitting nuts of a length equal to one and one-half times the diameter of the spring clips, as mentioned in S. A. E. standards.

The chemical specifications, physical properties, and heat treatment must be given. Nuts may be of carbon steel.

230. Metal spring chairs must be provided between springs and spring seats. Chairs must be so designed as to be held by the spring clips against longitudinal movement and have one face shaped to conform to the shape of the spring when the spring is free or without load.

The center of the chair must be recessed to properly receive the center fastening of the spring. Spring chairs may be omitted where the spring seat is shaped to conform to the shape of the spring when the spring is free.

281. Pressure blocks of a material equal to S. A. E. specification No. 12-35 for steel castings, heat treated, must be provided between the spring clips and the spring, and must be grooved and conform to the shape of the spring clips where in contact with the clips.

The face of pressure blocks must conform to the shape of the spring when the spring is free.

282. *Permanent stops.*—All vehicles must be provided with permanent stops which will prevent the springs from being deflected to a point at which the stress will be greater than 75 per cent of the elastic limit of the material from which the springs are made. It is desirable that yielding bumpers also should be provided.

283. The following table gives the permissible width of springs, minimum diameter of eye bolts, and minimum diameter of spring clips for both front and rear springs:

Location of spring.	Approximate load for spring.	Width.	Eye diameter.	Spring clip alloy steel, diameter.
	<i>Pounds.</i>	<i>Inches.</i>	<i>Inches.</i>	<i>Inch.</i>
Front.....	700 to 1,050	2½	1	1
	1,000 to 1,250	2½	1	1
	1,200 to 1,550	3	1½	1½
	1,500 to 1,850	3	1½	1½
Rear.....	1,250 to 1,500	2½	1	1
	1,600 to 1,900	2½	1	1
	1,900 to 2,500	3	1	1
	2,500 to 3,500	3	1½	1½
	3,880 to 4,500	3½	1½	1½

In case the rear springs take either drive, torque, or drive and torque, then one-eighth inch must be added to the above clip diameters, and one-fourth inch to spring eye diameters. Where rear springs are underslung, add one-eighth inch to clip diameters.

284. The use of carbon-steel spring clips will not be permitted.

285. *Rebound clip.*—A suitable number of rebound clips must be provided on each spring and attached in such manner as to retain their proper position, and if riveted in position must be provided with a spacer one thirty-second of an inch longer than the spring width between the open ends of the clips. The distance between the spacer and the face of the nearest spring leaf must not be greater than three-sixteenths of an inch.

286. *Lubrication.*—The lubrication of all spring connections must be through grease or oil cups, which must be so located as to be readily accessible and of ample capacity and so designed as to prevent any part of the cup shaking loose through vibration. When cups are not formed integral with the spring connections, they must be screwed in position with standard one-quarter inch taper pipe thread. At least four threads of shank must be engaged.

287. Springs must be provided with suitable means for retaining the leaves in proper alignment with each other. The method used must be shown in detail in the drawing mentioned in paragraph 293.

288. A drawing must be furnished showing in detail the method of fastening leaves at spring center; the number, location, and method of fastening rebound clips and the method of retaining the leaves in proper alignment with each other. This drawing must also bear in tabulated form the following information: Chemical specifications of steel from which springs are made.

HEAT TREATMENT.

Physical properties after heat treatment including Brinall and Scleroscope test.

- (a) Type of spring.
- (b) Width of spring, nominal.
- (c) Width of spring at eyes.
- (d) Length of spring under load, front end (center bolt to bearing point or eyes).
- (e) Length of spring under load, rear end (center bolt to bearing point or eyes).
- (f) Height of spring under load, measuring from short leaf to line drawn through center of bearing point or eyes.
- (g) Flexibility in pounds per inch of deflection.
- (h) Length of short leaf.
- (i) Thickness and number of leaves and of individual leaves counting from main leaf.
- (j) Inside diameter of bushing.
- (k) Outside diameter of bushing.
- (l) Diameter of center bolt.
- (m) Diameter of center bolt head.
- (n) Height of center bolt head.

289. Scale formed on leaves during heat treatment shall be removed as thoroughly as possible without breaking surface skin.

290. All springs must be tested in accordance with the recommendations of the S. A. E., and must fully meet with the requirements of said test as to variations in height, flexibility, and permanent deflection under conditions of test.

291. Driving power may be transmitted from axle to frame through the medium of radius rods, or through the chassis springs.

292. If power or torque is transmitted through the chassis springs, the design must be such that the vehicle will not be rendered inoperative through breakage of the main or driving leaf of the spring and the axle attachment must be such as to prevent relative longitudinal movement under the extreme pressure imposed at the maximum draw-bar pull.

293. *Bodies.*—Bodies are not to be furnished unless specifically called for. The construction of chassis shall be such as to permit the proper installation of body on same, having inside dimensions of 5 feet 1 inch wide, 10 feet long, and 2 feet high, with the floor of body at a height of not over 45 inches above the ground when the truck is loaded. The length of frame back of driver's seat shall be 10 feet 4 inches.

294. In fastening the body to chassis, neither the frame nor the frame members shall be drilled. The body shall be fastened to the frame by means of suitable bolts, as shown on drawing No. 3-1343C, Quartermaster General's office, 1916.

295. *Painting.*—The entire chassis shall be first thoroughly cleaned of all dirt, grease, or oil, and covered with coat of best quality, rust resisting paint. It shall then be painted with three coats of best quality lead and oil, olive-drab color, of the following composition: Six pounds white lead ground in linseed oil, 1 pound raw umber, 1 pint turpentine, one-half pint japan drier, 1 quart linseed oil.

296. Each coat must be permitted to become thoroughly dry before applying the next coat.

297. *Data with proposals.*—The following information must be furnished with each proposal, and also, all other data called for in these specifications. Illustrations, catalogues, and specifications, showing the construction of the truck bid upon, should also be submitted. Failure to supply this data may be considered to render the proposal informal and result in its rejection.

- (1) Name of manufacturer of motor, _____.
- (2) Bore, _____ inches. Stroke, _____ inches.
- (3) Number of piston rings, _____.
- (4) Type of piston rings, _____.
- (5) Crank shaft bearings:
Number, _____ Type, _____.
Size of each, _____.
- (6) Make and thickness of antifriction metal used, _____.
- (7) Are main bearings and connecting-rod bearings bronze backed?
- (8) Diameter of crank shaft, _____ inches.
- (9) Diameter of crank pin, _____.
- (10) Speed of motor corresponding to truck speed of 14 miles per hour on high gear, ——— revolutions per minute.
- (11) Manufacturer and type of governor, _____.
- (12) Manufacturer and type of carburetor, _____.
- (13) Type of water circulating pump, _____.
- (14) Method of lubrication of motor, _____.
- (15) Manufacturer and type of magneto, _____.
- (16) Manufacturer and type of clutch, _____.
- (17) Manufacturer and type of transmission, _____.
- (18) Gear reduction, crank shaft to rear wheels, _____.
First speed (low gear), _____; second speed, _____; third speed, _____;
fourth speed, _____; reverse, _____.
- (19) Type of drive, gear reduction of transmission only, jackshaft only if chain drive, final drive.
- (20) Manufacturer and type of drive axle, or jack shaft.
- (21) Number of sprocket teeth on jack shaft sprocket, and on wheel sprocket, _____.
- (22) Manufacturer of tires, _____ Size and type of tires, _____.
- (23) Maximum depth of frame, _____ inches.
- (24) Thickness of frame stock, _____ inches.
- (25) Kind of steel in frame, _____.
- (26) Manufacturer and type of steering gear, _____.
- (27) Diameter of steering wheel, _____.
- (28) Type of brakes, _____.
- (29) Manufacturer and brand of brake lining used, _____.
- (30) Area of braking surface, emergency brakes, _____.
- (31) Area of braking surface, service brakes, _____.

- (32) Distance required to stop normally loaded truck from speed of 14 miles per hour for 1½-ton truck, and from 12 miles per hour for 3-ton truck, on hard level macadam road ———.
 - (33) Diameter of front wheels, ———.
 - (34) Diameter of rear wheels, ———.
 - (35) Shipping weight of chassis including all accessories and spare parts as specified herein, ———, pounds.
 - (36) Weight of chassis only, on front wheels, ———.
 - (37) Weight of chassis only, on rear wheels, ———.
 - (38) Weight of chassis loaded on front wheels, ———.
 - (39) Weight of chassis loaded on rear wheels, ———.
 - (40) Type and make of radiator, ———.
 - (41) Is radiator spring suspended, ———.
 - (42) Water capacity of cooling system, ——— gallons.
 - (43) Frontal area of radiator, square inches, ———.
 - (44) Depth of radiator core, ——— inches.
 - (45) Area of radiator cooling surface, square inches, ———.
 - (46) Quantity of water delivered by pump, with engine speeds of 500 and 1,000 revolutions per minute, ———.
 - (47) Power required to drive fan, ———.
 - (78) Gasoline consumption in pints per horsepower hour on block test, with wide open throttle, and maximum torque at 250 feet, 500 feet, 750 feet, and 1,000 feet, of piston speed per minute.
 - (79) The gasoline consumption data above required must be taken with one setting of the carburetor. The carburetor setting must not be changed when testing the engine at different speeds or loads.
 - (80) The mechanical horsepower required to drive the engine at a speed of 1,000 feet of piston speed per minute, with carburetor in place, and with throttle wide open, ———.
 - (81) Clearance of volume in per cent of piston displacement, ———.
 - (82) Number of cylinders in casting, ———.
 - (83) Are cylinder heads removable, ———.
 - (84) Location of valves, both in head, one in head, and one in ell, two in ell, or tee, ———.
 - (85) The net weight of engine complete with flywheel, clutch, carburetor, magneto, pumps, generator, fan, and manifolds, ———.
 - (86) Complete valve timing data, ———.
 - (87) Gasoline consumption of fully loaded truck, in units per gallon on high gear, when running over smooth macadam roads, ———.
298. *Equipment.*—Diaphragm horn: Furnish and install in a location readily reached from the driver's seat, a diaphragm horn of best make. This horn shall be installed in a rigid manner with proper through bolts, nuts, and lock washers.

Suitable "pig-tail" towing hooks fastened to corners of frame at front and rear.
A suitable swivel towing hook at rear, having a spring take up of proper design which will resist both tension and compression.

Tire chains of best make, complete on all four wheels, with two dozen extra cross chains for same. The drive wheels may be equipped with individual cross chains which fasten to the wheels.

- 1 pair 6-inch side cutting pliers of best make.
- 1 pair 7-inch combination gas pliers of best make.
- 1 jack of best quality, and with suitable height of lift, and strength for the truck.
- 1 set of socket wrenches, to fit all nuts on truck.
- 4 spark plugs.
- 2 exhaust valves.
- 1 intake valve.
- 2 exhaust valve springs.
- 1 intake valve spring.
- 2 fan belts.
- 1 set extra hose connection for radiator.
- 1 extra drain cock for radiator.
- 2 extra grease cups of each size of trucks.
- 1 5-pound can soft cup grease.
- 1 gallon engine cylinder oil in sealed can.
- 1 gallon gear oil in sealed can.
- 1 quart kerosene in sealed can.
- 10 feet No. 10 Brown & Sharpe gage primary copper cable, oil and waterproof.

1 assortment of lock washers, Society American Engineers standard. Furnish 6 washers of each size provided on truck.

- 1 carburetor float.
 - 1 carburetor needle valve.
 - 1 condenser for magneto.
 - 1 condenser for battery timer.
 - 2 extra service brake shoes, complete with adjusting screws.
 - 2 extra emergency brake shoes, complete with adjusting screws.
 - 1 6-inch bastard file.
 - 1 8-inch flat mill file.
 - 1 box assorted cotter pins.
 - 1 rubber or canvas pail, 2½ gallons.
 - 1 small clamp vise of best quality, with 3-inch jaw.
 - 1 cold chisel, ¾ inch long.
 - 1 box grinding compound, must contain two grades.
 - 1 valve-lifting tool.
 - 1 valve-grinding tool.
 - 1 spring for placing under valves when grinding.
 - 1 pinch bar, 6-pound, 42 inches long.
 - 1 best quality grease gun.
 - 1 funnel, 8-inch, heavy, with strainer.
 - 4 gaskets for intake valve gage, and valve cup if used.
 - 4 gaskets for exhaust valve gage and cap if used.
 - 1 cylinder cover gasket, if used.
 - 8 spark plug gaskets.
 - 1 box assorted nuts, plain box, case-hardened. Assortment must include not less than 2 nuts of each size on truck.
 - 1 box nuts, castellated, case-hardened. Assortment must include not less than 2 nuts of each size on truck.
 - ½ dozen lamp wicks, of size used in lamps on truck.
 - 2 leather boots for universal joints, with suitable clamps.
 - 2 leather boots for joints on drag link, with laces.
 - 1 roll heavy gasket paper.
 - 1 fire extinguisher, 1-quart capacity, of best make, with bracket support. Mount in vertical position.
 - One shovel, short handle, square point, D handle, socket strap, best quality crucible steel.
 - One ax, single bit, 4-pound, with hickory handle, all of best quality.
 - One lantern, best quality, with No. 2 burner, guard and suitable globe lift. Must not blow out in the strongest wind.
 - One tow chain, 20 feet long, 5/16-inch links, with ring in one end and hook in the other end.
 - One hundred and fifty feet Manila rope, 5/8-inch diameter.
 - One complete set of all special tools used in the repair or adjustment of the truck.
 - Steel tool box, with lock, to hold all tools, tire chains, and all other tools.
 - Instruction books, oiling diagrams, with instructions for a complete understanding of the care and operation of the truck.
299. *Tests*.—Trucks will be inspected and tested at the factory under the direction of a representative of the Quartermaster Corps and notification shall be sent to the Quartermaster General of the Army when the machines are ready for such inspection. Trucks must be built to stand any reasonable test that the Government may require in its military service. Tests will be made with the truck under loads as specified, and all labor and materials necessary for the tests will be furnished by the contractor.

HENRY G. SHARPE,

Brigadier General, Quartermaster Corps, Acting Quartermaster General.

[Inclosure No. 4.]

STANDARD SPECIFICATIONS FOR GASOLINE MOTOR TRUCKS.

[Capacity, 3 tons. Prepared in the office of the Quartermaster General, Washington, D. C., June, 1916.]

1. The number of trucks required will be stated in the "Instructions to Bidders," issued by the purchasing quartermaster. The prices quoted will be f. o. b. factory, and the truck must be complete in every respect and in proper operating condition.

2. *Quality of materials.*—Except it be otherwise specified all materials are to be the best of their respective kinds, and all labor is to be done in the most thorough and workmanlike manner. In all cases where an article is mentioned in these specifications in connection with the words "best quality," "best make," "proper," or "suitable," the purchasing quartermaster or his authorized representative shall decide what is the best and most suitable to use.

3. *Award of contract.*—The trucks herein specified are to be used in the field service of the Quartermaster Corps, and in the selection of trucks and award of contract, the quality of material, design, workmanship, and suitability for use by the Quartermaster Corps in field service will be given due weight in determining which proposal shall be accepted.

4. *Manufacturers.*—Each bidder must submit a complete list of manufacture and location of factories furnishing any part, either finished or unfinished, assembly, or accessory, which is used in the construction of the trucks, and not made in the factory where the trucks are constructed. This shall not be construed as including bar or sheet stock or structural material. If this information is not given the proposal may be rejected, or in case the proposal is accepted, the Quartermaster Corps reserves the right to name the manufacturer and select the material, apparatus, parts, or accessories, and no others will be substituted for those named.

5. *Employment of convict labor.*—In the performance of work herein specified the contractor shall not, directly or indirectly, employ any person undergoing sentence of imprisonment at hard labor, which may have been imposed by a court of any State, Territory, or municipality having jurisdiction, nor permit such employment by any person furnishing labor or material to said contractor in fulfillment of this agreement.

6. *Patents.*—The contractor shall for all time secure to the Government the free and undisputed right to use any and all patented articles used in the work and shall defend at his own expense any and all suits for infringement of any patent or patents, and in case of adverse claims under patents, the contractor shall pay all awards.

7. *Design.*—The truck must be of well balanced design, and the material a workmanship the highest standard employed in commercial practice. It must be constructed in the most substantial manner, and provided with a suitable spring suspension. All parts of truck must be so designed and constructed as to be readily accessible for adjustment or repair.

8. *Strength of parts.*—All parts of truck from motor to and including driving wheels must be of such size, material, design, and strength as to readily transmit the full power of the motor at the different gear ratios, with a proper factor of safety, with a minimum wear on parts, and with maximum mechanical efficiency.

9. *Interchangeability of parts.*—All parts of trucks must be constructed to definite standard dimensions and proper tolerances, so that any part of same may be replaced and properly fitted and adjusted without requiring additional tool work or machine work on the parts.

10. *Standard parts.*—It is desired that as many parts of the truck as practicable be constructed to standard sizes and design, which will be interchangeable with the same parts made by other manufacturers, or according to S. A. E. standards.

11. *Materials.*—A complete list of all materials used in the construction of the various parts of the truck must be given, together with the chemical composition, and physical properties of same.

12. *Heat treatment.*—When necessary, all steel used in the construction of the truck must be heat treated to develop the best physical properties for the particular purpose for which the material is being used.

13. A complete description of the methods of heat treatment for various purposes and materials must be given, together with a description of the equipment for same.

14. All information in reference to the heat treatment will be considered confidential if so requested by the bidder.

15. *Drawings and data.*—Each bidder will be required to submit complete dimensioned detail and assembly drawings, showing the size and construction of every part of the truck. These drawings must show the shop limits on all parts, and a reference number or letter referred to the list of materials, physical properties, and heat treatment, which list will also be submitted with the proposal. The drawings must be arranged in proper order for filing, and provided with a suitable index which will enable any individual drawing to be readily located. The drawings and data above referred to will not be opened publicly with the proposals, but will be considered confidential. The drawings and data may be submitted direct to the Quartermaster General, Washington, D. C., and should be referred to in each proposal which is submitted.

16. If the drawings and data herein required are on file in the office of the Quartermaster General, they need not again be submitted with the proposal. If any major

changes have been made in the construction of the truck, materials used, or methods of heat treatment since the drawings and data were submitted, details of those changes should be submitted with the proposal.

17. *Service stations.*—Complete information regarding the location of all service stations, the floor area of each station, and the number of men employed in each service station, should be submitted with the proposal.

18. *Departure from specification requirements.*—In case the vehicle on which proposal is submitted does not comply with these specifications, in every particular, the bidder must state definitely in what particulars the vehicle which he proposes to furnish does not comply with specification requirements.

19. *Guaranty.*—Each bidder will be required to guarantee his vehicle or vehicles against defects in material or workmanship for a period of one year. This guarantee shall include the delivery of the defective part or parts to any point in the United States. After the installation of the new part, the defective part will be returned to the manufacturer if he so requests. The manufacturer will pay the transportation charges on all returned parts.

20. The above guarantee shall also apply to all parts and accessories which are not made by the bidder.

21. *Load capacity.*—The carrying capacity of trucks in pay load shall be the rating in tons, and they shall be of sufficient strength and be provided with sufficient power to carry and propel a gross load of 8,930 pounds under the most severe service conditions, with a proper factor of safety.

22. *Road speed.*—The governor on engine shall be set so as to give a road speed of 12 miles per hour, with a maximum governed engine speed of 1,300 revolutions per minute.

23. *Location of control.*—The speed change lever and steering wheel must be located in such a manner as to give either left-hand drive with center control or right-hand drive with right-hand control.

24. *Type of drive.*—The trucks may be provided with any suitable standard type of drive, such as internal gear, bevel gear, worm gear, or chain drive.

25. Preference will be given to that type of final drive which provides the greatest amount of ground clearance, in conjunction with provisions for retaining grease or oil and excluding dirt.

26. Either two-wheel drive or four-wheel drive may be employed.

27. *Fenders.*—Truck will be provided with front fenders only, which must be of suitable design and rigid construction.

28. *Seat and top.*—Seat shall be of proper width for not less than three persons and shall be provided with removable cushion and stationary back rest upholstered with best quality imitation or genuine leather. Top to be of collapsible type, with extra heavy bows and fastening irons, and covered with best quality 12-ounce water-proofed canvas.

29. *Bumper.*—A steel bumper, consisting of curved channel or other suitable section, shall be properly bolted to frame of truck and so placed as not to interfere with the starting crank. Front towing hooks may be secured to this bumper if so desired, and satisfactory attachment is made. No part of the bumper extending in front of the radiator or hood of engine shall be integral with the chassis frame.

30. *Radiator protector.*—Each truck shall be provided with an effective radiator protector, which shall extend the full height and depth of the radiator. This radiator protector shall be constructed of heavy structural steel shapes or steel castings, and shall be firmly bolted to the chassis frame. It must be so installed as to not interfere with the starting crank. Complete detail drawings showing the construction of this protector must be submitted.

31. *Ground clearance.*—The ground clearance of all parts of truck, except at drive sprockets and hub brake drums, shall be not less than 11 inches.

32. *Turning circle.*—The truck shall be so designed as to turn in a circle of not more than 55 feet, measured from outside wheel tracks.

33. *Gage.*—It is desirable that the gage of front and rear wheels shall be 61½ inches, measured from center to center of felloe bands, in order that the truck may track with 1½-ton trucks of the same gage.

34. *Wheel base.*—The wheel base must be suitable for the use of a 12-foot body and shall be not less than 124 inches or more than 150 inches.

35. *Engine.*—The engine must be of the four cycle type water cooled, having less than four cylinders, and provided with poppet valves. It shall have a total piston displacement of not less than 350 cubic inches, but a larger engine is desirable. It must be under a removable hood forward of the driver. All bearings shall be so designed as to be easily adjusted to take up wear, and all piston valve stems and push rods shall be properly bushed. If the crank case is of a split type, the lower half of case must be removable without disturbing bearings.

36. *Suspension.*—The engine must be mounted with a three-point suspension, or on a subframe having a suitable three-point suspension, which will effectively prevent the distortion of frame from straining any part of engine or transmission. The single flexible pin connection shall be hardened and ground and provided with a phosphor bronze bushing or a hardened and ground steel bushing.

37. *Tractive effort.*—The vehicles shall have sufficient power to carry its gross load on high gear up a 4 per cent grade, and on low gear up a 25 per cent grade, both grades being on a hard road surface. It shall also be able to stop and start with its gross load on the 25 per cent grade.

38. *Governor.*—A centrifugal type motor speed limiting governor of approved make shall be provided and adjusted so as to prevent the truck from exceeding a speed of 12 miles per hour on high gear. The governor shall be adjustable and must have provision for sealing with ordinary lead seals after adjustment.

39. *Crank case.*—The crank case may be of the barrel type or divided in a horizontal plane, with all bearings in the upper section. It must be so designed as to be light in weight and also of proper strength, and must be provided with suitable ribbing in order to secure a strong case, free from distortion or weakness, and without excessive weight. It must also be so designed as to permit any piston to be removed from its cylinder and taken out of the case without removing the cylinder or crank shaft.

40. All oiling receptacles, pipes, and oil guides, except the constant level troughs for connecting rods, shall be either pressed or cast integral with the crank case, or the oil pipes may consist of external leads. If external leads are used they shall be short and rigid or properly clipped to prevent vibration and chafing.

41. The crank case must be a smooth casting, free from defects of material, design, or construction.

42. All joints or connections in crank case shall be made thoroughly oil-tight.

43. The bearings for crank shaft shall be in the upper section if the case is made in two sections. The bearings shall consist of heavy split bronze bushings, and at least one set of these bushings shall be provided with side flanges to take end thrust. These bushings shall be faced with a suitable thickness of best quality bearing metal and provided with proper oil grooves, or properly designed ball or roller bearings shall be provided. The bearing caps shall be of proper design and made of material suitable for the purpose. These caps shall be held in place by means of alloy steel bolts of proper size, provided with castellated nuts, with suitable cottor pins. Not less than three main bearings shall be provided in a four-cylinder engine.

44. The main crank shaft bearings and the connecting-rod bearings shall be finished to an accurate bearing surface, unless the bearings are of the ball or roller type.

45. *Oil capacity.*—The oil reservoir of engine must be so designed as to hold sufficient lubricating oil to permit the truck to run fully loaded a distance of not less than 200 miles over ordinary solid roads without replenishing the supply of oil.

46. The oil filler tube on crank case shall be provided with a nonremovable fine mesh, brass screen, and also another screen of same construction which is removable.

47. *Crank shaft.*—The crank shaft shall be forged from a single piece of chromium nickel, or 30–40 carbon steel of suitable quality for the purpose, and heat-treated to develop the proper physical properties, and shall have not less than three main bearings for a four-cylinder engine.

48. The crank shaft shall be sufficiently large in section at all points to prevent objectionable torsional or lateral vibration at all practicable engine speeds and loads.

49. Both crank bearings and main bearings shall be large in area in order to give low-bearing pressures, and long bearing life without replacement or readjustment.

50. The crank pins and main bearings of crank shaft must be ground to a high finish.

51. The crank shaft must be accurately balanced for static balance.

52. Suitable means must be provided for preventing cylinder oil from creeping out of the crank case at the end of bearings.

53. The flywheel flange must be forged integral with the crank shaft. This flange must be large in diameter and so designed as to insure an accurate centering of the flywheel on the flange. The bolts used in fastening the flywheel to crank shaft shall be of suitable diameter and material, and properly heat treated. If the bolts take the driving strain, they shall be of large diameter, and tightly fitted in reamed holes in both members.

54. *Cylinder.*—The cylinders shall be cast from best quality grey iron and must be free from sand holes, blow holes, cold shuts, or other imperfections. The bore of finished cylinders must be exactly circular and the same diameter from end to end, with limits of plus or minus, 0.0005 inch.

55. The water jackets of cylinders must be tested under a hydrostatic pressure of 100 pounds per square inch, which test they must withstand without leaking.

56. The cylinders must be rigidly bolted to the crank case by means of a proper number of stud bolts in crank case, and double nuts, or single long type of tight fitting nuts. The stud bolts must accurately fit the holes in cylinder casting, and prevent the cylinders from getting out of alignment.

57. The water passages in jackets shall be of large area and volume, must extend entirely around the valve seats, and must offer as little obstruction as practicable to the flow of water. The water passages shall be so designed as to secure a uniform flow of water through all parts of the jacket. The water must circulate freely between the cylinders and the jackets must be free from air pockets, or dead ends where the water is unable to circulate freely. The jacket space must be so designed that all water will drain completely from the jackets when the lower drain cock on radiator or water-circulating system is opened.

58. The compression space in each cylinder must be accurately calibrated, and the cylinders selected so that the clearance volume of each cylinder is the same as that of any other for the same engine within one-half cubic centimeter.

59. *Pistons.*—The pistons shall be designed and constructed in accordance with the best standard practice. They shall be light in weight, heavily ribbed to secure proper strength and made of best quality grey cast iron, free from blow holes, sand holes, shifted cores, or other imperfections. They shall be properly annealed, machined with light cuts to avoid distortion, and ground to a high finish, proper tolerance, and a suitable clearance in cylinders.

60. If the pistons are made of cast iron, the clearance between maximum diameter of piston and the diameter of cylinder bore shall be not less than 0.002 inch or more than 0.004 inch. They shall be properly tapered or relieved, at the head end to provide for expansion, and shall have an internal stiffening flange at the open end.

61. The pistons shall be of such length as to give a low bearing pressure on the cylinder walls. The piston must also be so designed and constructed as to avoid slapping at all engine speeds and loads.

62. The pistons complete with rings and piston pins must be selected for weight, so that each piston will be the same in weight as that of any other piston for the same engine.

63. *Piston pins.*—The piston pins shall be hollow, with a wall of proper thickness. They shall be made of steel of suitable quality for the purpose, properly case hardened, and ground to a high finish and proper tolerance.

64. *Piston rings and grooves.*—The piston shall be provided with at least three ring grooves of proper width and depth, all located between the wrist pin and the head end of piston. These grooves shall be ground to a high finish at the sides. An oil groove shall also be provided which will carry oil to each end of the piston pin and furnish lubrication for same.

65. If the triple type of ring is used, having one internal ring and two external rings, two ring grooves may be used, each provided with a triple ring, or one groove may be provided with a triple ring and the other with the ordinary type of single ring.

66. The single rings shall be ground to a high finish and proper tolerance on the outside periphery and on the sides. The outside rings of triple rings must be ground all over, and the inside ring of triple ring must be ground on the outside and on the sides.

67. The rings must be of proper tension, and installed with only sufficient opening between the ends as to provide for expansion of the rings under maximum temperature conditions.

68. Suitable means must be provided for preventing an excess of oil from working past the piston rings and into the combustion space, and at the same time securing proper lubrication of the piston and all bearings connected with the crank case.

69. *Connecting rods.*—The connecting rods shall be of I-beam section, drop forged from best quality steel, equal to 30-40 carbon, and properly heat treated.

70. The crank end of the connecting rods shall be provided with bronze bushings faced with a proper thickness of best quality bearing metal.

71. These bearings shall be scraped to a proper fit with the crank and shall be held in place with suitable dowel pin. The bearing metal shall be provided with proper grooves and oil holes for lubrication.

72. If the bearing on piston pin is in the connecting rod end, a suitable solid phosphor bronze bushing, pressed in, shall be used in connecting rod end.

73. The bearing at each end of connecting rod shall be large enough to withstand long periods of severe service without the necessity of replacement or adjustment.

74. The cap end of connecting rod shall be made of the same material as the connecting rod and shall be held to the rod and bearings by means of suitable bolt made of best quality $3\frac{1}{4}$ per cent nickel steel or equal, properly heat treated, as provided with suitable castellated nuts and cotter pins. The connecting rod cap shall be provided with a suitable scoop for picking up oil from the constant level oil receptacles and delivering same to the bearings, or shall be provided with suitable force feed lubrication.

75. The complete connecting rods for each engine must be selected for weight so that each connecting rod shall be approximately of the same weight as that of any other connecting rod for the same engine. These connecting rods must have also their cylinder centers of gravity at approximately the same point on each rod.

76. *Valves.*—Both intake and exhaust valves must have ample lift must be large in diameter in proportion to cylinder volume in order to insure complete filling of the cylinders when running at the maximum governed speed of engine.

77. The exhaust valves must be constructed of best quality 13-16 per cent tungsten steel.

78. The complete composition of the steel must be stated definitely and all valves must be heat treated to develop the proper physical properties.

79. The intake valves must be made of best quality 3.5 per cent nickel-steel or equal. If the intake valves and exhaust valves are interchangeable in size, then the intake must be made of the same material above specified for exhaust valves.

80. All valves must be properly machined and the stem and face of valves ground to a proper finish and tolerance.

81. The valves must be ground to a thoroughly gas-tight fit in the valve seat.

82. The valves must be constructed of one piece for both stem and head, must have a large radius fillet between the stem and head, and must be provided with 30-45 degree seats.

83. All parts of valve mechanism must be completely inclosed in order to prevent the entrance of dust or dirt. If the engine is of the L-head or T-head type the valve springs, stems and tappets must be inclosed by a suitable readily removable cover plate, and if the engine is of the valve-in-head type, the overhead valve mechanism must be completely inclosed with a suitable readily removable cover, or the bearings for rocker arms must be provided with suitable felt washers to prevent the entrance of dust or dirt.

84. *Valve springs.*—The springs for both intake and exhaust valves shall be made of best quality steel, of proper strength for the maximum speed of the engine, and designated so as to withstand a long period of service without sagging or breaking. These springs shall be heat treated to develop the proper physical properties.

85. *Valve lifters.*—The valve lifter must be made of the most suitable steel and of proper design, with properly hardened wearing surfaces. It must have a suitable adjustment for height which is easily accessible and which will retain the adjustment and not shake loose due to vibration. This adjusting device must be strong enough to withstand heavy strains with a wrench in adjusting without distorting or stripping of threads.

86. *Valve-lifter guide.*—The engine shall be provided with suitable valve-lifter guides of proper material, which will be readily removable. These guides shall be installed in a proper relation to the valve stem and cam shaft, and so installed that they will not shake loose. They must be long in proportion to the diameter of the valve lifters must be finished in the bore to a smooth cylindrical bearing surface, and must have a proper clearance in relation to the diameter of valve lifter, in order to insure easy working, perfect lubrication, and quiet operation.

87. *Valve stem guides.*—The engine shall also be provided with suitable pressed in cast-iron valve stem guides. These guides shall be made of best quality gray cast iron, free from sand holes or blow holes, and reamed to a proper tolerance and clearance in reference to the diameter of valve stem. The length of guide shall be as long as practicable in order to insure long life, quiet operation, and a proper alignment of the valve.

88. *Cam shaft.*—The cam shaft shall be constructed of carbon steel of best quality for the purpose and the cams properly case hardened, and both the cams and bearings ground to a proper finish and size.

89. The cams must be forged integral with the cam shaft, and the bearings shall be such size as to permit the shaft to be removed without removing the bearings, or the bearings must be readily removable with the cam shaft. The gear connection for cam gear shall be a flange which is forged integral with the cam shaft and provided with a central boss for centering the cam gear.

90. The cams shall be designed and ground to such shape as to secure quiet operation of the engine and maximum torque and shall have wide bearing faces in order to prevent undue wear of the cams or valve lifters.

91. *Cam shaft bearings.*—The cam shaft shall be provided with not less than three bearings for a four-cylinder engine. The cam shaft bearings shall be of the best quality phosphor bronze, or equal bearing metal. They shall be provided with an effective means for securing a proper circulation of oil through the bearings from the crank case splash system or by a pressure oiling system.

92. *Gears.*—The cam shaft gear may be of cast iron, but the smaller gears on crank shaft and on magneto, generator, and pump shaft must be of steel. These gears must be machine cut and all gears accurately adjusted and ground to a quiet running fit under load. They must also have a sufficient width to insure long wearing life.

93. *Carburetor.*—The carburetor must be of such design and provided with such heating devices as will enable it to utilize gasoline having a specific gravity of 58° Baumé, or 0.7446 specific gravity at 60° F., and permit the engine to operate with satisfactory economy and regularity at all speeds and loads.

94. The carburetor must be adjustable and provided with means for readily enriching the mixture when starting in cold weather. A suitable drain cock must be provided at the bottom of the float chamber. The intake manifold must be provided with a suitable water jacket, and the carburetor must be installed in as high a position as practicable.

95. A suitable accelerator pedal must be provided, and also a hand throttle on steering wheel.

96. *Cooling system.*—The cooling water must be pump circulated, and the system shall be so designed that it may be completely drained to prevent freezing. Thermosiphon systems will not be acceptable.

97. The radiator must be of such design as to insure a uniform and free circulation of water, and mounted to withstand severe vibration or twisting without injury. It must be also readily repairable, without special equipment.

98. All parts of radiator in contact with water shall be thoroughly tinned. Suitable baffle plates shall be provided in order to insure a uniform circulation of water through the entire radiator.

99. Ample area for the circulation of air through the radiator shall be provided and also proper outlet area shall be provided to permit the free passage of the heated air away from the rear of engine. Suitable louvers shall also be provided in each side of the engine hood.

100. The radiator shall have a frontal area of not less than 1.3 square inches per cubic inch of piston displacement, and a total radiating surface in radiator of not less than 40 square inches per cubic inch of piston displacement.

101. *Fan.*—The engine shall be provided with a suitable fan which will cause a rapid circulation of air through all parts of the radiator, and insure proper cooling of the circulating water. This fan must be provided with suitable means for the ready adjustment of fan belt. The fan pulley and fan belt driving pulley must be so arranged as to permit of the ready replacement or removal of the belt. The fan belt and fan pulley must be constructed in accordance with Society of Automobile Engineers standards.

102. *Spark plugs.*—The spark plugs shall be constructed in accordance with the latest recommendations of the Society of Automobile Engineers, and the large hexagon type of shell provided with a single sparking point shall be used.

103. The plug must be provided with a porcelain of best make, packed with suitable copper gaskets and held in place with proper bushings and flexible cone.

104. The center electrode shall be made of a metal which will not readily corrode, warp, or be burned by the hot gases, and must be packed thoroughly gas tight inside of the porcelain.

105. The ends of the high-tension cable at spark plugs must be provided with suitable terminals properly secured to the cable and spark plug terminals.

106. The seat for spark plug gaskets shall be finished to a smooth and plain surface, and the seat shall be at right angles to the center line of spark plug.

107. *Lubricating system.*—The engine shall be lubricated by a constant level splash system or pressure system, or a combination of the two methods. The troughs for splash lubrication shall be higher at the rear than at the front in order to give a greater depth of oil when ascending grades.

108. The oil pump must be provided with suitable screens, which are readily removable for cleaning, and which will prevent any solid foreign matter from passing through the screens. It is desirable that the oil pump and screens be so arranged as to make the screens self-cleaning by an intermittent reverse flow of oil.

109. *Muffler.*—The muffler must be of substantial construction and so designed as to give the minimum back pressure and effectively muffle the exhaust. It must be so constructed and installed as to be readily taken apart for cleaning. The final exhaust not to be directed downward.

110. It is desired that the magneto, generator, coil, timer, battery, and muffler be kept as high as practicable.

111. *Starting motor.*—Suitable provision must be made either on the engine or elsewhere, for the installation of a starting motor, of proper size and design. The starting motor is not to be furnished, but the truck must be so arranged as to readily permit of its installation at any time if so desired.

112. *Electric lighting and ignition.*—The truck must also be provided with a suitable electric lighting system and dual ignition system. The electric lighting system shall consist of a generator driven from the power plant, a reverse current voltage cut out, a 120 ampere hour, 6 volt, lead acid, or nickel steel alkali battery, electric lights, fuses, wiring, and other necessary details. The ignition system shall consist of a high tension magneto of best make and a battery and coil ignition system. One distributor and one set of spark plugs may be used in common with the two separate ignition systems. The current for battery ignition will be taken from the electric lighting battery. Both battery ignition and magneto must be readily controllable from the driver's seat, and the spark advance lever on steering wheel must control both ignition systems and give a suitable degree of spark advance for all positions of the spark advance lever. The range of spark advance shall not be less than 30 degrees of crank angularity. The full retard position of the spark lever shall retard the battery spark at least 3 degrees after top center.

113. If the high tension magneto or generator is coupled to a drive shaft, two universal joints or a flexible coupling must be used in the driving connection in order to prevent binding of bearings. The flexible coupling, if used, must provide for parallel and angular displacement.

114. *Generator.*—The generator shall be of the fully inclosed direct-current, shunt, or compound-wound type and must have a continuous capacity of 12 amperes. The voltage of the generator at all speeds above that at which cut out closes, shall be suitable for charging a six-volt storage battery and for supplying current to 6-8 volt tungsten lamps. It must be driven from the engine by means of suitable gears or silent-chain drive. The gears or silent chain drive must be completely inclosed, thoroughly lubricated, and effectively protected from dust and dirt. If driven by means of silent-chain drive, the chain must be readily adjustable. Definite data in reference to the material and construction of chain or gears must be given.

115. *Armature.*—The armature shall be of the laminated-drum type, with the windings thoroughly insulated and so installed in the slots as to effectively resist the action of centrifugal force at the maximum guaranteed speed of armature. After the coils are properly secured in the slots and the armature coil terminals are securely soldered into slots in the ends of commutator segments the entire armature shall be treated with an insulating compound by a suitable impregnating process. The insulating compound shall have suitable insulating qualities and shall not soften under a continuous temperature of 250° F. The armature shall also be of proper electrical, magnetic, and mechanical balance.

116. Suitable means must be provided for preventing oil from the bearings from collecting on the commutator or armature.

117. *Frame.*—The generator shall be constructed with a suitable frame having high magnetic permeability, and fitted with proper end frames.

118. Suitable bearings of best quality shall be fitted in each of the end frames. The bearings shall have proper means for ready lubrication, shall be a proper fit on the armature shaft, and shall not be so loose as to cause vibration of the armature at any practicable engine speed. The ratio of engine to generator speed must be given, and also the maximum permissible speed of the generator. The generator must be run at a constant ratio of engine speed, and no friction drives or constant speed devices will be permitted. The speed of generator in any case must not be more than twice the engine speed. The generator drive connection must be made direct with the engine, or with some part of drive connection between the engine and clutch.

119. The brushes of generator must be the self-lubricating type, having a spring take up which will give a proper tension on the brush during its entire wearing life. The brushes must be easily accessible and readily removed or replaced without removing or loosening other parts, and must have ample area of cross section and area of contact to prevent excessive heating under continuous maximum permissible load. The brushes must be practically sparkless at all speeds, and at all loads from no load to maximum permissible load.

120. *Commutator.*—The commutator must be constructed of best quality hard-forged copper of uniform density, and the segments properly insulated with sheet mica of suitable thickness and proper density to wear equally with the copper segments.

121. *Regulation.*—All voltage and current-regulating devices must be contained in assembly with the generator. No separately mounted controlling devices will be permitted. The use of sliding contact devices for current or voltage regulation, and the use of permanent magnets in the construction of generator is also prohibited.

122. The generator shall be so constructed as to give a proper voltage and current when connected with the storage battery, at all speeds and current values up to maximum rated output, without moving controlling devices of any kind. The current and voltage shall be kept at proper values by the inherent regulation of the generator.

123. *Alternate.*—An alternate proposal is desired giving the amount, either more or less than proposed price, for furnishing a generator the same as above specified, except that it shall be provided with an automatic voltage-regulating device of the vibratory type, having either platinum or silver contact points, and which will keep the voltage of generator practically the same at all loads and speeds above "cut-in" speed, without the necessity of connecting the generator to storage battery. The voltage regulator must be included in the generator assembly, and not mounted separately.

124. *Rate of charge.*—The current output of generator must not be greater than the maximum advisable rate of charge of the storage battery, at the normal engine speeds irrespective of the condition of battery charge.

125. *Charging speed.*—The generator shall begin to charge the battery at an engine speed of not more than 500 revolutions per minute, and at the same time furnish the current necessary for ignition.

126. *Data regarding generator.*—The following data must be submitted in reference to the generator it is proposed to furnish:

(a) The voltage and speed of the generator when the cut-out opens, cutting off the current from generator to battery.

(b) The speed and voltage of generator when the cut-out closes, permitting the current from generator to pass to battery.

(c) The weight of generator without gear of sprocket.

(d) The ratio of speed between engine and generator.

(e) The speed-voltage curve or tabulated data and speed-current curve, or tabulated data, of generator when connected to battery.

(f) The speed-voltage curve or tabulated data of generator when provided with a voltage regulator.

(g) The maximum allowable current output of generator, and the temperature guarantees at maximum output for stated periods.

(h) The power required to drive the generator at maximum rated power output, and at a speed corresponding with an engine piston speed of 1,000 feet per minute.

127. *Waterproof covers.*—The high tension magneto shall be provided with a suitable waterproof cover of proper construction and arranged so as to be securely fastened around magneto and readily removable.

128. *High-tension magneto.*—A high-tension magneto of best make must be installed on the engine, and positively driven either by gears or by a silent chain drive. If driven by gears the gears must run in oil, and if driven by silent chain drive the chain must be readily adjustable. In either case the chain or gears must be completely inclosed, thoroughly lubricated, and effectively protected from dust, water, and dirt.

129. One distributor may be used in common for both battery ignition and for the magneto. The distributor must be of the weather proof type and provided with a suitable safety gap.

130. The breaker points must be of platinum, and the breaker box and contacts must be easily accessible and readily adjustable. The breaker box must completely inclose the breaker mechanism, and prevent the entrance of dust, water, or dirt.

131. The magneto must be provided with a suitable spark advance arrangement, which will enable the magneto to deliver an adequate strength of spark at all positions of the spark advance lever. The definite range of spark advance must be given in the proposal, and must not be less than 35° of crank angularity.

132. The sector for spark advance lever must be plainly marked start and run for the most suitable starting and running positions.

133. With battery ignition the strength of spark must be adequate for all engine speeds, and the spark lag must be as small as practicable. The definite amount of spark lag in degrees of crank angularity must be given for all engine speeds with a fixed setting of the spark advance lever.

134. Complete details of the construction of the magneto with drawings and illustrations must be submitted with proposal.

135. The guaranteed length of spark between needle points must be given with engine running at 100 revolutions per minute, and for both battery ignition and high-tension magneto the lag of spark in degrees of crank angularity must be given for all practicable engine speeds.

136. *Fabric-insulated primary cable.*—All primary cable shall be single flexible copper conductors, fabric insulated. This cable shall be constructed in accordance with the following table:

Number.	Number of wires.	Diameter of wires.	Nominal size of wires.	Circular mils in cable.	Carrying capacity (amperes).	Diameter over wire.	Diameter over braid.	Layers of cambric.
14.....	41	0.0100	30	4.100	0.080	0.20	2
12.....	49	.0113	29	6.208102	.23	2
10.....	49	.0142	27	9.854128	.25	2
2.....	133	.0226	23	67.764	127	.340	.478	3
1.....	133	.0254	22	85.466	152	.390	.518	3
0.....	133	.0285	21	107.743	202	.427	.568	3
00.....	133	.0320	20	135.926	227	.480	.628	3

All dimensions in inches.

137. *Stranding.*—No. 14 to be bunched; Nos. 12 and 10 to be bunched or rope lay; Nos. 2, 1, 0, 00 to be rope lay.

138. The tinned and stranded copper conductors shall first be covered with a layer of closely wrapped cotton, varnished, the two or three layers of varnished cambric applied, and the whole covered with a heavy, closely woven cotton braid. The braid will then be saturated with an oil and moisture-proof varnish.

139. The completed cable shall be capable of withstanding for one minute a potential of 1,500 volts A. C., applied between the copper conductors and a metal coil wrapped around the outside of the cable. The frequency of the test current shall be in accordance with the standardization rules of the A. I. E. E.

140. *High-tension cable.*—All high-tension cable connecting with spark plugs, distributors, high-tension magneto, or the secondary coils, shall be made up of either 26 or 37 copper conductors, thoroughly tinned, and 0.010 inch in diameter, and covered with three layers of rubber compound having a total thickness of not less than 0.100 or 0.125 inch. The cable shall be covered with two layers of heavy, closely woven glazed cotton braid, and the braid treated with two coats of an oil and water-proof varnish.

141. Both the primary and secondary cable shall be constructed and tested in accordance with the latest recommendations of the Society of Automobile Engineers.

142. *Tinning test.*—All copper wires must withstand the following tinning test: Samples will be properly selected to secure an average grade of tinning. The samples will have the insulation carefully removed, and the wires of cable carefully separated and straightened. The wires will then be thoroughly cleaned by means of ether, benzine, gasoline, naphtha, caustic, alkali solution, or hot water and soap, whichever may be found necessary to thoroughly clean the wires.

143. The wires shall then be rinsed in clear water and wiped dry with a soft cotton cloth. The wires will then be immersed for one minute in a solution of hydrochloric acid having a specific gravity of 1.088 at 70° F., and then rinsed in clear water and wiped dry as above specified. The wires shall then be immersed for 30 seconds in a solution of sodium polysulphide having an excess of sulphur, then rinsed in clear water and wiped dry.

144. The complete cycle of operations shall then be repeated, commencing with the immersion in hydrochloric acid and ending with the immersion in the sodium polysulphide solution.

145. Tests of tinning will be made on not less than 10 sets of samples of reasonable length. All wires must withstand one immersion in the hydrochloric acid without blackening in the sodium polysulphide solution, and 75 per cent of the wires must withstand three immersions in the hydrochloric acid without blackening in the sodium polysulphide solution. All tests shall be conducted with the solutions at a temperature of 70° F.

146. *Electric lighting equipment.*—The truck shall be provided with the following electric lighting equipment:

One searchlight, with quick acting vertical and horizontal adjustment, silver-plated brass or copper parabolic reflector, with 21 candle-power tungsten focusing lamp.

One instrument lamp, with 2-candlepower bulb, and 1 tail lamp with 2-candlepower bulb, connected in series.

One portable trouble lamp, 8 candlepower, with cord, and plug with separate socket. One ammeter of best make, for indicating the charge and discharge of battery.

147. *Searchlight.*—The searchlight shall be not less than 10½ inches in diameter outside of front flange. The body of lamp shall be spun or pressed from one piece of heavy metal. In the design of the lamp no parts shall be used which are liable to shake loose from vibration. The reflector shall be parabolic in form, spun or pressed from brass or copper of suitable thickness and heavily plated.

148. The searchlight shall be provided with a suitable handle and means for clamping the searchlight securely in any desired position. The searchlight shall be installed on the chassis in a location permitting it to be readily operated from the driver's seat, and also in such a position as to be unobstructed from the front.

149. This lamp shall be provided with a single-point bayonet socket with two wire connections, and a suitable focusing device.

150. *Side lamps.*—The two side lamps shall be best quality combination oil and electric, of suitable design and construction, and fitted with standard S. A. E. single-point, grounded return sockets, and 15 candlepower 6-8 volt tungsten bulbs. The oil fonts shall be so designed that they can not rattle or drop out. These lamps shall be made of heavy gage sheet steel or brass, thoroughly riveted and soldered, fully black enameled, and fitted with flat forged steel brackets or installed in dash. They shall have large glass semaphore front lens, and a side lens of green glass. The flat bracket shall be a snug fit in the lamp receptacle for same, and shall be held to lamp by means of a suitable bolt passing through lamp, receptacle, and bracket.

151. *Tail lamp.*—The tail lamp shall be the same as specified for side lamps, except that the large semaphore lens shall be of red glass colored in the glass composition, the side lens shall be of clear glass, and the bulb shall be 2 candlepower, 4 volt, connected in series with bulb of the same size and rating in instrument lamp. The tail lamp bracket shall be made of forged steel.

152. *Trouble lamp.*—The portable trouble lamp shall consist of a suitable hardwood handle through which the cord shall pass, and provided with a Society American Engineers standard, single contact socket, with two connections for wires, a lamp guard of proper design, and an 8 candlepower, 6-8 volt tungsten bulb. The other end of cord shall be provided with a suitable single point combination plug for connecting with a ground return socket. The cord shall be No. 14 Brown & Sharpe gauge flexible, twin-conductor, rubber covered, double braided, packing house cord of best make. The portable trouble lamp shall be provided with a Society American Engineers standard, single point, flush type, flanged socket, installed in a readily accessible location, preferably on the dash, and connected with the lighting switch.

153. *Ammeter.*—Furnish and install in a suitable location a flush type ammeter of best make, having a double scale for indicating the charge and discharge current of battery. It shall be installed in such a location as will permit the same to be readily observed from the driver's seat and properly illuminated by the instrument light.

154. This ammeter shall be connected in the circuit leading from the negative terminal of battery. The ammeter must be so designed as to not be effected by severe vibration. It must have a light moving system and be dead beat in action. It must be thoroughly insulated and so designed as to avoid short circuits due to the loosening of parts.

155. *Extra lamp bulbs.*—The following extra lamp bulbs shall be provided installed in a suitable metal case:

Two 15-candlepower, 6-8 volt, tungsten bulbs of best make, with single-point Edison bases.

Two 8-candlepower, 6-8 volt, tungsten bulbs of best make, with single-point Edison bases.

Two 2-candlepower, 4-volt, tungsten bulbs of best make, with single-point Edison bases, and matches for series burning.

156. The bulb base shall be of heavy seamless steel, with a heavy seamless steel hinged cover with automatic spring catch. The bulbs shall be held securely in place by means of brass springs and a suitable locking device. The case must be of proper size to hold the above lamps without the lamps touching each other or the sides, top, or bottom of the case. The case shall be thoroughly coated both inside and outside with best quality black enamel.

157. *Wiring.*—The truck shall be wired with the system of installation known as the ground-return system. In this system of wiring the chassis frame or bare metal is used as the return circuit.

158. *Conduit.*—Wherever practicable the wires shall be carried in either rigid or flexible metallic conduit. The flexible conduit is preferred. The conduit shall be

securely fastened by means of galvanized straps and galvanized machine screws of proper size. The ends of the conduit must point downward so that the water will not run into the conduit.

159. *Cleats*.—Where wires are not protected with conduit they shall be securely cleated at intervals of not more than 10 inches. Such cleats shall be of galvanized steel of proper thickness and width and secured with suitable screws. Brass machine screws in tapped holes shall be used in all cases where the fastening is to be made on metal.

160. *Clearance*.—When conduit is omitted, no wire shall be nearer to the exhaust pipe than 2 inches.

161. Where conduit is used the minimum clearance between the exhaust pipe and the conduit shall be $1\frac{1}{2}$ inches.

162. A minimum clearance of one-fourth inch shall be securely maintained between conduit and the nearest carburetor, gasoline pipe, gasoline tank, moving rod, or moving lever.

163. *Grounding*.—Wherever an insulated conductor is connected to "ground," the connection shall be installed so as to be readily accessible and removable on the completed truck. In all cases where the connection is made to an iron or steel part, the iron or steel shall be thoroughly tanned at the point where the connection is made, and the ground connection shall be firmly maintained by means of screws or bolts with suitable lock washers. Brass or copper lugs of proper size shall be used for all ground connections. The lugs shall be properly soldered to the ends of cables.

164. All cables shall be continuous from connection to connection. The splicing of cables will not be permitted. All cables shall be provided with suitable lugs or terminals wherever practicable. Where the use of terminals is not practicable, the ends of cables shall be tightly twisted, formed into a solid loop of proper size for the screw connection, and the loop thoroughly soldered.

165. *Extra fuses*.—Two complete sets of extra fuses shall be furnished with each truck.

166. Apparatus intentionally "grounded" in itself shall be so made that for inspection or test the ground can be opened without dismantling the apparatus.

167. *Connectors*.—All connectors shall be so made that when disconnected the section which is alive will have all live parts recessed one-sixteenth or more below the end of the shell connector.

168. *Protection against accidental short circuits*.—All connecting posts on fuse and junction blocks, or on instruments, generators, or switches, which must necessarily have exposed live parts, shall be so constructed, recessed, or installed that an accidental short circuit can not be effected with screw drivers, pliers, wrenches, or other tools used while making minor repairs or adjustments.

169. Where live parts might be liable to accidental short circuits to adjacent metal, they must be provided with suitable insulating caps or bushings, or surrounded with a suitable insulating barrier; or the adjacent bare metal liable to be accidentally connected to them through repair tools should be covered with insulating material.

170. *Protective devices*.—The current to all circuits shall be passed through protective devices.

171. Protective devices shall be made on the battery side of switches and junction boxes.

172. Fuses must be of the inclosed type, constructed so that inspection will show whether or not they have been melted.

173. Fuses must be marked with their rating.

174. Standard 10-ampere fuses shall be $1\frac{1}{2}$ inches long over all, with ferrules one-fourth inch in diameter.

175. Fuses must be so constructed that with the surrounding atmosphere at a temperature of 75° F. (24° C.) they will carry indefinitely a current 10 per cent greater than that at which they are rated, and at a current 25 per cent greater than the rating open the circuit without reaching a temperature which will injure the fuse tube or terminals of the fuse block. With a current 50 per cent greater than the rating and at room temperature of 75° F. (24° C.) the fuses starting cold must blow within one minute.

176. The temperature of the exterior of the fuse inclosure must not rise more than 125° F. (70° C.) above that of the surrounding air when the fuse is carrying the current for which it is rated.

177. Fuse clips must be so made that fuses can not slip out accidentally. They must be fastened to a base so that they can not turn.

178. Clips should be so designed and protected that they can not be sprung together enough to take a permanent set interfering with the insertion of the fuse, or so that

they can be sprung apart far enough to give them a permanent set sufficient to prevent their holding the fuse tightly.

179. *Bulb sockets*.—Bulb sockets must be so made that the continuity of the return path for current is not impaired when the lamp is subjected to vibration.

180. In lamps, hinges shall not be relied on to carry current between the bulb socket and the battery. The connections must be either permanent or so spring-held that contact is maintained tight under vibration.

181. Bulb sockets and connector plugs shall be constructed in accordance with the latest recommendations of the Society of Automobile Engineers.

182. The instrument light socket shall be the single point type with two terminals for wires. One terminal will connect with source of current supply, and the other will connect with a wire leading to the one point grounded tail light socket, thus putting the instrument light and tail light in series.

183. *Fuse box*.—A four-circuit fuse box of proper design shall be installed in a readily accessible location, and provided with fuse clips and fuses as follows:

184. One 30-ampere fuse for main connection between battery and junction fuse block. This fuse shall be the standard National Electric Code, 30 ampere, 250 volt, indicating fuse, $1\frac{1}{4}$ inches long, and $\frac{1}{4}$ inch in diameter. One fuse clip from this fuse shall connect with the wire leading from negative terminal of storage battery, and the other fuse clip shall connect with one end of each of the other three fuses.

185. Three 10-ampere fuses for lighting and ignition circuits. These fuses and fuse clips for same shall be constructed as specified in paragraphs 172–178 inclusive, and paragraph 184. One of these fuses will connect with lighting switch, one with search-light switch, and the other with ignition switch.

186. The fuse box shall be of best make, and constructed of molded insulating material in both box and cover, or the box and cover may be of black enameled steel suitably lined with a proper insulating material. The wires shall all enter the fuse box from below, and be a snug fit in the opening in box. If steel boxes are used the holes in box where wires enter shall have suitable insulating bushings, and the fuse clips must be mounted on a heavy hardwood base, securely fastened to back of box by suitable brass screws. The heads of screws shall be deeply countersunk below the surface of the base.

187. *Extra fuses*.—One complete set of extra fuses will be provided and attached by means of suitable spring clips to the inside of fuse box cover.

188. *Fuse clips*.—The fuse clips for all fuses shall be constructed as required by paragraphs 177 and 178 of these specifications.

189. *Switches*.—The ignition switch shall be triple point switch of best make, with one point for battery ignition, one point for magneto ignition, and the other point for cutting out the high tension magneto by grounding the high tension coil.

190. The two lighting switches shall be the push type of flush switch, of best make, and mounted in a location readily reached from the driver's seat, and provided with a heavy brass two-gang switch plate, in dead black finish.

191. *Insulation requirements of electrical apparatus and wiring after installation on truck*.—All electrical apparatus and wiring on truck shall be capable after installation of withstanding for one minute an alternating potential of 500 volts, the test being applied between the conducting circuit and frame or "ground." In making the test the ground connection shall be removed at such points as will permit the test being applied to all parts of the circuit which in actual use will be subjected to the working potential.

192. *Exception*.—Batteries will not be subjected to any insulation test above their working potential.

193. *Temperature test of insulating materials of electrical apparatus*.—All insulating material used in connection with plugs, sockets, and similar devices of electrical apparatus shall be capable of withstanding for 30 minutes a temperature of 300° F.

194. *Battery*.—Furnish and install on the truck a 6-volt 120-ampere-hour battery of best make, designed for lighting and ignition purposes only. This battery shall have a rated capacity of 120 ampere-hours, based on the method of rating given below, and may be either the lead-acid type or the Edison alkali-nickel-steel type.

195. The proposal must state the guaranteed life of the battery when properly cared for in accordance with the S. A. E. standard instructions.

196. Complete information regarding the details of the construction of the battery must be given, together with the guaranteed efficiency—that is, the ratio of watts output to watts input must be given, based on charging the battery to a potential of 2.6 volts per cell and discharging to a potential of 1.8 volts per cell at a 5-ampere discharge rate, the temperature being 80° F. at the beginning of charge and at the beginning of discharge.

197. *Dimensions of batteries*.—The over-all width of the battery, measured from side to side of case, shall not exceed $7\frac{1}{4}$ inches.

198. The over-all length of the battery, measured from end to end of case, including handles, shall vary according to the capacity of the battery and its details of design. Handles shall, as standard, be placed at the ends of the battery. The space occupied by such handles and hold-down devices shall be in the direction of the length of the battery only and not in the direction of its width. The over-all height of the battery, measured from bottom of case to top of handles, shall not exceed 9½ inches.

199. *Rating of battery.*—The battery shall be rated at the capacity in ampere-hours of the battery when discharged continuously at a 5-ampere rate to a final voltage of 1.8 per cell, the temperature of the battery beginning such discharge being 80° F.

200. *Hydrometer.*—Furnish with each battery a battery-hydrometer syringe of best make for measuring the specific gravity of the electrolyte. It must be so designed that the top or stem of hydrometer can not stick against the side of syringe when it is held in an approximately vertical position.

201. The hydrometer-syringe glass shall be so constructed as to hold the hydrometer in a proper position and shall be provided with rubber buffers in the ends to prevent the breaking of the hydrometer.

202. The lower end of syringe glass shall be provided with a suitable length of best quality rubber tubing.

203. The stem of hydrometer shall be marked in specific gravity, and also marked to indicate when battery is fully charged, when one-half charged, and when completely discharged.

204. *Battery jars.*—The battery jars, complete, including covers, vents, and terminal bushings, must be molded from best quality hard rubber compound, properly vulcanized. The jars shall be not less than one-eighth of an inch thick at all points and shall be provided with suitable supports for plates at bottom of jar, and a large capacity under plates for the accumulation of sludge without touching plates.

205. The rubber compound must have a high tensile strength and sufficient elongation to prevent excessive brittleness, and must not materially increase in brittleness with age.

206. The entire rubber jar must be capable of withstanding an alternating potential of not less than 25,000 volts for one minute without puncture.

207. *Installation of battery.*—The battery must be installed in a readily accessible location, which will facilitate adding water to, or the testing of the solution, and which will permit the easy removal of the battery. The battery compartment must be well ventilated and drained, must keep out water, oil, and dirt, and must not afford opportunity for anything to be laid on top of the battery. The battery must have free air space on all sides, must rest on cleats rather than on a solid bottom, and holding devices must grip the case or handle. A cover, cleat or bar pressing down on the cells or terminals must not be used.

208. The battery must be installed so that neither acid fumes nor overflow of water or electrolyte will cause serious leakage of current.

209. Battery hold-down bolts, if connected to handles or other metal parts at the level of the top of the jars, must be insulated at least one of their two ends.

210. *Cushion mounting.*—The battery shall also be provided with a suitable cushion mounting which will prevent it from being subjected to severe shock or vibration.

211. *Instructions for care of battery.*—Complete printed instructions for the proper care of battery shall be furnished. These instructions shall be in accordance with the latest recommendations of the Society of Automobile Engineers, together with such additional instructions as the manufacturer of battery may consider advisable.

212. These instructions shall be printed on heavy white cardboard of suitable quality, in large-sized type. This card shall be securely mounted under seat board, or in the most suitable location, and covered with two coats of best quality demar varnish.

213. *Transmission.*—The transmission shall be of the selective type and must have not less than four speeds forward and one reverse. It may be integral with the engine assembly forming a unit power plant, or it may be a separate unit, installed on the frame between the engine and differential. If the transmission is installed as a separate unit, two universal joints must be provided between the engine and transmission.

214. The high-speed gear shall be direct without gear reduction in the transmission.

215. The gears of transmission must be cut on suitable gear shapers or gear-generating machine, from forged steel blanks of alloy steel of the best quality for the purpose and properly heat treated and accurately adjusted to a quiet running fit under load. These gears must have sufficient width of face and strength to transmit the full power of the engine at all gear ratios, with a proper face of safety.

216. The splined driving shaft for sliding gears must be made of best quality alloy steel, properly heat treated.

217. It is desirable that the transmission shall be accessible from below the body for inspection, adjustment, or repair. The transmission shall be carried on the chassis frame or other part which is provided with a suitable spring suspension. Transmission gears constructed as an integral part of the rear axle, or in any other manner which does not provide proper spring suspension will not be acceptable.

218. *Differential.*—The differential shall consist of a forged steel case, to which the large gear is attached by being bolted or riveted. In worm drive rear axles, this case shall also contain the necessary gears for producing the required differential action, and shall be provided with suitable steel roller or ball bearings of best make. The case shall be supported on its bearings independent of the drive shaft ends, which shall be properly fitted into the two ends of the case, and connect by means of suitable splines to the gears in differential case. The spline connection shall be made in accordance with S. A. E. standards.

219. If bevel driving gears are used, both gears shall be machine cut on suitable gear generators, from forged steel blanks of 3.25 to 3.75 per cent nickel and chromium steel of best quality, and properly heat treated.

220. It is preferred that the small bevel drive gear be forged integral with its shaft. This shaft shall be made of 3.25 to 3.75 per cent nickel-chromium steel, of best quality, properly heat treated, and provided with two sets of taper roller or ball bearings of best make, and provided with suitable means for the ready adjustment of the small bevel gear in relation to the large bevel gear and vice versa. If ball bearings are used they shall be provided with suitable means to take care of thrust loads.

221. The differential housing must be oil tight, and must have an inspection plate, giving ready access to the inside of housing. An oil filler plug must be provided at a proper height to act as an overflow in filling. If the oil filler plug is located in the inspection plate, the studs for holding the plate must be so arranged as to prevent the plate from being reversed. The differential complete must be readily removable after removing the full floating splined drive shafts.

222. *Rear axle.*—The trucks may be either internal gear drive, chain drive, worm-gear drive, or bevel-gear drive.

223. The design, material, and construction of the rear axle and final drive shall be in every respect in accordance with the best standard practice.

224. Provision must be made for the thorough lubrication of all bearings, with the minimum attention necessary, and means must be provided for the protection of all bearings against water, dust, or dirt. If the rear axle is bevel gear drive or worm gear drive, suitable tie rods with turnbuckles must be installed, unless the axle is provided with a pressed steel axle housing which does not require tie rods.

225. *Internal gear drive.*—If the final drive is an internal gear, provision must be made for entirely inclosing the driving gears, and for retaining the lubricating oil or grease, and for preventing same from getting onto the brake bands.

226. Both the small spur driving pinion and the large internal gear shall be machine cut from drop forged steel blanks. The internal gear ring may be made of carbon steel of best quality for the purpose, but the small driving gear must be made of best quality chromium-vanadium steel, or other steel equally suitable. Both gears must have wide faces and must be so designed and constructed as to readily withstand the maximum power of the engine under the most severe service conditions, with a proper factor of safety.

227. All gears connected with this drive must be heat treated in the most suitable manner. The internal gear must be pressed onto turned flange on the wheel hub, and then firmly secured with suitable rivets.

228. The jack shafts shall be made of best chromium-nickel steel, must be properly splined at each end for connecting with driving gear and differential, and shall be provided at each end with steel roller bearings of best quality. These jack shafts shall be inclosed in steel tubing having flexible end connections in both the differential housing and the internal gear case, and these flexible connections shall be provided with suitable felt washers.

229. The complete differential with housing shall be firmly bolted with a proper number of bolts to the enlarged center of a drop forged steel axle having an I-beam section. This I-beam axle shall be forged from best quality carbon steel or equal, and properly heat treated. The wheel spindles shall be made of best quality chromium-vanadium steel, properly heat treated and not shrink into the ends of the axle.

230. *Front axle.*—The front axle shall be of I-beam section, drop forged from a single piece of carbon steel or alloy steel. The steering knuckles and the steering-knuckle levers shall be drop forged from alloy steel of best quality for the purpose and properly heat treated. The wheel spindles shall be provided with steel roller bearings of best quality, and provided with proper means of lubrication. The wheel hubs and bearings of both front and rear axles must be so designed as to prevent the

entrance of water, dust, or dirt, and also must prevent the leakage of grease from the hubs.

231. *Brakes*.—Two independent sets of double acting brakes shall be provided. The emergency brake must act directly on the rear wheels and be operated by a hand lever with catch for holding the brakes in any position. Service brakes may act directly on the rear wheels or on the drive shaft, and must be operated by a pedal. Brakes must be lined with an approved friction material and must be so constructed that they may be readily adjusted and securely locked in adjustment without removing the wheels or other parts.

232. Brake rods are to be sufficiently stiff to prevent whipping or rattling.

233. Brakes must be sufficiently powerful either to slip the wheels or stop the truck within a distance of not more than 20 feet with either the service brakes or the emergency brakes when the normally loaded truck is running on a level, hard, and dry macadam road at a speed of 14 miles per hour.

234. Both the service brakes and the emergency brakes must be readily adjustable for taking up wear, and must be provided with as large an amount of radiating surface as practicable. Provisions must also be made for holding the braking surfaces on brake bands or brake shoes concentric with the brake-drum surface. The brakes must be so designed as to release completely and not drag at any point when the brake lever or pedal is released. The brake drums must be exactly circular and bolted to the wheels with suitable bolts, and located in such a manner as to be concentric with the center of wheel. Provision must also be made for preventing an accumulation of oil or grease on the brakes or brake bands which would destroy the effectiveness of the brakes.

235. All brakes must be mounted in such a manner that the braking strains will be taken by parts which are strong enough to withstand these strains under the most severe braking conditions.

236. The rear-wheel brakes shall be equally effective either with or without load.

237. *Frame*.—The frame shall be constructed of heat-treated pressed steel or standard rolled sections. The frame and suspension must be so designed as to prevent cramping of any part, due to distortion of frame because of uneven road conditions.

238. It must have sufficient depth, thickness of material, and width of flange to withstand all strains which may be put on same under the most severe service conditions, with a liberal factor of safety.

239. The frame shall be reinforced at proper intervals with suitable cross members thoroughly fastened to the frame with hot rivets or fitted bolts riveted over. All holes in the frame shall be drilled, not punched. Suitable pigtail towing hooks shall be attached to the frame, two at the front and two at the rear. These towing hooks shall be bolted to the sides of frame.

240. A suitable towing hook shall also be installed in the center of the rear frame cross member, and provided with suitable spiral spring. This towing hook shall have spiral springs to resist both tension and compression, and must have a shank not less than 1 inch in diameter, and provided with a hook which is designed in such a manner as to prevent the draw-bar from pulling from the point of hook.

241. The frame shall be provided with two best quality, dressed oak sills, one bolted on top of each frame side member. These sills shall be the same width as the flange on frame, and shall be of proper depth, to give not less than 6 inches clearance between the rear tires and the side sill of body as shown on drawing No. 3-1346-B, Q. M. G. O., June, 1916. These sills shall be gained over all gusset plates or other irregularities on the frame, and shall be provided with not less than 10 half-inch saddle bolts, two angle plates with bolts as shown on drawing of body, and bolts of proper length for fastening body bolsters to sills. The sills shall be painted with three coats of paint of the composition given on drawing.

242. *Drive shaft*.—The propeller shaft connecting the transmission with the rear axle and differential must be of suitable size and strength to properly transmit the full power of the engine at all gear ratios under the most severe service conditions. It must also be of such design and must be supported in such a manner as to prevent whipping or excessive vibration at all reasonable coasting speeds. The slip joint shall be fitted with an S. A. E. standard or similar spline connection.

243. Two universal joints must be provided between the transmission and differential. These universal joints must be so designed as to contain a proper quantity of lubricating grease and must each be provided with a tight leather boot made of best quality first cut leather.

244. These leather boots must be provided irrespective of the type of universal joint which is employed, and must be provided at each end of boot with suitable screw clamps.

245. *Clutch*.—The clutch may be either of leather faced cone type, multiple disk, or single disk type. The multiple disk type of clutch is preferred. It must have

sufficient strength to transmit full power of the engine at all speeds, must be easily accessible for repair or replacement of parts, and must be provided with a suitable arrangement for permitting easy engagement, which will not require frequent adjustment or renewal of leather or friction material. The clutch must be capable of withstanding the severe service required when hauling trailers carrying loads at least equal to the load carried on truck.

246. It is desirable that the clutch be readily adjustable or provided with a spring which will give uniform action of clutch during the wearing life of the friction material.

247. The clutch must be readily removable without disturbing the transmission, steering gear, motor, or other important parts, except in the case of a unit power plant, and must be provided with an efficient brake, in order to stop the spinning of clutch. The action of the clutch must not be affected by changes in atmospheric conditions, and the clutch must engage without grabbing at all engine speeds.

248. *Steering gear and wheel.*—The steering gear may be either the worm and wheel type or the screw and nut type, and means shall be provided for its thorough lubrication. Adjustments must be possible without removing the steering assembly from the frame.

249. A notched grip steering wheel of best quality shall be provided, having an outside diameter of not less than 20 inches. The steering post must be rigidly mounted to prevent vibration, and must be provided with both spark advance and throttle levers. The lever sector for spark lever must be plainly marked "START" and "RUN," for the most suitable starting and running positions of the spark advance lever.

250. The gear reduction and length of levers on steering gear must be such as to give easy turning action with the fully loaded truck, but the gear reduction must not be so low as to prevent sufficiently quick turning of the wheels in steering.

251. The steering cross rod must be located back of the front axle in order that the front axle may protect it against damage from obstructions, and it must be above the bottom edge of the axle at all points.

252. All steering connecting rod joints shall be hardened steel sockets, held by springs in close contact with hardened steel balls. The steering cross rod joints may be of the ball and socket or clevis type.

253. *Wheels.*—The wheels shall be of suitable size for the use of 36 inches S. A. E. demountable solid tires, and shall be either best quality wooden cast-steel wheels, of proper design, strength, and construction, and made in accordance with the best standard practice.

254. If the wheels are made of wood, the spokes must be made of best quality selected, straight-grain hickory, and thoroughly seasoned, and the wheels provided with S. A. E. felloe bands. The felloes shall be constructed of best quality ash, thoroughly seasoned, and free from defects. The wheel shall be of suitable size and design for the use of 36 by 5 inches single, solid, demountable rubber tires, on front wheels, and 36 by 5 inches dual, solid, demountable tires on rear wheels. All wheels shall be of proper strength to resist the vertical and lateral loads in the most severe service, and with the maximum loads and speeds for which the truck was constructed.

255. The ends of all spokes must rest on the inside of the felloe.

256. The hubs of wheels shall be made of best quality cast, or forged steel, free from blow holes which will impair the strength or finish of finished hub, and must be provided with best quality hardened and ground roller bearings of proper size.

257. Complete detail and assembly drawings, showing the construction, material, and dimensions of all parts of the wheels, must be submitted.

258. *Hub odometer.*—A hub odometer of best make, and of suitable design and construction for most satisfactory use on motor trucks, shall be provided and installed on one of the front wheels. This odometer shall have not less than five figures in the dial, and provision shall be made to prevent leakage of grease into mechanism.

259. *Tires.*—On two-wheel drive trucks the tires shall be 36 by 5 inches dual tires on rear wheels, and 36 by 5 inches single tires on front wheels, both front and rear tires demountable.

260. On four-wheel drive trucks the tires shall be 36 by 7 inches, single, demountable, both front and rear.

261. All tires shall be best quality solid rubber tires on hard-rubber base with S. A. E. steel rims. A sample section of the rubber tire and rim must be submitted with each proposal.

262. The following data must be submitted in reference to the tires which it is proposed to furnish:

- (a) Diameter and width of front tires.
- (b) Diameter and width of rear tires and whether single or dual.
- (c) Total area of rubber, both soft and hard, in tire section.

- (d) Area of rubber above top of channel.
- (e) Specific gravity of soft rubber.
- (f) Tensile strength in pounds per square inch at given temperature.
- (g) Stretch and set of 2-inch lengths of rubber in small strips, at given temperature.
- (h) Per cent by volume of fine Para rubbers in tires.
- (i) Per cent by volume of other rubbers in tires.
- (j) Guaranteed mileage of tires if mileage is run in one year.
- (k) Guaranteed mileage of tires if mileage is run in two years.
- (l) Trade name of tire.
- (m) Name of manufacturer of tire.

263. All tires furnished with the entire lot of trucks must be the same type and size and must be made by the same tire manufacturer, unless the tires of other manufacturers will fit the same demountable rim.

264. *Gasoline tank*.—A suitable drawn-steel gasoline tank shall be provided having a capacity of not less than 30 gallons. This tank shall be thoroughly tinned both inside and outside.

265. A metal partition shall be installed in the inside of tank of such height as to give a capacity of 6 gallons on each side of the partition. Suitable baffle plates shall be installed on each side of partition in order to prevent excessive splashing. The connection from tank to carburetor shall be made from the bottom of each compartment, through a three-way cock, thus giving a positive reserve supply of 6 gallons.

266. If a vacuum system or a pressure system is provided, the three-way cock may be installed at the top of tank with the supply pipes extending from same to the bottom of each compartment in tank.

267. A suitable gasoline strainer with drain cock shall be installed in a readily accessible location, and in the gasoline line between the tank and carburetor, or between the gasoline tank and vacuum feed tank. The gasoline pipe line shall consist of brass or copper tubing, not smaller than five-sixteenths of an inch outside diameter, and arranged so as to completely drain through either the tank, carburetor, or strainer.

268. Suitable means must be provided for draining the gasoline from a flooding carburetor onto the ground without permitting any gasoline to get into the engine pan or to accumulate on any part of the chassis.

269. The gasoline tank must be installed high enough to permit the gasoline to flow to the carburetor when the truck is climbing the maximum grade which it is capable of negotiating under the most favorable road conditions, and with the minimum amount of gasoline in the tank. If necessary, a pressure feed system may be employed.

270. *Springs*.—The chassis spring suspension must be of such design and construction as to relieve the body and chassis above springs of excessive vibration when the vehicle is traveling empty or partially loaded over rough surfaces at maximum speed.

271. Springs must be made of alloy steel properly heat treated, not lower in quality than required to develop the following physical properties:

Minimum elastic limit, pounds per square inch.....	170,000
Tensile strength, pounds per square inch.....	210,000
Elongation, per cent.....	6
Brinnell hardness.....	390-410
Schlerescope.....	53-56

272. Spring eyes must be provided with phosphor-bronze or soft-steel bushings pressed in and reamed in position to the S. A. E. limits of tolerance for such bushings. Bushings must have suitable lubricating channels and conform to S. A. E. standard of wall thickness. If phosphor bronze is used, it must be equal to S. A. E. specification No. 26.

273. Spring eyebolts must be hardened and not smaller in diameter than the size mentioned in the table in paragraph 283. Eyebolts must be securely anchored to prevent turning in the spring shackle and be provided with suitable means for lubrication.

274. Spring shackle bolts or cross bars must be properly hardened on bearing surface and be so designed as to provide at least equal projected bearing area to that provided by the eyebolts. Where shackle bolts are used in connection with bar shackles, they must be provided with suitable means of lubrication and be securely anchored to prevent turning in the shackle.

275. *Spring shackles*, must be made of a material equal to S. A. E. specification No. 12-35 for steel castings, and heat treated. They must have a center to center distance not less than the spring width and may be of two types—Bar shackles formed of two plates with a connecting bar formed integral with them, or yoke shackles, having one end open and the other end connected and adapted to receive the shackle pin or bar.

Where yoke shackles are used they must be bushed at the shackle pin or bar end with a material equal to S. A. E. specification No. 26 or soft steel, bushing to have $\frac{1}{4}$ -inch walls; lubricating channels, and suitable means of lubrication. Yoke shackles must be so designed as to provide projected bearing area at the closed end at least equal to that of the spring eyes. Rear spring shackles must be in tension.

276. *Shackle hangers*, when used in connection with bar shackles, must be bushed with a material equal to S. A. E. specification No. 26 or soft steel, said bushings to have $\frac{1}{4}$ -inch walls and be provided with suitable lubricating channels and means of lubrication.

277. *Shackle position*.—In the design of springs and the assembly of same on chassis, the spring shackles must stand in approximately a vertical position when the spring is under full load, except on chain-driven vehicles where shackles must stand at an angle sufficient to allow chain adjustment without cramping the spring main plates.

278. *Spring leaves* must be held against longitudinal movement by means of an alloy steel center bolt of proper size, by an indentation in the center of each leaf, or by a combination of those methods. If center bolts are used, the heads shall conform to S. A. E. standard, and be provided with snug fitting S. A. E. standard center bolt nuts and means provided for locking the nuts in position. Springs with shrunk-on center bands will not be acceptable because of the difficulty of making repairs in field service. Center fastening must be shown in detail on the drawing mentioned in par. 293.

279. *Spring clips* must be made of alloy steel, properly heat treated, of a suitable quality to develop physical properties equal to the following:

Elastic limit, 100,000 pounds per square inch.
Tensile strength, 130,000 pounds per square inch.
Elongation in 2 inches, 20 per cent.
Reduction of area, 60 per cent.
Brinell hardness, 295.
Schleroscope, 35.

These spring clips must not be smaller in diameter than the size mentioned in the table in par. 287.

Spring clips must have S. A. E. standard threads and be provided with snug-fitting nuts of a length equal to one and one-half times the diameter of the spring clips, as mentioned in S. A. E. standards.

The chemical specifications, physical properties and heat treatment must be given.

Nuts may be of carbon steel.

280. *Metal spring chairs*, must be provided between springs and spring seats. Chairs must be so designed as to be held by the spring clips against longitudinal movement, and have one face shaped to conform to the shape of the spring when the spring is free or without load.

The center of the chair must be recessed to properly receive the center fastening of the spring. Spring chairs may be omitted where the spring seat is shaped to conform to the shape of the spring when the spring is free.

281. *Pressure blocks*, of a material equal to S. A. E. specification No. 12-35 for steel castings, heat treated, must be provided between the spring clips and the spring, and must be grooved and conform to the shape of the spring clips where in contact with the clips.

The face of pressure blocks must conform to the shape of the spring when the spring is free.

282. *Permanent stops*.—All vehicles must be provided with permanent stops which will prevent the springs from being deflected to a point at which the stress will be greater than 75 per cent of the elastic limit of the material from which the springs are made. It is desirable that yielding bumpers also should be provided.

283. The following table gives the permissible width of springs, minimum diameter of eye bolts, and minimum diameter of spring clips for both front and rear springs.

Location of spring.	Approximate load per spring.	Width.	Eye diameter.	Spring clip alloy steel, diameter.
	<i>Pounds.</i>	<i>Inches.</i>	<i>Inches.</i>	<i>Inches.</i>
Front.....	700 to 1,050	2 $\frac{1}{2}$		
	1,000 to 1,250	2 $\frac{1}{2}$		
	1,200 to 1,550	3		
	1,400 to 1,850	3		
Rear.....	1,250 to 1,500	2 $\frac{1}{2}$		
	1,600 to 1,900	2 $\frac{1}{2}$	1	
	1,900 to 2,500	3	1	
	2,500 to 3,500	3	1 $\frac{1}{2}$	
	3,880 to 4,500	3 $\frac{1}{2}$	1 $\frac{1}{2}$	

In case the rear springs take either drive, torque, or drive and torque, then one-eighth inch must be added to the above clip diameters, and one-fourth inch to spring eye diameters. Where rear springs are underslung, add one-eighth inch to clip diameters.

284. The use of carbon-steel spring clips will not be permitted.

285. *Rebound clip*.—A suitable number of rebound clips must be provided on each spring and attached in such manner as to retain their proper position, and if riveted in position must be provided with a spacer $\frac{1}{4}$ inch longer than the spring width between the open ends of the clips. The distance between the spacer and the face of the nearest spring leaf must not be greater than $\frac{1}{8}$ inch.

286. *Lubrication*.—The lubrication of all spring connections must be through grease or oil cups, which must be so located as to be readily accessible and of ample capacity and so designed as to prevent any part of the cup shaking loose through vibration. When cups are not formed integral with the spring connections, they must be screwed in position with standard $\frac{1}{4}$ -inch taper pipe thread; at least four threads of shank must be engaged.

287. *Springs*.—Must be provided with suitable means for retaining the leaves in proper alignment with each other. The method used must be shown in detail in the drawing mentioned in paragraph 293.

288. A drawing must be furnished showing in detail the method of fastening leaves at spring center, the number, location, and method of fastening rebound clips and the method of retaining the leaves in proper alignment with each other. This drawing must also bear in tabulated form the following information:

k. Chemical specifications of steel from which springs are made.

Heat treatment.

Physical properties after heat treatment including Brinall and Scleroscope test:

- (a) Type of spring.
- (b) Width of spring, nominal.
- (c) Width of spring at eyes.
- (d) Length of spring under load, front end (center bolt to bearing point or eyes).
- (e) Length of spring under load, rear end (center bolt to bearing point or eyes).
- (f) Height of spring under load, measuring from short leaf to line drawn through center of bearing point or eyes.
- (g) Flexibility in pounds per inch of deflection.
- (h) Length of short leaf.
- (i) Thickness and number of leaves and of individual leaves, counting from main leaf.

- (j) Inside diameter of bushing.

- (k) Outside diameter of bushing.

- (l) Diameter of center bolt.

- (m) Diameter of center bolt head.

- (n) Height of center bolt head.

289. Scale formed on leaves during heat treatment shall be removed as thoroughly as possible without breaking surface skin.

290. All springs must be tested in accordance with the recommendations of the S. A. E. and must fully meet with the requirements of said test as to variations in height, flexibility and permanent deflection under conditions of test.

291. Driving power may be transmitted from axle to frame through the medium of radius rods, or through the chassis springs.

292. If power or torque is transmitted through the chassis springs, the design must be such that the vehicle will not be rendered inoperative through breakage of the main or driving leaf of the spring and the axle attachment must be such as to prevent relative longitudinal movement under the extreme pressure imposed at the maximum draw-bar pull.

293. *Bodies*.—Bodies are not to be furnished unless specifically called for. The construction of chassis shall be such as to permit the proper installation of body on same having inside dimensions of 6 feet 6 inches wide, 12 feet long, and 2 feet high, with the floor of body at a height of not over 45 inches above the ground when the truck is loaded. The length of frame back of driver's seat shall be 12 feet 4 inches.

294. In fastening the body to chassis neither the frame nor the frame members shall be drilled. The body shall be fastened to the frame by means of suitable bolts, as shown on drawing No. 3-1346B, Quartermaster General's Office, June, 1916.

295. *Painting*.—The entire chassis shall be first thoroughly cleaned of all dirt, grease, or oil, and covered with coat of best-quality, rust-resisting paint. It shall then be painted with three coats of best-quality lead and oil, olive-drab color, of the following composition: 6 pounds white lead ground in linseed oil, 1 pound raw umber, 1 pint turpentine, $\frac{1}{2}$ pint Japan drier, 1 quart linseed oil.

296. Each coat must be permitted to become thoroughly dry before applying the next coat.

297. *Data with proposals.*—The following information must be furnished with each proposal, and also all other data called for in those specifications. Illustrations, catalogues, and specifications showing the construction of the truck bid upon should also be submitted. Failure to supply this data may be considered to render the proposal informal and result in its rejection.

- (1) Name of manufacturer of motor.
- (2) Bore, inches; stroke, inches.
- (3) Number of piston rings.
- (4) Type of piston rings.
- (5) Crank-shaft bearings: Number, type, size of each.
- (6) Make and thickness of antifriction metal used.
- (7) Are main bearings and connecting-rod bearings bronze backed?
- (8) Diameter of crank shaft, inches.
- (9) Diameter of crank pin.
- (10) Speed of motor corresponding to truck speed of 12 miles per hour on high gear, revolutions per minute.
- (11) Manufacturer and type of governor.
- (12) Manufacturer and type of carburetor.
- (13) Type of water circulating pump.
- (14) Method of lubrication of motor.
- (15) Manufacturer and type of magneto.
- (16) Manufacturer and type of clutch.
- (17) Manufacturer and type of transmission.
- (18) Gear reduction, crank shaft to rear wheels: First speed (low gear), second speed, third speed, fourth speed, reverse.
- (19) Type of drive, gear reduction of transmission only, jackshaft only if chain drive, final drive.
- (20) Manufacturer and type of drive axle or jackshaft.
- (21) Number of sprocket teeth on jackshaft sprocket, and on wheel sprocket.
- (22) Manufacturer of tires; size and type of tires.
- (23) Maximum depth of frame inches.
- (24) Thickness of frame stock inches.
- (25) Kind of steel in frame.
- (26) Manufacturer and type of steering gear.
- (27) Diameter of steering wheel.
- (28) Type of brakes.
- (29) Manufacturer and brand of brake lining used.
- (30) Area of braking surface, emergency brakes.
- (31) Area of braking surface, service brakes.
- (32) Distance required to stop normally loaded truck from speed of 12 miles per hour, on hard level macadam road.
- (33) Diameter of front wheels.
- (34) Diameter of rear wheels.
- (35) Shipping weight of chassis including all accessories and spare parts as specified herein, pounds.
- (36) Weight of chassis only, on front wheels.
- (37) Weight of chassis only, on rear wheels.
- (38) Weight of chassis loaded on front wheels.
- (39) Weight of chassis loaded on rear wheels.
- (40) Type and make of radiator.
- (41) Is radiator spring suspended?
- (42) Water capacity of cooling system, gallons.
- (43) Frontal area of radiator, square inches.
- (44) Depth of radiator core, inches.
- (45) Area of radiator cooling surface, square inches.
- (46) Quantity of water delivered by pump, with engine speeds of 500 and 1,000 revolutions per minute.
- (47) Power required to drive fan.
- (48) Efficiency of power transmission from engine to rear wheels on each of gear ratios, and with full power of engines.
- (49) Does truck steer with front wheels, rear wheels, or both front and rear wheels?
- (50) Type of front springs.
- (51) Type of rear springs.
- (52) Make and type of bearings in front wheels.

- (53) Make and type of bearings in rear wheels.
 - (54) Minimum diameter of turning circle.
 - (55) Speed of truck at each gear ratio with 1,000 feet of piston speed per minute.
 - (56) Is engine, clutch, and transmission in unit power plant, or is transmission in separate unit.
 - (57) Make and type of front wheels.
 - (58) Make and type of rear wheels.
 - (59) Make and type of front axle.
 - (60) Make and type of rear axle.
 - (61) Total length of chassis over all.
 - (62) Total width of chassis over all.
 - (63) Wheel base, inches.
 - (64) Tread, front wheels, center to center of felloe band.
 - (65) Tread, rear wheels, center to center of felloe band.
 - (66) Minimum ground clearance, center of rear axle.
 - (67) Minimum ground clearance, center of front axle.
 - (68) Minimum ground clearance of any part of front axle.
 - (69) Minimum ground clearance of any part of rear axle.
 - (70) Minimum ground clearance at drive sprockets.
 - (71) Minimum ground clearance at brake drums.
 - (72) Minimum ground clearance at fly wheel.
 - (73) Minimum ground clearance between axles.
 - (74) The speed power curve and speed torque curve of engine with wide-open throttle. The speed power curve must be extended to the drooping point, if practicable, and the engine vibration points noted on the curve. The maximum speed of engine without excessive vibration must also be indicated on the curve.
 - (75) Weight of piston complete with pin and rings.
 - (76) Weight of connecting rod complete with bushings, bearings, bolts, and set screws.
 - (77) Gasoline consumption in pints per H. P. H. on block test, at one-fourth load, one-half load, three-fourths load, and full rated load at 1,000 feet of piston speed per minute and a water jacket temperature of 180° F. at outlet of water manifold. Also gasoline consumption in pints per hour with engines running at 1,000 feet of piston speed per minute and no load and with water jacket temperature the same as above.
 - (78) Gasoline consumption in pints per H. P. H. on block test with wide-open throttle and maximum torque at 250 feet, 500 feet, 750 feet, and 1,000 feet of piston speed per minute.
 - (79) The gasoline consumption data above required must be taken with one setting of the carburetor. The carburetor setting must not be changed when testing the engine at different speeds or loads.
 - (80) The mechanical horsepower required to drive the engine at a speed of 1,000 feet of piston speed per minute with carburetor in place and with throttle wide open.
 - (81) Clearance of volume in per cent of piston displacement.
 - (82) Number of cylinders in casting.
 - (83) Are cylinder heads removable?
 - (84) Location of valves, both in head, one in head, and one in ell, two in ell, or tee.
 - (85) The net weight of engine complete with flywheel, clutch, carburetor, magneto, pumps, generator, fan, and manifolds.
 - (86) Complete valve timing data.
 - (87) Gasoline consumption of fully loaded truck in units per gallon on high gear, when running over smooth macadam roads.
298. *Equipment.*—Diaphragm horn: Furnish and install in a location readily reached from the driver's seat a diaphragm horn of best make. This horn shall be installed in a rigid manner, with proper through bolts, nuts, and lock washers.
- Suitable "pig-tail" towing hooks fastened to corners of frame at front and rear.
- A suitable swivel towing hook at rear, having a spring take-up of proper design which will resist both tension and compression.
- Tire chains of best make, complete on all four wheels, with two dozen extra cross chains for same. The drivewheels may be equipped with individual cross chains which fasten to the wheels.
- One pair 6-inch side-cutting pliers of best make.
- One pair 7-inch combination gas pliers of best make.
- One jack of best quality, and of suitable height of lift and strength for the truck.
- One set of socket wrenches to fit all nuts on truck.
- Four spark plugs.
- Two exhaust valves.

One intake valve.
 Two exhaust valve springs.
 One intake valve spring.
 Two fan belts.
 One set extra hose connection for radiator.
 One extra drain cock for radiator.
 Two extra grease cups of each size of trucks.
 One 5-pound can soft cup grease.
 One gallon engine cylinder oil in sealed can.
 One-half gallon gear oil in sealed can.
 One quart kerosene in sealed can.
 Ten feet No. 10 B. & S. gauge primary copper cable, oil and waterproof.
 One assortment of lock washers, S. A. E. standard. Furnish 6 washers of each size provided on truck.
 One carburetor float.
 One carburetor needle valve.
 One condenser for magneto.
 One condenser for battery timer.
 Two extra service brake shoes, complete, with adjusting screws.
 Two emergency brake shoes, complete, with adjusting screws.
 One 6-inch bastard file.
 One 8-inch flat mill file.
 One box assorted cotter pins.
 One rubber or canvas pail, 2½ gallons.
 One small clamp vise of best quality, with 3-inch jaw.
 One cold chisel, ¾-inch long.
 One box grinding compound; must contain two grades.
 One valve lifting tool.
 One valve grinding tool.
 One spring for placing under valves when grinding.
 One pinch bar, 6-pound, 42 inches long.
 One best quality grease gun.
 One funnel, 8-inch, heavy, with strainer.
 Four gaskets for intake valve gauge, and valve cap, if used.
 Four gaskets for exhaust valve cage and cap, if used.
 One cylinder cover gasket, if used.
 Eight spark plug gaskets.
 One box assorted nuts, plain box, case hardened. Assortment must include not less than two nuts of each size on truck.
 One box nuts, castellated, case hardened. Assortment must include not less than two nuts of each size on truck.
 One-half dozen lamp wicks of size used in lamps on truck.
 Two leather boots for universal joints with suitable clamps.
 Two leather boots for joints on drag link with laces.
 One roll heavy gasket paper.
 One fire extinguisher, 1-quart capacity, of best make, with bracket support. Mount in vertical position.
 1 shovel short handle, square point, D handle, socket strap, best quality crucible steel.
 1 ax, single bit, 4-pound, with hickory handle, all of best quality.
 1 lantern, best quality, with No. 2 burner, guard and suitable globe lift. Must not blow out in the strongest wind.
 1 tow chain, 20 feet long, ¾-inch links, with ring in one end and hook in the other end.
 150 feet manila rope, ¾-inch diameter.
 1 complete set of all special tools used in the repair or adjustment of the truck.
 Steel tool box, with lock, to hold all tools tire chains and all other tools.
 Instruction books, oiling diagrams with instructions for a complete understanding of the care and operation of the truck.
 299. *Tests.*—Trucks will be inspected and tested at the factory under the direction of a representative of the Quartermaster Corps and notification shall be sent to the Quartermaster General of the Army when the machines are ready for such inspection. Trucks must be built to stand any reasonable test that the Government may require in its military service. Tests will be made with the truck under loads as specified, and all labor and materials necessary for the tests will be furnished by the contractor.

HENRY G. SHARPE,
Brigadier General, Quartermaster Corps,
Acting Quartermaster General.

Inclosure No. 6.]

FEBRUARY 3, 1916.

MEMORANDUM FOR THE QUARTERMASTER GENERAL.

Subject: Assembly of motor trucks.

1. In compliance with instructions from Col. Baker, the following memorandum is submitted in reference to the advisability of purchasing standard truck parts and assemblies from different manufacturers, and assembling same to construct a standard motor truck which will be suitable for military use.

2. It is, of course, extremely desirable that the various parts of motor trucks for military use be made distinctly standard, in order that the various units of which the truck is composed will be absolutely interchangeable. In other words, the truck should be so designed and constructed that the engine in any truck may be replaced by the engine from any other truck, irrespective of the difference in the design, size, or manufacture of the engine. The same flexibility and interchangeability should apply to every other unit of which the truck is composed, such as transmission, front axle complete, rear axle complete, radiator, wheels, steering gear, frame or body.

3. Under the present conditions it would be practically impossible to induce the different manufacturers of trucks to so design and construct their vehicles that the unit parts of any one make of truck can be replaced by the units made by any other manufacturer of completed trucks. This condition is due to the fact that the various engineers can not agree on a standard basis of design and construction, each engineer claiming advantages for his particular design over the design of other engineers. There are also commercial reasons, in that some designs can be constructed more cheaply and consequently sold cheaper than others, although they may not be as suitable as the more expensive designs, and each manufacturer is also careful to so construct his truck that all repair parts must be purchased from him, thus conserving the profit which accrues from the sale of parts, which is an important part of the business, and also to prevent inferior parts from being furnished by other manufacturers.

4. The reasons of the manufacturer for so designing his truck that spare parts or unit assemblies can not be furnished by other manufacturers are sufficient to make it very improbable that they will ever get together on a common design for a standard truck with interchangeable parts, or unit assemblies, unless some outside influence is brought to bear on them.

5. The Society of Automobile Engineers is doing very valuable work in the standardization of material specifications, tests of materials, and also the size and design of minor parts, but they will hardly be able to standardize unit assemblies, because the society is composed principally of engineers who are associated with the various manufacturers, and they control the recommendations of the society.

6. The various manufacturers of parts and unit assemblies for trucks and automobiles who do not make the complete vehicle have not been able to agree on a standard basis for design or construction, to enable their parts or assemblies to be interchangeable, so that the manufacturers of strictly assembled trucks whose vehicles are constructed entirely from parts made by other manufacturers are not able to construct a standard truck with interchangeable parts or unit assemblies.

7. It is my opinion that all of the manufacturers of parts and unit assemblies, such as engines, transmissions, axles, etc., will be quite willing to make slight modifications in the design or construction of their product, which would enable the parts or units of their manufacture to be used in a standard truck which is designed and assembled by the Government. In this way the Government could accomplish a result which the manufacturers themselves can not produce, and it would result in a saving in first cost of trucks of not less than 25 to 30 per cent. The most important advantage of such an arrangement, however, would be the ready replacement and complete interchangeability of parts and unit assemblies, and the very large decrease in the number of parts and assemblies necessary to be kept on hand for replacements in field service. Another very important advantage would be that the Government would obtain real competition and very low prices in the purchase of all parts, supplies, and assemblies, as the same articles could be furnished by any manufacturer. In the purchase of all material, supplies, parts, unit assemblies and accessories, very rigid specifications could be formulated which would require the delivery of articles and material of the highest standard of design, composition, and construction.

8. The establishment of a shop for the assembly of new motor trucks and the overhauling and repair of old or disabled trucks would afford an excellent opportunity for the thorough training of sergeant chauffeurs. It would also permit of the overhauling

and repair of the various parts of trucks at a very low cost, and materially decrease the maintenance expense, and result in more satisfactory operation.

9. In the assembly of trucks, yearly contracts should be entered into for the furnishing of all parts, unit assemblies, and accessories required for the total production during that year, and the trucks produced during that year should be given a model designation. The trucks produced in each of the succeeding years should have different model designations, which would indicate the use of assemblies and accessories of a different manufacture, but all unit assemblies of any one series should be made readily interchangeable with each other, and the unit assemblies of any one series of year's production should also be made interchangeable with the units of any other series, irrespective of the difference in design of the unit assemblies.

10. It is recommended that two standard designs of motor trucks be prepared. One design should be a $1\frac{1}{2}$ -ton truck with two-wheel drive, and the other should be a $1\frac{1}{2}$ -ton truck with four-wheel drive, but the parts made interchangeable on both types of truck.

(Signed) WM. M. BRITTON,
Electrical and Mechanical Engineer, Quartermaster Corps.

[Inclosure No. 7.]

WAR DEPARTMENT,
OFFICE OF QUARTERMASTER GENERAL OF THE ARMY,
Washington, June 21, 1917.

From: The Quartermaster General.

To: Mr. Coker F. Clarkson, General Manager Society of Automotive Engineers, 29 West Thirty-ninth Street, New York City.

Subject: Standardization of military motor trucks.

1. Referring to the excellent work of standardization of parts and assemblies of motor trucks for military service which is being conducted by the Society of Automotive Engineers, it is requested that because of the extreme value of this standardization work from a military standpoint, you make every effort to extend this standardization to every unit assembly of which the trucks are constructed.

2. It is desired that your society standardize the design and fastenings of engine, clutch, transmission, rear axle, front axle, radiator, hood, springs, frame, dash, steering gear, and wheels. It is desired that efforts be first made to make the above units entirely interchangeable in all fastenings and connections and to further standardize the individual parts of all units in order to make those parts completely interchangeable in the assemblies made by different manufacturers.

3. It is considered by this department that the work above referred to is of the utmost military importance, and the early conclusion of all of this work will have an inestimably advantageous effect on the prosecution of the present war. It is therefore requested that this work be completed at the earliest practicable date.

4. The excellent work which your society has done and is continuing to do is fully appreciated by this department and there is every reason to believe that its work will be of increasing importance.

Respectfully,

HENRY G. SHARPE,
Quartermaster General, United States Army.
By W. A. BERTSCH,
Lieutenant Colonel, Quartermaster Corps.

[Indorsement No. 8.]

WASHINGTON, D. C., July 14, 1917.

MEMORANDUM FOR MAJ. C. B. DRAKE.

Subject: Policy regarding purchase of motor trucks.

1. In accordance with your suggestion, made at a conference held yesterday with you and Col. Bertsch, the undersigned committee has carefully revised the situation regarding the purchase of motor trucks for military use. One of the subjects under consideration at the conference was a letter under date of July 12 received by the Quartermaster General from Mr. F. A. Scott, chairman of the general munitions board of the Council of National Defense. A copy of that letter is attached hereto.

2. Commenting specifically on Chairman Scott's remarks, we would say that it is the understanding of this committee, based on reliable information, that the failure of the allies to place orders with certain American truck manufacturers has not been

due to the withholding of award of contracts by the Quartermaster General. We believe, furthermore, that it has been the fixed policy of the Quartermaster General's Office to release for immediate purchase by the allies all American trucks needed by them.

3. It is obvious that in the time that has intervened since the opening of bids, on June 10 strong feeling has been apparent among American truck manufacturers that the Quartermaster General's Office has not been sufficiently diligent in making forehanded and comprehensive arrangements to insure a sufficient supply of trucks and that inadequate consideration has been given by the Quartermaster General's Office to the problems which confront the truck manufacturers of insuring the proper flow of raw material to their factories and of the difficulties of holding their organizations intact.

4. It is not necessary to state that the Quartermaster General's Office has not been derelict, as mentioned above. Conditions over which he has no control whatever have prevented the Quartermaster General from deciding the proper awards to make for trucks prior to this time. It is evident to the committee, however, that it is necessary to make substantial awards at once. These will serve the double purpose of guaranteeing the delivery of such a number of trucks as will be required for use in the near future and of stabilizing the industry, but the committee is distinctly of the opinion that to order more than the number required for immediate needs will defeat the completion of important work, which will be explained later.

5. Several factors have an important bearing on the ultimate success of the motor transport service. The first requirement for such success is that the different designs and makes of trucks in use shall be confined to the fewest practical number. Another requirement is that the fewest possible changes in construction details of the trucks be allowed, once they have been placed in foreign service in large quantities. If it were possible to have all the trucks of a given size of one design, the ideal condition would be fulfilled.

6. The concentration on one model considerably facilitates the instruction of drivers and repair men and insures better handling and maintenance of the unit. It also reduces the number of repair parts necessary to keep on hand to a minimum, thus markedly conserving storage and transportation facilities.

7. Inasmuch as it is necessary to make provision for motor transportation facilities abroad before it will be possible to bring about such standardized condition, it is evident that some compromise arrangement must be made. This compromise arrangement would consist in providing modified commercial trucks that are immediately obtainable, in the smallest numbers that will serve the needs of the Army safely up to the time standardized trucks shall be available. It is believed that a sufficient number to satisfy this condition can be obtained from not over four companies.

8. Your attention is invited to the work which has been progressing during the past two years, in which the Quartermaster General's office has been actively proceeding with the Society of Automotive Engineers. The object of all this work has been to obtain for the Army the most completely standardized truck possible to evolve, with the least disturbance of existing industrial relations and plant equipments, and to obtain units embodying the combined experience and ability of the best truck and parts engineers in the country. From what is known of the proposed standardized trucks it can be stated definitely that they will be more suitable for military service than any commercial trucks which are produced at the present time, and that they will be distinctly better than any of the modified commercial types which various manufacturers have proposed to build in more strict compliance with the War Department specifications. In general, the unit assemblies to be employed are exceptionally rugged and will need considerably less attention and fewer replacements, thus conserving valuable material, skilled labor, and already restricted transportation facilities.

9. The rapidity of the progress of this standard work since the urgent needs of war have been upon us have been remarkable. Necessary details of design upon which it seemed but a short time ago impossible to obtain unanimity have become accomplished facts. A final result in the form of advanced designs for completely standardized military truck, producible in counterpart form by at least all assembly factories, is in sight. All that is needed to bring this work to an ultimate satisfactory conclusion is concrete and substantial evidence on the part of the Government as these trucks will actually be purchased in comparatively large numbers as soon as available. Up to the present time the work has been carried on as the purely voluntary action of truck manufacturers, parts makers and the Society of Automotive Engineers, who are anxious to meet the Government's needs. It has also been conducted in accordance with the Quartermaster General's letter of June 21, a copy of which is attached.

10. In view of the decided progress which has been made in this very urgent standardization, and of the action of the Quartermaster General in requestion that the work be done, it is to be inferred that the Government will purchase in large numbers, trucks constructed in accordance with the finally approved standards.

11. The importance of complete standardization of all parts of motor trucks is fully recognized by the Secretary of War, who, in an address made on June 26, urged upon the society the vital necessity of forwarding the military truck standards work to an early completion.

12. The complete standardization of aeroplanes and engines which is now being accomplished and which will, it is understood, be consummated within a short time, constitutes additional evidence of the War Department's acute appreciation of the immediate and vital importance of standardization.

13. From all of the evidence at hand it is clear that all details connected with the standardization and testing of motor trucks, and of getting them into quantity production, can be practically completed by January 1, 1918, provided the Government will lend moral and financial assistance without stint to the completion of this highly important work.

14. The committee, accordingly, recommends that the Secretary of War be urgently requested to make available the sum of \$175,000 for the specific purpose of completing the already advanced development of class A and class B standard military trucks. It is recommended that this fund be made disburseable by the Quartermaster General, for services of temporary consulting engineers, draftsmen, and other employees, for necessary materials and supplies, for the rent of adequate quarters, and for the necessary labor and materials incident to the emergency construction of proof models, as well as for the prosecution of field tests to demonstrate the same. It is pointed out that this sum is less than one-tenth of one per cent of the sum now available to the Quartermaster General for the purchase of military trucks, and that its expenditure at this time will certainly secure to the Army the saving of millions of dollars in first cost of trucks, and in the more important ultimate costs of maintenance and repair parts.

15. It is the desire of this committee to present as forcefully as possible the advisability of purchasing at this time only as many trucks as will be actually needed prior to the time when the standard trucks can be obtained in large quantities. Modified trucks constructed by old line manufacturers, if contracted for at the present time in large quantities for delivery throughout the fiscal year of 1918, will leave such a small number of additional trucks to be purchased that the standardization of trucks for military use will become entirely impracticable, preventing the Government from obtaining for years to come the general cooperative effort necessary to evolve an adequate standard design of military truck that can be produced by a large number of manufacturers. It will further tend to stifle that spirit of competitive buying which has always been a fixed policy of the War Department.

(Signed)

WM. M. BRITTON.
K. W. ZIMMERSCHIED.
COKER F. CLARKSON.

[Inclosure No. 9.]

JULY 16, 1917.

The Quartermaster General.

Mr. F. A. Scott, chairman General Munitions Board, Council of National Defense,
Munsey Building, Washington, D. C.

Situation relative to motor trucks needed by the Army.

1. Referring to your letter of the 12th instant regarding the industrial situation as affected by the pending award of contracts for the furnishing of motor trucks to this department, you are advised that this office has fully realized the importance of making award of contracts at the earliest possible date consistent with the best interests of the Government, and that it has been impracticable to make proper awards until the present time.

2. You are further advised that this office has just awarded contracts for the furnishing of approximately 11,000 motor trucks, and it is believed that this action will entirely relieve the situation referred to in your letter.

3. The number of trucks above referred to will be entirely adequate for the needs of this department until January, 1918, after which time it will be possible to secure in large numbers standardized trucks having interchangeable parts, and which comply almost completely with the requirements of the standard specifications.

Respectfully,

HENRY G. SHARPE,
Quartermaster General, United States Army.

[Inclosure No. 10.]

JULY 16, 1917.

Memorandum for: The Chief of Staff.

Subject: Standardization of motor trucks.

1. This office has for a period of about two years been endeavoring to secure motor trucks which are entirely suitable for use in the military service, and has, with the assistance of the Society of Automotive Engineers, prepared various standard specifications for the purchase of motor trucks, and has been endeavoring during that period to standardize the construction of military motor trucks to the fullest possible extent.

2. It was not at first believed possible to completely standardize these vehicles so that all parts of same would be completely interchangeable. After several conferences with a large number of the leading automotive engineers of this country, it has become evident that the ultimate and thoroughly complete standardization of all parts of motor trucks can be readily attained, provided the efforts of the War Department and the automotive engineers are concentrated toward the attainment of that end. The extent to which the engineers are cooperating with this office in the complete standardization of the various units of which the motor trucks are composed, has been a thorough surprise to this office, and has completely demonstrated the fact that standardized military trucks may be obtained in large numbers. In fact, in greater numbers than could possibly be required, provided proper moral and financial assistance is given by the War Department.

3. The work of standardization has so far been conducted in cooperation with the Society of Automotive Engineers, through various subcommittee, which committees are composed of the leading engineers of those manufacturers who are producing the standard unit assemblies used in truck construction. It was at first extremely difficult to secure much progress in standardization because of the interest of each manufacturer in retaining his individual features of design and construction, which could not, of course, be retained in case of a final standardization being decided upon. However, when the urgent military necessity of this ultimate standardization work was made known to the engineers, they at once relegated their individual prejudices and interests, and heartily cooperated in the design of units which would include the best and most advantageous features of each of their individual designs. This action is resulting in the design of unit assemblies which are far superior to any individual units which are being constructed at the present time. It was at first believed that it would be impossible to carry this standardization further than the design of the fastenings and connections of these units, which would result in the unit assemblies of different manufacturers being entirely interchangeable, but which would vary in details of internal construction and design with each individual manufacturer.

4. During the last conference with the engineers, which was held at the Ohio State University, Columbus, Ohio, on July 9 and 10, 1917, it became evident that it will be thoroughly practicable to effect the complete standardization of each individual unit in all its details in a comparatively short time, thus resulting in the complete and thorough standardization of every individual part of which the motor trucks will be composed. The extreme military importance of such a design is of course obvious. The manufacturers of transmissions have already perfected a design which is admitted to be the very best manner by all of the manufacturers of transmissions, even to the tolerance used in the construction of each individual part. This procedure will make every part of the transmissions interchangeable, irrespective of the manufacturer of these parts. It is proposed to effect this same standardization in the design of every individual unit of which the trucks will be composed.

5. The excellent work which is being accomplished by the War Department toward the complete standardization of aeroplanes is an indication of what may be done in the standardization of motor trucks. It should be pointed out, however, that the same problems which are confronting those connected with the standardization of aeroplanes will not be met in the standardization of motor trucks, for the reason that in aeroplane construction there are a number of problems which have not been solved in a thoroughly satisfactory manner. In the standardization of motor trucks, however, it will only be necessary to incorporate all of the various well-known and thoroughly tried advantageous features which are found in the various motor trucks which have already been constructed in large numbers. It will then require but a very brief period of field service to demonstrate the practicability of these standardized trucks, and to justify their production in large numbers for use in the military service.

6. Your intention is invited to the inclosed memorandum which was submitted to this office by a committee composed of Capt. Wm. N. Britton, of this office, Mr. K. W. Zimmerschied, engineer of the General Motors Co. and member of the automotive committee of the Council of National Defense, and Mr. Coker F. Clarkson, general

manager of the Society of Automotive Engineers. There is also inclosed with the memorandum referred to a copy of a letter received by this office under date of July 12, 1917, from Mr. F. A. Scott, chairman of the General Munitions Board of the Council of National Defense, in which recommendations were made regarding the necessity for immediately placing orders for motor trucks and also copy of a letter dated June 21, 1917, from this office to the Society of Automotive Engineers, in which attention is invited to the urgent necessity for the standardization of the various parts of which the motor trucks are composed, and urging that this work of standardization be carried to completion at the earliest practicable date.

7. Your attention is especially invited to the very important details of this standardization work, and also a proper policy for the purchase of motor trucks, mentioned in the memorandum above referred to. The recommendations in that memorandum are fully concurred in by this office, and it is recommended that the sum of \$175,000 be allotted for use in completing the standardization of motor trucks at the earliest practicable date. This amount should be available for the employment of consulting engineers, mechanics, engineers, draftsmen, and other employees, for the purchase of the necessary apparatus, materials, and supplies, for the rent of adequate quarters, and for the necessary labor and materials incident to the emergency construction of proof models, and for the prosecution of the necessary field and shop tests, the amounts expended to be utilized in connection with the standardization of motor vehicles.

8. In the prosecution of the work above referred to it is proposed to employ the best consulting engineers obtainable, and also to employ the best specialists in connection with the design and test of each individual unit of which the trucks will be composed.

9. In the standardization of these motor trucks it is proposed to follow the same method of procedure which has been found so thoroughly successful in the present standardization work which is being conducted by the War Department in the design and construction of aeroplanes. No effort will be spared to bring this work to a satisfactory conclusion at the very earliest practicable date, and to obtain standardized motor trucks which will be the result of the best efforts of the leading automotive engineers of the United States and which must result in the production of vehicles which will be far superior for use in the military service to any vehicles which are being constructed at the present time. From all information at hand, it appears that this department will be able to obtain standardization motor trucks in large numbers, beginning about January 1, 1918. The next conference with the manufacturers and engineers interested in the manufacture of motor trucks and unit assemblies for same will be held under the auspices of the Society of Automotive Engineers at the Ohio State University, Columbus, Ohio, on July 20, 1917. At that time additional information will be obtained in reference to the progress of the designs of the standardized units, and definite information will also be obtained regarding the time when it will be possible to obtain in large quantities the standardized unit assemblies, and also the completed standardized trucks.

10. This office has awarded contracts for the delivery of more than sufficient trucks to meet the needs of this department to January 1, 1918, and has also awarded contracts for all approved four-wheel type trucks obtainable to June 30, 1918.

11. It should be pointed out that the trucks which are being purchased at present are to be used for immediate needs only, and after the standardized motor trucks are obtainable in large quantities it will be desirable to utilize these trucks in training camps, or to dispose of them for commercial use, or for use by the allies, in order that all trucks used in our military service will be only of the standardized design and sizes, thus reducing the problem of maintenance and operation to an absolute minimum.

12. It should be carefully noted that the trucks which will be obtained as a result of this standardization will not be experimental in the least degree. New and untried devices will not be included in their design. The only reason for experimentation and testing will be for the purpose of demonstrating the relative advantages of various devices and features of design, each of which has already thoroughly demonstrated its complete practicability. The tests will be conducted for the purpose of selecting the very best of the many approved devices and designs.

13. It is recommended that the allotment of funds above referred to to be used in connection with the standardization of motor trucks, be made available at the earliest practicable date.

HENRY G. SHARPE,
Quartermaster General United States Army.

TRANSPORTATION OF THE ARMY AND ITS SUPPLIES. (SUPPLEMENTAL ESTIMATE.)

Original estimate..... \$809, 532, 025. 72
 Supplemental estimate..... 144, 647, 990. 00

NOVEMBER 15, 1917.

From: The Remount Division.
 To: The Estimates Branch.

It is estimated that 90 divisions, having an aggregate strength of 27,313 officers and men, will be organized from 3,000,000 men. On this basis the amounts shown on the attached statement will be required for the purchase of supplies and equipment, the nature of which, or because of time required for manufacture and delivery, would preclude delivery within six months after the orders are placed.

The number of vehicles, harness, and aparejos estimated for is based on cablegram No. 224, dated October 18, 1917, from Gen. Pershing, copy of which is hereto attached. This cablegram requests 600 escort wagons as an initial supply and 100 escort wagons monthly for each 25,000 men. Although no mention is made in this cablegram with reference to medical, ration, and water carts, also combat wagons, the number of these vehicles estimated for is based on the initial supply for a division plus one-sixth of this allowance as an automatic monthly supply for 25,000 men.

JOHN S. FAIR,
 Colonel, Quartermaster Corps, National Army.

NOVEMBER 14, 1917.

Memorandum for the Estimates branch.

There is submitted herewith supplemental estimate for the fiscal year 1919, as requested in your memorandum of the 12th instant, covering funds to complete the equipment for 3,000,000 men, which equipment is of such a character as could not be delivered under contract within six months after orders are placed.

C. B. DRAKE,
 Lieutenant Colonel, Quartermaster Corps.

[Appropriation: Supplies, services, and transportation, 1919. Amount \$63,956,000.]

Item A. T. 229g.—Other vehicles: Purchase of motor trucks.

	Heavy (3 t. n.).	Light (repair).
Motor trucks required for 90 divisions (3,000,000 men) under latest tables of organization.....	21,600	1,170
Army and corps lines of communication and general use (100 per cent.).....	21,600	1,170
Total.....	43,200	2,340
Already provided for 45 divisions under 1918-19 appropriations.....	30,476	810
Remaining to be supplied for 90 divisions.....	12,724	1,530

The estimated cost of this number of motor trucks is as follows:

12,724 heavy motor trucks, at \$4,000 each..... \$50,896,000
 1,530 light motor trucks, at \$2,000 each..... 3,060,000
 Total..... 53,956,000

APPENDIX.

JANUARY 17, 1918.

Memorandum for Transportation Division:

At the hearings before the House Committee on Military Affairs information was requested as follows:

"Average cost of private soldier, both in this country and in France, of clothing, transportation, and everything that we furnish. What we want is an estimate of the cost to maintain a soldier across the seas, including tonnage, and the statement is to show the amount per man per year in France."

"Can you give us a statement of what tonnage will be required per man per year so that we can give an estimate of what tonnage will be required to maintain 1,000,000 men across the seas?"

"Put printed forms in hearings as to specifications covering animals."

It is presumed that the above request calls for the specification of animals purchased by the Quartermaster Corps.

"How many mules and horses were purchased by the allied nations before this country got into the war and what was paid for them and the character of the horses?"

"How many purchasing zones have we and what is the area of each for animals?"

It is requested that this information be furnished at the very earliest moment.

By direction of the Acting Quartermaster General:

J. Q. A. BRETT,

Lieutenant Colonel, Quartermaster Corps, National Army.

JANUARY 19, 1918.

Memorandum to the Supplies Division:

To enable the water transport branch to reply to the attached memorandum, it is requested that statement be furnished showing the approximate weight of supplies and equipment required per man per annum in France.

P. H. McCARY,

Captain, Quartermaster Corps, National Army.

JANUARY 23, 1918.

Memorandum to the Storage Division (statistical branch):

1. Information is requested as to whether data called for within can be furnished from the records of the Storage Division.

L. HARDEMAN,

Lieutenant Colonel, Quartermaster Corps, National Army.

JANUARY 29, 1918.

Memorandum to the Water Transport Division:

Replying to the request of January 19 above, it is estimated that the approximate weight of supplies and equipment required per man per annum in France is 5.18442 short tons.

F. L. DEVEREAUX,

Major, Quartermaster Corps, National Army.

JANUARY 31, 1918.

Memorandum for the Finance and Accounting Division, Estimates Branch:

In connection with request contained in attached memorandum of January 17 for statement of the approximate tonnage required for the transportation of supplies and equipment required to maintain 1,000,000 men at overseas station, the following is submitted, based on the estimates of the supplies division (clothing and equipment) of approximately 5 short tons per man per annum, or 10,000 pounds.

It is estimated that it will require 104 ships of an approximate gross tonnage capacity of 6,000 tons making eight trips per year for the transportation of supplies and equipment for 1,000,000 men stationed in France.

In this connection it is remarked that the embarkation service is engaged in the preparation of data along the lines of the within request which it is believed is intended to cover equipment of all classes.

R. J. BURT,

Lieutenant Colonel, Quartermaster Corps.

ARMY APPROPRIATION BILL, 1919.

COMMITTEE OF MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 14, 1918.

STATEMENTS OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, ACCOMPANIED BY BRIG. GEN. I. W. LITTELL, COL. H. J. HIRSCH, MAJ. L. HARDEMAN, MAJ. E. C. MARSHALL, JR., AND CAPT. C. P. DALY, QUARTERMASTER CORPS.

WATER AND SEWERS AT MILITARY POSTS.

The CHAIRMAN. The next item in the bill, General, is on page 40:

Waters and sewers at military posts: For procuring and introducing water to buildings and premises at such military posts and stations as from their situations require it to be brought from a distance; for the installation and extension of plumbing within buildings where the same is not specifically provided for in other appropriations; for the purchase and repair of fire apparatus, including fire-alarm systems; for the disposal of sewage, and expenses incident thereto, including the authorization of toilet paper; for repairs to water and sewer systems and plumbing within buildings; for hire of employees, \$19,735,546.

Gen. SHARPE. There were two funds appropriated at the last session of Congress, Mr. Chairman. Under the provisions of the act of June 15, you gave us \$10,546,169, and then under the act of October 6, you gave us \$23,886,500. The first was a reduction from our estimate of \$12,912,500. That makes the total appropriated \$10,546,169 plus \$23,886,500, or \$36,432,669.

The CHAIRMAN. Will you put a list of the items in the record?

Gen. SHARPE. I have a table giving each one of the items, commencing with item No. 237 and including item No. 248.

The CHAIRMAN. I wish you would also put in the record a statement showing how much you have expended up to date out of your last year's appropriation, and how much you have under contract.

Gen. SHARPE. We will do that, and also put a statement in the record explaining each one of the items.

Mr. Chairman, I also want to submit, after the recapitulation, which gives the total of the various items, the subdivisions of the appropriation, as it has been divided into the apportionment for the United States and also for the Philippine Islands.

The CHAIRMAN. We will be glad to have that.

I suppose the principal reason for the decrease in the appropriation is that you have already taken care of the initial cost and that much of the appropriation will not be needed during the next fiscal year.

Gen. SHARPE. Yes, sir.

Capt. DALY. We have a deficiency under that appropriation now.

Mr. ANTHONY. Does that appropriation take care of the sewers at any of the cantonments?

Gen. SHARPE. Yes, sir.

Mr. KAHN. I saw in the newspapers two or three days ago, General, that the pipes had burst down at Camp Meade and that there was danger of their water supply being shut off. How about that?

Gen. LITTELL. The pipes were frozen everywhere in the country, Mr. Kahn, and, of course, that place is no exception at all, but they have remedied that. The greatest trouble there was from the danger of the dam going out where they had impounded the water. That danger come from the ice covering the water backed up by the dam. They blew up the ice and relieved that situation at that dam, and it is all right now.

Mr. KAHN. What is your source of supply—the Patuxent River?

Gen. LITTELL. Yes, sir.

Mr. KAHN. Did the freezing of the pipes occasion any considerable hardship on the camp on account of lack of water?

Gen. LITTELL. No more than anywhere else.

Mr. KAHN. How deep do you bury the pipes?

Gen. LITTELL. Out there at Camp Meade they are buried from 2 to 3 feet deep.

Mr. OLNEY. Does the freezing line go below 2 feet at that particular location?

Gen. LITTELL. It has. Usually in this country it has only gone down about a foot and a half during extreme seasons, but this year it went down further than that.

Mr. KAHN. It was an unusual condition, although that condition does happen once in a while in the vicinity of the city of Washington. I can remember that in 1899 there was a condition like that. Do you think it would be advisable to bury the pipes deeper, because really, to my mind, it seems that there might be a repetition of that condition at any time?

Gen. LITTELL. It is going to cost a good deal more to bury them deeper. This condition of weather has been so very unusual that it has caught people everywhere. Right in the city the pipes have frozen.

Mr. KAHN. Of course, in the city you are in this kind of a situation: If your water pipe is frozen and your neighbor's pipe is not frozen, you can still get some water; but in the camps if the pipes are frozen you can not get water.

Gen. LITTELL. I do not think there is any danger of their freezing, so far as the main lines are concerned.

Mr. KAHN. That is what I had reference to especially, whether the main lines of pipes were sufficiently protected.

Gen. LITTELL. There is not much danger of that. I do not think there is any danger of that.

Mr. KAHN. How many second-feet of water do you deliver at a camp like Camp Meade?

Gen. LITTELL. I have not figured that out, but we have been figuring on furnishing from about 50 to 55 gallons per capita. As a matter of fact, they have used much more than that. We can not keep them down to that.

Mr. KAHN. In the various camps throughout the country is there an ample supply of water everywhere?

Gen. LITTELL. What we consider an ample supply, but it is some times a precarious supply. Take, for instance, Camp Devens, in Massachusetts. That is right up to the limit, practically substantially, of what is the supply they need. They use more than we think they ought to use, and that is always the case in all the camps.

We try to keep them down to 50 or 55 gallons, if possible, but the moment the steam heat comes on they use a great deal of water in addition to their ordinary needs, and we have had to supplement the supply they are getting from the city, and we have also put in some more wells, from which we are furnishing them.

Mr. KAHN. Were you able to get an additional supply readily?

Gen. LITTELL. Yes, sir.

Mr. MCKENZIE. I would like to ask the general if it would not be a wise thing, and whether it would not guard against freezing, if, when the thermometer drops to a certain point, they would allow the water to move through the pipes—to flow through the pipes. Would not that prevent freezing?

Gen. LITTELL. Yes. They have an organization in each of the camps to look after the utilities, and if they properly attend to their business the officers of those utilities units will see that the commanding officers of the barracks, and all other places where the water is, will allow it to drip, and keep it from freezing, as we do in our own houses.

Mr. KAHN. What is the size of the main-line pipes?

Maj. MARSHALL. From 8 to 12 inches; there are two lines of 12-inch pipe.

Mr. KAHN. And the service pipes?

Gen. LITTELL. They are from 2 to 4 inches.

Mr. ANTHONY. Does this item carry anything for the purpose of improving the water supply at Camp Doniphan?

Gen. SHARPE. Not specifically. At Fort Sill there is provided the construction of an additional pump and raising the old pump house. That is at Fort Sill. There is not anything specifically for Camp Doniphan.

Mr. ANTHONY. What kind of water do they have at Camp Doniphan? What is the source of supply?

Gen. LITTELL. There is a separate supply, different from that from Fort Sill. The authorities there at Lawton raised the dam, so that they could get a sufficient supply of water.

Mr. ANTHONY. You are supplying the men there from different water from that which is supplied to Fort Sill?

Gen. LITTELL. From the water collected at the dam.

Mr. ANTHONY. From the rainfall that is collected in the dam?

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. Has that not turned out to be pretty bad?

Gen. LITTELL. There is a good deal of vegetable matter in it, which causes a certain odor and it is disagreeable to drink.

Mr. ANTHONY. I had a statement from some men there, in which they stated that there was a green slime on these pipes which supply the camp, and that they could not fail to notice the result of that in drinking the water. Are those reports true?

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. Who is responsible for locating a camp where there are such vile water conditions as that?

Gen. LITTELL. As I understand it, that water is unpleasant to drink, but is not dangerous.

Mr. GREENE. Is that what is sometimes called alkali, which frequently gets into the sources of the water?

Gen. LITTELL. That is what it is. We counteract the effects of that by using sulphate of copper.

Mr. ANTHONY. Were there not times when the water supply was very meager, as well as bad, at Camp Doniphan?

Gen. LITTELL. That was before they could finish the pipe lines.

Mr. ANTHONY. I had a letter from a man out there, in which he said the water supply was so meager that the sick men were not able to get water to bathe in.

Gen. LITTELL. At first, arrangements were made to put in the pipe lines by the city, and we had a great deal of difficulty in getting pipe, and until the pipe line was installed there was a shortage of water there.

Mr. ANTHONY. This was one of the big camps established in the summer, was it not?

Gen. LITTELL. It was established way late.

Mr. ANTHONY. I want to ask you another question in reference to the sewerage at Camp Funston. Have you had any trouble with the natural drainage and sewerage there?

Gen. LITTELL. I do not remember any.

Mr. ANTHONY. That camp is located, as I recall, on an absolutely flat piece of land?

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. Where there is no natural drainage. Would it be considered wise to locate a military camp on a piece of land like that?

Gen. LITTELL. That would depend upon whether the water can be carried off by proper means.

Mr. ANTHONY. Is it not a fact, after periods of rain there, there have been 6 inches of water standing in that camp?

Gen. LITTELL. That has not been reported to us.

Mr. ANTHONY. I have seen it that way, and there has been a great deal of complaint about it.

Gen. LITTELL. The Quartermaster Department has nothing to do with the selection of the camp sites.

Mr. ANTHONY. Are not these matters of the supply of water and the question of natural drainage taken into consideration when the camps are located?

Gen. LITTELL. The camps were directed to be located, or, rather, the department commanders were all directed by the War Department to select the camp sites, and the department commanders selected boards who picked out the camp sites and recommended the locations to the department commanders, and the department commanders made their recommendations to the War Department, approving the location of the camp sites by the various boards, and the proposition was put up to us to do the best we could with each particular camp.

Mr. ANTHONY. The general location was picked out by the department commander, and the camp was directed to be located on that

particular reservation. Who is responsible for placing that camp on an absolutely flat bottom, when a mile and a half back from that location they could have gotten a site on beautiful rolling country?

Gen. LITTELL. The department authorities.

Mr. ANTHONY. Who would locate the exact spot where the camp would be; would not the engineer officers do that?

Gen. LITTELL. Yes, sir; but they were all directed to consult with the department commanders in the location of the camps, as to the general site.

Mr. ANTHONY. What kind of a sewerage plant have you at Camp Funston? Do you depend upon the natural fall to carry the sewage off or do you have a mechanical device for that purpose?

Gen. LITTELL. I do not remember whether it has to be conducted up to the levels or not. We would have if there was not sufficient fall—I mean if the camp was located so that a sufficient fall could not be gotten between the camp and the final place of discharge—they broke it up into steppes.

Mr. ANTHONY. So that the Quartermaster's Department is not responsible for the location of these camps in any way, and you build the sewerage system at the camp sites where you are told to do so by the general commanding the department?

Gen. LITTELL. Yes, sir.

Mr. ANTHONY. Regardless of whether they are proper locations or not?

Gen. LITTELL. We had no choice in the matter. We did the best we could with each situation.

Mr. ANTHONY. You are charged with expending the money for sewers and the men in your department are supposed to be skilled in that line. If you are told to build a camp at a certain place where there is no proper drainage, would you go ahead and build it?

Gen. LITTELL. We could, if the case was so serious that it could not be done—we would have to write a report to the authorities that it could not be done.

Mr. ANTHONY. There was a case at Camp Doniphan, where it was obvious that there was an inadequate water supply, and there was a case at Camp Funston, where any layman could see that there is improper drainage.

Gen. LITTELL. The reports were to the effect that if the pipes were put in connecting the camp with the nearest city water supply there would be a very abundant supply of water.

Mr. KAHN. At Camp Doniphan?

Gen. LITTELL. At Camp Doniphan; yes, sir. It is the same water that is supplied to the town of Lawton.

Mr. MCKENZIE. In the first place, General, the country was divided into districts, so far as the establishment of these cantonments was concerned, and they were to establish 16 of these cantonments?

Gen. LITTELL. The country was divided into districts.

Mr. KAHN. There were to be 32 of them, all told.

Mr. MCKENZIE. Who was responsible for making the geographic division of the country?

Gen. LITTELL. The country was divided into draft districts, so that there would be so many men in the draft in certain districts, and the boundaries of the districts were determined by the number of men in a certain area.

Mr. McKENZIE. Who did that?

Gen. LITTELL. I do not know. I suppose it was done by the Provost Marshal General.

Mr. McKENZIE. The next step was to find the location for the camp in each particular district?

Gen. LITTELL. Yes, sir.

Mr. McKENZIE. That was provided for by the appointment of a board of Army officers to make the selection in each particular district?

Gen. LITTELL. Yes, sir.

Mr. McKENZIE. In all of these districts there were perhaps a number of cities and towns competing with one another to have the camp located at their particular city or town. This board of officers would then go out and examine all the proposed sites and report back to the commanding officer of that particular division. Is that not true?

Gen. LITTELL. Yes, sir; that is true.

Mr. McKENZIE. And the arbitrary power of locating the site was in the hands of the commanding officer of that department, on the recommendation of the board of officers, which was submitted to him; is that not true?

Gen. LITTELL. That is right; yes, sir.

Mr. McKENZIE. As a matter of fact, no officer in the Quartermaster's Department in the city of Washington had a thing to do with it?

Gen. LITTELL. No, sir.

The CHAIRMAN. Gen. Littell, you are really at the head of that department of the work, but you could not override or disapprove the final decision of the commander of any department?

Gen. LITTELL. We, of course, knew nothing about the actual conditions or state of affairs in regard to the particular site they had picked out, and we could not know that until after we got a topographical survey.

The department commander was directed to select the site and report it to the War Department. The department commanders carried out those instructions by selecting boards usually consisting of a representative of the department commander himself, one of the quartermasters, and a medical officer.

Mr. McKENZIE. I know from personal experience in regard to the locating of Camp Grant at Rockford, Ill., how that was done. There were a number of towns in that district competing for the location of the cantonment, and in company with some gentlemen I appeared before Gen. Barry in the city of Chicago and laid the matter before him, and he said he would locate that camp at the place this board recommended, regardless of what anybody on the outside might say, and he could not do otherwise. I do not think there is any blame to be attached to the War Department.

Mr. ANTHONY. Following that statement by Mr. McKenzie, is it not a fact that those camps were located finally at sites different from those recommended by the board of officers?

Gen. LITTELL. I do not know.

Mr. ANTHONY. You would not know as to that?

Gen. LITTELL. No, sir.

Mr. ANTHONY. I know they were. I do not refer to any in your district, Mr. McKenzie; but I had in mind one in Kentucky, where I think the board recommended a site near Lexington, and the camp was finally located near Louisville.

Mr. QUIN. Can you tell me about the water supply at Camp Beauregard?

Gen. LITTELL. No, sir. We have at least 40 of these camps and cantonments, and it is impossible for me, without going to the records, to remember all the facts in connection with all of them. I remember some of the large and difficult ones, but I can get that information for you in regard to Camp Beauregard.

Mr. QUIN. I wish you would do that, and put it in the record. The Mississippi troops are there, and I would like to know about that.

Mr. KAHN. Do you recall the date when the men of the National Army and the National Guard were ordered to the various cantonments? It was some time in September, was it not?

Gen. LITTELL. September 1 was the date fixed, and then it was changed to September 5. That was for the men of the National Army.

Mr. KAHN. Yes. I have heard a great deal of complaint that the camps at that time were not in a state of completion, or near a state of completion. Can you give us any information on that point?

Gen. LITTELL. There were lots of things about the camps that were not complete. We were asked if we could take care of a certain number of men on the 1st of September, and we replied that we could, and that we could have shelter for them, and we did. We had shelter for all they desired us to have shelter for on that date.

There were a lot of extras ordered in that time that we did not expect. In a good many of the camps they ordered 1,500 officers in the very first thing, and, of course, they had to put up with some discomfort, because we had not expected them, and had not reached the point where quarters for that many officers had been completed. These were student officers sent from the training camps.

But we did have quarters for the first section of the draft. There were lots of things that were incomplete, and we could not possibly get them complete. But we had enough of the arrangements completed to house the men and make them comfortable.

Mr. KAHN. At all the camps?

Gen. LITTELL. At every one of them, as far as I remember.

Mr. KAHN. Did you have enough quarters for the second lot of men that were assigned to the cantonments? As I recall, the men came in increments about two weeks apart, up to October.

Gen. LITTELL. The first lot went in on September 5 and the second lot went in on September 19.

Mr. KAHN. Then, there was another lot early in October?

Gen. LITTELL. Yes, sir.

Mr. KAHN. What was the state of completion of the camps when the second lot came on?

Gen. LITTELL. We had shelter for each increment as they were called for. In fact, in most of the camps, we had more than they needed. But, as I say, there were some deficiencies that we were unable to complete, certain things that it was absolutely impossible to get at that early stage, and complete them all.

For instance, some of the steam-heating plants were incomplete. You could not get the boilers, and there was not anything you could do to get the boilers, and we had to wait until they were made.

Mr. KAHN. That was one of the complaints I heard, and, of course, I wondered whether the difficulties could have been avoided by hold-

ing the men back for a couple of weeks until those things could have been settled.

Gen. LITTELL. That could have been done, but it would have resulted in the greatest amount of confusion.

Mr. KAHN. But the confusion would not have been as bad as the pneumonia.

Gen. LITTELL. I do not think the pneumonia is entirely due to the lack of completion of the camps.

Mr. GORDON. It is due to lack of clothing, is it not?

Gen. LITTELL. It is due to various things. That comes from measles, and the Surgeon General claims it is because the men were crowded.

Mr. KAHN. Why were they crowded?

Gen. LITTELL. I do not know.

Mr. KAHN. Was there a greater number of men than you had accommodations for?

Gen. LITTELL. The instructions were that there would be so many men placed in a tent, and they had a stove in the tent, and the natural inclination of a soldier is to shut that up tight, so that there would be no ventilation. Some one has to stand guard to keep that tent open, so that they will have ventilation.

Mr. KAHN. They were crowded in more than you thought they would be, because you did not provide accommodations for as many as really came. Was that not it?

Gen. LITTELL. No, sir.

Mr. KAHN. Have you accommodations now at all the camps for the 200,000 men of the National Army who have not as yet gone to the camps?

Gen. LITTELL. We have. The camps are completed for the full number of men we were directed to prepare them for.

Mr. KAHN. Since when were they thus completed?

Gen. LITTELL. I think every one of the camps were practically completed on the 1st of December. There are some few little things to be finished. I do not know that they will ever be finished, because as long as there is any one there something has to be done.

Mr. KAHN. Of course changes have to be made.

Gen. LITTELL. But as originally planned they have been long ago fixed up.

Mr. KAHN. Did you have to expand them?

Gen. LITTELL. Yes, sir. By reason of the adoption of the Pershing division and the requirements of the Surgeon General we had to do a great deal of additional construction. For instance, we first built barracks for 200 men, and then, under the requirements of the Surgeon General and the adopting of the Pershing division, the companies were increased to 250 men apiece, and therefore it was necessary to comply with both of those conditions, using three barracks which were originally intended for three companies to take care of two companies, and therefore we had to build a lot more barracks.

Mr. KAHN. Of course, making those additions entailed a great deal of additional expense, too.

Gen. LITTELL. Yes, sir.

Mr. KAHN. Much more so than if you had built them for the larger units at first?

Gen. LITTELL. Yes, sir. It also entails expense in the extension of sewer pipe and steam heating, and everything else you can think of.

Then we had a lot of extra buildings like buildings for schools, officers' schools, and men's schools, and theaters, and additional post exchanges, and units for instruction in gas fighting, and extra stables, and things of that kind.

Mr. KAHN. What, in your opinion, is the approximate cost of the different cantonments? Can you put that in the hearing?

Gen. LITTELL. Yes, sir. I would like to get the latest revised figures.

Mr. KAHN. Yes. I would like to have the cost of each cantonment. Speaking of the sewerage which Mr. Anthony was talking about, have you any aseptic tanks anywhere for the destruction of the sewage?

Gen. LITTELL. When it is necessary; yes, sir.

Mr. KAHN. Have any tanks been used at Camp Funston for the purpose of destroying the sewage?

Gen. LITTELL. I have a table that shows all of that.

Mr. KAHN. Can you put into the hearings something about that?

The CHAIRMAN. May I suggest that instead of doing that now, when we reach the subject of barracks and quarters, the General be prepared to give us that information?

Gen. LITTELL. Yes, sir. I can give you the per capita cost of these cantonments now.

Mr. KAHN. How much is that?

Gen. LITTELL. For the number of men originally intended for each camp, it is about \$220 per man.

Mr. GARRETT. General, did the appropriation for these cantonments or any of the buildings in the cantonments become exhausted before they were completed?

Gen. LITTELL. Yes, sir.

Mr. GARRETT. How did that so happen?

Gen. LITTELL. In the first place, we had a certain amount of money for the construction of these cantonments. We were told to go ahead and do the best we could with that and try to keep within that limit, which we did, to the very best of our ability.

But it was soon found out, as I just explained to Mr. Kahn, that there were a lot of additions required in way of additional buildings, facilities, and so forth, and therefore we had to have additional sums of money to build them.

Mr. GARRETT. In the case of Camp Logan, in Texas, I visited that camp in the months of October and November, and the base hospital was not complete. It lacked the sewerage and heating. That is located at Houston, Tex.

Gen. LITTELL. That is a camp; yes, sir.

Mr. GARRETT. There was quite a good deal of complaint to the effect that the base hospital was not in condition at that time for the men that were confined in it. I inquired of the contractor and also of the commanding officer there as to why that was, and he said the appropriation had given out.

Gen. LITTELL. I do not believe his statement is accurate. He evidently did not know about it. That would not have delayed their construction at all, because if we had found out that there was not sufficient money to complete that hospital, we would have asked the Secretary of War to have authorized a deficiency.

The hospitals were constructed by the plans prepared by the Surgeon General's office, and the original intention at these camps was to make them all canvass, and the Surgeon General, in accordance with instructions from the War Department that it would be a canvass camp, asked for a lot of hospital tents, and the department was then getting tentage as fast as possible, but the hospital tents could not be supplied in time, and we were instructed to provide for the sick by building shelters of wood, and they furnished plans to comply with those instructions.

Mr. GARRETT. Where did the fault lie, if there was any fault, because of the failure of that base hospital to be completed before the men arrived there, or even after they had been there quite a while, and is that hospital completed and well equipped now?

Gen. LITTELL. Yes, sir; it is completed now. You must remember, Mr. Garrett, that the building of these camps was held back and we were not ordered to construct them until way late, and then, it having been decided to build hospitals, they were practically the only buildings that were erected there, except the mess halls and the shelters for the latrines.

The design was very simple, and the Surgeon General's instructions were to omit plumbing and sewerage, which we did, and then later it was decided that they wanted plumbing and sewerage, and we were called upon to put that in, and in every instance where that question was referred to the Quartermaster Department the approval of the suggestion was recommended.

When they finally asked to have the sewerage put in the hospital at the National Guard camps, it was submitted to us, and we recommended it, and it was returned to us authorizing it for 10 of the 16 camps.

Later we recommended it for the other six camps, and that was also approved. That carried it so far ahead that it was absolutely impossible to get all that done at the time the troops were there, but the shelter was there.

Mr. GARRETT. That was due to a change in the plans, and not because of the lack of money?

Gen. LITTELL. Yes, sir.

Mr. TILSON. Have you aseptic tanks at all these camps?

Gen. LITTELL. No, sir; we only put them where it was absolutely necessary. In some places they do not object to the discharge of the sewage, and then, of course, we do not put the aseptic tanks in, because it is more or less expensive. But wherever there is any objection made to the ordinary discharge of the wastage, we put in the purifying outfit.

Mr. LUNN. Are these sewerage disposal plants on a small scale being installed in the camps where the ejection of the sewage is objectionable?

Gen. LITTELL. We have only installed them for the hospitals.

Mr. LUNN. Does that entail quite an expense, or can it be cheaply done?

Gen. LITTELL. Not for the hospitals alone.

Mr. GREENE. How far has the old sink for the sewerage been displaced by anything like water-flushed sewerage?

Gen. LITTELL. Of course, it is in all the cantonments. The idea in the National Guard camps was that they would dig pits, and, of

course, use them, and drain them out in the ordinary way, as they have been doing all along, and burn them out with kerosene or crude oil. I think there were two of the camps where it was shown and represented that the soil was of such a nature that some sort of a water-flushed sewerage was absolutely necessary, and in those cases we have installed them.

Mr. GREENE. The cantonments have permanent sewerage?

Gen. LITTELL. Yes, sir; they all have modern sewerage systems, shower baths, hot and cold water, electricity, laundries, and all sorts of things of that kind.

Mr. TILSON. Why was there so great a difference made in the preparations to take care of the National Army and National Guard? It seems the National Army had everything they could want. Those camps where I have been have been well taken care of, whereas the National Guard camps have nothing.

Gen. LITTELL. I do not think it would hardly be fair to take my answer to that, because I have not been informed as to why it was. I can only surmise.

Gen. SHARPE. There has been no information about it and I can only surmise, too. My surmise is that the idea was that the National Guard would not stay in the camps but be moved almost immediately out of them and go abroad.

Mr. TILSON. That answer was made to me in September, and I told them they would suffer if they had to stay there until the first of December, but their idea was that they would be gone by the first of December.

Gen. LITTELL. We anticipated that there would be some call for the improvement of those camps, and we did ask for an item in the appropriation bill for the conversion of those camps into cantonments.

Mr. TILSON. Of all the hardships that a soldier has to go through in a camp, the lack of modern sewerage conveniences is the greatest of all. The men in the National Army have had up-to-date facilities, the same as we have in the cities, whereas the National Guard has been absolutely without anything at all. Not only have they had to live in tents and freeze to death, but they have had absolutely nothing in the way of modern conveniences.

Gen. LITTELL. The money was not appropriated when we anticipated that there would be some such demand.

The CHAIRMAN. You do not mean that in the matter of sewerage the National Guard camps are not supplied?

Mr. TILSON. They are using latrines, as I understand it, entirely.

Gen. LITTELL. All but two of them.

The CHAIRMAN. I thought that at Camp Sheridan you provided sewerage.

Gen. LITTELL. That was for the hospital. There are two of the National Guard camps that have sewerage.

Mr. SHALLENBERGER. What did you do for the Regular Army?

Gen. LITTELL. If they are in camp, they have the same as the National Guard.

Mr. SHALLENBERGER. Are they not in camp?

Gen. LITTELL. Some of them are and others are in temporary buildings.

(The details of the estimate are as follows:)

WATER AND SEWERS AT MILITARY POSTS, FISCAL YEAR 1919.

Deficiency act, June 15, 1917, \$10,546,169.

Deficiency act, October 6, 1917, \$23,886,500.

Item W. & S. 257, procuring water (water systems).

[Estimate, fiscal year 1919, \$517,211.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$438,111.00	\$438,111.00		\$79,100.00	\$79,100.00	\$517,211.00
Appropriated fiscal year 1918.....					8,200.00	8,200.00	8,200.00
Expended fiscal year 1917.....		275,952.57	275,952.57		95,000.00	95,000.00	370,952.57

REMARKS.

The following is a list of projects for the fiscal year 1919:

Fort H. G. Wright, N. Y., development of a new fresh-water supply.....	\$90,000
Fort Keogh, Mont., material and labor of sinking and casing two 4-inch wells.....	6,000
Fort McDowell, Cal., replacing 4,000 feet galvanized-iron pipe to connect west and east garrison.....	2,100
Fort McKinley, Me., increasing the present water supply system and thoroughly overhauling present system.....	8,658
Fort Niagara, N. Y., water purification plant.....	12,000
Fort Rosecrans, Cal., new water supply for this post. Present source outside of proposed lines of land defense.....	30,000
Fort Sill, Okla., construction of a pump pit; additional pump and electric motor; razing old pump house, etc.....	37,800
Fort Slocum, N. Y., installing auxiliary water main of 6-inch cast-iron pipe. Present supply through an underwater main.....	13,956
War College, concrete trench, with necessary iron covers, etc., to contain the main 8-inch water service pipe.....	3,600
Alcatraz, Cal., drilling of tubular well, 400 feet.....	15,687
Fort McKinley, Me.: Improving well system.....	18,000
Development of a new water supply.....	200,310
Total.....	438,111

Supplies.—The supplies to be purchased under this item consist of boilers, piping, fittings, and all material required for the construction of water system, reservoirs, trestles, wells, etc.

Services.—The services to be procured consist of the hire of labor, etc.. Job and contract services for the construction of water systems, reservoirs, trestles, sinking artesian wells, etc., and such other personal and nonpersonal services as may be necessary.

United States.—No estimates were submitted for this purpose for the United States for the fiscal year 1918, on account of the necessity of keeping the total under the estimate within the amount approved by the Secretary of War.

Philippine Islands.—This estimate is for \$79,100 for procuring water submitted by the department authorities for the fiscal year 1919. It is \$70,900 more than estimated for 1918.

The increased amount estimated for is explained as follows:

Procuring water (water systems).

Camp McGrath.—For replacing galvanized-iron water mains, supplies, \$4,000; services, \$1,800. Garrison, Second Battalion, Thirty-first Infantry, and Third Battalion, Philippine Scouts. The water mains at this post are of galvanized iron and have been in the ground so long that they are beginning to rust out. It is the intention to replace these mains with cast-iron pipe.

Camp Stotsenburg.—For replacing galvanized-iron mains and extending water system, supplies, \$4,000; services, \$1,800. Garrison, Ninth Cavalry and Second

Field Artillery. This sum will be required to replace certain galvanized-iron mains that are beginning to rust and for extensions to the water systems made necessary to provide for the increase in garrison.

Fort Mills.—For driving of wells and connecting same with post water system, supplies, \$20,000; services \$10,000. Garrison, Company A, Third Engineers; First Company, Second Aero Squadron; Ninth band; and 17 companies Coast Artillery Corps; Thirteenth Infantry; Fifth and Eleventh Battalions Philippine Scouts. The water supply of Fort Mills will barely suffice for the present garrison and it will be necessary to continue the driving of wells and connecting them by mains to the present system to furnish sufficient water for the increased garrison; also to increase, if possible, the normal supply for all purposes. For the extension of water mains, supplies, \$7,000; services, \$3,000. The sum above stated is required for the extension of water mains and enlargements so as to provide fire protection for buildings on the mine level and barrio of San Jose; also all storehouse and wharves on the water front.

Fort William McKinley.—For remodeling water system, supplies, \$5,000; services, \$2,500. Garrison, Field Hospital No. 4; Company B, Third Engineers; Third Field Battalion, Thirty-first Infantry; Ambulance Company No. 4; Signal Corps; Fifteenth Cavalry; Eighth Infantry; headquarters Third Battalion and Thirty-first Infantry; casuals. The increase in garrison will necessitate the remodeling of the water system, which is now under way, by which the water for all latrine purposes will be furnished from the river water system, thereby reducing the consumption of well water so that the present system of wells will furnish sufficient water for all cooking and drinking purposes. The river water system is now being developed, and the funds asked for will be required to complete the project.

Ludlow Barracks.—For remodeling water system, supplies, \$7,000; services, \$3,000. Garrison, Sixth and Eighth Battalions, Philippine Scouts. The present water supply at Ludlow Barracks is obtained from the Mituan River, a highly contaminated stream, and is pumped to a steel tank at the post, a great elevation above the river. The plant is operated by steam, all the pumping appurtenances being of a very uneconomical type. It is the intention to remodel the system so as to take advantage of the falls in the river that exist in the post, install modern and economical pumping machinery; also to divide the system so that the water consumed in the portion of the post at the low elevation will not be pumped to the tank on the hill, but to a tank that will be constructed at sufficient elevation to supply the lower part of the garrison. The price stated includes all mains and other work incident to this modification.

Item W. & S. 237a, purchase of water.

[Estimate fiscal year 1919, \$7,778,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$7,740,000.00	\$7,740,000.00	\$38,000.00	\$38,000.00	\$7,778,000.00
Appropriated, fiscal year 1918.....	262,858.75	262,858.75	33,000.00	33,000.00	295,858.75
Expended, fiscal year 1917.....	302,835.75	302,835.75	38,000.00	38,000.00	340,935.75

REMARKS.

Services.—The services to be procured under this item are of class 1, non-personal. They are for current requirements only and are required to cover payment for water for military purposes, for recruiting stations, storehouses, etc.

United States.—The amount of the estimate is approximately \$7,437,164.25 more than the cost for 1917, and about \$7,473,141.25 more than the apportionment for 1918. The increase is due to the increase in the Regular Army, the mustering in to the Federal service of the National Guard, and for the National Army. This estimate is based upon the estimate for 1918 plus a small increase for labor and material, and is as follows:

For stations other than for cantonments.....	\$430,000
For cantonments.....	7,310,000
Total.....	7,740,000

Philippine Islands.—The amount of the estimate is \$5,000 more than submitted by the department authorities for the fiscal year 1918. It is the same amount as that expended for the fiscal year 1917. No explanation is given as to this increase.

Item W. & S. 237b, sterilizers and filters, purchase and repair.

[Estimate fiscal year 1919, \$540,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$540,000.00	\$540,000.00	\$540,000.00
Appropriated, fiscal year 1918.....	1,676.68	\$15,099.04	16,765.62	16,765.62
Expended, fiscal year 1917.....	6,113.19	55,018.71	61,131.90	61,131.90

REMARKS.

Supplies.—Under this item are procured water bags, sterilizers with ropes and covers attached; also hypochlorite of lime necessary to properly purify the water contained in these bags. In addition if the purchase of any filters or sterilizers are found necessary, the funds are authorized for this item.

United States.—The amount of the estimate is about \$478,868.10 more than the cost for 1917, and about \$523,234.38 greater than the apportionment for 1918. The increase is due to the increase in the Regular Army, the mustering into the Federal service of the National Guard, and for the National Army. A great many bags have been procured and used and it will be necessary to replace many of them and repair others during the fiscal year 1919. The item provides for both purchase and repair. This estimate is based upon the estimate for 1918 plus a small increase for labor and material and is as follows:

For stations other than for cantonments.....	\$30,000
For cantonments.....	510,000
Total.....	540,000

Philippine Islands.—No estimate.

Item W. & S. 238, introducing water to buildings.

[Estimate fiscal year 1919, \$117,957.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$98,957.00	\$98,957.00		\$19,000.00	\$19,000.00	\$117,957.00
Appropriated, fiscal year 1918.....		425,583.75	425,583.75		15,000.00	15,000.00	440,583.75
Expended, fiscal year 1917.....		24,989.34	24,989.34		30,000.00	30,000.00	54,989.34

REMARKS.

The following is a list of projects for the fiscal year 1919:

Fort Casey, Wash., extension of infiltration gallery, construction of a filter house and 1,000,000-gallon reservoir.....	\$62,082
Madison Barracks, N. Y., material and labor for extension of water mains for the fire protection of stables, etc.....	983
Philadelphia depot, automatic sprinklers system to be installed in building used for manufacture of uniforms, etc.....	20,250
Presidio of Monterey, installation of two fire hydrants at new forage warehouse.....	1,713
Fort Ruger, Hawaii, construction of a water supply for new mortar battery and 4.72-inch battery.....	1,695
Fort Sill, Okla., replacement of the old 3-inch wrought-iron main by 3,620 feet of 6-inch, 1,800 feet of 4-inch, and 8 fire hydrants, etc.....	12,234
Total.....	98,957

Supplies.—The supplies to be purchased under this item consist of pipe, fittings, etc., and such other class "D" articles as may be required in the construction of water-distributing systems.

Services.—The services to be procured consist of the hire of laborers, job and contractor services, and such other personal and nonpersonal as may be required in the construction of water-distributing systems.

United States.—No amount was estimated for under this item for 1918 in order to keep within the amount approved by the Secretary of War. Therefore, the amount as stated for the fiscal year 1918, \$425,583.75, was transferred from other items of the appropriation. The amount of the estimate is about \$73,967.66 more than the cost for the fiscal year 1917, and approximately \$326,626.75 less than appropriated for the fiscal year 1918.

Philippine Islands.—The amount estimated for is the same as that submitted by the department authorities. It is \$4,000 more than was estimated for during the fiscal year 1918 and \$11,000 less than the amount expended for the fiscal year 1917. The amount estimated for is required as follows:

For introducing water to buildings constructed during the year, also to buildings that were not provided originally with water connections, at all posts in the Philippine Department, supplies, \$13,000; services, \$6,000. This does not include the sum asked for in other projects that are included in a lump-sum appropriation for a special installation.

ARMY APPROPRIATION BILL, 1919.

Item W. & S. 238a—Fuel for pumping plants.

[Estimate, fiscal year 1919, \$1,523,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,523,000.00	\$1,523,000.00	\$1,523,000.00
Appropriated, fiscal year 1918.....	137,048.13	137,048.13	\$48,000.00	48,000.00	185,048.13
Expended, fiscal year 1917.....	82,134.94	82,134.94	82,134.94

REMARKS.

Supplies.—The supplies to be procured under this item are class "A," and will be required for purchase of fuel for pumping plants.

United States.—The amount of the estimate is about \$1,440,865.06 more than the cost for 1917 and about \$1,385,951.87 more than the apportionment for 1918. The increase under this item is due to the increase in the Regular Army, the mustering into the Federal service of the National Guard, and for the National Army. The estimate is as follows:

For stations other than for cantonments..... \$23,000
 For cantonments..... 1,500,000

Total 1,523,000

Philippine Islands.—No estimate is submitted for the fiscal year 1919.

Item W. & S. 239, installation and extension of plumbing within buildings.

[Estimate fiscal year 1919, \$56,028.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....		\$3,528.00	\$3,528.00	\$52,500.00	\$52,500.00	\$56,028.00
Appropriated, fiscal year 1918.....		309,150.00	309,150.00	9,000.00	9,000.00	318,150.00
Expended, fiscal year 1917.....		60,434.68	60,434.68	30,000.00	30,000.00	111,434.68

REMARKS.

Services.—The services procured under this item are by contract or hire, as may be deemed necessary for the placing of plumbing in new buildings. The above amount includes the installation of 24 urinals in barracks Nos. 45, 45A, 46, 46A, at Fort H. G. Wright, N. Y., amounting to \$2,487.

United States.—The reason for the large decrease estimated for in connection with the cost for 1917 and the amount appropriated for the fiscal year 1918 is due to the fact that practically no new construction under the appropriation "Barracks and quarters" is contemplated for the fiscal year 1919.

Philippine Islands.—The amount of the estimate is the same as that submitted by the department authorities. The amount is \$48,000 more than the estimate submitted for the fiscal year 1918 and \$22,500 more than the amount expended for the fiscal year 1917. The amount estimated is required for the following works:

For installing plumbing fixtures in buildings constructed during the year, also in buildings that were not provided originally with plumbing facilities, at all

posts in the Philippine Department, supplies, \$8,000; services, \$4,000. This does not include the sums asked for in other projects that are included in a lump-sum appropriation for a special installation.

Camp Stotsenburg.—For installation of plumbing and sanitary system, supplies, \$25,000; services, \$11,000. Garrison: Ninth Cavalry, Second Field Artillery. The present regimental Cavalry post has no sewer system, the dry-earth system being used. For sanitary reasons it is necessary to install plumbing and sanitary systems at all buildings in the Cavalry garrison, as this is one of the most important stations in the Army.

Regan Barracks.—For completing sanitary plumbing installations, supplies, \$3,000; services, \$1,500. Garrison: Seventh Battalion, Philippine Scouts. For the completion of installing sanitary plumbing in the remainder of the buildings at Regan Barracks not already provided therewith.

Item W. & S. 240, purchase of fire apparatus.

[Estimate fiscal year 1919, \$59,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$55,000.00	\$55,000.00	\$4,000.00	\$4,000.00	\$59,000.00
Appropriated, fiscal year 1918.....		\$15,625.00	15,625.00				15,625.00
Expended, fiscal year 1917.....		56,430.31	56,430.31		10,000.00	10,000.00	66,430.31

REMARKS.

Supplies.—The supplies under this item consist of gasoline and chemical fire engines, fire hose, ladders, axes, extinguishers, hose carts, and other fire extinguishing apparatus.

United States.—The amount estimated for is about \$1,430.31 less than the cost of 1917, and approximately \$39,375 greater than the apportionment for 1918. The amount estimated for is based upon the amount appropriated for 1918, allowing slight increases for labor and material. The estimate is as follows:

For stations other than for cantonments.....	\$30,000
For cantonments.....	25,000
Total.....	55,000

The increase of 1919 over 1918 is due to the increase of the Regular Army and the calling in to the service of the National Guard and the National Army.

Philippine Islands.—The estimate is the same as that submitted by the department authorities and is \$6,000 less than the amount expended for the fiscal year 1917. No estimate was submitted for the fiscal year 1918. The amount estimated for will be required for all posts in the Philippine Department, and is larger than usual for the reason that no funds were estimated for or appropriated for the fiscal year 1918.

ARMY APPROPRIATION BILL, 1919.

W. & S. item 241—Repair of fire apparatus.

[Estimate, fiscal year 1919, \$353,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$350,000.00	\$350,000.00	\$3,000.00	\$3,000.00	\$353,000.00
Appropriated, fiscal year 1918.....	5,000.00	5,000.00	2,000.00	2,000.00	7,000.00
Expended, fiscal year 1917.....	6,410.97	6,410.97	2,000.00	2,000.00	8,410.97

REMARKS.

Supplies.—The supplies under this item consist of hose, buckets, axes, and all material and parts required to replace or make repairs to fire extinguishing apparatus.

Services.—Either job or contract services are procured under this item, as may be deemed to the best interests of the Government, for repairs to the apparatus.

United States.—The amount estimated for is about \$343,589.02 more than the cost for 1917 and about \$345,000 greater than the apportionment for 1918. This increase is due to the calling in to the service of the National Guard, National Army, and increase of the Regular Army. It is believed that the amount estimated for will be required under this item. The estimate is as follows:

For stations other than for cantonments..... \$50,000
For cantonments..... 300,000

Total 350,000

Philippine Islands.—The estimate is the same as that submitted by the department authorities. It is \$1,000 more than the amount appropriated for the fiscal year 1918 and is required for current repairs to fire apparatus for all posts in the Philippine department.

W. & S. item 242—Purchase of fire-alarm system.

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....
Appropriated, fiscal year 1918.....
Expended, fiscal year 1917.....	\$427.05	\$427.05	\$427.05

REMARKS.

United States.—No estimate is submitted under this item for the United States for the fiscal year 1919.

Philippine Islands.—No estimate is submitted for this item for the fiscal year 1919.

W. & S. item 242-a—Fire-alarm systems, repair of.

[Estimate, fiscal year 1919, \$1,800.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,500.00	\$1,500.00	\$300.00	\$300.00	\$1,800.00
Appropriated, fiscal year 1918..	675.00	675.00	300.00	300.00	975.00
Expended, fiscal year 1917.....	445.96	445.96	2,000.00	2,000.00	2,445.96

REMARKS.

Supplies.—The supplies procured under this item consist of wire, batteries, bells, and annunciators, etc., required in the repair of fire-alarm system.

Services.—The services to be procured consist of either job or contract, as may be considered to the best interests of the Government.

United States.—The estimate is approximately \$1,054 more than the cost for 1917 and \$875 greater than the apportionment for the fiscal year 1918. The increase is due to the calling into the service of the National Guard, National Army, and the increase in the Regular Army.

Philippine Islands.—The estimate is the same as that submitted by the department authorities, and is for the same amount as appropriated for the fiscal year 1918. It is \$1,700 less than the amount expended for the fiscal year 1917. The amount estimated for is for repairs to fire-alarm system at all posts in the Philippine department.

W. & S. Item 243—Sewage, disposal of.

[Estimate, fiscal year 1919, \$84,550.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$54,550.00	\$54,550.00	\$30,000	\$30,000	\$84,550.00
Appropriated, fiscal year 1918.....	196,675.00	196,675.00	15,700	15,700	212,375.00
Expended, fiscal year 1917.....	139,953.43	139,953.43	32,000	32,000	171,953.43

REMARKS.

The following is a list of projects for the fiscal year, 1919:

<i>Fort Caswell, N. C.</i> —Labor and material to install approximately 2,050 feet sewer.....	\$1,980
<i>Fort Ethan Allen, Vt.</i> —Construction of several sewer-pipe lines and enlargement of others.....	16,224
<i>Fort Gaines, Ala.</i> —Sewer system for this post. Necessary if post is re-garrisoned.....	15,000
<i>Letterman General Hospital.</i> —Putting in main sewer and installing six manholes.....	2,906
<i>Fort McDowell, Cal.</i> —Construction of an incinerator.....	8,250
<i>Fort McPherson, Ga.</i> —Putting in 6-inch sewer-pipe line for buildings Nos. 23 and 67.....	2,055
<i>Fort Moultrie, S. C.</i> —Extensions and alterations to post-sewer system.....	2,118
<i>Fort Myer, Va.</i> —Construction of a sewer and septic tank for toilet buildings Nos. 83 (stable guardhouse, Artillery) and No. 96 (stable guardhouse, Artillery); sewer in front of Cavalry stables to manhole No. 1.....	4,358
<i>Schofield, Barracks, H. T.</i> —Cover for septic tanks.....	4,358
<i>Fort Banks, Mass.</i> —Construction of trunk-sewer line.....	900
Total	55,591

Supplies.—The supplies to be procured under this item consists of pipe, fittings, etc., required in the construction of sewerage systems.

Services.—The service to be procured consist of either job or contract, required for the construction of sewerage systems, etc.

United States.—The amount estimated for is approximately \$85,403.43 less than the cost for the fiscal year 1917 and \$142,325 less than the apportionment for 1918. The increase is due to the calling out into the service of the National Guard, the National Army, and the increase in the Regular Army.

Philippine Islands.—The amount estimated for is the same as that submitted by the department authorities. It is \$2,000 less than the amount expended during the fiscal year 1917 and \$14,300 more than the amount appropriated for the fiscal year 1918. The funds are required for the following purposes:

Camp John Hay.—For construction of bacteriological tank: Supplies, \$3,000; services, \$1,500. Garrison: M, Twenty-seventh Infantry, second battalion, Philippine Scouts. For the construction of a bacteriological tank to provide for sewage purification on portions of the sewer system that are now discharging into dry creeks, thereby creating a nuisance.

Camp Stotsenburg.—For construction of sewer system and bacteriological tanks: Supplies, \$12,000; services, \$6,000. Garrison: Ninth Cavalry, Second Field Artillery. As stated under item 239, there is no sewer system for the Cavalry garrison at this post, and the funds asked for are required for and include the construction of a sewer system with the necessary bacteriological tank, as all sewage will have to be treated, for the reason that there is no running stream into which it can be discharged.

Pettit Barracks.—For rebuilding portion of sewer system: Supplies, \$2,000; services, \$1,000. Garrison: Fourth Battalion, Philippine Scouts. The present sewer system in a portion of the post will require rebuilding.

Regan Barracks.—For completing sewer system: Supplies, \$3,000; services, \$1,500. Garrison: Seventh Battalion, Philippine Scouts.

W. & S. item 243-a.—Expenses incident thereto.

[Estimate, fiscal year 1919, \$27,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$18,000.00	\$18,000.00	\$0,000.00	\$0,000.00	\$27,000.00
Appropriated, fiscal year 1918.....	14,000.00	14,000.00	6,000.00	6,000.00	20,000.00
Expended, fiscal year 1917..	120,945.76	120,945.76	9,719.00	8,719.00	129,664.76

REMARKS.

United States.—The amount estimated for is for services only, and is about \$102,945.65 less than the cost for the fiscal year 1917 and \$4,000 greater than the amount appropriated for the fiscal year 1918. This increase is due to the calling into the Federal Service for the National Guard, National Army, and the increase of the Regular Army.

Philippine Islands.—The estimate is the same as that submitted by the department authorities. It is about the same as the cost for 1917 and is \$3,000 more than the amount appropriated for the fiscal year 1918.

ARMY APPROPRIATION BILL, 1910.

625

W. & S. item 243-b—Fuel for incinerators.

[Estimate, fiscal year 1919, \$232,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$232,000.00	\$232,000.00	\$232,000.00
Appropriated, fiscal year 1918.....	27,000.00	27,000.00	\$6,000.00	\$6,000.00	33,000.00
Expended, fiscal year 1917.....	19,297.96	19,297.96	19,297.96

REMARKS.

Supplies.—The supplies to be procured under this item are class "A."

United States.—The amount of the estimate is about \$212,702.04 more than the cost for the fiscal year 1917 and is \$205,000 greater than the apportionment for the fiscal year 1918. The increase is due to the calling into the Federal service of the National Guard, National Army, and the increase in the Regular Army. This estimate is based upon the estimate for 1918, plus a small increase for labor and material, and is as follows:

For stations other than for cantonments..... \$32,000
 For cantonments..... 200,000

Total..... 232,000

Philippine Islands.—No estimate is submitted according to this item for the fiscal year 1919. The amount appropriated for the fiscal year 1918 was \$6,000.

Item W. & S. 243c—Purchase of incinerators, repair.

[Estimate, fiscal year 1919, \$49,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$48,000.00	\$48,000.00	\$1,500	\$1,500	\$49,500.00
Appropriated, fiscal year 1918.....	1,062.50	1,062.50	1,000	1,000	2,062.50
Expended, fiscal year 1917.....	24,874.93	24,874.93	1,500	1,500	26,374.93

REMARKS.

Supplies.—The amount estimated for is required for the purchase of lumber, etc., for the manufacture of standard latrine boxes which are now being used in the place of incinerators, also for repairs to old incinerators as well as repairs to latrine boxes already constructed.

Services.—Under this item job or contract services are procured for repairs to incinerators, latrine boxes, etc.

United States.—The amount of the estimate is \$23,125.07 more than the cost for the fiscal year 1917 and is \$46,937.50 greater than the amount apportioned for the fiscal year 1918. The increase is due to the calling into the Federal service of the National Guard, National Army, and the increase in the Regular Army. This estimate is based upon the estimate for 1918 plus a slight increase for labor and material, and is as follows:

For stations other than for cantonments..... \$2,500
 For cantonments..... 45,500

Total..... 48,000

Philippine Islands.—The amount of the estimate is the same as that submitted by the department authorities. It is the same as the cost for 1917, and is \$500 more than the amount appropriated for the fiscal year 1918. The funds are required for the purchase and repair of incinerators at all posts in the Philippine Department.

W. & S. 244—Toilet paper.

[Estimate, fiscal year 1919, \$1,175,500.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,170,000.00	\$1,170,000.00	\$5,500.00	\$5,500.00	\$1,175,500.00
Appropriated, fiscal year 1918.....	54,500.00	54,500.00	5,500.00	5,500.00	60,000.00
Expended, fiscal year 1917.....	99,502.26	99,502.26	5,000.00	5,000.00	104,502.26

REMARKS.

Supplies.—The supplies under this item are Class "A." The issue of same being governed by paragraph 1215, Army Regulations 1913, section 5.

United States.—The amount of this estimate is about \$1,070,497.74 more than the cost for 1917 and is \$1,115,500 greater than the apportionment for 1918. This increase is due to the calling into Federal service of the National Guard, National Army, and the increase in the Regular Army. This estimate is based upon the estimate for 1918, plus a slight increase for labor and material, and is as follows:

For stations other than for cantonments.....	\$65,000
For cantonments.....	1,105,000
Total.....	1,170,000

Philippine Islands.—The amount of the estimate is the same as that submitted by the department authorities and is the same as the amount appropriated for the fiscal year 1918. It is \$500 more than the cost for the fiscal year 1917.

W. & S. item 245—Water systems, repair of.

[Estimate, fiscal year 1919, \$1,445,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$1,420,000.00	\$1,420,000.00	\$25,000.00	\$25,000.00	\$1,445,000.00
Appropriated, fiscal year 1918.....	54,375.00	54,375.00	23,000.00	23,000.00	77,375.00
Expended, fiscal year 1917.....	179,868.52	179,868.52	23,147.00	23,147.00	203,015.52

REMARKS.

Supplies.—The supplies under this item consist of pipe, fittings, and all materials required for making repairs to water systems, as well as reservoirs, sterilizers, filters, etc.

Services.—The services procured under this item are both job and contracts, and are required for repair of water systems, sterilizers, etc.

United States.—The amount estimated for is about \$1,240,131.48 more than the cost for 1917 and is \$1,565,625 greater than the apportionment for 1918. The increase under this item is due to the calling into the Federal service the National Guards, the National Army, and the increase in the Regular Army. This estimate is based upon the estimate for 1918 plus a slight increase for labor and material, and is as follows:

For stations other than for cantonments.....	\$95,000
For cantonments.....	1,325,000
Total.....	1,420,000

Philippine Islands.—The amount of the estimate is the same as that submitted by the department authorities. It is \$2,000 more than the amount appropriated for the fiscal year 1918 and is \$1,853 more than the cost for the fiscal year 1917. This is the minimum amount that will be required for current repairs to water systems at the several posts in the Philippine Department. The systems as originally installed in numerous cases consisted of galvanized-iron pipe, which, due to its age, is requiring increased funds yearly for their maintenance.

W. & S. item 246—Sewer systems, repair of.

[Estimate, fiscal year 1919, \$414,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$400,000.00	\$400,000.00	\$14,000.00	\$14,000.00	\$414,000.00
Appropriated, fiscal year 1918.....	18,750.00	18,750.00	10,000.00	10,000.00	28,750.00
Expended, fiscal year 1917.....	66,273.36	66,273.36	9,960.00	9,960.00	76,233.36

REMARKS.

Supplies.—The supplies procured under this item consist of pipe, fittings, and all material required to make repairs to sewerage systems and purification plants.

Services.—The services to be procured under this item are obtained by contract, hire, and job for making repairs to sewerage systems, etc.

United States.—The estimate is about \$333,726.64 greater than the cost for 1917 and about \$381,250 greater than the apportionment for 1918. The increase is due to the calling into the Federal service the National Guard, National Army, and the increase in the Regular Army. This estimate is based upon the estimate for 1918 plus a slight increase for material and labor, and is as follows:

For stations other than for cantonments.....	\$35,000
For cantonments.....	365,000

Total.....	400,000
-------------------	----------------

Philippine Islands.—The estimate is the same as that submitted by the department authorities. It is \$4,000 more than the amount appropriated for the fiscal year 1918 and \$4,050 more than the cost for the fiscal year 1917. The funds are required for repair of all sewer systems in the Philippine Department. No explanation is given for the increased amount estimated for.

ARMY APPROPRIATION BILL, 1919.

W. & S. item 247—Plumbing within buildings, repair of.

[Estimate, fiscal year 1919, \$786,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$760,000.00	\$760,000.00	\$76,000.00	\$76,000.00	\$786,000.00
Appropriated, fiscal year 1918.....	67,500.00	67,500.00	23,000.00	22,000.00	89,500.00
Expended, fiscal year 1917.....	75,585.37	75,585.37	20,334.00	20,334.00	95,919.37

REMARKS.

Supplies.—The supplies under this item consist of pipe, fittings, and material required for making repairs to plumbing systems within buildings.

Services.—The services procured under this item are both job and contract and required for repairs to plumbing systems within buildings.

United States.—The amount estimated for is about \$684,414.55 more than the cost for 1917 and is \$692,500 greater than the apportionment for 1918. The increase is due to the calling into the Federal service the National Guard, National Army, and the increase in the Regular Army. This estimate is based upon the estimate for 1918, plus a slight increase for material and labor, and is as follows:

For stations other than for cantonments..... \$120,000
For cantonments..... 640,000

Total..... 760,000

Philippine Islands.—The estimate is the same as that submitted by the department authorities. It is \$4,000 more than was appropriated for the fiscal year 1918, and is \$5,666 more than the cost for the fiscal year 1917. No explanation is given for the increased amount estimated for. The funds are required for plumbing repairs within buildings at all points in the Philippine Department.

W. & S. item 248—Employees.

[Estimate, fiscal year 1919, \$4,576,000.]

	United States.			Philippine Islands.			Grand total.
	Current requirements.	New construction.	Total.	Current requirements.	New construction.	Total.	
Estimate.....	\$4,500,000.00	\$4,500,000.00	\$76,000.00	\$76,000.00	\$4,576,000.00
Appropriated, fiscal year 1918.....	227,350.00	227,350.00	76,300.00	76,300.00	303,650.00
Expended, fiscal year 1917.....	306,760.80	306,760.80	76,000.00	76,000.00	382,760.80

REMARKS.

Services.—The services required under this item are for employees in connection with pumping plants, water systems, sewerage systems, plumbing, etc.

United States.—Under this item are paid the salaries and wages of engineers, firemen, plumbers, and others employed in connection with the various systems. The amount estimated for at permanent posts is \$250,000. This is a slight increase over the estimate for 1918 which was \$227,350. Due to the fact of increase in the cost of material and labor, the amount estimated for at cantonments is \$4,250,000, making a grand total for the United States of \$4,500,000. The estimate for cantonments is based upon one-half the per capita cost for 1918 multiplied by the number of men in the various cantonments.

Philippine Islands.—The estimate is the same as that submitted by the department authorities. It is \$300 less than the amount appropriated for the fiscal year 1918. It is the same as the cost for the fiscal year 1917.

ARMY APPROPRIATION BILL, 1919.

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
January 14 and 15, 1918.

STATEMENT OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, ACCOMPANIED BY BRIG. GEN. I. W. LITTELL, COL. H. J. HIRSCH, COL. J. P. WOOD, MAJ. L. HARDEMANN, MAJ. R. C. MARSHALL, JR., MAJ. WILSON, CAPT. CHAS. P. DALY, QUARTERMASTER CORPS.

CLOTHING AND CAMP AND GARRISON EQUIPAGE.

The CHAIRMAN. The next item is "Clothing and camp and garrison equipage." I notice in the first place, General, that the supplemental estimate is larger than the original estimate under this item. Your original estimate was for \$883,172,148.36, and then you come in with a supplemental estimate of \$949,342,872.27, making a total of \$1,832,515,020.63. I would like to have that matter explained first.

Gen. SHARPE. The reason for that is that the cost per capita is figured the same in both the original and the supplemental estimates.

The CHAIRMAN. What is the cost per capita?

Capt. DALY. That is \$457.

Gen. SHARPE. There was a reserve included in the supplemental estimate, which is not in the original estimate.

The CHAIRMAN. How much of the supplemental estimate is for reserve?

Capt. DALY. \$365,000,000.

The CHAIRMAN. How do you account for the difference between \$365,000,000 and \$949,000,000?

Capt. DALY. The first estimate of \$883,172,148.36 was based on an army of 1,612,245 men. The supplemental estimate is based on an army of 3,000,000 men, for supplies that would take over six months to obtain.

The CHAIRMAN. So that the real reason for this supplemental estimate is to provide for an army of 3,000,000 men?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. In this item, as in the others, I will ask you to put in the record a detailed statement showing what is embraced in each item, with an explanation of each item, and also a statement showing how much you have expended of the appropriation you had at the last session of Congress.

Capt. DALY. We have expended all of it, and we have a deficiency of \$300,000,000 now.

The CHAIRMAN. You have already spent all of the \$610,000,000, and you have a deficiency of how much?

Capt. DALY. We have a deficiency of about \$310,000,000. We have existing contract obligations that exceed the appropriation to that extent.

The CHAIRMAN. So that you will have to have a deficiency appropriation now of \$310,000,000?

Capt. DALY. Yes; that will make the 1918 appropriation practically what we estimated for when we appeared before the Committee on Appropriations.

The CHAIRMAN. That is practically \$1,000,000,000, including the appropriation you got at the last session and the deficiency you will ask for. How many men will that actually equip? What sized army will that amount of money actually equip?

Capt. DALY. You mean the 1918 estimate and the deficiency?

The CHAIRMAN. Yes.

Capt. DALY. I can not answer that offhand.

The CHAIRMAN. You can put that in the record?

Capt. DALY. Yes, sir. It is practically 2,033,345 men. The per capita cost is practically the same, \$547.

NOTE.—The above figure (2,033,345 men) is correct.

The CHAIRMAN. Then, if that amount of money is expended, you ought to have on hand enough clothing and equipment now for an army of 2,000,000.

Capt. DALY. There are a good many of the contracts under that appropriation for cloth and materials that extend to December, 1918, for deliveries.

The CHAIRMAN. I understand that, but what I am trying to get at is whether the amount of money that Congress gave you at the last session for clothing and equipment, together with the deficiency which, as I understand you, you expect to ask the Committee on Appropriations for right away, will equip that sized army when the money is finally expended?

Capt. DALY. Practically, yes, when it is finally completed.

The CHAIRMAN. There has been on this item a great deal of criticism throughout the country as to a shortage, especially of clothing, to be furnished to the soldiers when they were to go to camp. What was that condition when the first appropriation was made?

Gen. SHARPE. Mr. Chairman, is this an executive session of the committee?

The CHAIRMAN. Oh, yes.

Gen. SHARPE. I will explain the whole matter, and then the committee can determine what shall be omitted when the hearings are printed.

The CHAIRMAN. Yes.

Gen. SHARPE. The conditions were such that in February of this past year, after consultation with the Secretary of War, it was thought necessary to advertise for the supplies for the Army for this present fiscal year. The advertisement was inserted in the papers under date of February 4.

The appropriation bill for this year did not pass, and about the 5th or 6th of March, after the failure of the appropriation bill to pass, with the approval of the Secretary of War, orders were placed at once for the delivery of the stores for an army of 160,000 men—the Regular Army, which was contemplated to be in service in 1918—for delivery as soon after the first of the fiscal year as the articles could be obtained. Conditions continued to grow more alarming, and a little later in that month I obtained authority from the Secretary of War to purchase clothing sufficient for 500,000 men, in addition to the 160,000 which had already been granted, to provide for the Regular Army and the National Guard.

Mr. ANTHONY. What year was that?

Gen. SHARPE. That was 1917. On the 13th of March, in reply to a question which was asked of the department, when we would be able to handle supplies for 1,000,000 men, it was stated that we could take care of the National Guard and the Regular Army by the 31st of July, but that we would not be able to take care of an additional 500,000 men until the 31st of December.

The same question came up again, and was replied to in the same way on the 2d of April, and again on the 16th of April.

Then the urgency for calling into the service a great number of National Guard organizations was pressing, and we made the statement that we could not take care of any additional troops to the ones we already contemplated, and in that statement we gave practically the same résumé which I have just repeated to you. That was transmitted to every one of the department commanders along about the 23d of April, I think.

At that time, along in April, the problem was given to us of providing for 1,078,000. We were working on that problem. It contemplated the National Guard, the Regular Army, and the National Army. There was no intention then of sending any troops abroad until next year.

Mr. KAHN. That is, you mean this year?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. In other words, there was no intention of sending any troops abroad until at least 12 months after the declaration of war?

Gen. SHARPE. Twelve months after that time. Our arrangements were made with that in view.

MARCH 13, 1917.

Memorandum for the Chief of Staff.

1. Clothing and equipment necessary for 1,000,000 men can, under existing conditions, be procured within 10 months with the understanding that it might be necessary to purchase some blankets which do not conform to existing specifications, but which would closely approximate standard quality and color.

2. It should also be stated that it would not be possible to secure sufficient canvas at once to shelter the men, and it would be necessary to put a large portion of them in cantonments. As now equipped, it requires from 60 to 90 days in which to make delivery of canvas in sufficiently large quantities. The entire quantity required for the million men, however, would be available within the limit of 10 months above specified.

3. The foregoing statement is based on the assumption that the funds will be appropriated and available to cover the cost of all the supplies required for the million men, at the outset, thus enabling the department to at once place the orders for the supplies and in the quantities required, thus keeping the factories in continuous operation.

HENRY G. SHARPE,
Quartermaster General.

APRIL 2, 1917.

1. The present Regular Army and 68,000 men of the National Guard can be practically supplied with clothing and equipage from supplies on hand and deliveries being made daily (in addition to that which the National Guard already has), including tentage. The supplies for the National Guard now being called into the service will practically be ready for it when required.

2. The Quartermaster Corps believes that it will be able to maintain the supply of the above number of troops after their initial equipment.

3. It will be noted that 89,000 (instead of 68,000) of the National Guard have been called into the service, but the Quartermaster Corps is making every effort and believes that it will be successful in equipping that number also.

4. The difference between the present total strength of the Regular Army plus the above 68,000 men and 500,000 men will be equipped by the end of July from daily deliveries under contracts already made.

5. It will require four months to complete the equipment of the Regular Army and National Guard, both at war strength (approximately 500,000), with regulation articles except tentage. A slight reduction in this time may be made by using certain commercial articles.

6. To equip another 500,000 men will require five months in addition to the preceding four months, provided that all of the orders for the second 500,000 men could be placed at the same time as the orders for the equipment of the first 500,000 men.

7. Animal transportation under the old tables of organizations can be now supplied for the Regular Army and the National Guards, the latter being at its maximum strength while on the border, i. e., 158,000 men. It is understood that new tables of organization have been prepared which increases the transportation, but those tables have not been furnished the Quartermaster General.

8. Considerable time would be saved in the work of the Quartermaster Corps in equipping the National Guard being called out, if the Quartermaster General could be notified simultaneously with The Adjutant General of the call to be made for additional troops.

9. To obtain supplies as quickly as possible the Quartermaster Corps has placed orders for delivery before July 31, with as many contractors as possible, and all it could do to expedite the delivery of a greater quantity for an additional number of men would be to increase the orders to each of the present contractors and to induce other firms and manufacturers which could not agree to deliver by July 31 to accept orders for a later date.

H. G. SHARPE,
Quartermaster General.

APRIL 16, 1917.

Memorandum for CHIEF OF STAFF:

It is understood that the "other plan" referred to is for this department to be prepared to equip 500,000 men by the end of July and 500,000 more by the 31st of December, with proper uniform and equipage, or to clothe and equip the first 500,000 by the middle of June with articles closely approximating standard articles, and the third 500,000 similarly by November 1.

It will not, in the opinion of this office, be practicable to properly clothe and equip this or any other number of men more than was provided for in the original plan.

QUARTERMASTER GENERAL.

OFFICE QUARTERMASTER GENERAL,

April 19, 1917.

THE ADJUTANT GENERAL OF THE ARMY:

1. With reference to paragraph (a) the question can be answered in the affirmative.

2. With reference to paragraph (b), the question would depend on where the men are to be mobilized for which the supplies are required.

3. During the month of March orders were placed for the delivery of clothing and equipage up to July 31 in sufficient quantities, except tentage, to equip an army of 500,000 men, including the National Guard and Regulars now in the service. These supplies are coming in daily, and the Regular Army and National Guard so far called in have been taken care of and are provided for,

and sufficient supplies will be coming in to take care of 25,000 additional men in April, 50,000 in May, 75,000 in June, and 100,000 in July, but it must be borne in mind that these supplies are being received from various factories scattered from the Atlantic to the Pacific coast, the bulk coming from the Eastern States.

4. Early in April orders were placed for clothing and equipage for an additional 500,000 men for delivery up to December 31, and assuming that the first 500,000 men are equipped by the end of July, the department will be able to clothe and equip 100,000 men monthly thereafter, with the exception of tentage.

5. Much time will be consumed even after the supplies are delivered in transporting them to the places where the troops will require them. Especially is this true if they are mobilized at points distant from the factories. Attention is invited to the fact that to take care of a great number of troops at once the demands on depots should be divided among the various supply depots which are now being stocked up to take care of certain territorial limits.

6. So far as transportation supplies are concerned, there is a sufficient quantity of wagons, ambulances, and harness now on hand to equip approximately 50,000 men immediately, in addition to the Regular Army and National Guard. By utilizing motor transportation in lieu of animal-drawn transportation an additional 100,000 men can be equipped by May 20, 1917.

7. Bids are now being invited for transportation supplies necessary to equip 500,000 men, and it is estimated that these supplies can be delivered in from 60 to 90 days after date of award. It can, therefore, be stated that the necessary transportation for any number of men that can be equipped and subsisted during the periods named in the above communication can also be supplied with the necessary transportation.

8. It should be borne in mind that the resolution of the Council of National Defense will, it is understood, prevent indefinitely the supply of cots, although it is not known to this office what effect the resolution will have on contracts made and guaranteed by bond from bidders.

HENRY G. SHARPE,
Quartermaster General.

APRIL 27, 1917.

From: The Adjutant General of the Army.

To: The Commanding General, Western Department, San Francisco, Cal.

Subject: Calling out of National Guard troops.

Referring to your telegram of April 13, 1917, recommending that all Coast Artillery, National Guard, including field officers of the States of Oregon and Washington, and the remainder of the National Guard in California, including all field officers, be called into the Federal service, I am directed by the Secretary of War to inform you confidentially that these National Guard troops can not be called out at the present time unless immediate requirements make it necessary, in view of the following conditions as reported by the Quartermaster General:

During the month of March orders were placed for the delivery of clothing and equipage up to July 31 in sufficient quantities, except tentage, to equip an army of 500,000 men, including the National Guard and Regulars now in the service. These supplies are coming in daily, and the Regular Army and National Guard so far called in have been taken care of and are provided for, and sufficient supplies will be coming in to take care of 25,000 additional men in April, 50,000 in May, 75,000 in June, and 100,000 in July, but it must be borne in mind that these supplies are being received from various factories scattered from the Atlantic to the Pacific coast, the bulk coming from the Eastern States.

Early in April orders were placed for clothing and equipage for an additional 500,000 men, for delivery up to December 31, and assuming that the first 500,000 men are equipped by the end of July, the department will be able to clothe and equip 100,000 men monthly thereafter, with the exception of tentage.

Much time will be consumed even after the supplies are delivered in transporting them to the places where troops will require them; especially is this true if they are mobilized at points distant from the factories. Attention is invited to the fact that to take care of a great number of troops at once, the demands on depots should be divided among the various supply depots which are now being stocked up to take care of certain territorial limits.

So far as transportation supplies are concerned there is a sufficient quantity of wagons, ambulances, and harness now on hand to equip approximately 50,000 men immediately in addition to the Regular Army and the National Guard. By utilizing motor transportation in lieu of animal-drawn transportation, an additional 100,000 men can be equipped by May 20, 1917.

Bids are now being invited for transportation supplies necessary to equip 500,000 men, and it is estimated that these supplies can be delivered in from 60 to 90 days after date of award. It can, therefore, be stated that the necessary transportation for any number of men that can be equipped and subsisted during the period named in the above communication can also be supplied with the necessary transportation.

It should be borne in mind that the resolution of the Council of National Defense will, it is understood, prevent indefinitely the supply of cots, although it is not known to this office what effect the resolution will have on contracts made and guaranteed by bond from bidders.

By order of the Secretary of War:

WM. M. CRUIKSHANK,
Adjutant General.

WAR DEPARTMENT,
OFFICE OF THE QUARTERMASTER GENERAL OF THE ARMY,
Washington, October 18, 1917.

Memorandum for the Chief of Staff:

1. With reference to the attached cablegram from Gen. Pershing, in which he states that the clothing on hand October 1 is 16,700 woolen breeches; 1,200 woolen coats; 4,200 service hats; 2,000 leggings, canvas; and 1,000 pairs woolen stockings, and that the clothing situation is critical, attention is invited to memorandum of this office of August 25, 1917 (Q. M. G. O., 111.03-CE Genl., 1918), in which it was shown that the shortage of clothing was due to three causes, as follows:

First. That arrangements were made to call the National Army before the date this department stated they could equip them.

Second. That shipments of troops abroad were made a year before it was the intention to begin such shipments, when the problem of supplying the troops was given to this department.

Third. That various special units not included in the original number estimated for were shipped abroad.

These are the facts, and no doubt the military situation demanded this; but according to the above cablegram from Gen. Pershing, the clothing situation is becoming critical on the other side, and the inability to provide clothing in case any further troops are called into the service in this country still further complicates the problem.

2. On October 12 a confidential letter was addressed to this office by The Adjutant General, giving the priority of the supply of woolen clothing to the various units to be shipped abroad and indicating the order in which these troops were to be equipped, and it was presumed that they were to be sent abroad in the same order. This provides, first, for a large number of aero squadrons and then for another division of troops, and reference is made to this letter in this connection because if additional troops are sent abroad with the reserve which must be given them, it will further complicate the clothing situation here, account of making a great shortage.

In repeated cablegrams, Gen. Pershing has urged necessity of sending labor troops over in order to enable him to make proper provisions for handling the supply of troops which he already has there. In the letter of October 12 above referred to, as far as the Quartermaster's Department is concerned, many of these labor troops are to be shipped last.

3. If it is not deemed advisable to discontinue the shipment of troops abroad, the necessity of providing adequate clothing for the upkeep of troops already abroad is imperative, and authority to make shipment for that purpose in preference to any other demands is requested.

Attention is invited to the attached statement, which shows all the shipments which have been made to the troops abroad, exclusive of the full allowance of equipment taken with them individually.

HENRY G. SHARPE,
Quartermaster General.

As you gentlemen recall, there was a change in those plans, and at the same time that the change in the plans for sending troops abroad was made the law of May 18, 1917, authorized the creation of a great many technical units. A great many of these technical units were shipped abroad with the troops.

The training camps were established and they drained us of our clothing. That made about 130,000 additional men to provide for, above the program which had been given to us.

In addition to that, because of the movement of troops abroad, there had to be transmitted with them six months' reserve supplies.

The date, as I have stated, when we could furnish the equipment for these men was December 31, 1917—that is, the original 1,000,000 men, 500,000 on July 31, and 100,000 monthly thereafter, making supplies for a full million men by the 31st of December, 1917.

It was necessary to call the National Army, in order to train them, before the 31st of December, and the date for that was fixed as September 1. We had these additional troops also to furnish with supplies, and, as I stated, also had to supply the troops shipped abroad.

Attention was called to the fact, along in July or August, that we would not be able to handle more than 100,000 men in September and probably 100,000 monthly thereafter.

But in order to have the men drilled, it was deemed necessary to order them into the cantonments on the dates they were ordered. The shipments of the troops abroad and the shipments of clothing there and the additional number of troops which were called out, of course, depleted the stock which we were to have on hand anticipatory of the mustering in of troops on the dates which had been set. It was also the understanding that these troops could go to the camps even if they had to go there and be drilled in their civilian uniforms, the same as was done in England.

We have tried to meet every one of these conditions, and on October 18 I submitted a memorandum stating how the problem had been complicated by these new changes made in it, the three changes, the shipment of troops abroad a year before it was expected, the calling of an additional number of technical units, making a good many over and above the number which we were to equip under our program. That was returned to me by an indorsement of The Adjutant General's Office of October 23, reading as follows:

[First indorsement.]

WAR DEPARTMENT,
ADJUTANT GENERAL'S OFFICE,
October 23, 1917.

To the Quartermaster General, with the information that the decision of the President to begin sending troops abroad at an earlier date than had been anticipated by him, and to call the increments of the National Army at an earlier date than he had recommended, has called upon his department to put forth very strenuous efforts, which efforts, however, have so far fairly well met the needs from day to day, and the Secretary is convinced that this same energy will meet all future calls made upon his department; that while the supply situation is so critical supplies will continue to be distributed in such manner that no one will suffer; that troops designated for over-seas service must be first equipped according to approved schedule of priority in equipment board; that Gen. Pershing's needs must be taken care of, but a large reserve will not be created in France at the expense of the men we now have under arms and who must be made comfortable; that as soon as the supply situation will allow

the following priority list will govern: Gen. Pershing's needs ahead of all others, with troops soon to join him second; National Army divisions in northern cantonments, third; other troops in northern places, fourth; National Army troops at southern camps, fifth; and other troops in southern camps last; that the supply situation will be kept in mind when further increments of the draft are under consideration.

By order of the Secretary of War:

PAUL GIDDINGS, *Adjutant General*.

That was signed by The Adjutant General, by order of the Secretary of War.

Mr. GORDON. What is the date of that, General?

Gen. SHARPE. The date of that is October 23.

The CHAIRMAN. Then, as I understand it, the first reason for the shortage is the change in the view of the War Department as to sending the troops to France. That is the first reason?

Gen. SHARPE. Yes, sir.

The CHAIRMAN. And that change was made when?

Gen. SHARPE. When Gen. Pershing's troops went over, some time in May or June.

The CHAIRMAN. Then the next most important reason was that the National Army or the drafted men were called into camps to be trained in civilian clothes when you knew you did not have the supplies necessary to equip them?

Gen. SHARPE. I would like to explain in that connection, Mr. Chairman, that England, the greatest country in the world for the production of cloth, had practically the same problem we had submitted to us, and she had the resources of this country to call upon to supplement her own efforts. We did not have that.

We had to depend upon ourselves. It took England a year to equip an army of a million men, and we have got ours—

The CHAIRMAN (interposing). You mean to equip and arm and clothe?

Gen. SHARPE. To clothe them.

The CHAIRMAN. It took England a year to clothe an army of a million men?

Gen. SHARPE. Yes, sir; that is the information we have. We have come near doing that now, and we were able to do it in a portion of the time that England took to do it, and I think that is a wonderful tribute to the business capacity and progressiveness of our business people.

The CHAIRMAN. Let me get one thing straight there. I understand that the drafted army was called into the service earlier than was first expected.

Gen. SHARPE. No, sir; not earlier than was expected. We said it could be done by December 31, and they said they must have it done by September 1.

The CHAIRMAN. You said it could not be done until December 1?

Gen. SHARPE. As far as the equipment was concerned.

The CHAIRMAN. They said it must be done by September 1?

Gen. SHARPE. Yes, sir.

Mr. MCKENZIE. I would like to ask to be put into the record a statement showing the number of men in these special and technical units that you have been called upon to equip.

The CHAIRMAN. I asked for that.

Gen. SHARPE. Here is a memorandum of July 21, which I submitted, which is a part of the résumé of what I have given you. It is a memorandum to the Chief of Staff. He asked for a statement in regard to the additional troops which we had sent over, in a memorandum dated July 20.

JULY 21, 1917.

Memorandum for the Chief of Staff:

1. Referring to memorandum dated July 20, there is submitted the following list showing the enlisted men comprising the special units that have been raised and uniformed that were not originally estimated for, i. e.:

Training camps.....	40, 000
9 railway regiments, Engineers.....	10, 000
1 forestry regiment, Engineers.....	1, 167
6 months' reserve for 10 Engineer regiments.....	11, 670
Aviation schools.....	1, 460
5 telegraph battalions, E. R. C.....	1, 045
13 base hospitals.....	1, 796
Ambulance Corps.....	4, 000
Field hospitals and ambulance companies (64 each, about 60 per cent complete).....	11, 700
Ordnance, E. R. C.....	333
Quartermaster, E. R. C.....	2, 500
6 months' reserve for first and second convoys.....	25, 000
6 months reserve for marines.....	3, 800
Total.....	130, 154

2. In addition to the foregoing, it has been necessary to provide a considerable quantity of clothing for the equipment of reserve officers, especially those ordered for duty with troops abroad.

3. Attention in this connection is invited to statement made verbally in an interview with Gen. Bliss, Gen. Smith, and the undersigned on April 2, 1917, wherein it was stated that:

"Considering the stock on hand and orders so far placed, the equipment of the first 500,000 men (Regular Army and National Guard) could be completed by July 31, and that if orders were placed at once for supplies for an additional 500,000 men they could be equipped within five months from that date."

4. On April 16, 1917, in a memorandum of the General Staff it was stated:

"It will not be practicable to properly clothe and equip within the time previously allotted this or any other number of men more than that provided for in the original plan."

5. In an indorsement of The Adjutant General, dated April 19, 1917, the following statement was made:

"Early in April orders were placed for clothing and equipage for an additional 500,000 men for delivery up to December 31, and assuming that the first 500,000 men are equipped by the end of July the department will be able to clothe and equip 100,000 men monthly thereafter, with the exception of tentage.

HENRY G. SHARPE,
Quartermaster General.

Mr. McKENZIE. What is the date of that?

Gen. SHARPE. It is dated July 21, I think.

Mr. McKENZIE. There have been a great many technical units organized since that time—regiments of Engineers?

Gen. SHARPE. There were 10 regiments of Engineers in that. There have been others organized since that time.

Mr. McKENZIE. There is the Twenty-third Regiment of Engineers now at Camp Meade.

Gen. SHARPE. Yes, sir. We also had the second training camp, and the increase of the Medical Corps, quite a considerable increase, and an additional increase of our own corps.

The CHAIRMAN. I asked you the other day to put in the record a full and complete statement of the total number of these special and technical units authorized by the act of May 18.

Gen. SHARPE. I understood that was for our corps only.

The CHAIRMAN. You furnish the supplies for them. Do they not have to give you the number of men they have, so that you know how many you will have to supply?

Gen. SHARPE. When they commence to organize only. We are notified of the organizations.

The CHAIRMAN. You can put in the record the number of special and technical units you have been asked to equip?

Gen. SHARPE. Yes, sir.

Mr. MCKENZIE. Have you been asked, up to this time, to furnish uniforms for the meteorological unit of the aviation section?

Gen. SHARPE. I do not remember seeing that.

The CHAIRMAN. The question has been asked why you happen to furnish the supplies for the marines.

Gen. SHARPE. We have to do that when they are operating abroad. We clothe them and feed them whenever they are operating with the Army.

The CHAIRMAN. You do not class them as technical units of the Army?

Gen. SHARPE. No, sir; they are part of the regular establishment, and they are sometimes unexpectedly thrown upon us. That number of men we did not know about, of course.

The CHAIRMAN. Is the Army now furnished with sufficient clothing and equipment?

Gen. SHARPE. Maj. Hardeman can answer that better than I can.

The CHAIRMAN. If not, how much short is the Army now?

Maj. HARDEMAN. About 125,000 coats short, furnishing one per man. That was on the 1st of December.

Gen. SHARPE. That is the woolen coats, not the overcoats.

Mr. ANTHONY. Does that mean that there are 125,000 men at the camps that have not woolen coats?

Maj. HARDEMAN. Not now.

Mr. ANTHONY. That means that you are short that much in your reserve that you ought to have?

Maj. HARDEMAN. On the 26th of December there were 100,619 men short of coats, but we had sufficient in number, but not of proper sizes. That shortage has been made up since by shipping proper sizes in, and that was not exactly correct, because we found out afterwards that they were figuring on the final draft. It is probable that about 75,000 would have covered it.

The CHAIRMAN. About how many?

Maj. HARDEMAN. About 75,000 woolen coats required to give each man in each camp a woolen coat.

The CHAIRMAN. You mean 75,000 to each camp?

Maj. HARDEMAN. No.

The CHAIRMAN. In the whole Army?

Maj. HARDEMAN. Yes, sir. As far as we can find out from the reports we have received all that stuff was ordered at once.

The CHAIRMAN. In other words, I want you to put in the record the shortage on the latest date you have on each article of clothing that goes with a soldier's equipment.

Gen. SHARPE. We will get that as of to-day.
(The matter referred to is as follows:)

Statement of shortages reported at camps on Dec. 26, 27, and 28, 1917, and of conditions Jan. 19, 1918.

Camp.	Shortages reported.			Remarks.
	Over-coats.	Coats.	Breeches.	
Devens.....				No shortage originally reported; none reported since.
Upton.....				Do.
Dir.....	19	1,440		Reported equipped, telegram Jan. 9, 1918.
Meade.....	217	8,912	1,350	Reported on Jan. 1, 1918: 3,400 coats to be supplied Jan. 2, 1918, by Baltimore depot would complete equipment.
Lee.....		2,790		No further reports shortages. Shipments coats reported as follows: 10,010 Dec. 28, 755 Jan. 15, 440 Jan. 16, 1918.
Jackson.....				No shortage originally reported. On Jan. 1, 1918 reported a shortage of 500 breeches and 500 coats. On Jan. 17, 1918 reported shortage of 2,038 coats, with shipment of 600 coats on hand unopened. 5,000 shipped from New York, Jan. 3, 1918, probably not yet received. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Gordon.....	1,838	7,900	1,838	Reported on Jan. 7, 1918, that on arrival of 10,006 coats shipped from New York, Jan. 5, command would be equipped. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Sherman.....		1,150		Reported on Jan. 17, 1918, a shortage of 7,000 coats which had been purchased and were then en route. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Custer.....	530	4,530		Reported on Jan. 18, 1918, shortage of 4,421 coats; 706 were shipped from Chicago Jan. 3; 421 on Jan. 10, and 1,500 on Jan. 19; New York was directed to ship 1,794 on Jan. 19, 1918, of sizes required. Delay in ordering was due to the fact that telegram of division commander first reported on Jan. 9 that 421 coats were required and on Jan. 18 wired that 4,421 were required. Sufficient cotton coats and flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Grant.....		3,821	3,821	On Jan. 19, 1918, reported that 1,570 coats were expressed Jan. 14 from Chicago, 2,251 on Jan. 19, and that 1,371 will be expressed Jan. 21. On Jan. 17 reported no breeches needed. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Taylor.....	111	1,086	1,086	On Jan. 17, 1918, reported that he was provided with breeches and overcoats and upon arrival 1,570 coats shipped Jan. 8 from Chicago, command would be equipped. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Pike.....	774	5,868	2,459	On Jan. 17, 1918, reported sufficient overcoats and breeches, including those required for final increment of draft, on hand, and on arrival of 7,010 coats from New York would have sufficient to equip troops. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Funston.....	38	9,600 1,077	126	On Jan. 17, 1918, reported still short 2,900 coats and on arrival of 5,000 shipped by New York there will be sufficient to equip command. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Dodge.....	50	300		No report of present shortage received; 2,645 overcoats were shipped by New York Dec. 29, 1917; 5,515 coats shipped by New York Dec. 21, 1917; and 5,000 coats shipped Jan. 6, 1918.
Travis.....	268	6,632		On Jan. 17, 1918, depot quartermaster at Fort Sam Houston reported that a board of officers found shortage of 1,761 breeches, all of which he supplied and a shortage of 15,709 coats, of which the quartermaster had shipping advice of 14,240 on Jan. 11, 1918; 8,808 were shipped from New York on Jan. 10 and 12, 1918. The quartermaster was advised that in view of conflicting report of quantities and sizes needed, further report was to be submitted to the Quartermaster General on receipt of shipments then en route. In the meantime to issue additional flannel shirts and wool undershirts to wear with cotton coats until wool coats arrive. This camp, although it had large quantities of wool uniforms in storehouse, apparently preferred to wear the cotton until ordered by this office to issue the woolen.

Statement of shortages reported at camps on Dec. 26, 27, and 28, 1917, and of conditions Jan 19, 1918—Continued.

Camp.	Shortages reported.			Remarks.
	Over-coats.	Coats.	Breeches.	
Lewis.....				Did not report shortage in December. On Jan. 17, 1918, reported 500 breeches, 1,416 coats, and 968 overcoats short, and sufficient then en route to equip the division.
Greene.....				This camp is garrisoned by Regulars and is being equipped with 2 suits per man for duty abroad.
Wadsworth....	45	3,387	4,001	On Jan. 17, 1918, reported there was no shortage of overcoats and that issues of wool coats and breeches at the rate of 1 per man was completed Jan. 6, 1918.
Hancock.....		4,000	3,200	On Jan. 17, 1918, repeated his report of Jan. 3 that every man in the division had 1 overcoat, 1 pair breeches, and 1 coat.
McClellan.....		1,200	1,200	On Jan. 18, 1918, reported that every man had an overcoat, 1 wool coat, and 1 wool breeches.
Sevier.....		2,935	5,963	On Jan. 17, 1918, reported that when shipment of 4,970 uniforms now en route arrived, sufficient wool uniforms would be on hand to equip command. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Wheeler.....		1,141	1,141	On Jan. 17, 1918, reported all men in camp equipped with 1 overcoat, 1 coat, and 1 breeches. This command is being equipped for duty abroad.
Sheridan.....				Did not report shortage in December. On Dec. 29, 1917, reported that 3,000 breeches and coats were required. On Jan. 20, 1918, reported that telegram of Dec. 29, 1917, was not based on correct understanding of situation and that when shipments en route arrived, would have sufficient to equip command. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
McArthur.....		5,500		This camp is being equipped with 2 suits per man for duty abroad.
Logan.....				No shortage reported.
Bowie.....		3,725	2,068	On Jan. 17, 1918, reported that shipments have been received to complete equipment; 1 overcoat, 1 coat, and 1 breeches, wool, per man.
Doniphan.....	2			On Jan. 20, 1918, reported 2,290 coats, wool, were required, but no breeches or overcoats; that with coats en route every man will be equipped with 1 suit and 1 overcoat. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Shelby.....		5,100	1,900	On Jan. 17, 1918, reported a surplus of overcoats, coats, and breeches in hands of organizations, but made no mention of any shortage.
Beauregard....	10,863	3,004	1,042	On Jan. 18, 1918, reported that one complete uniform and overcoat for each man present except wool coats were on hand, but failed to give number or sizes required. New York reports shipment Jan. 8, 1918, 997 coats; Jan. 10, 1,340, with 470 yet to be shipped. On receipt of these coats a total of 29,998 coats will be on hand for 23,430 men. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.
Cody.....		2,182	1,495	On Jan. 9, 1918, the depot quartermaster at El Paso wired that every man at this camp was equipped with 1 overcoat and 1 wool uniform.
Kearney.....		13,809	13,836	On Jan. 17, 1918, reported that upon receipt of coats expressed from Philadelphia depot on Jan. 2, 5, 9, 11, 12, and 16, 1918, he will have sufficient coats to equip command, and has sufficient breeches and overcoats. Sufficient cotton coats and a supply of flannel shirts are on hand to provide for comfort of men until woolen coats are received.

OFFICE QUARTERMASTER GENERAL,
December 29, 1917.

DEPOT QUARTERMASTER,
400 Brookline Street, Cambridge, Mass.:

Telegram sent you December 28, shortage cantonments and camps under your supervision. Take steps at once to purchase in your locality any uniform garment which is short on account of size or deficiency in order to give each man one woolen uniform complete in serviceable condition. In order to accomplish this you should make exchanges where necessary between camps and canton-

ments under your direction or have any garment in any cantonment or camp altered sufficient to fairly fit a man for which it is required. Report to this office daily the number of garments which you purchase and the number which you have altered. This condition at camps and cantonments under your supervision must be corrected within the coming week. If any garments uniform in quality or closely approximating for which a shortage exists of at least the full amount allowed in equipment C can be bought in your locality over and above what the men now require report by wire will be made to this office. You are not restricted to absolute uniform articles in purchasing the number required for the allowance authorized, but the articles purchased must be as closely approximating specifications as you would be willing to use in an organization commanded by yourself in the service. You are not limited to price except where the price is unreasonable, in which case you will take the article and report to this office for settlement of the question of price. The main thing now is to equip within the coming week the men in camps and cantonments intrusted to you with at least one fairly well-fitting uniform complete and a regular allowance of underclothing, socks, etc. The conservation officer at each cantonment and camp will be made use of to cooperate with you in making alterations with repair machinery at their disposal. In addition, you are authorized to employ garment makers to alter garments.

GOETHALS,
Per SMITH.

(To all depot and camp quartermasters.)

The CHAIRMAN. There is one other thing I would like to have explained. How long do you figure that a soldier's equipment will last him, ordinarily?

Maj. HARDEMAN. That varies with each different article. We figure that about 10 per cent of the breeches will have to be replaced each month and about 5 per cent of the coats. I can give you the number required for 100 men for each quarter. It takes one-fourth of 62½ pairs of breeches for every 100 men every three months; that is about 5 per cent of breeches per month. For the coats, you have one-half of that.

The CHAIRMAN. What about the shoes?

Maj. HARDEMAN. So far as the shoes are concerned, we figure that it takes 100 pairs of shoes for each quarter for each 100 men; that would be 33⅓ per cent.

The CHAIRMAN. Can you tell the committee in what length of time you have to completely furnish the soldier with a new outfit?

Maj. HARDEMAN. I have that table made out, showing the number required per month for each 100 men for each article of clothing required.

The CHAIRMAN. You can put that in the record.

(The matter referred to is as follows:)

Overcoats.....	2	4.2	1	2.2

The CHAIRMAN. What I am trying to arrive at is: It has already been testified that you were given enough money last year, with the deficiency you are going to ask for, to fully equip an army of 2,000,000 men when your contracts are all carried out, up to the close of this fiscal year. We are going to be called on to explain why we should increase that appropriation by \$800,000,000 to equip an army of 3,000,000 men.

Gen. SHARPE. That large increase is due to the fact that we have to meet very large calls which Gen. Pershing has made for the renewal of the supplies. I can give you a list of what Gen. Pershing has asked for, in regard to each article of clothing.

The CHAIRMAN. You can put that in the record.
(The matter referred to is as follows:)

Supplies to be shipped for troops oversea for each 25,000 men.

¹ Two-thirds hip, and one-third knee.

² For four months only.

³ For three months only.

⁴ Initial stock.

⁵ Tentative figures.

⁶ Heavy weight, October to April, inclusive; light weight, May to September, inclusive.

Mr. SHALLENBERGER. We make these appropriations for a year.

Gen. SHARPE. Yes.

Mr. SHALLENBERGER. We are given the number of shoes a man uses in each quarter, and he practically needs a new pair of shoes every three months. Could we not have the information as to how many shoes and how much clothing a man requires for the year, so that

when we appropriate for the year, we can have an accurate understanding of what the needs are?

Gen. SHARPE. I have given you a list of the calls which Gen. Pershing has made.

Mr. SHALLENBERGER. Can you not let us have that for the year?

Gen. SHARPE. They are very largely increased.

Mr. KAHN. How many yards of cloth have you contracted for for suits of clothes?

Col. HIRSCH. Of the 16-ounce cloth we have contracted for a little over 31,000,000 yards, the deliveries running to December, 1918.

Mr. KAHN. How many yards are required for a soldier's uniform?

Col. HIRSCH. You can figure on an average of about $3\frac{1}{4}$ yards, I should say.

Mr. KAHN. That would practically provide for nearly 10,000,000 uniforms.

Col. HIRSCH. That is correct; yes, sir.

Mr. KAHN. That is what you are figuring on. For how large an army would those uniforms provide?

Col. HIRSCH. When we first started out producing, we were told to buy enough of that cloth to provide uniforms for 500,000 men, and then on top of that came the estimate to purchase for another 500,000 men, and then came an order to estimate for replenishment for a million men for another 12 months. Then we got a call for another 500,000 men, with replenishment for 12 months, and on top of that another for about 456,000 men for replenishment for 12 months, so that we were practically told to place orders for 1,956,000 men, with replenishment for 12 months, and in some of the items of clothing and equipage we have already bought what was necessary for an initial equipment for 1,956,000 men, plus the replenishment as figured on by past experience for the same number of men.

But in making purchases for the 16-ounce and the 30-ounce goods for overcoatings and the flannel shirtings, and also the blankets, the Quartermaster General authorized the committee on supplies, where they had advantageous offers, to recommend purchases up to the end of December, 1918, and in some cases, particularly in 16-ounce goods, and in 30-ounce goods, and in blankets, and in shirting flannels, more purchases have been made than the allowances for 1,956,000 men, plus replenishment for 12 months would be required, simply because the Quartermaster General decided that where advantageous offers could be obtained for those, it would be to the advantage of the Government to place that many ahead.

Gen. SHARPE. The purpose being to keep the factories at work.

This matter came up in August or September last year, and they were about to enter into a large contract with the American Woolen Co., and I asked if after the mills were started in operation, instead of stopping on the 30th of June, 1918, they could not make a more favorable contract, as far as the Government was concerned, if they made a contract for additional mills, running the deliveries between June 30 and December 31, 1918. They said they could, and so I authorized them to go ahead under that proposition, and I had the matter approved by the Secretary of War, the purpose being to keep the factories in operation.

Mr. KAHN. What do you mean by more favorable contracts? Were you able to get the goods at a reduced price?

Gen. SHARPE. At a much reduced price.

Mr. KAHN. Now, of course, you have practically, as the Colonel said, one coat for every man in the Army, as I understand it.

Gen. SHARPE. One suit with the exception of the coats.

Mr. KAHN. I understood you to say you had one suit for every man in the Army.

Mr. GORDON. The witness just stated that they had contracted—

Mr. KAHN (interposing). I know they have contracts out, but they only have one suit for every man.

Mr. TILSON. Is the converse true, that every man in the Army has one suit?

Mr. KAHN. Yes; that is what the testimony is.

Mr. TILSON. I mean, has he the suit?

Mr. KAHN. That is what I was going to ask.

Gen. SHARPE. With the exception of the coat.

Mr. KAHN. Do you think that one suit is sufficient?

Gen. SHARPE. The allowance is two suits.

Mr. KAHN. That is, you are one suit short for every man in the Army to-day.

Capt. DALY. No, sir; not for the men abroad.

Gen. SHARPE. All the men who go abroad, before they get aboard the transports must have two suits with them.

Mr. KAHN. That is about 200,000?

Capt. DALY. And in addition, they must have six months' reserve.

Mr. KAHN. They are fully equipped, but there are still over a million men in this country who have only one suit; is not that right?

Col. HIRSCH. I do not believe that statement is exactly correct. When we first started out to equip the Army the initial equipment was one coat and two pairs of breeches for every man, and the orders were placed on that basis. If it had not been for the fact that when the troops went abroad they immediately gave two coats and two pairs of breeches to every one of those men, and in addition to that sent a six months' reserve to France, which took away the stuff available for that number of men, in all probability we would have had one coat and two pairs of breeches for all the men, which is what we figured on in the beginning.

After the troops began to go abroad they decided they wanted to figure on giving them two coats and two pairs of breeches, but we had always figured on two pairs of breeches, and at the present time a great many of the men have two breeches, and the stuff now coming in will very shortly give every man two pairs of breeches.

Mr. KAHN. I am not complaining of the Quartermaster General's Department. There has been a great deal of criticism throughout the country that the men have not been properly supplied, and what we want to get at is the reason for that, so that when these questions are asked us on the floor of the House we will have information to furnish to Members of the House.

How long do you think it will take before you can furnish every soldier who is now in the camps in the United States with a full uniform equipment; that is, two coats and two pairs of breeches?

Gen. SHARPE. Col. Hirsch has the data in regard to that.

Mr. KAHN. Can you put that in the hearings? Can you tell me when we can expect that?

Gen. SHARPE. You must remember, Mr. Kahn, in giving that statement we have got to consider this: That the suit which the man now has may have to be replaced by another, so that even if you gave him one suit he would not then have the two suits in addition. You have got to take that into account. We are taking all of this clothing and putting it through the renovation plants and restoring it as soon as possible.

Mr. KAHN. In that connection, what kind of clothing has the soldier now?

Gen. SHARPE. Woolen, sir.

Mr. KAHN. All over the country, in all of the camps?

Col. HIRSCH. With the exception of those—there is a shortage of the coats, which has been noted by Maj. Hardeman, but the soldiers have woolen clothing everywhere. Those men who have not woolen coats have the cotton coats.

Mr. KAHN. But in this kind of weather the cotton coat does not keep him very warm, does it?

Gen. SHARPE. There was one camp down South which had the O. D. cotton, and the other day when they were asked how much surplus woolen they had on hand we found that the reports indicated that there was a considerable surplus down there of woolen clothing.

Mr. KAHN. Why was that?

Gen. SHARPE. They were called upon for an explanation, and it seemed that until they were ordered to go into wool they had been wearing the cotton by preference.

Mr. KAHN. What camp was that?

Maj. HARDEMAN. That was Camp Travis at San Antonio. The question came up as to how many woolen coats and breeches they would have that were not of the proper sizes, and they did not know, because they had not issued any, and were wearing cotton, and they could not give us the answer until they had issued all that they had.

Mr. KAHN. Would it not have been possible to transfer the woolen coats to some northern camp, where the weather was very cold, and where the woolen coats were needed.

Maj. HARDEMAN. We did not know how many they had. They were not using the coats until we asked them how many they had of the improper sizes.

Mr. KAHN. I understand that the men in some of the camps are still wearing overalls for drill purposes.

Gen. SHARPE. They were given the men to protect their clothing. That was the purpose of doing that, to conserve their clothing.

Mr. KAHN. It was not due to the fact that they had no military uniforms?

Gen. SHARPE. No, sir; they were given to the men to conserve the one suit of clothing they had.

Mr. HARRISON. I have here a letter along this same line that I have just received. It is dated January 8, and I received it on January 10. It purports to be from the father of one of the men, who has visited his son at Camp McClellan.

Mr. ANTHONY. Where is Camp McClellan?

Gen. SHARPE. At Anniston, Ala.

Mr. HARRISON. I know this gentleman is a responsible man so far as he is personally concerned. It may have been an accidental circum-

stance that he found conditions which he describes, but it is along the line Mr. KAHN was asking you about.

Mr. KAHN. What is the date of the letter?

Mr. HARRISON. It is dated January 8. It says:

I have just returned from a visit to Camp McClellan, Ala., to see my son, whom I found quarantined in a detention camp, improperly clothed (in fact, with no pants), having two pairs of old summer pants, and both of them exposing his drawers; asked him why he did not have better, and was told by him that he had an order for clothes, but they issued him some he could not wear, so small could not get in them, and I found many others with summer apparel. Those that we would come in contact with would say that better had sometimes been issued them, too small, and when they would say they would not fit them (too small), would be told, "Damn you, take them; all you get"; my son, who had comfortable quarters in the barracks, when one of his company happened to have a case of mumps, he with some others were taken to a detention camp, and there quarantined upon the frozen ground, and the day I was there no fire. He said they had no wood; was told some had to carry wood 2 miles. I saw many carrying wood. In that detention camp men were there quarantined all together, who had come in contact with mumps, measles, meningitis, scarlet fever—whatever happened to be in camp. No separation. No farmer would keep his stock in such condition and expect them to thrive.

I found that the volunteer man was in much worse condition than the drafted man. Conditions seemed to operate in many ways to crush out all his patriotism. I talked with Col. ———, whom I was sorry to know had been removed from the command of his regiment; that he had not been able to get supplies for his men.

I ask you as a favor to use your influence to see if the conditions can not be remedied to some extent, that the men can get proper clothing, and one class of men in contact with mumps or measles or other diseases may be separated, and comfortable quarters while exposed to such things. My boy said he was well when I saw him; did not know how long he could stand it. He was put there for 21 days, and was serving his twentieth day when I saw him, but said he would be liable to be there 21 days more. Many told me there was some that had been in quarantine since September.

Hoping you will let me hear from you, and that through the department you may be able to get conditions bettered and men made comfortable, I remain,

Yours, truly,

That is a camp of the National Guard, not of the drafted men.

Mr. KAHN. Of course, Gen. Sharpe would not be able to tell us anything about the medical conditions.

Mr. HARRISON. He has not got the pants, according to this man, and the coats are short.

Maj. HARDEMAN. On December 26 the commanding general at Camp McClellan reported that he had overcoats for every man in the camp, and the report goes on to say:

1. Sufficient overcoats, woolen underwear, stockings, and blankets to equip this command now in hands of men. Enough woolen coats and breeches in quantity on hand to equip command with one suit each, but approximately 1,200 men can not be equipped on account of proper sizes not being available.

MORRIS.

Mr. KAHN. That letter was written three days after that telegraphic report was made. Do you think it would take three days to issue the clothes to the men?

Maj. HARDEMAN. I can not say. This report comes from the commanding general of the camp.

Mr. FIELDS. Do you know about the conditions at Camp Zachary Taylor?

Maj. HARDEMAN. Camp Taylor was reported to be 111 overcoats, 1,118 woolen coats, 1,086 breeches, and 300 suits of woolen underwear.

Mr. FIELDS. On what date was that?

Maj. HARDEMAN. On December 26. The quartermaster who is charged with supplying them was directed to make up his deficiencies, and this is his report:

1. Telegram of December 28, Goethals per Hardeman, regarding which you called me on the phone Saturday, was apparently based on a general misunderstanding, for after conversations with all the camps, it appears that practically every man in camp is now equipped with overcoats, coats, woolen breeches, and woolen underwear and wool stockings, and I will endeavor to get a statement from the commanding general of each camp to that effect.

2. Camp Funston's report on shortage was based on the anticipated arrival of 14,000 or more men during the coming month. Camp Taylor also anticipated the arrival of additional men. Camp Pike likewise. * * *

W. F. CLARKE,

Colonel, Quartermaster Corps, United States Army.

Mr. FIELDS. I saw a soldier from Camp Zachary Taylor in my town on Monday following Christmas with a cotton suit on, and the temperature had been 24° below zero at Louisville, and he told me many soldiers were in cotton suits. I know he was in a cotton suit, because I saw him in his office.

Mr. KAHN. You found that during the border trouble you had a good deal of difficulty in fitting the troops from the various States. For instance, some of the boys from Georgia, I understand, have long bodies and short legs, and the men from different parts of the country seemed to have developed a physical condition somewhere so that they had short bodies and long legs. Were you able to take care of the present conditions by reason of the experience that you gained in the Mexican trouble? Was that a guide to you for sending certain classes of clothes to certain camps where you knew that there were men who were built along certain lines?

Gen. SHARPE. The men called into the draft have been very much larger in some places in the country than we have ever had in the case of any men coming into the Army. For instance, in Michigan and other places in the West they are very much larger.

Mr. KAHN. The men from the lumber camps, I presume, are much larger.

Gen. SHARPE. Yes, sir. There was an officer in the office this morning from one of the camps who had two divisions to supply, and he said that our tariff of sizes enabled him very well to equip the men in those divisions which he had coming in. The men who had come from the West were very large, and he had to have extreme sizes for some of them. There was one man for whom he had to order shoes of size 15½. Of course, no tariff can be based on such a thing as that.

Mr. KAHN. I was down at several of the camps on the Mexican border, and I found there that the men had difficulty in getting the proper sizes.

Gen. SHARPE. They did, sir. We had men from some of the States who were tall men and rather thin. Our large sizes are contemplated to provide for rather strong men. We had not gone into that matter in the sizes.

Mr. KAHN. Do you not think you ought to take advantage of those experiences you have had?

Gen. SHARPE. We have in the past, but it is a very serious thing to change these tariffs of sizes because a few instances indicate that they do not fit.

Mr. KAHN. There were not a few instances on the Mexican border, but instances of whole companies.

Gen. SHARPE. That may be, but at the same time we have tried to modify that in order to get the proper sizes, and we have asked the various divisions to report from time to time whether there is any indication that there is a modification desired in the tariff of sizes. They have to make requisitions for the sizes they call for and that must be the criterion we have.

The CHAIRMAN. General, is the statement in newspapers, purporting to come from you, that the size of the foot of the drafted man is larger than that of the man in the Regular Army, true?

Gen. SHARPE. In some parts.

The CHAIRMAN. The statement was that it applied generally throughout the country.

Gen. SHARPE. That is a mistake. Take it, for instance, in Camp Custer. The men there were very large and had to have very large sizes of shoes.

We have made mistakes, and I am not ashamed to admit them, either.

But when the officer at the depot in Chicago was informed that at Camp Custer they had a certain number of small-sized shoes on hand, and they wanted the larger sizes substituted, unfortunately they repeated the same-sized shoes, and that made an excess of that size of shoes. Instead of having a thousand of the small-sized shoes on hand, they were sent right back there, and the order was duplicated, and they got a thousand of that same size, and nobody was benefited by it. He is shipping out hundreds and hundreds of invoices a day. There is no excuse for it at all.

Mr. KAHN. Mistakes will happen; we recognize that fact, of course.

Gen. SHARPE. Maj. Hardemann tells me that the packer in the depot who substituted these sizes without authority has been dismissed. The thing had to be traced back after the shipment was made.

Mr. KAHN. Then you have done the best you could to punish the man who was guilty of that offense?

Gen. SHARPE. Yes, sir. My only regret is that it ever occurred.

Mr. KAHN. How many suits of woolen underclothing or winter underclothing are you still short?

Gen. SHARPE. None at all.

Mr. KAHN. None at all?

Gen. SHARPE. No, sir.

Mr. KAHN. That is well taken care of?

Gen. SHARPE. Yes, sir.

Mr. KAHN. How recently has that been taken care of?

Maj. HARDEMAN. During the month of December.

Mr. KAHN. During the last month?

Gen. SHARPE. They had two suits up to that time. We started shipping them in October, but because of the congestion the shipments were very much delayed; but we started shipping two suits for every man. That was probably in the latter part of November that they got the two suits.

Mr. KAHN. How about the heavy overcoats? Are the men all supplied with them now?

Maj. HARDEMAN. Yes, sir. There is this report of December 26 that says that certain men in some of the camps could not be fitted with the overcoats that were on hand. That has been remedied by sending proper sized coats. From the reports received to date they are there and being issued.

Mr. KAHN. How long is an overcoat supposed to last?

Maj. HARDEMAN. Two overcoats a year in this country.

Mr. KAHN. Have you enough reserve overcoats, or will you have enough reserve overcoats, to give every man an additional overcoat for this year's supply?

Maj. HARDEMAN. Not yet.

Mr. KAHN. Will you have?

Maj. HARDEMAN. They are coming in very rapidly.

Mr. KAHN. Will you have enough?

Col. HIRSCH. According to the records of what has already been contracted for, we will have, up to June, 1918, 5,417,000 overcoats.

Mr. KAHN. That would give two overcoats for each of 2,500,000 men.

Col. HIRSCH. In addition to that, we have material coming in the spring of this year that will make considerably more. We were directed to make that up into overcoats, and it has been practically all contracted for at the present date.

Mr. KAHN. You are not going to have any further trouble on the question of winter overcoats?

Col. HIRSCH. No, sir.

Gen. SHARPE. Gen. Pershing's initial request was for overcoats for 25,000 men and upkeep for 5,000 men each month, making 55,000 for 11 months. In other words, if 25,000 men are shipped over to-day, in a year's time they have 80,000 overcoats. That is over three overcoats they have over there in a year.

Mr. KAHN. Do you assume that that proportion will continue during the war for all of the troops that go abroad?

Gen. SHARPE. Yes, sir. In reference to that matter, we have consulted with the French and English officers in our office, and they say that just about corresponds with their upkeep during the past two and a half years over there.

Mr. KAHN. Have you organized repair companies?

Gen. SHARPE. Yes, sir. We have a repair organization in every one of the cantonments, and in addition to that, we have arrangements made in the cities, and we are sending abroad to France a very large repair organization. That includes everything. That is in connection with the mechanical repair shops going abroad.

Mr. KAHN. Do they clean these overcoats?

Gen. SHARPE. They renovate them—entirely repair them.

Mr. KAHN. Is there any cost to the soldier for that?

Gen. SHARPE. No, sir; none at all. The uniform is issued to the man gratis.

Mr. KAHN. And the repairs are made without cost to him?

Gen. SHARPE. Absolutely. That is, all Government property.

Mr. KAHN. In reference to the shoes, what is the cost of a pair of Army shoes at the present time?

Gen. SHARPE. I think it is about \$4.65. That is the field shoe. That is the only kind we are shipping abroad.

Mr. KAHN. What other kind of shoes do you have?

Gen. SHARPE. We used to have a marching garrison shoe, made of calfskin, but we have discontinued the issuing of that type.

Mr. KAHN. Is that shoe you are issuing the tan shoe we see on the soldiers' feet here?

Gen. SHARPE. That is the one we are issuing here, but abroad we issue the field shoe, with the hobnails.

Mr. KAHN. You do not issue those shoes until they get on the transports to go abroad?

Gen. SHARPE. There were some of them issued, but Gen. Pershing called for nothing but the field shoes abroad. He does not want any of the marching shoes sent abroad.

Mr. KAHN. Have you organized any shoe-repair companies?

Gen. SHARPE. Yes, sir; for shoes and everything.

Mr. KAHN. You have cobbler units?

Gen. SHARPE. We have a regular organization provided, with all the necessary machinery and everything installed at every one of the cantonments, and also sent abroad. It is a very large and comprehensive repair shop. The English officers who were over here with their commission spoke of the salvage which came from the battle fields.

Mr. KAHN. I saw some pictures in one of the papers yesterday of the great volume of shoes that were turned in to be repaired.

Gen. SHARPE. In the English Army they prefer the repaired shoes to the new ones. Those shoes have been broken in to use, and they are softer to wear.

Mr. MCKENZIE. You have to uniform the shoe repairers just the same as the soldiers, and you furnish that equipment for them?

Gen. SHARPE. Yes, sir.

Mr. KAHN. They are enlisted men?

Gen. SHARPE. They are enlisted men who go abroad.

Mr. KAHN. Do you have any trouble with them because of their being paid only the salary of the enlisted man?

Gen. SHARPE. No, sir.

Mr. KAHN. You have no trouble getting men for those units?

Gen. SHARPE. No, sir.

Mr. KAHN. In reference to the hat cord which shos the branch of the service the man belongs to, how many millions of those have you?

Gen. SHARPE. Those cords are lost very frequently, and they have to renew them.

Mr. KAHN. Do they have to renew them?

Gen. SHARPE. As far as the hat is concerned, Gen. Pershing has indicated that he does not care for the hat, and wants some change made to a cap, and wants to discontinue the use of our campaign hat, but we can not do that because it is the only hat we have, and it is the only hat that will do, or something like that, to go into the tropics, or places where it frequently rains. You must have the protection that those hats give. You must have better protection than a cap gives.

Mr. KAHN. I understand that you get the helmet over there.

Gen. SHARPE. That is in the trenches. In their billets, or cantonments, they have been wearing the hat, but Gen. Pershing does not wish any more of those hats sent. He wants to substitute a cap in place of the hat, and there is a modification of our present cap which has been proposed.

Col. HIRSCH. They spoke of some such hat as the French are wearing. That is the kind he spoke of.

Gen. SHARPE. He wants that for the man to carry around and put on their heads, and then put his helmet over it, and then he wants a modification of our present cap for a man to wear when he is off duty. He has indicated that he does not want the hat.

Mr. KAHN. Does he give any special reason why he wants that modification.

Gen. SHARPE. Some of the officers coming back from over there whom we have questioned about the matter have been rather surprised at the recommendation.

Col. HIRSCH. I think he wants the cap for the men to use when they go to the trenches. When they get in the trenches they put on the steel helmet, and they can put the cap in their pockets, whereas the campaign hat is in the way, and a man has no further use for it.

Mr. KAHN. The campaign hat would presumably be ruined in the trenches.

Gen. SHARPE. They do not take the hat to the trenches. The hats are left back in their billets or cantonments.

Mr. KAHN. They put on the helmets when they go into the trenches?

Gen. SHARPE. When they are ordered into the trenches. What Gen. Pershing wants is something for them to wear after they come back—when they are resting—before they go into the trenches again. He does not want the hat; he wants a modification of our cap.

Mr. KAHN. Have you taken any steps to supply him with what he wants?

Gen. SHARPE. They are making different designs.

Maj. HARDEMAN. We asked him in a cablegram to describe what he desired.

Mr. ANTHONY. What would it be like—the hat which the English wear?

Gen. SHARPE. It is much like the hat we have—like the cap.

Mr. ANTHONY. Would it have a vizer?

Gen. SHARPE. Yes, sir; like the officers' caps.

Maj. HARDEMAN. The present one he says is too stiff and heavy, and he wants a lighter cap than that.

Gen. SHARPE. We tried to make it out of cane—putting that around the brim to make it lighter.

Mr. GREENE. Has that cap anything to commend it except the regulations that direct it to be worn?

Mr. KAHN. They had about three or four changes in caps for three or four months.

Gen. SHARPE. I should hate to see a change in the design of the cap made, because it would cost an enormous amount of money which would be locked up in a garment which is not further to be used.

Mr. GREENE. I was thinking of the original æsthetic revelation of the design of the thing. I think your point is well taken.

Mr. KAHN. What have you done toward procuring the cotton cloth for the uniforms to be made in anticipation of warmer weather?

Gen. SHARPE. Contracts have been made for great quantities of that, and a great many of the garments have been made and put in storehouses.

Mr. KAHN. Will you be able to issue them promptly upon the coming of milder weather?

Gen. SHARPE. I think we have already sent them out to some of the cantonments.

Mr. KAHN. We hope we will not have complaints coming in that the men are wearing winter uniforms with the thermometer at 95 degrees.

Gen. SHARPE. I do not think that will be possible. We have ample quantities of that, and are distributing it now, commencing in the South.

You asked for the number of hat cords, the number contracted for. That is 6,510,341, and that would be about three for each man.

Mr. KAHN. You consider that they lose those cords so rapidly that they will require that many?

Gen. SHARPE. Yes, sir.

(Thereupon the committee adjourned to meet to-morrow, Tuesday, January 15, 1918, at 10.30 a. m.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Tuesday, January 15, 1917.

The committee met at 10.30 o'clock, a. m., Hon. S. Hubert Dent (chairman) presiding.

STATEMENT OF MAJ. GEN. HENRY G. SHARPE, QUARTERMASTER GENERAL, ACCOMPANIED BY COL. H. J. HIRSCH, COL. J. P. WOOD, MAJ. L. HARDEMAN, MAJ. WONSON, AND CAPT. C. P. DALY, QUARTERMASTER CORPS—Resumed.

Mr. KAHN. Yesterday, Col. Hirsch, and I think Gen. Sharpe also, stated that the recurring demands from Gen. Pershing for additional supplies somewhat hampered the work of the department. Could you give a list of the additional supplies that Gen. Pershing has been asking for?

Gen. SHARPE. I have some of the things. He is asking for jerkins, which are made of lighter stock, woolen clothing, mocassins, toques, large quantities of rubber boots, and then he also asked for winter caps, arctic overshoes, winter gauntlets, and spiral puttees for use in the trenches.

Mr. KAHN. Have you any of those articles that he calls for except the spiral puttees?

Gen. SHARPE. We are having them all manufactured and sent over to him. They were new articles entirely.

Mr. KAHN. Are any of the soldiers on this side supplied with anything like that?

Gen. SHARPE. With rubber boots. We do occasionally supply them with rubber boots, but we do not issue them as generally as he does over there. They use them in the trenches over there.

Mr. KAHN. Do you know whether the English and the French use these same materials?

Gen. SHARPE. Yes, sir.

Mr. KAHN. So that Gen. Pershing is simply duplicating the things that the other armies use in the trenches.

Gen. SHARPE. Yes, sir; he found that necessary.

Mr. KAHN. Will the necessity for acquiring these things materially interfere with you in the furnishing of those things which the soldiers in this country actually need at this time?

Gen. SHARPE. I do not think they will interfere.

Col. HIRSCH. I have here a list showing everything issued to the men in this country, and everything issued to the men on the other side, and I think that will answer what you are asking about, in reference to the things that the men abroad get, that the men in this country do not get.

Mr. KAHN. Will you kindly tell us what the difference is in the equipment of the soldier in this country and the soldier abroad?

Articles of clothing and equipage issued per man.

Articles.	For service abroad.	For service at home.

¹ Where authorized.

Col. HIRSCH. Each man here and each man abroad has the rubber boots, but in this country they only get them when specially authorized. Both here and abroad each man has to begin with two coats and two pairs of woolen breeches. Abroad he has one leather jerkin, and that has recently been adopted. Both here and abroad they have one coat denim; that is intended for working purposes. Both here and abroad they are supposed to have two coats—wool. As a

matter of fact, every man who has gone abroad has had issued to him two coats, but in this country so far we have only been able to issue them one coat, wool, and it is supposed that at this stage a few men are still without the one coat, wool.

Mr. KAHN. How soon will you be able to furnish that?

Col. HIRSCH. My idea is that there are enough available to-day; that if they are distributed there will be enough to give each man one coat, wool. There are quite a number reported that are of small sizes, that apparently can not be utilized at this time, but at the same time, even taking into consideration these small-sized coats, if they were all drawn in and redistributed, the possibilities are that some of them might be utilized in certain sections of the country.

There were 89,600 coats, wool, that have been prepared for shipment abroad, but that have not been shipped yet. Yesterday Gen. Goethals gave instructions to pull back 75,000 of them and issue them to the camps of this country, and my own opinion is that with those coats plus what are coming in now every day there ought to be more than sufficient to give every man in this country one coat, wool.

I do know, as a matter of fact, that some of the men have already two coats, wool. That is an unfortunate matter in connection with the distribution in some of the camps. It is a matter which is very hard to control. Some people will hog it a little bit and get two, whereas some others do not get any.

Mr. KAHN. Who is responsible for that?

Col. HIRSCH. That is partly explained in this way, that they say it is a local condition. I think that you can get a better explanation than that when you get Col. Wood on the stand.

The men both here and abroad get one hat cord apiece. They get three pairs of winter drawers apiece; they get one pair of winter gauntlets abroad, and here only when specially authorized. Each mounted man gets a pair of riding gloves, both here and abroad, and one pair of woolen gloves. Each man, both here and abroad, gets one campaign hat, and there is one jerkin to each man abroad. That is a leather jerkin, lined with woolen material, that is worn over the coat and under the overcoat.

Each man gets two extra pairs of legging laces, both here and abroad, and two pairs of shoe laces; two pairs of leggings; that is, either one or the other; either the woolen spiral legging or the canvas legging.

The orders at the present time are that in this country only canvas leggings will be issued and used. We find, however, that we can get the spiral legging easier than the canvas legging, because of the difficulty of getting the canvas duck.

Abroad each man gets one pair of moccasins; he gets one set of ornaments, both here and abroad. Those are the collar ornaments.

Mr. KAHN. What is the character of the moccasins that they get?

Col. HIRSCH. The moccasin has been made of shillings—that is, the skin taken off of the back of the sheep and short ends of wool—and that is made of wool on the inside. That he wears inside of his rubber boots. It is very warm, and the only difficulty is that when worn abroad they will probably be full of lice. They say that the shilling attracts the lice, for some particular reason.

Mr. KAHN. Those are what are called cooties?

Col. HIRSCH. Yes, sir. Abroad each man gets a pair of overshoes, and in this country gets them when authorized. Each man gets one overcoat, both here and abroad, and two flannel shirts; each man gets two pairs of shoes and one slicker.

Mr. KAHN. What is that?

Col. HIRSCH. That is a rubber slicker, to wear when it rains.

Mr. TILSON. That is the same as the Cavalry type?

Col. HIRSCH. We have only one type.

Gen. SHARPE. They have eliminated the poncho.

Col. HIRSCH. Each man gets five pairs of woolen stockings, and each man gets two identification tags.

Abroad each man gets a toque, which is a woolen scarf, that he wears under the steel helmet, and he can use it as a scarf when he goes off duty.

Each man gets one pair of denim working trousers, both here and abroad; one barrack bag; three blankets apiece, both here and abroad; five pins for the tents, and one pole.

Mr. TILSON. Are you using wood or aluminum?

Col. HIRSCH. We are using wood entirely.

Mr. TILSON. The aluminum pins did not prove satisfactory?

Col. HIRSCH. No, sir.

Mr. KAHN. Will the manufacture of the jerkin which you have described interfere with the manufacture of other clothing?

Col. HIRSCH. No, sir.

Mr. KAHN. Of course, if the entire Army goes abroad, you will have to have many millions of those jerkins.

Col. HIRSCH. We have ordered quite a number to date, and most of them have been delivered. It is a fact, however, that they have only figured on the number of men who are actually abroad.

Mr. GORDON. What is a jerkin?

Gen. SHARPE. It is a sleeveless leather jacket, lined with very thick wool.

Mr. KAHN. It is a garment which Gen. Pershing has requested for the use of the men in France and in Belgium. Col. Hirsch explained that it is made of the skin of the sheep, with the wool inside.

Gen. SHARPE. It is practically a woolen garment.

Col. HIRSCH. The jerkin is made of leather, and it is somewhat similar to what you very often see automobilists or aeroplane people wearing. The idea is to keep out the cold air, the leather being impervious, and it is lined on the inside with about 25 or 30 ounce material, and it is wanted to keep the men warm, and it will keep a man warm. We have purchased, up to date, 510,400, most of which have been delivered.

Mr. KAHN. Have you contracts for more than that number outstanding?

Col. HIRSCH. No, sir; that was the limit of what we were authorized to contract for, and what we have contracted for and purchased to date.

Mr. KAHN. Assuming that in this year we will be getting a good many more men over to France, are you going to have a shortage of jerkins over there?

Col. HIRSCH. There is no doubt but that we may expect further needs this year, and they are going to be anticipated.

Mr. KAHN. Have you commandeered any clothing at any of the retail stores here in the city?

Col. HIRSCH. About three weeks ago when the Senate passed a resolution directed to the Secretary of War, that he make an effort to get such uniforms as were in the hands of the retailers—we did that before that time. A short time ago instructions were given to purchase such uniforms as could be found in the hands of retailers throughout the country, and those instructions were sent to every depot quartermaster and every camp quartermaster.

The CHAIRMAN. Can you not tell us definitely when that was done?

Col. HIRSCH. My impression is that it was some time in the latter part of December, although I am not quite so positive about that. My assistant tells me it was December 29.

NOTE: The correct date is December 19.

Mr. KAHN. As a matter of fact, you went into the retail stores and took such clothing as they had, for the use of our soldiers?

Col. HIRSCH. That is the idea; whether we commandeered that clothing or not, I do not know. The attitude of the retail merchants seemed to be that they were only too willing to sell that clothing. But the country has been pretty well combed by the people who have purchased the goods—pretty well combed of the goods that can be utilized by the enlisted men.

Mr. KAHN. Has that commandeering resulted in any increased cost of clothing to officers? Have the stores that sold you their stock raised their prices and claimed that because of the fact that the Quartermaster's Department took away the clothing, they had to charge more?

Col. HIRSCH. I never heard that statement made.

Mr. KAHN. You do not know anything about that?

Col. HIRSCH. No, sir.

Mr. SHALLENBERGER. Did you take officers' clothing, or enlisted men's clothing?

Col. HIRSCH. We took everything, up to within a certain price, that could be utilized.

Mr. TILSON. Gen. Sharpe, what is the plan that you use in assigning clothing to the individual man? Do you use the clothing allowance that you have been using for a number of years in the Regular service, and, if not, what modification of that plan have you made?

Gen. SHARPE. In July the clothing allowance was discontinued and the issue of a certain definite quantity of clothing, known as first equipment C, was provided, to be issued directly by the Government.

Mr. TILSON. So that now you issue the same amount to each man, regardless of whether he is hard on his clothing or not. He can not, by being careful with his clothing, save a good part of it and get it in money at the end of six months, as he formerly did?

Gen. SHARPE. That is true. He is issued clothing, the purpose being for the Government to repair it, and reissue it to him after it has been repaired.

Mr. TILSON. Formerly you had some difficulty in getting some of the men to order the amount of clothing they ought to have, because by not ordering it they could get the price of it in cash at the end of six months?

Gen. SHARPE. That is true. At the Washington Barracks there is a contingent there which frequently has duty, or is frequently detailed from Washington Barracks for funerals and things of that kind, in the performance of which duty the men are brought into notice, and it became necessary for the commanding officer to require that the different detachments be brought to him for inspection before they went out, and he would return the men who were not properly dressed, and ask the company commander or the troop commander why he permitted men to turn out in such a manner, and the invariable reply was that the man was going to be discharged and the officer did not care to force the man to go to the expense of buying additional clothing. With this method there is no doubt but that it is going to make the general average of the presentation of the men better than it was before.

Mr. TILSON. Probably in the end it will, because as it is now there will be a tendency on the part of every man to get as much clothing as he can, as it does not come out of his clothing allowance at the end of the year, whereas before a man held back as much as he could, because he would get that amount in cash at the end of a certain period.

Gen. SHARPE. That is true; but the officers have discussed the matter a great deal, and it seems to be the opinion now that when our repair shops are all in thorough operation it may be possible that there will not be an increase in the actual cost over what the allowance heretofore has been. With the operation of the repair shops, any garment which is serviceable or any pair of shoes will be issued to the men.

Mr. TILSON. Do you go any further with the principle that the clothing belongs to the Government than you formerly did?

Gen. SHARPE. Yes, sir; it belongs absolutely to the Government now. There was a question of some title in it, in view of the fact that it was given to him, but the law never allowed him to wear it after he got out of the service, and he could not sell it.

Mr. TILSON. He usually sold it to some man in the service when he went out of the service?

Gen. SHARPE. Yes, sir.

Mr. TILSON. You can not carry that principle down to his underclothes and shoes?

Gen. SHARPE. With the shoes we do, and the hats, too. The great proportion of the hats used in the training camp at the Washington Barracks we thought were all going to be lost, but we had them all renovated, and they were reissued in very good condition.

Mr. GREENE. Along the line of what you have just explained to Mr. Tilson, the effect is that each soldier, regardless of any former arrangements by regulations, is now made an allowance in sufficient clothing, at the expense of the Government, without regard to any specified limitations of allowance? That is to say, if he is short of something on some occasion there is an issue made to him of that particular thing because he needs it.

Gen. SHARPE. That is true; but, at the same time, they are limited to the number provided in equipment C, and then an officer is always responsible for those things. The company officer is responsible, and if it is found that there is an undue expenditure the matter will be looked into.

Mr. GREENE. Of course, that is on the disciplinary side, but I am speaking more particularly of the economic policy. If, for any legitimate reason the soldier has lost, or has suffered loss by accident, or by wear and tear, of an item which formerly would have been charged against his clothing allowance, and which he might have been likely to husband with some particular care, and all that has been charged against his pay account for reissue, he now gets that reissue, as a matter of course?

Gen. SHARPE. He gets a reissue, and he is responsible for the damage done to it, and the charge is made against him. We frequently used to get shoes returned to us. They might have been burned on the soles, when on investigation it was definitely decided that the man had put his shoes against a stove in order to dry them and had burned them, and had then claimed that they were damaged. They were damaged, but in that case we would not make a reissue. The man would have to buy the shoes himself. Now, however, if he does that, he is charged with the value of the shoes.

Mr. GREENE. That is proper enough, but it comes down to the fact that the man is not only required to maintain his clothing allowance as he used to be and it was charged against him on his pay account, but the Government will maintain it regardless of the cause of the loss, or the shortage, or the wear and tear.

Gen. SHARPE. They have to.

Mr. GREENE. If, as you say, it is directly chargeable to the soldier's own carelessness it will be set off against his pay account.

Gen. SHARPE. Yes, sir.

Mr. GREENE. All of which comes to him any way, no matter what the cost of that is, and the necessity for reissue.

Gen. SHARPE. Yes, sir.

Mr. GREENE. The idea that he is limited in any sense by a certain standard of issue does not affect the reissue if he is below that standard?

Gen. SHARPE. No, sir.

Mr. GREENE. Now, I would like to ask you a question or two in regard to the matter of sizes. As I understand it, under normal conditions of garrison routine the quartermaster will have what experience shows is a reasonable allowance of a variety of sizes, so that with the help of the post tailor he can adjust the clothing to fit the average recruitment at that post, and it is not a matter of any great concern or importance, because each man can finally get fitted out without much trouble.

Has the experience of the service led to any general policy with regard to the distribution of these standard sizes in great numbers when you have such mobilizations as we had on the Mexican border or the present enormous reinforcement of the Army?

Gen. SHARPE. There is a tariff of sizes for each one of the articles of clothing, and they call for so many thousand of the different articles, which will be shipped to them in accordance with the tariff of sizes.

Mr. GREENE. But that is more or less based upon the normal conditions of peace routine, is it not?

Gen. SHARPE. Yes, sir.

Mr. GREENE. Has your experience thus far in the assembly of all kinds of men, who might not otherwise have been voluntarily in

the military service, but who represent peculiar differences in physical structure that the climate of the United States develops—has that led you to any rearrangement of policy in reference to the distribution of sizes to the quartermasters—that is, thus far—in the various localities?

Gen. SHARPE. Yes, sir; we have made a rearrangement of the tariff of sizes, because it was shown that in some sections, chiefly in the West, the men were very large. But you take it again in other sections, and you will find a great variation. For instance, the camp quartermaster at Camp Wheeler yesterday stated that they have some 2,000 men at that camp, and after they had issued to the men they had only left 225 coats of sizes too small for issue.

Mr. GREENE. As a matter of business experience the retail clothing trade has learned that certain men may have certain standard chest measurements or correspond in some other proportion to what is called a normal measurement. Yet there are such variations in waist measures, or in the long-legged or short-legged men, to say nothing of men with sloping shoulders and other varieties of physical formation, that they make combination sizes. For instance, they will have a 38 chest that has a certain kind of shoulder or a certain length of body, or they will make the trousers a certain size waist measure, and those trousers may be either for long-legged or short-legged men. It may be found that such conditions would make desirable, and even necessary, such combination of sizes in your Army issues.

Gen. SHARPE. Take the tariff of sizes for coats alone, and you will get a good illustration of that. I think there are something like 18 different sizes of coats, and there are 32 different sizes of trousers. That is because of the cut of our coat. It is supposed to fit to the body, and that was one of the reasons in the spring—you may have seen—that there was some agitation to change the uniform. The department made recommendations in regard to a change in the cut of the uniform, that as far as the officers were concerned, because of the large number of officers coming into the service who would be buying their uniforms, that if there was to be a change in the uniform it ought to be changed then. At the same time we submitted a proposition which would change the enlisted man's garment, so that instead of having a large number of sizes on hand it was very much reduced, because there would be no attempt to fit the coat to the body, but give it a good comfortable fit for field service. But that recommendation was not approved.

Mr. GREENE. Is there sufficient play in this variety of sizes to allow any taking out, so that even though a man may not find in one of your combinations just exactly his fit, yet it can be taken to a tailor and easily made to fit him properly?

Gen. SHARPE. No, sir; there is not very much of the spare parts left in the cloth. The variations in the sizes are so large that it has not been thought advisable to give that additional cloth in the garments.

Mr. GREENE. Do you now have in the field the same arrangements that are practiced in time of peace, giving the soldier an opportunity to get his clothes changed and properly fitted by the company tailor?

Gen. SHARPE. There is very little of that done in the field, but we will be very glad to do that with the repair shops we have.

Mr. GREENE. The repair shops will take care of them?

Gen. SHARPE. Yes, sir.

Mr. GREENE. That is only in the sense that already it is apparent that many men are going without proper clothing because the sizes do not fit them, and that means a long delay in the return of the proper sizes and the reissue; and in one instance, unfortunately, the very same issues rejected came back, and I was wondering whether your experience has shown any more satisfactory way of getting the first distribution more nearly satisfactory.

You suggested that some part of this trouble was due to what you call the local situation. I suppose that may be reduced, in other terms, to the fact that either the official qualifications or the temperamental disposition of the quartermaster was at fault, can it not? One quartermaster has a way of getting a good many things in, whether he sees he is going to need them or not, and some other quartermaster is not perhaps as farsighted.

Gen. SHARPE. I think that has something to do with it; but the facts are that, as far as the cantonments are concerned, we shipped to the cantonments a certain number of articles which we knew would be required, according to the tariff or sizes, and then after that the shipments were made on the requisitions of the quartermasters for the sizes they desired.

Mr. GREENE. That was for the personnel already assembled or to be assembled?

Gen. SHARPE. Yes, sir.

Mr. GREENE. It has appeared in the testimony hitherto given that you got requisitions from quartermasters at different cantonments of posts that rather put you to some trouble, and investigation showed that some of the requisitions are based upon an expectation of thousands and thousands of soldiers who have not yet been ordered to that particular post at all.

Gen. SHARPE. It appears that they base their estimate on the troops who were to come there eventually.

Mr. GREENE. According to their understanding?

Gen. SHARPE. Yes, sir.

Mr. GREENE. Have those incidents within any of your former experience led to the consideration of the advisability of schooling quartermasters to a certain definite and standardized policy about their requisitions, so that the department may know what requisitions are intended for them? If two of them are requisitioning for troops and they know they are going to be inspected, and others are going on the theory that they might as well get all they can, it is obvious that some posts will have more than they want or need and other posts will be short.

Gen. SHARPE. The requisitions all come into the office, and when they are received they are all carefully gone over to find out what strength they are basing the estimate on. If it is beyond the known actual strength, they communicate with them at once to find out why they are basing their requisitions on that number. Maj. Hardemann can give you more detailed information in regard to that.

Maj. HARDEMANN. In submitting a requisition they are supposed to state the strength of the command, the number of articles they have in the hands of the organization, and the number of articles they have in the storehouse not yet issued, and then we know what the authorized allowance is and we take the difference. If they have more in the hands of the organization and in the storehouse than was au-

thorized, they do not get anything unless it is demanded on account of priority service over the sea, where they require two suits instead of one; or if those men are coming within a few weeks, it is held down to the lowest minimum.

Mr. GREENE. I understand, for instance, that since the Reserve Corps has been under way you have been holding quartermasters' schools. I suppose part of the purpose is not only to develop efficiency along practical lines of each individual man now commissioned in the Reserve Corps, but to standardize his methods according to your Army regulations and your policy. Would it not be a pretty good idea for some men who hitherto never had an opportunity to go to such a school? Is it not apparent that there is not any standardization on the part of some of the officers?

Gen. SHARPE. That is one of things we are taking up at the quartermasters' school at Jacksonville, Fla., at Camp Joseph E. Johnston. We are sending our officers down there and instructing them.

Mr. GREENE. The only point is, that while each one of these things seems to be an instant problem, yet their multiplication day after day disturbs not only your priority but the work of actually supplying the soldiers?

Gen. SHARPE. Yes, sir.

Mr. GREENE. How far has the War Department, in your bureau, been benefited or practically served by this volunteer spirit on the part of the women of America who are knitting sweaters and caps? Do you handle those as any part of that outfit, after it is assembled anywhere?

Gen. SHARPE. We handle those, but always at some of the ports of embarkation.

Just recently there was some organization in New York. The National League for Woman's Service, and their intention is to provide for every man who is going abroad certain things in the way of a comfort kit. They are sent directly to the quartermasters at the ports of embarkation, and they make the distribution to such men as have none of those articles already provided.

Mr. GREENE. Have you made some attempts to standardize these things, to regulate the character of them?

Gen. SHARPE. Yes, sir; they were all submitted to the office and approved before their offer was accepted. It is all done impersonally. This league does not appear in the matter at all.

Our quartermaster simply communicates with the officers of the league in New York and notifies them how many of these particular kits are desired, and they are shipped to them, and then the quartermasters make the distribution and make their reports to the league, showing the disposition made of those articles.

Mr. GREENE. That is the so-called comfort kit; is that a sort of "housewife"?

Gen. SHARPE. Yes, sir.

Mr. GREENE. That does not include sweaters or helmets?

Gen. SHARPE. No, sir.

Mr. GREENE. Do you also provide for some standardization of sweaters and helmets?

Gen. SHARPE. No, sir.

Mr. GREENE. Do you desire to have those things supplied?

Gen. SHARPE. We asked Gen. Pershing if he desired sweaters provided, and he said he did not wish sweaters, and we did not put sweaters on our list in consequence of that.

Mr. GREENE. Is it found by experience that these gifts from the women appear to supplement the Army's issue to a great advantage?

Gen. SHARPE. When they are given in the manner in which these ladies in this league are giving them now. They are given just before the men embark.

There was a great abuse in New York in that matter. Some of the organizations would go marching down the streets of New York, and one man would have none of these things and another man would have four or five attached to him, and they also found out that they had been sold in some of the shops there. But in this way in which this league does that work the distribution is made to the man as he goes aboard the ship, and if a man has one of those already he does not get another one, and there is no opportunity for them to dispose of them.

Mr. GREENE. In regard to the matter of the officers supplying their own uniform and equipment, under ordinary conditions is it permissible for an officer who is expected to uniform himself or to provide other parts of his equipment to go to the post quartermaster and buy those articles on the same terms as they are issued to the enlisted men, and then make such alterations and changes as may be necessary by reason of his rank?

Gen. SHARPE. Yes, sir.

Mr. GREENE. I understand that some time ago an order was issued which put a stop to that.

Gen. SHARPE. Yes, sir.

Mr. GREENE. Will you tell us what the reason was for that?

Gen. SHARPE. The reason was because the demands upon the Quartermaster's Department were so great that we would not have been able to supply the men.

We got an order to supply something like 6,000 medical officers, and that took from us an enormous quantity of clothing which we had to have for the men.

The law never has authorized the sale of these stores to officers and the Regulations of the Army have prescribed that when these things were on hand in sufficient quantities to justify the sale, they might be sold.

Mr. GREENE. Under existing circumstances, of course, there is a tremendous influx of officers into the service from civil life, and the majority of those men had, practically, no parts of the military equipment. There has been a tremendous demand made upon all sources of military supply for clothing and other equipment by just that kind of men, and as a natural consequence the market price for officers' uniforms has gone beyond all possible dreams.

Gen. SHARPE. Yes, sir. In consequence of that I made a recommendation to the Secretary of War, citing a case which had been brought to my own knowledge, where a particular cloth was worth about \$3.50 a yard, and the particular tailor had been buying from one of these traveling salesmen from one of the mills and he had offered that tailor the identical cloth for \$9.50 a yard. That is an increase of \$6 a yard, which the tailor will have to charge to the

officer, or whoever buys the uniform. I immediately made a recommendation to the Secretary requesting authority that we should be permitted to buy as many thousands of yards of that cloth as possible, and to sell a sufficient amount of that to each officer desiring to have a uniform made, if he desired to make the purchase, and we are now trying that cloth.

Gen. Pershing has asked for the shipment of cloth for sale to the officers, and that has been done.

Mr. GREENE. But still this situation remains, that the men, in consideration of the fact of the unusual wear and tear and demands of the service in time of war, have been taken off from their old clothing allowance and its limitations, and its effect on them, and have been put in the position where the Government will see them through, whereas the officers on whom the burden of furnishing the uniform is always oppressive, under normal conditions, are now put, not only to an unusual expense due to preparations for war, but to the enhancement of the market values of the cloth, made by the demands upon this very material by other sources.

Gen. SHARPE. It is not exactly the same material.

Mr. GREENE. It is of the same character of material.

Gen. SHARPE. The officers usually wear a little better cloth. The point is this: Under the law the President can determine whether he is going to make an allowance for an enlisted man in kind, or make him a money allowance, but there is no authority of law—indeed, there is a strict prohibition of law, as found in section 3365 of the Revised Statutes—for increasing the allowance to an officer.

Mr. GREENE. I understand, but the matter comes down to the practical point, not as to what they have been in contemplation, or any regulation which may have been made. The fact is, that because this unusual demand has been made upon the market to supply the enlisted men, the officer, who is put upon his own resources, with no Government behind to help him get it, must pay for it out of his own pocket, and he is put to all the disadvantage of the enhancement of the market price, or the scarcity of the articles themselves.

Gen. SHARPE. There is no way of avoiding that, except by authorizing us to buy some of the cloth and sell it to the officers, which we are doing. You can not give them that as an allowance, because that would be a distinct violation of law.

Mr. GREENE. I understand, and I am not speaking about that. I am speaking about what they have to pay for it.

Gen. SHARPE. As soon as the Government gets in a position where they will be able to supply the necessary issues to the men they are going to commence sales to the officers.

Mr. GREENE. By which time all the officers will have bought their uniforms.

Gen. SHARPE. We have already, on some articles, commenced to make the sales.

Mr. GREENE. Take the question of overcoats which the officers use.

Gen. SHARPE. They have made some sales of overcoats.

Mr. GREENE. The officer wants about the same character of cloth in his overcoat as is put in the overcoat which you are issuing to the enlisted man. Heretofore he used to be able to go to the post quartermaster and get an overcoat for about \$9. and get it refitted. together

with his braid and sleeve ornaments, and he was as well off as anyone else in that direction. Now he has to pay \$50 or \$60 for an overcoat, and he has to have an overcoat because it is wintertime and the regulations call for it.

Gen. SHARPE. We have had to take steps to provide for the men. The law places on the department the duty of providing for the men and not for the officers. We will allow them to buy as soon as we can get the supplies which will justify us in making the sales.

Mr. GREENE. I simply wanted to bring out the fact that there is this great difference between the two sets of men, equally patriotic, both of them going voluntarily into the service, into which they have gone for patriotic purposes, and yet the economic aspect of one of them is tremendously disproportionate to that of the other, and I wanted to find out whether or not there is going to be some prospect of early relief.

Gen. SHARPE. I hope there is to be. We are looking forward to that time very confidently.

The Secretary of War has gone quite as far as he can under the law as it now stands. There is no authority at all for selling these articles to the officers, but he has authorized it to be done by regulation.

Mr. GREENE. We also know that any department that wanted to have statutes passed before they can carry on war would be in pretty bad shape.

Gen. SHARPE. But they did not give us the reserve; that is all we are working for.

Mr. GREENE. Is there any means by which the department can get at the private retailers in the matter of sales to officers, and in any sense affect favorably to the officer the price which the retailer charges?

Gen. SHARPE. That I do not know, unless we commandeer the articles and then sell them to the officers themselves.

Mr. GREENE. Why can not you get some practical way out of this trouble? If the same sources of supply enable the retailer to have certain articles on which he can put up the price, why can you not get control of the sources of supply and keep the prices down?

Gen. SHARPE. I think Col. Wood can give you a more comprehensive and complete answer to that question than I can.

Col. WOOD. The situation which I think you refer to has been brought about by the difficulty of providing the enlisted men with the necessary woolen clothing. The enlisted men can not afford to buy their uniforms elsewhere; the officers have a sufficiently larger salary so that, although it may be a hardship, they can provide their uniforms.

The situation with respect to the cost is this: Gen. Sharpe's department could have been authorized to purchase cloth suitable for officers' uniforms and issue that to them at cost, to have them made up, but unless a different cloth was purchased it would have been interfering very much with the supply of cloth for the enlisted men, which has been continuously short since the winter weather began. If they used a finer cloth, the question of cost would still have been an acute one because the great increase in the cost of the cloth to the Army is reflected also in the finer cloths that would be used for the officers' uniforms and in all civilian clothes.

A further difficulty would exist in that after it had been issued at the cost price it would still be necessary for the officer to have the

cloth made into a uniform by a merchant tailor. The cost of making up a single uniform by a merchant tailor is so much larger than the cost of the cloth itself that the saving would be comparatively small. It requires three and a fraction yards of cloth to make a uniform. The cost of the cloth used in an officer's uniform has probably not exceeded \$4 or \$4.50 a yard at the mill. The difference represents the enhancement of the cost of the tailoring, so that merely to issue him the cloth at a wholesale price would not at all solve his problem of the expense of procuring an officer's uniform or overcoat.

Gen. SHARPE. I would like to state that in my experience the making of a garment was double the cost of the cloth.

Mr. GREENE. You suggested, however, that there might be some way by which the Government could get hold of the sources of supply, so that it might regulate its distribution and put off some of these intermediate charges which now lead to the enhancement of the price.

Gen. SHARPE. That is what we are now trying to do by buying the cloth and having it on hand for sale to the officers. Most of the tailor shops around the city have very small credit and they have to be carried by the traveling agents, and the consequence is that they charge to the officers an enormous profit over and above the cost of the cloth to them.

Mr. GREENE. In commandeering uniforms and parts of equipment from private retailers, does the department allow the dealer what the dealer has been accustomed to allow himself in profit, or does the department allow him a percentage of profit on his original cost price?

Col. HIRSCH. What we do in all cases is to notify them that we will not pay over 10 per cent on any cost price, as shown by the man's invoices. In a great many cases they actually sold them at cost price when they knew it was going to the Government for this emergency.

Mr. GREENE. These supplies were only for the enlisted men?

Gen. SHARPE. In almost all cases they were for the enlisted men.

Mr. GREENE. You said the one exception to that order forbidding the sale by the quartermasters of clothing and equipment to the officers in the service was made in the case of the Medical Corps. Was there some particular reason set forth for that?

Gen. SHARPE. There were a much larger number going abroad, and they said they could not get them in time for these troops to go abroad.

Mr. GREENE. Something was brought out recently about your allowances for wastage in clothing and equipment, and I thought that perhaps on that the record might properly show what you had as a basis of computation for war purposes as distinguished from your usual reserve stock under peace routine. I do not care particularly about having the exact figures, but what elements were taken into consideration in connection with the matter of wastage as distinguished from the ordinary wear and tear, because wear and tear under garrison routine and ordinary field maneuvers in time of peace is comparatively trifling when set up against the tremendous strain on clothing and equipment in action.

Gen. SHARPE. What we term upkeep. We were going to put that in the hearings.

Mr. GREENE. Then I do not care to take the time of the committee in reference to that now. You can explain what particular factors distinguish the so-called wear and tear on ordinary wastage which you have to take into consideration in the upkeep in time of peace and the tremendously increased proportion of wear and tear and wastage which enter into your upkeep and maintenance in time of war.

Gen. SHARPE. The upkeep in time of peace for use in this country is derived from the practice we have always had in this country during peace time conditions.

The upkeep abroad is based on Gen. Pershing's calls, and as I said yesterday, I consulted the French and English officers in our office in reference to that matter, and they told me it was about the same as their upkeep in their armies as shown to be necessary for the war. That upkeep is required because when a man comes back from the trenches his clothing must be taken off and the whole outfit is sterilized, and the man gets a bath and then passes out, and he has a renovated suit of clothes and underclothing to put on, and those which he has discarded for the time being are put through the renovator. They are repaired and used again for someone else.

Mr. GREENE. Then in addition to such things which are a part of your routine, you have to take into consideration the enormous amount of destruction of clothing and equipment incidental to action, and to the lice in the trenches, and the fact that a man starting out with an entirely new outfit in the morning, may have it all torn off in a little while, so that there is absolutely no normal and it has to be largely a matter of conjecture, to some extent figured upon what our allies have found to be a proper proportion.

Gen. SHARPE. We thought the figures were very large, but at the same time we studied what Gen. Pershing calls for, and consulted the British and French officers in our office, and they did not think the calls were excessive.

Mr. GARRETT. General, under the head of camp and garrison equipment, in this detailed statement which you have furnished the members of the subcommittee, those items seem to be divided into two classes, and a portion of them seem to be those things manufactured by the Quartermaster's Department, and the others seem to be those obtained by contract. How are the contracts let for those articles which you obtain by contract?

Gen. SHARPE. They are let now through Col. Hirsch's office, and that is the office of purchase and manufacture in Washington.

Mr. GARRETT. How have they been let heretofore?

Gen. SHARPE. They were let through the depot in Philadelphia until the office of purchasing and manufacturing quartermaster was established here in Washington.

Mr. GARRETT. Under the present system of letting these contracts, how do they arrive at what is a fair price, by competitive bidding or otherwise?

Gen. SHARPE. No, sir; we do not have any competitive bidding. That was discontinued when the war commenced in April.

Mr. GARRETT. Is the condition in this country now such that competitive bidding is an impossible thing in order to obtain equipment for the Army?

Gen. SHARPE. It was the Secretary's order of April 12, which announced that section 3907 of the Revised Statutes requiring advertisement and competitive bidding in time of war would be discontinued because the exigency was such that it was thought that was advisable. The law says "except in emergency or exigency."

Mr. GARRETT. Under the head of articles purchased from contractors, I notice there is an item for barber and toilet materials, amounting to \$1,522,074.84, and then there is another item of that character amounting to \$4,566,421. How do you arrive at that amount for this material?

Gen. SHARPE. There is a per capita figure explaining that.

Mr. GARRETT. What is that? Can you give us a statement of what those articles consist of, and the allowance for each man?

Gen. SHARPE. Some of the toilet articles are for the use of general prisoners confined at military posts and disciplinary barracks without pay and allowances, and applicants for enlistment held under observation. The regulations provide for that. Then there are barbers' materials for prisoners and applicants for enlistment while held under observation and toilet materials for use of general prisoners confined to military posts and disciplinary barracks without pay or allowances. Then there are toilet kits.

Mr. GARRETT. What are the toilet kits?

Gen. SHARPE. Those are authorized to be issued to the enlisted men under paragraph 1217 of the Army Regulations.

One razor.
One brush, shaving.
One brush, hair.
One comb, medium.
One brush, shoe.
One broom, whisk.

One brush, tooth.
One housewife.
Two towels, huckaback.
One package polish, shoe, russet.
One cake soap, toilet.

Mr. GARRETT. What constitutes a toilet kit?

Gen. SHARPE. There is a razor, a tooth brush, a shoe brush, a towel, a hair brush, and comb. I think there are two towels. They are issued to the recruits.

Mr. GARRETT. Each private has one of those kits?

Capt. DALY. Each recruit on his first assignment.

Mr. GARRETT. Does that include a razor strop, and everything necessary to keep the razor in condition?

Gen. SHARPE. There is no razor strop.

Mr. GARRETT. What character of razors are they?

Gen. SHARPE. They are razors that used to cost about 65 or 70 cents.

Mr. GORDON. Are they safety razors?

Gen. SHARPE. No, sir.

Mr. GARRETT. Was the same character of razor issued to each class of privates?

Gen. SHARPE. These razors are only issued to recruits on their first assignment.

Mr. GARRETT. What do you mean by the recruits? We are talking about making appropriations for the entire Army.

Capt. DALY. When a man first joins the service, on his first assignment he gets this kit. During the rest of his service it is not replenished or replaced.

Mr. GARRETT. Each man who goes into the service is supplied with this material?

Capt. DALY. Yes.

Mr. GARRETT. And thereafter—

Capt. DALY (interposing). It is up to him to replace it.

Mr. HULL. Do they require them to keep those materials replaced?

Capt. DALY. I am not prepared to answer that.

Col. HIRSCH. That was commenced before the war, and it was done because so many of the recruits had no money, and in order to give the man an opportunity to keep himself cleanly, and clean shaven. he was given such toilet articles as the ordinary man should have.

Mr. HULL. This was based on conditions existing prior to the war in the Regular Army?

Col. HIRSCH. Yes, sir.

Capt. DALY. It is based on the latest per capita cost for these articles supplied to the Regular Army.

Mr. HULL. In reference to the razors which cost 65 cents, how are they obtained, in large quantities? Usually a 65-cent razor is not so very good.

Gen. SHARPE. Those are very good razors. We used to pay more than 65 cents for the razor, and then we put the 65-cent razor on, and have had very good results.

Mr. GARRETT. There is an item there marked "Packing, \$9,983,489."

Capt. DALY. That covers packing materials, lumber, excelsior, specially treated paper for over-seas shipments, and for packing and shipping clothing and equipment.

Mr. GARRETT. How do you get at that amount of \$9,983,489 for that material? How do you estimate that?

Capt. DALY. That is figured on a per capita cost of \$6.13 per man per year. That is what it costs us to ship the clothing. That also includes the labor.

Mr. GARRETT. Does not each one of the privates, when you get him ready to start across the country, or abroad, have all his stuff packed up in a bundle, by himself?

Capt. DALY. When they ship from our manufacturing plant and our depots to posts, stations, and camps, there it is arranged for bulk distribution. It is put into packing boxes and sent off.

Mr. GARRETT. You hire extra help for that?

Capt. DALY. Civilians are used for that purpose, and that is included in the cost.

Mr. GARRETT. Why do you employ civilians to do the packing for the Army?

Capt. DALY. We have all civilians at our depot; no enlisted men.

Mr. GREENE. Mr. Chairman, perhaps by asking the question I am about to ask if I am correct in my assumption, it may help us to have a clear understanding in regard to any future instance that may arise.

You have to base the general upkeep and the maintenance in your department on what you call a priority system, although it may not follow that the particular articles taken care of in that pertain directly to the same individuals or personnel. It is a basis of computation, rather than the fact that the things taken in all belong to any one man or set of men?

Capt. DALY. Yes, sir.

Mr. GARRETT. The next item is simply for necessities. What does that include? Does that follow up the items of packing?

Capt. DALY. That covers the purchase and repair to machinery for use in clothing manufacturing establishments maintained by the Government at posts and cantonments, and the furnishing of equipment in connection with the operation of those machines.

Mr. GARRETT. I see you have an item there for \$2,000,000 for civilian employees. Are those employed in that packing?

Capt. DALY. No, sir; those are clerks and operatives in the manufacture of clothing, the warehousemen, storehouse men, and the men used in the handling of the supplies. It does not include the packers.

Mr. GARRETT. Have you a statement that would show the salaries paid these civilians?

Capt. DALY. That is all listed in the book of estimates.

Mr. KAHN. The men who do the packing, the men engaged in opening the cases, are under civil service, are they not?

Capt. DALY. Yes, sir.

Mr. KAHN. You call them openers and packers?

Capt. DALY. Yes, sir.

Mr. GARRETT. And you draw on the Civil Service for whatever help you need?

Capt. DALY. All of those employees are either classified as skilled laborers, packers and openers, or unskilled laborers.

Mr. GARRETT. We are having officers' training camps for everything; would it not be practical to have a school for training men in this kind of work?

Capt. DALY. They are trained at the depot where they are employed. That is the best training you can have for them.

Mr. GARRETT. What would you say of the idea of having men doing this kind of work who are within the draft age?

Gen. SHARPE. That would require a larger draft to cover all those places. These men are civilians employed in the different cities where the different depots are located.

Mr. KAHN. Are not the openers and packers at the various depots generally discharged soldiers, men of older years?

Capt. DALY. Most of them are beyond the draft age. Some of them are discharged soldiers, but only a very few now.

Mr. KAHN. But they are almost all above the draft age?

Capt. DALY. They probably all are.

Mr. GARRETT. Under the articles set out in items 258-C to 258-F, you have listed various articles, such as denim, duck, etc., and you have other things listed there, with the unit cost and the quantity, etc. In the Quartermaster General's Department, how do you arrive at that unit of cost?

Capt. DALY. That is the average price paid for those articles in the year.

Mr. GARRETT. You mean for the manufacturing of them by the Quartermaster General's Department?

Capt. DALY. Manufacture at our depots.

Mr. GARRETT. The Government manufactures them?

Capt. DALY. Yes, sir; at their own plant.

Mr. GARRETT. How do you arrive at the unit of cost?

Capt. DALY. You have reference to the materials?

Mr. GARRETT. Yes, sir.

Capt. DALY. That is the average of the cost during the year.

Mr. GARRETT. What I want to get at is this: For instance, take the article of denim, which is listed at 25 cents a yard, and the quantity given is 929,897 yards. How do you get that cost of 25 cents a yard?

Gen. SHARPE. That is the average price paid for denim last year.

Mr. GARRETT. That is the price you paid for the raw material?

Gen. SHARPE. For the denim cloth.

Mr. GARRETT. That is what you mean by the unit of cost in reference to all these articles? That is what you figure out it has cost you per yard to make up this quantity of stuff?

Gen. SHARPE. Yes, sir.

Mr. GARRETT. How do your figures for articles of the character of those made by the Quartermaster General's Department compare with the units of costs under the articles listed in items 258-C to 258-E, purchased of contractors? Do those articles cost you more when you get them from the contractors than when you get them through your own department, or do they cost less?

Capt. DALY. It is about the same; there is very little difference.

Mr. GARRETT. Then where does the contractor get any profit?

Gen. SHARPE. He gets his profit by the fact that he does not give his employees any holidays or pay for leave of absence, or things like that. Under the law we have to give so much leave of absence with pay to a civilian employee every year. These plants are maintained, with instructions as to the way in which they shall operate on certain items, like bed sacks and shirts—we are practically getting all the sacks and shirts through the Philadelphia and Jeffersonville depots, and the operations of the plant at Philadelphia are maintained to enable a requisition coming to be filled in the particular sizes that may be called for at that particular time. If you are going to get four sizes, it is going to cost you more than if you make—

Mr. GARRETT (interposing). Then the idea is that the management of the contractors is more economical than that of the Quartermaster General's department, and on account of not having to give their men leave and not paying for overtime they can make their profit?

Gen. SHARPE. They do pay for overtime, but they do not give leaves of absence. We have to give a certain amount of leave of absence to our employees.

Mr. GARRETT. How much is it?

Gen. SHARPE. Thirty days.

Mr. GARRETT. Each private is entitled to that much leave of absence?

Gen. SHARPE. These are civilian employees.

Mr. KAHN. And they also get 30 days' sick leave?

Gen. SHARPE. Yes, sir.

Mr. GARRETT. Those are civil-service employees?

Gen. SHARPE. Yes, sir.

Mr. GARRETT. By virtue of the fact that you have civil-service employees, civilians, and that they are paid for one month extra in the year, are they allowed 60 days' leave?

Gen. SHARPE. They are allowed 30 days' sick leave, but they must produce a doctor's certificate.

Capt. DALY. They do not all get 60 days. The employee who is sick and who has a doctor's certificate showing that he has been away for 30 days on account of personal illness is allowed pay for those 30 days. In addition to those 30 days' annual leave he gets 30 days'

sick leave. They all take their annual leave, and whenever an operative takes leave we must replace him by another operative. We can not shut the plant down.

Mr. GARRETT. Is it the opinion of your department that by obtaining articles from contractors in such a manner as you now obtain them, without competitive bidding, that you are getting them as cheaply as you would by having competitive bidding?

Gen. SHARPE. I think Col. Hirsch can answer that better than I can.

Col. HIRSCH. I did not catch your question.

Mr. GARRETT. The question was, Is it the opinion of your department that in getting material for the Army from contractors in the manner you now employ you are getting it as cheaply as you would by getting it by competitive bidding?

Col. HIRSCH. I think so, and in a great many cases I think we are getting it at a lower price.

Mr. GARRETT. What do you base that opinion on?

Col. HIRSCH. Taking it in the articles manufactured, we arrive at something to base it on by getting—are you speaking of materials or manufactured things?

Mr. GARRETT. I am speaking of manufactured things under this item.

Col. HIRSCH. Take, for instance, the Philadelphia depot, manufacturing a certain article. They have to arrive at a cost basis and what material it takes to make a certain article, and they go into every detail so that you can readily arrive at the figure showing the net cost of the article, figured on the prior cost of the labor and the raw material.

The next element to go into it would be the overhead charges, and that would be different, according to the profit a man would be figuring on to make, so that we can readily tell about what the limit of profit there is in it for a manufacturer.

Mr. GARRETT. What limit of profit do you allow?

Col. HIRSCH. I think they usually speak of 10 per cent. A man figures that he is entitled to 10 per cent profit, and that is considered a fair profit if the volume is not excessive. It seems to be the opinion in the trade that that is a fair profit. In a good many cases they make less and in some cases they make more. They would just simply establish a price and not endeavor to find out what the manufacturer should make.

We had the competitive bidding method in force for all articles of clothing and equipage for the supply of the Army in the fiscal year 1916. Those bids were opened on the 5th of March, and that gave us an idea as to what the value of the various articles was. The bidding at that time was unusually large. We had responses from all sections of the country, so that we had something rather definite to go on when we took up the question of purchases for the emergency. We made the emergency purchases without advertising. We were governed largely by the prices we had gotten in the opening of bids on March 5.

As the prices went up we knew from the value of the raw materials, and we could figure out in a way how much more that would

add to the cost of the articles on which bids were made at the opening of March 5.

In addition to that, wherever we found that we could get the factory in Philadelphia to manufacture a certain number of the articles at less price we did that. In that way we were able to keep in fairly close touch with what the real value might have been. We have sent inquiries out all over the United States, and we had offers from all over the United States for almost every article.

Although it was not competitive bidding in the sense that we asked for bids to be submitted, we really have had bidding, because we have had offers from all over the United States, and the different people who made the offers did not know what prices we were paying, and each man really had to be governed as to what the things cost him and what he was willing to sell them for by his own experience.

MR. GARRETT. As I understand it, all of this material purchased from the factories is really purchased upon a cost plus a 10-per-cent basis, and then you add overhead charges to that.

COL. HIRSCH. I think the manufacturers, as a rule, figure that way. I have asked them time and again how they arrived at particular figures, and they invariably have put down the cost of the raw material as so much, and the overhead charges as so much, and then for profit they usually figure 10 per cent.

MR. GARRETT. That is about the same basis that was used in building the cantonments all over the country, and that is a pretty well-established policy now, is it not—the method of paying for those things on a basis of cost plus 10 per cent? Is that not the way they are figuring out on all this stuff? Here is what I mean: You go to a manufacturer and say we want so many million dollars worth of stuff, and you set out the details and tell him when you want it delivered and what you want to do with it. You say what is the cost of raw material, what are the overhead charges, and then he figures his taxes, and then he gets a profit of 10 per cent on what he is making for the Government. Is not that about the way it is done?

COL. HIRSCH. No, sir; I do not think he figures in his taxes. It is simply the overhead charges of running his factory, and he does not figure on giving his employees leave with pay, and I do not think he figures in his taxes.

MR. GREENE. Have you had any occasion at times to be suspicious of this elastic phrase "overhead"?

COL. HIRSCH. Do you mean that they were charging too much for overhead?

MR. GREENE. Yes.

COL. HIRSCH. I think in some cases they do figure too much of an overhead, but we do not follow that, principally. Where a man comes in and asks a certain price, and we think it is excessive, in certain cases I have asked him to let me see his cost sheet, and he is usually willing to do it, and then I have called attention to the fact that I think his allowance for overhead charges is entirely excessive. I think the question depends on the volume of a man's business.

MR. GREENE. Of course, there is an economic law that allows proper overhead charges, but in cases like this there have been suspicions that men disregard that law, as well as in many others.

Mr. GARRETT. What risk does a contractor take with the Government when you give him a contract to furnish this material? Does he run any risk of loss whatever in manufacturing this stuff for the Government?

Col. HIRSCH. I think he takes a chance on the elements of labor-cost increase, and he takes a chance in a great many cases. The Government does not furnish materials, and when he goes out to buy his materials he finds that he has to pay more money than he figured on. One thing that all the manufacturers complain of is the constantly increasing cost of labor that is going on all the time, which they did not figure on when they put in their bids. Also the raw-material market has been constantly rising ever since the emergency purchases began.

Mr. GARRETT. Under this cost-plus method, that does not enter in.

Col. HIRSCH. In the matter of clothing and equipage we did not let any on that basis; we never gave any of those out on a cost-plus basis. Some of the equipment contracts were given out that way, but none of the contracts for clothing and equipage were made on that basis.

Mr. GARRETT. Is it your opinion, from the experience you have had in the manufacture of similar articles, where you can arrive at the cost price, that the contractors furnishing this material are not making more than 10 per cent?

Col. HIRSCH. I am quite decidedly of that opinion, and also I am of the opinion that in a great many cases they are not making 10 per cent.

Gen. SHARPE. The committee has indicated from time to time that they would be glad to receive suggestions as to where conditions might be improved in the Army. I would like to suggest for the consideration of the committee the desirability of having section 120 of the national-defense act of June 3, 1916, applied in peace as well as in war, for the reason that when you are buying under public advertisements and sealed proposals it very often happens that people will not bid, because they do not care to go through the methods of operation which they have to go through, and because the quantities are small compared to what we are now buying, and we therefore are sometimes forced to buy through middlemen. In other words, we must pay the middleman's profit. I do not see why, if purchases are being made by the Government, we should not have the right to go directly to the manufacturer in time of peace as well as in war.

The CHAIRMAN. That is hardly pertinent now, unless you are expecting peace very soon.

Gen. SHARPE. But I do think it is a very important matter. I do not see why we should not go to the manufacturer and place our orders direct in time of peace as well as in time of war, and that would give us our articles at a fair and just price.

Mr. GORDON. On that question, would that not furnish a tremendous incentive for fraud on the part of the bidders, as well as on the part of the men—

Gen. SHARPE (interposing). It would take away the question of fraud.

Mr. GORDON. If you allow men in your department to go out and buy stuff they have to pay for, without competitive bidding, they might have manufacturers they might want to buy from.

Gen. SHARPE. I say, when we have opened our bids and we do not get a favorable bid we should have the right to place our orders with manufacturers in time of peace just as we do in time of war.

Mr. GORDON. You have the power to reject all bids.

Gen. SHARPE. But you do not get any further then. Different manufacturers will not bid with you.

Mr. GORDON. There is a statute in every State in this Union that requires material for public use to be purchased by competitive bid, the theory of competitive bidding being that everyone producing that material or those supplies is entitled to bid and that thereby the Government will receive the largest possible advantage from competitive bidding. That is the theory upon which those statutes were enacted.

Gen. SHARPE. Exactly. I believe in that; but the trouble is here: I do not see why there should be a combination as between and manufacturers and distributors that the Government shall be discriminated against as against some large wholesaler.

Mr. GORDON. If there is a combination, of course, you are authorized and should take the necessary steps to prevent that; and I presume you would do it.

Gen. SHARPE. You can not always prove it.

Mr. GORDON. You can prove whether the price is high or not if you know what the article is worth.

Gen. SHARPE. I still think it would be a good idea.

The CHAIRMAN. We will take the suggestion under consideration.

Mr. OLNEY. Mr. Greene brought out rather an interesting question concerning sweaters. I think in the early months of the war the War Department, as a part of the supplies, furnished sweaters to the men, but now the furnishing of sweaters to the men has been eliminated.

Gen. SHARPE. Last fall; the sweater was discontinued in 1916. We did issue some we had on hand; that is all.

Mr. OLNEY. As a matter of fact, it has been estimated that there were about 10,000,000 women and children knitting sweaters and helmets, and to do that it was estimated that they used a pound of wool a month, and that would depreciate the already rapidly diminishing supply of wool at the rate of 120,000,000 pounds a year; and these sweaters are furnished voluntarily to the Army, and the armies of all the allies are dependent upon the private enterprise of the United States. On page 42 of the bill I believe the article listed under the estimate for 1919—

Mr. SHALLENBERGER (interposing). Do you mean to say these sweaters are not desirable and that that is an uneconomical use of the wool?

Mr. OLNEY. It is most useful.

Mr. HULL. I would like to go into the question of these sweaters for a moment. Does the War Department favor the furnishing of these sweaters by the Red Cross?

Gen. SHARPE. Yes; we do.

Mr. OLNEY. They welcome any help from the private industry.

Mr. HULL. You consider them useful, of course?

Gen. SHARPE. Yes.

Mr. OLNEY. On page 42 of the bill there is an item of \$885,000,000 which provides clothing equipment for an army of 1,612,245 men,

and then there is an item below that, marked "supplemental estimate," which provides for the difference in the number of men between 3,000,000 and 1,612,245?

Gen. SHARPE. Yes.

Mr. OLNEY. Why is it that that item is so much larger than the item of \$885,000,000? Is it because the price of materials as well as labor has so largely increased?

Gen. SHARPE. The last item includes a reserve, while the other item does not.

Mr. KAHN. The sweaters spoken of by Mr. Olney a moment ago are issued to the soldiers through charitable organizations or individuals?

Gen. SHARPE. Yes, sir.

Mr. KAHN. They are voluntarily given to them by whomsoever may choose to buy or knit the sweaters for the soldiers. Do the soldiers really find use for those sweaters?

Gen. SHARPE. I imagine so, Mr. Kahn; I do not know, except by hearsay. The sweater was worn heretofore in our service in a most improper way. It was worn and made to be worn as an outer garment. But the sweater is of no use whatever as an outer garment. It must have a windbreak on the outside in order to give any real increase to the bodily temperature. If the sweater is made small enough to go under the coat it will give some protection, but that goes right back to the style of our coat. You can not get a large sweater under our coat.

Mr. KAHN. Do you think it would be appreciated by the soldiers in the service of the country if the Government furnished them with sweaters?

Gen. SHARPE. Gen. Pershing does not seem to think so. Gen. Pershing was asked about that, and he does not want them, and that is the reason we are not furnishing them. This matter was brought up two or three times, and if we were to buy them it would stop the manufacture of them on the outside, but Gen. Pershing does not want them, and we do not feel that we are justified in buying something and shipping it over if he does not want it. We are furnishing the men with the jerkin, which is superior to the sweater.

Mr. OLNEY. The cost per capita, which was so well brought out by the chairman of the committee, for clothing material, you estimated to be \$547?

Gen. SHARPE. Yes, sir.

Mr. OLNEY. Does that include gas masks?

Gen. SHARPE. No, sir; they are not furnished by our department.

Mr. OLNEY. How many blankets do you furnish per man in the Army?

Gen. SHARPE. Three blankets per man. Do you mean how many we furnish in a year?

Mr. OLNEY. I wish you would tell us how many you furnish each man in a year.

Gen. SHARPE. We furnish each man with nine in France and five to each man here.

Mr. OLNEY. So that a supply of three blankets per man would not last our Army more than two or three months?

Gen. SHARPE. Two months in France.

Mr. OLNEY. In the early contracts, is it not a fact that 35 per cent cotton was allowed in our uniform material?

Gen. SHARPE. We did allow that at first.

Mr. OLNEY. And afterwards the specifications were changed so that they were made of all wool?

Gen. SHARPE. Of noils and shoddies.

Mr. OLNEY. In the hearing before the Senate Committee on Military Affairs, I notice that reference was made to shoddy in a rather slighting way, but I happen to know that shoddy can be all wool.

Gen. SHARPE. Yes, sir.

Mr. OLNEY. Is it not a matter of fact that this substitute for wool and all-wool shoddy is just as effective and makes just as warm clothing, perhaps, as the raw wool?

Gen. SHARPE. I so understand. Col. Wood can give you more expert knowledge than I can on that subject.

I would like to say before Col. Wood testifies that the cotton was put in the blanket and overcoating because those garments belonged to the Government, and in laundering them we did not want to have them lose their size.

Mr. OLNEY. I understand that cotton decreases the shrinkage?

Gen. SHARPE. Yes, sir.

Mr. OLNEY. The uniforms, as a matter of fact, are only cleansed; they are not washed?

Gen. SHARPE. That is all.

Mr. OLNEY. They do not go through the laundry?

Gen. SHARPE. Col. Wood can give you the information.

Mr. OLNEY. In the early specifications did not the regulations read that the uniform cloth would be 75 per cent wool and 25 per cent cotton?

Col. WOOD. That was the specification prior to the change recommended by the cooperating committee of woollen manufacturers.

Mr. OLNEY. Why were the specifications changed; because they did not produce wool enough?

Col. WOOD. They thought the reworked wool was much warmer than the cotton, and when the garment or the blanket got wet it was much more readily dried out.

Mr. OLNEY. The shoddy substitute, the all-wool shoddy, makes a warmer article of clothing than the article that is made of part cotton?

Col. WOOD. Yes.

Mr. OLNEY. It came out in the testimony of one of the witnesses before the Senate committee that the German uniform as worn in the winter time is sometimes even twice as heavy as the American uniform. Is it not a matter of fact that a garment can be twice as heavy and yet not be any warmer than a closely woven piece of lighter goods, and that the thinner article can be just as warm and as serviceable and as dependable for training and fighting purposes as the heavier article of clothing worn by the German soldier, which may be twice as heavy, and may be distinctly an all-wool piece of goods?

Col. WOOD. That is true; and there is the further consideration that the soldier's woollen uniform has to be worn in France the year round, and if they are too heavy they would be very burdensome to the soldier in the warm weather.

Mr. OLNEY. Did the American Woollen Co. offer several millions yards of goods last spring to the Council of National Defense, and was their offer rejected?

Col. WOOD. I am not able to answer that question.

Mr. OLNEY. As a matter of fact, the other cloth is made out of better wool, as a rule, half blood and better wool, then the so-called Army uniform, is it not?

Col. WOOD. Not better, I should say, but finer. The term finer in reference to wool does not necessarily mean better. Fineness represents a smallness of diameter of the wool hairs, and some of the coarser wool is better wool for certain purposes than the fine wool. The wool used under normal conditions by the Army, the cross-bred wools, are stronger than the fine wools used by the Navy.

Mr. OLNEY. As a matter of fact, there was an auction of wool in Boston a week ago, when \$2 was paid for the best wool grown—the Australian wool.

Early in April the Boston Wool Association offered to the Government, as of that date, its wool supply on hand, on a basis of the cost plus 10 per cent, or at least on a fair profit basis. The Council of National Defense, or the Quartermaster General's Department, was not disposed to accept that offer. As a matter of fact, wools have gone up since that date from 30 to 40 per cent, and would not the Government have saved a matter of \$40,000,000 or \$50,000,000 in its future contracts for Army goods if it had accepted that offer.

Gen. SHARPE. A letter was addressed by the Boston wool committee to the Secretary of War and was referred by the Secretary of War to the munitions board of the Council of National Defense. Then acknowledgment was made by the Secretary to the secretary of the company, and the letter was sent to our office. We were not expected, I inferred, to do other than wait for the reply from the munitions boards.

The records of our office do not show that a reply ever was received.

In regard to the possibility of buying the wool, in order to buy wool you have to have spot cash. On the date that the offer was made we were in the condition of owing \$34,000,000 for supplies which had been bought during the preceding year for the Mexican trouble and which had not been paid for, and we had obligated the Government to spend every cent we had to the extent of \$250,000,000, and we were not in a position to buy wool, even if we had known the purchase of the wool was authorized.

We took the matter up when it was thought to be urgent to buy wool and presented it to the comptroller, and he decided that we could buy wool under our appropriation.

That was a decision rendered on June 6. We commenced buying wool in August. We did not commence buying it before August because we did not have any money.

After the first of the fiscal year, when the appropriations had not been made available, we had to borrow \$30,000,000 from the President's \$100,000,000 emergency fund in order to pay for the transportation of the Army, and we would not have had any funds to use in the purchase of wool. We did not have any such funds until some time in August, when the appropriation became available.

Mr. OLNEY. If the appropriation bill had passed the Senate last March, would that have given you the necessary money?

Gen. SHARPE. It would not have given us the sums that were required, because we would have used it and made a deficiency just the same way. That appropriation bill was only about \$28,000,000.

Col. WOOD. I think, in view of what has been said in reference to the loss to the Government in failing to avail itself of the offer which was referred to, I ought to say that I was in a large measure responsible for having the offer made.

It would have been a very fortunate thing if the Government could have availed itself of that offer, and the fact that it did not only brought into prominence the saving that could have been made; but precisely the same thing is true with regard to other articles.

If the Government had bought cotton, it would have saved a great deal of money, and that would have also been true if it had bought lumber and coal. If we could have bought all the things that were going to be needed during the fiscal year, the Government would have saved a great deal of money, and the wool question has only attained prominence because of the voluntary action of the wool merchants in having offered that wool at the terms at which they offered it, although a very wrong impression has gone out that the War Department has been negligent in regard to that offer.

Mr. OLNEY. I am sure that a precedent set by the wool association would have been followed by the Wool Growers' Association of the United States and other wool associations in granting an extension of time.

The CHAIRMAN. In that connection I think what has been said in answer to your question rather reflects on Congress for not making the appropriation. Gen. Sharpe stated that this ruling was made that they had authority to purchase wool in June.

Gen. SHARPE. In June; yes, sir.

The CHAIRMAN. That you did have the authority. Congress passed a deficiency bill on June 15, which was approved on that date, giving you \$231,000,000 for that, among other similar purposes.

Gen. SHARPE. That money was not available until after the 1st of July.

Capt. DALY. The Treasury did not make that money available for disbursement until after the close of the fiscal year.

The CHAIRMAN. Why did you not start right in as soon as the fiscal year began?

Gen. SHARPE. We did not have the money. We had to borrow \$30,000,000 from the President's emergency fund.

The CHAIRMAN. I want you to answer this question. Did Congress fail to give you, under that item for clothing, camp and garrison equipage, as much as you asked for in June last year? You got \$231,538,548. Was that all of the amount you asked for, or did Congress fail to give you the full amount you asked for?

Gen. SHARPE. They gave us the full amount we asked for.

The CHAIRMAN. They gave you the full amount you asked for?

Gen. SHARPE. Yes, sir.

Mr. GORDON. Gen. Sharpe, you say you borrowed \$30,000,000 from the President's fund. Why could you not have borrowed \$70,000,000 more which he had in his hands for just such emergencies as that, and buy this wool if it was a wise thing to do?

Gen. SHARPE. The urgency of the matter was not presented to us, that we would have to do it.

Mr. GORDON. Did they ever answer this letter?

Gen. SHARPE. I have never seen an answer to it.

Mr. GORDON. You do not know whether the department ever made a reply?

Col. WOOD. The answer to that was made by Mr. Baruch.

Mr. GORDON. Is it customary for these unofficial gentlemen to answer letters addressed to the Secretary of War?

Col. WOOD. It was addressed through him to the Secretary.

Mr. GORDON. Is it customary for the Secretary of War to turn over letters of that kind to these dollar-a-year unofficial gentlemen?

Col. WOOD. I do not know. I presume, as long as the offer was made through him, the answer would naturally be made through the same channel.

Mr. GORDON. I understood Mr. Olney to say that the offer was made directly to the Secretary of War.

Col. WOOD. It was addressed to him, but sent through Mr. Baruch.

Mr. GORDON. The Secretary of War sent it to Mr. Baruch?

Col. WOOD. No, sir; it was given by the chairman of the wool trade committee to Mr. Baruch, because he was supposed to have general supervision of the purchase of war materials. It was addressed to the Secretary of War and presented through Mr. Baruch, and answer was made through the same channel.

Mr. GORDON. You know the answer was made?

Col. WOOD. Yes, sir.

Mr. GORDON. When was the offer made?

Col. WOOD. I think it was made in April.

Mr. GORDON. Do you know when it was answered?

Col. WOOD. Within six or seven days.

Mr. OLNEY. Could not the Council of National Defense have anticipated the constantly rising prices, taking into consideration the experience of England, which, in the early stages of the war, appointed a commission to take care of the wool situation, and the example that had been pointed out by the English Government in reference to the importance of commandeering the wool supply?

Gen. SHARPE. There has been a commission appointed, and we have been buying wool ever since August.

Mr. OLNEY. Yes; but under rather unsatisfactory conditions, as far as I can learn. Is there complete coordination between the Council of National Defense and the Quartermaster's Department?

Gen. SHARPE. Yes, sir.

Mr. OLNEY. You do not think the Council of National Defense has usurped too much of the power of the Quartermaster's Department?

Gen. SHARPE. No, sir.

Mr. OLNEY. You do not think, as Mr. Gordon said, that there are too many dollar men there representing large interests?

Gen. SHARPE. I do not know what the gentlemen are representing. I do know that they are demonstrating a most excellent spirit of patriotism in the work they are doing down there.

Mr. OLNEY. In the hearings before the Senate Committee on Military Affairs I think Mr. Kaplan was interrogated to some extent. Am I incorrect in saying that it developed that a firm in which he was interested received 6 cents a pound for sorting rags?

Gen. SHARPE. His brother was interested in it. I do not know whether Mr. Kaplan was interested in the firm at all.

Mr. OLNEY. Am I correct in saying that the price charged was 6 cents a pound?

Gen. SHARPE. That was the contract price.

Mr. OLNEY. Was that sorting for colors, distinguishing khaki colors which you needed in the uniforms, or sorting out the wool rags from the cotton?

Gen. SHARPE. I do not know what the sorting consists of.

Mr. OLNEY. Is not that an exorbitant price?

Gen. SHARPE. Yes, sir.

Mr. OLNEY. I have sorted wool in my apprenticeship days, and have sorted 10 bags of New Mexican wool a day, weighing about a thousand pounds. I know the sorting of rags is perhaps a slower process, but I believe it is quite possible for women who are generally employed in sorting rags at small pay per day, perhaps at a dollars and a dollar and a half a day, to be able to sort as much as 300, or 400, or 500 pounds of rags a day. It seem to me that there was a glaring defect there.

Gen. SHARPE. The matter was recommended to us by the Council of National Defense, and was adopted by me for that reason. Later on an investigation developed the fact that the price was excessive, and the contract was annulled.

Mr. OLNEY. People may say what they please about the men in the Army being practically well supplied with uniforms and clothing, but I know as a matter of fact of more than one case where there is a noticeable lack of overcoats and extra clothing. I think those conditions exist at Camp Lee, at Camp Gordon, and Camp Sheridan, do they not, more than in any other camps?

Gen. SHARPE. No, sir. I think we had a report from Camp Lee the other day that all of the men there were equipped.

Mr. OLNEY. I want to call your attention to an individual case. Yesterday a chap died at the Walter Reed Hospital, and he had been ill at Camp Meade for a period of a week. There was a noticeable lack of ticks or mattresses at Camp Meade, which is a part of the outfit of a soldier.

Gen. SHARPE. No, sir; that is not a part of the outfit of a soldier.

Mr. OLNEY. A part of the camp equipment.

Gen. SHARPE. No, sir.

Mr. OLNEY. It does not come under you to furnish mattresses?

Gen. SHARPE. No, sir; we do not furnish mattresses in camps.

Mr. OLNEY. I know of one other case where clothing was bought by individuals waiting for supplies at the camp. Did you know that this morning there went through Washington a special train of sick soldiers, most of them critically ill of pneumonia, and that one car was attached to this train containing men afflicted with contagious diseases, and that that car was hitched to an express train and sent to Philadelphia, these soldiers coming up from the South? It seems to me where so much measles and pneumonia exist it must be due to some extent to lack of clothing.

Gen. SHARPE. I do not understand so. I understand that they have had the worst epidemic of pneumonia in New York City they have ever had, and it still exists to-day.

Mr. OLNEY. Is it a fact that at Camp Meade 7 per cent out of a total of over 30,000 men are ill to-day?

Gen. SHARPE. That I do not know. That would come under the Medical Department.

Mr. OLNEY. As a matter of fact, to revert to the wool question, speaking of this matter of price, in my experience of 20 years in the wool business, the highest price that I have seen, the price of Australian wool, was 98 cents a pound in the year 1899. The normal price is 75 cents a pound. I have reasons to believe there is plenty of wool in the world to-day—something over 2,000,000,000 pounds in all countries; but, as a matter of fact, we may lay the price of this wool to-day to certain conditions which we can not help, such as lack of transportation.

In Oregon there is 6,000,000 pounds of wool in the grease unpurchased, but it can not reach the market because of lack of transportation, there not being freight cars enough to haul it here, and yet that 6,000,000 pounds of Oregon wool would be most serviceable and useful if we could get at it.

Mr. GORDON. The War Department controls the railroads; why could they not get it out? There is no reason why they can not do that, is there, if they should need it?

Gen. SHARPE. I have never heard of that wool until Mr. Olney mentioned it yesterday. That was the first I had heard of it.

Mr. OLNEY. I want to touch briefly on the question of shoes. As a matter of fact, is it not true that in the early months of the war the regulations so read that it was possible to furnish a soldier the so-called sawdust or cork field shoe? They say if we sawed our shoe in two we would find a cork or sawdust filling in most of our shoes. I called attention of the Surgeon General's office and your office to this, and I think the rules have been so changed that there has been a substitution made of a pigskin sole. The detriment to the soldier or the sailor from an orthopedic standpoint was unfortunate, in that he had a sole on which was glued a cork and sawdust filling, glued on there by some substance which went the whole length of the sole, the theory being that the heat of the foot melted the glue and the cork and sawdust filling became dislocated and came into a lump on the pigskin sole, and from an orthopedic standpoint it was considered very detrimental by Gen. Gorgas. Has not that been eliminated and do not the regulations now read so that it has been stopped entirely?

Gen. SHARPE. Yes, sir. It was only put in on the recommendation of some of the best manufacturers we could consult on the subject. When the matter you mentioned was brought up it was changed for that very reason.

Mr. OLNEY. Is there a tendency, do you think, to favor large concerns in spite of the lower bids you receive from smaller concerns? You do receive bids but, as a matter of fact, the principle of competition is not there.

Gen. SHARPE. On some things there is competition, like shoes.

Col. HIRSCH. Are you referring to shoes?

Mr. OLNEY. Yes.

Col. HIRSCH. All the awards for shoes are really made on competitive bids. Notices have been sent out to every manufacturer in the United States, and they can bid if they desire, and the awards are made to the lowest bidders. That is one item which has been produced entirely in that way.

Mr. GORDON. Were the awards made in all cases to the lowest bidders?

Col. HIRSCH. In all cases the awards were made to the lowest bidders. In other words, notices were sent to every manufacturer in the United States, asking them to bid on a certain quantity, and the awards were made, starting at the lowest prices and going up until the committee had sufficient awards made so that they had the quantity that they wanted to purchase. The price was not always the same.

Mr. GORDON. That answers Mr. Olney's question in the negative, that you did not give any preference to the larger firms?

Col. HIRSCH. Yes, sir.

Mr. OLNEY. I know of a small firm whose bid was 100 per cent lower than the largest bid accepted, and I understand was not tested for durability but was tested for its looks. In the eyes of the layman—I saw the sample submitted, and it seemed to me as if the sample submitted was up to the specification, and yet a large rubber concern was given the contract in spite of the fact that there was a much lower bid made.

Col. HIRSCH. What particular article are you referring to?

Mr. OLNEY. It happened in reference to some hot-water bags for the Red Cross supplies. I wondered if every man had a fair chance.

Col. HIRSCH. We had nothing to do with that matter.

Mr. GREENE. Apart from the distinctively medical stores and supplies, does the medical department obtain any of its quartermaster's stores from you?

Gen. SHARPE. No, sir.

Mr. GREENE. It furnishes its own stores of that kind through its own quartermaster system?

Gen. SHARPE. They used to call them medical purveyors.

Mr. GREENE. Do they do that in reference to tentage?

Gen. SHARPE. The tentage they get from us. I was only thinking of such things as hospital cots and blankets and sheets.

Mr. GREENE. I said outside of the distinctively medical stores. Does it get any other quartermaster supplies through the Quartermaster's Department?

Col. HIRSCH. The only thing we furnish them is the equipment for the individual soldier—the clothing the man wears, the blanket he uses himself, and the bed sacks, and such things as those which the individual soldier uses. Similar articles used in hospitals, like mattresses and sheets, and all the medicines, and things that go with the surgical supplies are purchased by the Medical Department, and the Quartermaster General's Department has nothing to do with that.

Mr. OLNEY. I particularly want to emphasize the fact that I really believe that there is a serious shortage of clothing at some of the camps. Here was this particular young man I spoke of a while ago, lacking a mattress, and a part of the men have been lacking overcoats, and a good many of them have contracted bronchial pneumonia. This particular young man's parents came on here to see about him, and such a thing as that goes all over the locality where he lives, that he lacked the clothing he should have had, and the effect upon the community where he lives is enormous. It tends to create dissatisfaction and a lack of loyalty and patriotism, and a don't-care method

about winning the war, and I want to emphatically say that I really think a lack of clothing does exist, and it should be brought to your attention not only in individual cases but generally.

The CHAIRMAN. The general has admitted that.

Col. WOOD. Would not the death of Maj. Gardner, who was an officer, go a long way to show that the prevalence of pneumonia was not by any means dependent upon the shortage of clothing?
